The Case Against the U. N.

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, March 18, 1955

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an article by Mr. Peter Edson which appeared in the Washington News last week. We may not agree with what Mr. Edson says but certainly he has pointed out some gross deficiencies against the United Nations. I commend this article to the membership of the House:

CASE AGAINST THE U. N.

(By Peter Edson)

UNITED NATIONS.—From the constructive view of seeing what is wrong with the United Nations to make it work better, a dozen major shortcomings may be listed.

Out of 63 U. N. vetoes in the last 9 years, 61 were cast by Russia. France and Russia both vetoed consideration of the Spanish question. France alone vetoed a Russian proposal to send a cease-fire inspection commission to Indonesia.

Soviet vetoes have made the U. N. Security Council of 11 members increasingly ineffective. The General Assembly of all members has become increasingly important. What this suggests is charter amendment to redefine functions of the two branches in dealing with threats to peace.

The U. N. has been unable to create a police force. This was supposed to have troop contributions from member countries to act under Security Council direction in maintaining peace. Eight years of negotiation could not break the deadlock on troop quotas, their location, armament, command, and state of readiness.

The closest thing to it has been the U. N. forces assembled to defend South Korea under American command. But the U. N. has not effected a permanent solution to the Korean question.

Communist China was declared an aggressor, but no punitive action has been enforced against this aggression. The U. N. has so far failed to secure release of all Americans held prisoner of war, wrongfully tried and sentenced by communist China. The U. N. truce supervision team has been unable to observe and enforce cease-fire violations in North Korea.

The U. N. has failed to make any progress on disarmament, though a special commission is still at work on this question in London.

The U. N. has been unable to reach any agreement on control of atomic energy and atomic weapons. A new international conference on peaceful uses of atomic energy will convene in Geneva this year.

Maintenance of peace since the end of World War II has developed largely through regional defense alliances such as the North Atlantic Treaty Organization, Organization of American States, Southeast Asia Treaty Organization, and the Communist bloc of nations under Russia. Such regional arrangements were authorized by the U. N. Charter. But it was not foreseen that they would become more powerful than the U. N. itself.

Decisions of the International Court of Justice at The Hague are advisory only, unless both sides agree in advance to accept its decisions. There is no provision for enforcement of world-court decisions. Only 10 contentious cases have been submitted to the court. Eight requests have been made for advisory opinions.

The United States has filed claims against Russian, Hungarian, and Czech Governments for shooting down American aircraft, as a matter of policy. But these cases will never come to trial, because the Communist countries don't accept the court's jurisdiction.

In a number of regional disputes, U. N. commissions have arranged cease-fire agreements, but they have not been able to achieve permanent solutions, except on the Indonesian question.

Such cases include the Kashmir dispute between India and Pakistan, and the Arab-Israeli dispute in the Middle East.

The final test of the U. N., which is still to come, is whether it will be successful in preventing world war III.

It was inability to prevent World War II that wrecked the League of Nations.

The statesmen who drafted the U. N. Charter at San Francisco 10 years ago thought they were correcting the faults that made the old league a failure. As the record now stands, they were not completely successful.

Voting and Attendance Record

EXTENSION OF REMARKS
OF
HON. GERALD R. FORD, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1955

Mr. FORD. Mr. Speaker, under leave to extend my remarks, I include a report of my voting and attendance record during the first session of the 82d Congress.

The record indicates all rollcall votes and all quorum calls. The description of bills is for the purpose of identification only; no attempt has been made to describe the bills completely or to elaborate upon the issues involved.

The purpose of this report is to collect in one place information which is scattered through thousands of pages of the RECORD. I want to be able to provide any interested constituent with a simple compilation of my voting and attendance record.

(Voting and attendance record, Representative GERALD R. FORD, JR., Fifth District, Michigan, 82d Cong. 1st sess.)

Roll-call No.	Date	Measure, question, and result	Vote
	1951		
1	Jan. 3	Call by States	Present.
2	...do	Election of Speaker. (Rayburn, 231—Martin, 192.)	Martin.
		H. Res. 7, providing that the rules of the House of Representatives will be the same as those of the 81st Cong.:

Res. 278, extending the Defense Production Act of 1950 through July 31, 1951; the Housing and Rent Act of 1947, as amended; and certain import control authority: On amendment preventing roll-backs or the lowering of price ceilings below those on enactment date of resolution and prohibiting any new price ceilings on materials or services during the period of the temporary extension, except for the placing of price ceilings on agricultural commodities if they exceed their parity price. On adoption. (Adopted, 232 to 159.)	Nay.
99	...do	S. 1590, extending rent control in the District of Columbia for 1 year. On adoption of conference report. (Adopted, 242 to 126.)	Nay.
100	June 30	H. J. Res. 277, making temporary appropriations through July 31 for Government departments pending enactment of 1952 appropriation bills. On adoption of conference report. (Adopted, 256 to 12.)	Yea.
101	July 5	Quorum call	Present.
102	...do	do	Present.
103	...do	...do	Present.
104	July 6	...do	Present.
105	July 9	...do	Present.
106	July 10	...do	Present.
107	July 11	...do	Present.
108	July 12	...do	Present.
109	...do	H. R. 3709, making appropriations for the Department of Labor and Federal Security agencies for fiscal 1952: On motion to recommit to committee on conference with instructions to insist on House provision barring the filling of more than 25 percent of vacancies occurring in 1952 in the offices, bureaus, etc., covered by this bill. On adoption. (Adopted, 223 to 170.)	Yea.
110	July 13	Quorum call	Present.
111	July 16	...do	Present.
112	...do	...do	Present.
113	...do	...do	Present.
114	July 17	...do	Present.
115	July 18	...do	Present.
116	July 19	...do	Present.
117	July 20	...do	Present.
118	...do	H. R. 3871, amending and extending for 1 year the Defense Production Act of 1950: On Andresen amendment restricting until June 30, 1953, imports of fats and oils, cheese, dairy products, peanuts and rice. On adoption. (Adopted 266 to 147.)	Nay.
119	...do	On Davis (Wisconsin) amendment establishing 1 Government agency through which all claims of municipalities for materials, etc., would be channeled. On adoption. (Defeated, 164 to 251.)	Yea.
120	...do	On Hope amendment preventing the placing of quotas on livestock slaughtering. On adoption. (Adopted, 249 to 167.)	Nay.
121	July 20	H. R. 3871—Continued On Wolcott amendment deleting language enlarging the President's authority to acquire property, including facilities, and to erect plants, factories, etc., and to engage in the marketing, transportation, and storage of such critical materials necessary to national defense; but authorizing installation of additional equipment, facilities, etc., in Government-owned plants and the installation of Government-owned equipment in privately owned plants. On adoption. (Adopted, 233 to 184.)	Yea.
122	...do	On Hardy amendment deleting authority to create new Government corporations by Executive orders. On adoption. (Adopted, 250 to 167.)	Yea.
123	...do	On amendment authorizing a roll-back of 10 percent below the May 10, 1951, prices of agricultural commodities. On adoption. (Adopted, 234 to 183.)	Nay.
124	...do	On Cole amendment providing a fair and equitable margin for each species of livestock processed to insure a fair profit to all segments of the industry on each species. On adoption. (Defeated, 166 to 249.)	Yea.
125	...do	On Davis (Georgia) amendment providing that for a period of 120 days following enactment of bill prices and wages, salaries, and other compensation shall not be raised above the levels prevailing on July 7, 1951, except that agricultural products may not be prevented from reaching parity. On adoption. (Defeated, 172 to 243.)	Nay.
126	...do	On Poage-Cole amendment to set up a formula, including parity costs, for arriving at ceiling prices for all commodities to insure a reasonable profit. On adoption. (Defeated, 181 to 233.)	Nay.
127	...do	On amendment exempting strategic metals and minerals from ceiling prices when in short supply. On adoption. (Defeated, 200 to 216.)	Yea.
128	...do	On adoption of amendment deleting from the bill language authorizing the licensing of and suspension of licenses of certain businesses covered by the scope of the bill. On adoption. (Adopted, 333 to 82.)	Yea.
129	...do	On amendment deleting from the bill language relating to control of commodity speculation. On adoption. (Adopted, 242 to 172.)	Nay.
130	...do	On motion to recommit. On adoption. (Defeated, 117 to 299.)	Nay.
131	...do	On passage. (Passed, 323 to 92.)	Yea.
132	July 25	Quorum call	Present.
133	...do	H. R. 3880, making appropriations for the Executive Office and sundry independent offices for fiscal year, 1952. (Conference report.): On motion to recommit to committee of conference. On adoption. (Adopted, 188 to 186.)	Yea.
134	July 26	Quorum call	Present.
135	...do	On motion to recommit to committee with instructions to reduce appropriation for the international information and educational activities of the State Department by $15 million. On adoption. (Defeated, 142 to 245.)	Nay.
136	July 27	Quorum call	Present.
137	...do	H. J. Res. 289, terminating the state of war between the United States and the Government of Germany. On adoption. (Adopted, 378 to 0.)	Yea.
138	...do	H. Res. 335, providing for the consideration of H. R. 4484, confirming and establishing the titles of the States to lands beneath navigable waters within State boundaries and to the natural resources within such lands and waters. (Tidelands.) On adoption. (Adopted, 270 to 92.)	Yea.
139	July 30	Quorum call	Present.
140	...do	S. 1717, amending and extending for 1 year the Defense Production Act of 1950. On adoption of conference report. (Adopted, 294 to 80.)	Yea.
141	...do	H. R. 4484, confirming and establishing the titles of the States to lands beneath navigable waters within State boundaries and to the natural resources within such lands and waters. (Tidelands.) On passage. (Passed, 265 to 109.)	Yea.
142	July 31	Quorum call	Present.

181	Sept. 25	...do	Present.
182	...do	S. 2006, increasing the lending authority of the Export-Import Bank of Washington and extending its life 5 years to June 30, 1958. On passage. (Passed, 259 to 69.)	Yea.
183	...do	H. Res. 429, providing for the consideration of H. R. 39, a bill for the development of marketing facilities for handling perishable agricultural commodities. On adoption. (Adopted, 211-112.)	Yea.
		H. R. 39, providing for the development of marketing facilities for handling perishable agricultural commodities:	
184	Sept. 26	On motion to recommit to committee. On adoption. (Recommitted, 180 to 162.)	Yea.
185	Sept. 27	Quorum call	Present.
186	...do	H. Res. 430, providing for the consideration of H. Res. 82, relating to the unification of Ireland. On adoption. (Defeated, 139 to 206.)	Nay.
187	...do	Quorum call	Present.
188	Oct. 4	H. R. 5118, amending the Social Security Act to provide unemployment insurance for Federal civilian employees. On suspension of the rules and passage. (Defeated, 197 to 140.)	Nay.
189	Oct. 4	Quorum call	Present.
190	Oct. 5	...do	Present.
191	...do	H. R. 5113, the Mutual Security Act of 1951. On adoption of conference report. (Adopted, 235 to 98.)	Yea.
192	Oct. 8	Quorum call	Present.
193	...do	H. Res. 436, authorizing the Committee on Banking and Currency to conduct studies and investigations relating to matters within its jurisdiction. On adoption. (Adopted, 284 to 15.)	Yea.
		S. 1959, amending the National Labor Relations Act, as amended, to validate union-shop elections held prior to time of taking of non-Communist oath by labor-union leaders, and to dispense with the requirement of existing law that an election be held before a labor organization and an employer may make a union-shop agreement:	
194	Oct. 9	On motion to recommit. On adoption. (Defeated, 22 to 304.)	Nay.
195	...do	On passage. (Passed, 307 to 18.)	Yea.
196	Oct. 10	Quorum call	Absent.
		H. R. 5650, making supplemental appropriations for the fiscal year, 1952:	
197	Oct. 11	On motion to recommit to committee with instructions to strike out funds for Grandview Air Terminal, Missouri. On adoption. (Defeated, 127 to 183.)	Not voting.
198	...do	On passage. (Passed, 301 to 19.)	Not voting.
		H. R. 4740, making appropriations for the Departments of State, Justice, Commerce, and the judiciary for fiscal 1952. (Conference report):	
199	...do	On motion the House recede and agree to a revision of the language of the House bill relating to United States contributions to international organizations. On adoption. (Adopted, 200 to 126.)	Not voting.
200	...do	H. R. 5684, making appropriations to carry out provisions of Mutual Security Act for the fiscal year ending June 30, 1952. On passage. (Passed, 222 to 99.)	Not voting.
201	Oct. 15	Quorum call	Absent.
202	...do	H. R. 5411, amending Public Laws 815 and 874 of the 81st Cong. with respect to schools in critical defense housing areas. On passage. (Passed, 257 to 55.)	Not voting.
203	Oct. 16	Quorum call	Present.
204	...do	...do	Present.
		H. R. 4473, Revenue Act of 1951:	
205	...do	On adoption of conference report. (Defeated, 157 to 204.)	Yea.
206	Oct. 17	Quorum call	Present.
207	Oct. 18	H. Res. 463, providing for the consideration of H. J. Res. 285, authorizing appropriation of $95,000 for commemoration of the one hundred and fiftieth anniversary of the establishment of the U. S. Military Academy. On adoption. (Adopted, 179 to 149.)	Nay.
208	...do	Quorum call	Present.
209	...do	S. Con. Res. 36, authorizing the appointment of 14 Members of Congress to participate in a public discussion with representatives of the Consultative Assembly of the Council of Europe. On adoption. (Adopted, 237 to 75.)	Yea.
210	...do	Quorum call	Present.
		S. 355, adjusting the salaries of postmasters, supervisors, and employees in the field service of the Post Office Department:	
211	...do	On adoption of conference report. (Adopted, 339 to 7.)	Yea.
		S. 622, increasing the basic rates of compensation of officers and employees of the Federal Government:	
212	...do	On adoption of conference report. (Adopted, 318 to 26.)	Yea.
213	...do	Quorum call	Present.
		H. R. 4473, the Revenue Act of 1951:	
214	...do	On adoption of conference report. (Adopted, 185 to 160.)	Yea.
		H. R. 3669, amending the Railroad Retirement Act of 1937 to increase the monthly benefits paid to retired railroad employees:	
215	...do	On adoption of conference report. (Adopted, 341 to 0.)	Yea.
216	Oct. 20	Quorum call	Present.
		S. 1864, providing or assisting in providing an automobile or making a cash payment to certain disabled veterans:	
217	...do	On overriding Presidential veto. (Overridden, 223 to 53.)	Nay.

The Foreign Aid Program Forgets the United States of America

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, March 18, 1955

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks I am including a timely and interesting editorial which appeared in the Wall Street Journal entitled "The Arc and the Ark":

THE ARC AND THE ARK

The President's foreign aid message to Congress is much more than a money request for the next fiscal year. It opens a new and lengthy—if indeed not interminable—chapter in the history of this country's foreign aid program.

The evidence of the indefinite duration of this program, currently costing the United States nearly $5 billion a year, is abundant. Foreign Operations Administrator Stassen has spoken of 8 years. The President's message by implication goes further. It says the forthcoming transfer of FOA activities to "permanent" departments—State and Defense—emphasizes that foreign aid is "an integral part of our foreign policy." It indicates it may have to be continued until general disarmament becomes possible.

So we are not to see an end to foreign aid, promised so often, next year or any foreseeable year. That is one new thing, long suspected, now made clear. The other is that the bulk of foreign aid from now on is to go to what is called the arc of free Asia—a peculiarly murky, misleading and emotional label.

Few would quarrel with the premise here; as the message puts it, the "threats to world security and stability are now centered in Asia." Ergo, the United States must help to build up strength in some 15 Asian nations so that they can resist communism. Few, again, would dispute the desirability of that goal. What must be asked is whether foreign aid is an effective instrument for that purpose.

First of all, can American foreign aid substantially strengthen the economies of these Asian nations? Consider Indonesia, one of the countries in the socalled free arc. By all authoritative reports, the Government has made an economic shambles of the country and complete collapse has been averted only by the almost indestructible fertility of the land. The Government is considered to have reached a high mark in waste, inefficiency and corruption even for Asia, where such attributes are not uncommon. One may well wonder what American tax dollars will accomplish under such circumstances, and where they will go.

Or take India. One of the things that has perplexed some of our point 4 officials is the prospect that for every gain in agricultural productivity there will likely be a population gain, so that the end result of assistance may be not to diminish poverty but to multiply it. That many sound cruel, but the cruelty is nature's.

In general, the Asian nations are not sufficiently developed to absorb large sums economically. They can be expected to make gradual economic progress over many years, but it is questionable whether any amount we could spend on them could significantly speed that progress.

Secondly, can it be reasonably assumed that American aid will strengthen resistance to communism in this area? Some of the nations—like the Philippines, South Korea, and Formosa—are of course vigorously anti-Communist. But any notion that we can convert nations like India, Burma, and Indonesia to such a positon simply by giving them money does not correspond with political and geographical reality.

India has been accepting American economic aid—not military—for some time, without discernible influence on the "neutralism" of the Nehru Government. Indeed, the Indians are said to feel rather uncomfortable about taking American money, a feeling not likely to be eradicated by more of it. It's a good bet that if India ever becomes strongly anti-Communist, it will not be because of United States aid; it will be because it has decided it has to make a stand against Chinese Communism imperialism or go under. Meantime neutral India and Burma and pro-Communist Indonesia want to try to get along with Peiping.

These nations are also, it should be remembered, obsessed with anticolonialism. They may get over that eventually, but the very suggestion that the United States might want to aid them in order indirectly to affect their politics is not going to win friends for the United States or the anti-Communist cause any time soon.

However, it is sometimes argued that any progress is better than none. If, despite the enormity of the task, the dubious political results, the certain waste, a little can be accomplished, isn't it worth it?

There might be some validity in this argument if the United States could in fact afford a large and quasipermanent foreign aid program. That is, if the Government had balanced the budget at a decent level of taxation, reduced the public debt, and was nonetheless running a persistent surplus. As it is, this kind of program is a luxury this country demonstrably cannot afford.

Certainly there are dangers and threats in the Far East. But Washington will accomplish little if in worrying about the arc of free Asia it neglects the ark of free America.

Answer to Private Utility Proposal on Trinity Project

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. ENGLE. Mr. Speaker, recently the Pacific Gas & Electric Co., in California, offered to build the powerhouses on the Trinity River project, which has been authorized for construction by the Federal Government under the reclamation law. The Pacific Gas & Electric Co.'s so-called partnership proposal was the subject of extended testimony by the House Committee on Interior and Insular Affairs. This proposal will not only, if adopted, reverse a half century of Federal Government power policy but will have a serious effect on the operation of the Central Valley project and probably delay for many years the construction of the much needed Trinity River project. Following is a brief summary of the reasons the P. G. & E. proposal should not be adopted:

COMPANY'S PROPOSAL VIOLATES FEDERAL POWER POLICY

First. Acceptance of the company's proposal would be a reversal of half a century of power policy in the Federal Government. The principle of low-cost public power with preference to municipalities and other public agencies has been stated at least 13 times in acts of Congress dating from 1906. In other words, for almost 50 years the Federal Government has consistently followed a policy of selling publicly produced power at the lowest possible rates, giving preference to municipalities and public agencies. If the Federal Government's power policy was to exploit the power potential for profit-making purposes, then it could raise power rates to make a financial showing for the Trinity Project which would completely nullify the company's argument that its proposal would place the Government in a better financial position.

THE AMOUNT OF THE OFFER IS NOT SUFFICIENT TO MEET FEDERAL COSTS

Second. The P. G. & E. Co. has made an offer to the Department of the Interior to purchase falling water from the Trinity project for $3.5 million annually. This happens to be the only firm part of the offer—the offer in all other respects being very vague, as discussed herein under other headings. With respect to the $3.5 million, it is not even sufficient to return to the Federal Government its actual costs at the Government's rate of interest. The amount would have to be about $4,150,000 annually to accomplish this. Therefore, there would be, under the company's proposal, an actual loss to the Federal Government of $650,000 annually, or over $32 million in 50 years. Even if the company paid the Federal Government its full costs of $4,150,000 it would be comparable to the Government loaning the company funds to expand its power facilities at the low Federal interest rate.

COMPANY'S CLAIM THAT ITS PROPOSAL RETURNS $36 MILLION MORE REVENUE TO THE FEDERAL GOVERNMENT OVER PROJECT REPAYMENT PERIOD IS IN ERROR

Third. The company's claim, in its proposal to the Department and in its widely distributed pamphlet on the proposal, that under its proposal an additional $36 million would be returned to the Federal Government over the project repayment period is not supported by testimony given to the Interior and Insular Affairs Committee. Bureau witnesses stated that amortization with interest of the increased cost of enlarging the tunnels under the company's proposal would exceed the $36 million by about $6 million, and that therefore there would actually be less revenue under the company's proposal by about $6 million.

COMPANY'S PROPOSAL WOULD INTERFERE WITH CVP OPERATION AND REDUCE FIRM CAPACITY OF EXISTING FEDERAL POWERPLANTS

Fourth. The firm generating capacity at the existing Shasta powerplant under the company's proposal would be reduced by 60,000 to 100,000 kilowatts, or 16 to 27 percent, and this is a most important and serious aspect of the company's proposal. The Bureau witnesses testified before the Interior and Insular Affairs Committee that this reduction was estimated at 100,000 kilowatts, or around 27 percent, and that such reduction would decrease the firm energy below that re-

quired to continue service to all existing preference customers. The effort then would be to dedicate a large block of power, about 100,000 kilowatts according to Bureau estimates, from the Central Valley project powerplants to company use. This would be power taken away from existing preference customers now having contracts with the Federal Government, in contravention of the law with respect to preferences.

CLAIMS BY COMPANY REGARDING THE ADDITIONAL POWER-GENERATING CAPACITY UNDER THE COMPANY'S PROPOSAL ARE MISLEADING

Fifth. The P. G. & E. proposal call for installation of 130,000 more kilowatts of generating capacity than the Bureau proposes to install.

In the first place, this figure is misleading because this additional installation results in the firm generating capacity at existing Federal plants being reduced by 60,000—100,000 kilowatts—60,000 kilowatts by the company's estimate and 100,000 kilowatts by the Bureau's estimate. This matter is discussed under the preceding heading.

In the second place, with respect to the increased generating capacity, it must be pointed out that the amount of energy generated is dependent upon the amount of the water which runs through the turbines and not upon the powerplant capacity. An equal amount of water will generate the same energy whether it runs through the Bureau's plants or the company's plants. The company proposes to use the plants for peaking purposes by running the water through in gushes in certain periods and then shutting down the plants completely during other periods. It is like pouring a bucketfull of water through a funnel. Increasing the size of the funnel only results in getting the water through faster.

The effect of the company's proposal to release the water in this manner upon the operation of the Central Valley project and its primary purpose of supplying water for irrigation is not known and requires much additional study as discussed under the next heading.

THE EFFECT OF THE COMPANY'S PROPOSED OPERATING PLAN UPON THE CENTRAL VALLEY PROJECT OPERATION IS UNKNOWN

Sixth. The company in its proposal reaches certain conclusions which are based upon a suitable release schedule. The effect of a suitable release schedule for operating the company's powerplants for peaking purposes upon the Central Valley project's primary purpose of supplying water for irrigation is not known and will require much additional study. It is questionable, and Bureau witnesses so testified before the Interior and Insular Affairs Committee, whether the reregulation of the Trinity flows which are gushed through the powerplants can be accomplished by the existing Keswick Reservoir without additional storage. If additional costly storage is required, the whole economics of the proposal are affected.

The P. G. & E. proposal is quite vague in other respects. The proposal includes no details as to how and on what terms it will exchange power for pumping energy. Also, the proposal includes nothing as to how the company would support long-term preference customers of the Bureau of Reclamation.

THE COMPANY'S CLAIM THAT ITS PROPOSAL MAKES 5 PERCENT MORE WATER AVAILABLE FOR THE FARMERS IN THE CENTRAL VALLEY IS NOT CORRECT

Seventh. The P. G. & E. Co. states that its proposal would make 5 percent more water available to the farmers of the Central Valley than would be available under the Bureau's plan on the basis that the company would divert 5 percent more water from the Trinity River for operation of its powerplants.

Information given the Interior and Insular Affairs Committee indicates that the releases would be at such time as to make this additional water unusable in the Central Valley. It would simply waste to the ocean through the Sacramento River rather than through the Trinity-Klamath Rivers.

FEDERAL AND STATE TAXES PAID BY P. G. & E. UNDER ITS PROPOSAL ADDS ADDITIONAL COSTS WHICH POWER CONSUMERS MUST PAY

Eighth. The P. G. & E. Co. states that under its proposal $70 million in additional Federal taxes would be paid and $65 million in taxes to State and local governments would be paid—a total of $135 million. This, of course, is simply an additional cost to the company which, along with the company's profits, would necessarily have to be passed on to the power consumers. The Federal Government could likewise pay these additional amounts as in-lieu-of-tax payments by simply raising the Federal power rates in the service area. The energy could be marketed at these higher rates. However, as discussed under item 1 above, the power policy of the Federal Government, as established by law, has been to dispose of electric energy at the lowest rates consistent with sound business principles.

THE ADDITIONAL $50 MILLION CAPITAL OUTLAY INVOLVED IN FEDERAL CONSTRUCTION DOES NOT COST TAXPAYERS ONE PENNY

Ninth. The company's statement that its proposal would save the Federal taxpayers $50 million in capital outlay is misleading. Under Federal construction, this $50 million would be returned to the Federal Government with interest within a period of about 30 years after it had been appropriated and would not cost the Federal taxpayers one penny.

PUMPING POWER FOR SAN LUIS PROJECT IS AN IMPORTANT ASPECT WHICH MUST BE CONSIDERED IN CONNECTION WITH THE COMPANY'S PROPOSAL

Tenth. The only way that the San Luis project can have an assured continuous supply of low-cost energy for pumping purposes is to integrate the Trinity power into the Central Valley project system. The company's proposal includes no details as to how and on what terms it will exchange power for pumping energy.

THE DELAY DUE TO COMPANY'S PROPOSAL

Eleventh. Testimony given to the Interior and Insular Affairs Committee indicates that it will probably take 3 years to complete all the studies required in connection with the company's proposal and to iron out all the points of controversy, assuming that they can be ironed out. We cannot afford the resulting delay in construction of the Trinity River division.

Aircraft Contracting in Southern California Area

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1955

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent granted me so to do, I am pleased to present the text of a letter to me from the Los Angeles Chamber of Commerce, dated April 27, 1955, including the text of the statement by Carl P. Miller, president of the chamber of commerce, as mentioned in his letter:

LOS ANGELES CHAMBER OF COMMERCE,
April 27, 1955.

The Honorable CLYDE DOYLE,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN DOYLE: Secretary of the Air Force Talbott on February 9 made statements on the subject of Air Force contracts in southern California which called for challenge.

Unfortunately these statements were not released to the press until 2 days ago.

Attached is our answer to the Secretary.

May I emphasize something of which I know you are aware, mainly that the heart of the aircraft industry is not in the buildings and machines, but in the thousands of trained engineers and workers who cannot be found in any new location. This is a national defense effort which must not be destroyed.

Sincerely,

CARL P. MILLER,
President.

STATEMENT BY CARL P. MILLER, PRESIDENT, LOS ANGELES CHAMBER OF COMMERCE, APRIL 26, 1955

Secretary of the Air Force Talbott has announced that he will stop further aircraft contracting in the Los Angeles area because we have 25 percent of our industrial employment in aircraft now.

Shall we now expect to hear that Mr. Talbott will not authorize the purchase of any more trucks or cars in Detroit because Detroit has 46 percent of its industrial employment in the automotive industry?

Or that he will not approve the purchase of any more steel in Pittsburgh because Pittsburgh has 41 percent of its industrial employment in the steel industry?

Secretary Talbott overlooks several important facts:

1. Only 8 percent of Los Angeles' total employment is in the aircraft industry. Los Angeles has 23 major industrial groups each producing more than $25 million annually. Los Angeles is the best balanced industrial center in America.

2. During World War II Los Angeles had 43 percent of its industrial employment in the aircraft industry. Fortunate for the Nation that we did! We are better balanced by far now than we were then.

3. The aircraft industry is not made up of buildings and machines. It is made up

of the know-how of thousands of engineers, supervisors, foremen, and skilled workers. Their experience goes back to the beginning of the century, because Los Angeles is the center of the aircraft industry. This is the priceless ingredient of our Nation's air defense, the one thing that can't be reproduced no matter where new plants are located. Secretary Talbott proposes to throw it away.

4. A vital complement to the aircraft industry is the electronics industry. With over 400 electronics factories, Los Angeles is a major center for the production of electronic equipment for aircraft. Here again, the know-how is the basic element. It does not exist in brick and mortar of some new plant built at who knows what remote spot.

5. Los Angeles is farther away by air from potential northern European bomb sources than any other large American city. If Secretary Talbot is talking about submarines, then how soon does he expect to put the lid on New York, Philadelphia, and Washington?

In conclusion, may we respectfully suggest that the Secretary might better spend his time in plans for protecting this important national-defense establishment than in plans for its destruction.

Noncompetition Rule Is Felt by All Agencies

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1955

Mr. PATMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Joseph Young:

NONCOMPETITION RULE IS FELT BY ALL AGENCIES

(By Joseph Young)

The administration's new policy of terminating Federal activities which it deems in competition with private industry is affecting virtually all agencies in Government.

The Budget Bureau has directed agencies to terminate and transfer these functions to private industry, regardless of cost.

Thousands of Federal employees have lost their jobs and thousands more face dismissal if the policy continues unabated.

The AFL Government Employees Council, representing more than 600,000 Federal workers, has attacked this policy and has appealed to Congress to bring pressure on the administration to modify it.

"The entire policy is being predicated without regard to increased cost to the taxpayer, national security, and the Government's moral obligation to Federal employees, who have devoted years of their life in the service of the Federal Government," the GEC said.

COSTLY

The GEC declared: "This will have the end result of increasing the cost to the taxpayer for all services and functions performed by private industry, because the Government, upon termination of Government functions, will not have the means to gage the propriety of private industry cost bids.

"In addition, the Government will be forced to accept private industry's standards for the quality of the end product and services received, and the Government would also further be forced to accept private industry standards of improved techniques, engineering, and technological progress. Inasmuch as these will be geared to a great degree to the civilian consumer's acceptance, our national defense and the lives of service personnel could be seriously jeopardized by inadequate or arrested quality, production, development, and research standards.

"The present policy has displayed total disregard for the moral obligation the Government has to provide jobs and economic security to hundreds of thousands of faithful and loyal civil servants who have devoted their lives to Government service. The policy has further disregarded the aderse and social economic impact upon communities and States in which these Government functions are privately located. There is no guaranty that upon termination these Government jobs and functions will develop into similar private industry positions within the same locality or State boundaries. There is also a lack of proper evaluation of the vast sum of taxpayer's monies which have been invested in equipment, facilities, and the training of highly skilled operating personnel."

The GEC also declared that national security is threatened when Defense Department work is performed in private industry plants. It referred to recent congressional reports of subversion and espionage in private industry defense plants. The Council added that: "Federal employees provide a nucleus of loyal and trustworthy civilian servants. * * * They cannot strike, nor do they seek the right to strike against the Government; therefore, there is no danger of production delays caused by differences between employees and management."

The GEC concluded: "The sum and substance of the policy would be to cause the terrific upheaval of the economic status of Federal employees and their families, the dissipation and dislocation of industrial know-how and industries. The policy would further spell the economic death of scores of supporting businesses and services of local communities throughout the Nation."

ACTIVITIES TERMINATED

Here are some of the Federal activities which the GEC declared have been terminated under the administration's policy. The GEC said this is only a partial list and that many other Federal activities have been transferred to private industry.

1. Manufacture of chain and rope.
2. Manufacture of special furniture for naval vessels.
3. Manufacture of special marine paint for the Navy.
4. Manufacture and development of prototype protective clothing for the Armed Forces.
5. Repair and overhaul of typewriters and office equipment.
6. The Reconstruction Finance Corp. has been placed in liquidation.
7. Synthetic rubber plants have been sold.
8. The Army and Navy are divesting themselves of automotive maintenance and repair to private garages.
9. The Air Force is now contracting over one-half of its maintenance and modification work to private industry.
10. The Navy is increasing the farming out to private interests its manufacturing, research, and development and modification functions.
11. Contracts have been let for private delivery of Government supplies from the General Services Administration's stores depots in the Washington and New York areas; and similar arrangements are being made elsewhere through the Nation and in other Government agencies.
12. The cleaning of governmental buildings has been placed under private contract.
13. The Government manufacture of dry ice for the Navy has been terminated.
14. The manufacture of crates and wooden boxes for Government shipments has been contracted.
15. An increasing amount of engineering and drafting services have been contracted to private industry.
16. The Army is divesting itself of increasing amounts of the research and development of prototypes and manufacturing and modification functions.
17. Granting a larger proportion of naval work to private interests than is assigned to Government shipyards, arsenals, etc.
18. Increasing amounts of the Nation's public natural resources are being turned over to private interest, for development for profit.
19. The Government Printing Office has, and apparently will continue to expand their method of farming out printing to outside printing plants.
20. The Bureau of Engraving and Printing has constantly farmed out work, and it is generally understood that shortly they expect to discontinue the printing of cigarette tobacco and alcoholic stamps. This procedure not only eliminates hundreds of jobs but could become a great security risk.
21. Postal finance activities: Postal remittances, money order and other finance activities formerly handled in post offices and in other central accounting offices have been transferred to banking institutions.
22. Highway post offices: The operation and maintenance of trucks used in the conduct of the highway post offices are now being done under contract.
23. Machine rentals: Pitney-Bowes postage meters, IBM machines and others are now being used in postal work with the ownership retained by business firms and used in postal activities on a rental basis.
24. Contract stations: The Post Office Department has contracted much of the postal work to individuals and firms who to all intents and purposes conduct post offices involving money order, registry, COD insurance, stamp sales, and other postal activities.

Government Spending

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a letter I have received from Mr. Royal A. Roulston, vice president of the Kalix Mills, Inc., of Lawrence, Mass., which is for the attention of the Members of Congress and the Government departments concerned:

KALIX MILLS, INC.,
Lawrence, Mass., April 25, 1955.

Congressman THOMAS J. LANE,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: Since 1941 we have been engaged in the processing of textiles and cordage to various Government specifications requiring mildewproofing, waterproofing, coating and flameproofing; and we are still doing so.

No single company in this area which you so ably represent, has processed as many million yards of military webbing as we have done; none has processed the hundreds of thousands of gun slings and bazooka straps that our company has done. All these, and many others we have accomplished without benefit of fanfare, gratuities, or political pressure of any kind—and we do not want any now either. We have been able to achieve these records because we have the

men, the knowledge, and the ability to get things done efficiently, properly, and on schedule. All of the business that we have been fortunate enough to obtain has been possible because we were the low bidders.

Now in the face of rising labor costs, increasing taxes, ascending power and freight rates, it is becoming extremely difficult for a small company to bid low enough to receive a Government contract award. And just how far we can go in lowering our operating costs any more is problematical and the employees know it. Several of them called my attention to the fact that we as a company do everything to save money and lower costs, but that some well-publicized articles that tend to indicate the National Government at Washington and its officeholders are not cooperating to keep us little taxpayers in business. As a matter of fact, it seems that many Federal bureaus are being managed by incompetents who grossly waste public moneys—these same incompetents are unable to calculate, estimate, or analyze the costs of doing a job or the best way and manner to accomplish it. These conditions are being printed from time to time in the press; they are serious and give us small operators great concern, for it is our money and that of our workers that is being thrown around. We believe it is impossible for a private industry to operate that way and be able to pay its taxes and keep out of bankruptcy.

But Government spending is different; a good many of the men who handle the money were never able to successfully run even a small business, so turn to politics for an easy living. We know of no private business that would allow the stockholders or directors to meet and grant themselves a $7,500 increase in salary as was done recently. In this greater Lawrence area the majority of people do not earn $7,500 in a year. On this score, however, we want to thank you and commend you for the way you voted; we feel that by your negative vote to raise your own pay, you were, and are, keeping faith with your electorate. Again, sir, we thank you.

The morning's Eagle Tribune carries on the front page a devastating double column piece about the Navy having enough tin cans of hamburgers on hand to last several years; other departments are also criticized for similar over stocks. The May issue of Reader's Digest contains a very enlightening article entitled "Dollars to Dust," a story of "almost unbelievable governmental extravagance." Congress votes millions of dollars for the use of the Bureau of Reclamation projects—and the record of this Bureau seems rotten, and my esteemed representative, I mean, rotten. Do you know of any company in this country or any other government where individuals have such a record of poor figuring, overspending and general poor management, and where such individuals were not fired? In our own Government circle it appears that such conduct is tolerated. We don't like this waste and wanton business. Can we look into it more, Mr. Lane? And if the charges as preferred in the papers are correct, will you use your good influence to combat such foolish business.

If you will be kind enough to advise me as to whom I might better direct such complaints, I will write to the address directly; but as you are our most competent representative on the scene, we hope you will be able to convince your fellow Congressmen tha people are beginning to watch them. We are not at war now, and we have a terrificially high budget for even this Nation at peace. Under our system, the Congress must vote the appropriations, and Congress should take time to investigate just how wisely these appropriations are being used. On the face of it, it looks as if too many legislators are throwing away too much money on too many needless enterprises.

We do appreciate your efforts on the behalf of this section; we want you to make noise enough to awaken some of your associates to the cases at issue and to influence them to help you to make us a happier group of taxpayers by eliminating such extravagances as the papers are printing.

Our greetings to you, sir, and our best wishes for your continued success in Washington.

Sincerely yours,

ROYAL A. ROULSTON,
Vice President, Kalix Mills, Inc.

California and Los Angeles Proclaim Seventh Anniversary of the State of Israel on April 26, 1955

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1955

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent granted me so to do, I am pleased to present this letter to me from Dr. Max Nussbaum, chairman, and Dr. Otto Schirn, vice chairman, of the American Zionist Council of Los Angeles, Calif., together with the resolution unanimously adopted at the community-wide celebration in Los Angeles, April 26, 1955, at the Statler Hotel, and a copy of the proclamation issued April 25, 1955, by Hon. Goodwin J. Knight, Governor of the State of California:

AMERICAN ZIONIST
COUNCIL OF LOS ANGELES,
Los Angeles, Calif., April 27, 1955.

The Honorable CLYDE DOYLE,
Congressman From California,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN DOYLE: We take pleasure in enclosing herewith for your information the text of a resolution adopted unanimously at the communitywide celebration of the seventh anniversary of the State of Israel, which was held last night under our auspices at the Statler Hotel in Los Angeles. May we also attach hereto the text of the proclamation issued by Governor Knight for this occasion.

In this connection, you might be interested to learn that a proclamation declaring April 27 as Israel Independence Day has been issued by the Honorable John S. Gibson, Jr., acting mayor of Los Angeles, and that a resolution marking this observance has been unanimously adopted by the Los Angeles City Council.

Finally, may we inform you, in case you have not seen today's Los Angeles press, that both the Examiner and the Herald-Express carried a full-page pictorial display, as well as editorial comment and feature articles, as a salute to the State of Israel on the occasion of her seventh anniversary.

Very sincerely yours,

Dr. MAX NUSSBAUM,
Chairman.
Dr. OTTO SCHIRN,
Vice Chairman in Charge of Public Relations.

RESOLUTION ADOPTED UNANIMOUSLY AT THE COMMUNITY-WIDE CELEBRATION HELD AT THE STATLER HOTEL IN LOS ANGELES ON APRIL 26, 1955

We, the more than 1,200 citizens of southern California, gathered in Los Angeles on April 26, 1955, salute the State of Israel on her seventh anniversary. This tiny notch of land, which gave miraculous rebirth to the Jewish people, is not only a spiritual but an unparalleled physical achievement.

We rejoice in the fact that our Government has played an indispensable role in the extraordinary program of human rescue and rehabilitation of the State of Israel. True to the United States bipartisan sponsorship of the Zionist cause and of the establishment of Israel which stemmed from that inspired movement, our country recognized Israel on the day of its independence and has since granted it material aid and moral support in the finest American tradition.

We want to express our deep conviction that it is futile for our Government to attempt, by bait of arms, to bind to our cause nations who have little or no history in the struggle for democracy and who today have no stake in democracy's defense; indeed, whose cause, as the Bandung Conference reveals, is now supported by Communist spokesmen.

We are convinced that there can be no enduring settlement in the troubled Middle East unless it is based upon acceptance of Israel's existence. In these last 7 short years, Israel has made tremendous strides; it stands today on the threshold of a still more fruitful and dynamic participation in the constructive labors of our time.

On its seventh birthday, we salute Israel, its friends, and its millions of well-wishers in the United States and throughout the world.

Gov. Goodwin J. Knight has issued on April 25, the following proclamation:

"April 27, 1955, will mark the seventh anniversary of the establishment of the Republic of Israel as a sovereign nation. This occasion is being observed throughout the United States during the week of April 22 to 29. The objectives of these programs will be to offer the American public an opportunity to acquire a broader understanding of the achievements of Israel so that the bonds of friendship which exist between our nations will gain added strength.

"The people of the United States—and especially those of the Far West—have a keen appreciation for the hopes and determinations of pioneer men and women. Out of the hard work and ambitious dreams of a great people, our Nation has pushed back the wilderness and conquered the desert. Much of their inspiration was devised from the chronicle of the pre-Christian Hebrew people which they found in the sacred writ. The efforts of the spiritual heirs of Abraham to reestablish a nation in the ancestral homeland have been watched with great interest by the entire world.

"I hope that my fellow Californians will join in extending congratulations and best wishes to the people of Israel as they celebrate the seventh anniversary of their existence as a modern nation. Through such observances we are able to gain greater appreciation for the problems and purposes of those foreign powers with which we enjoy friendly and peaceful relations.

"GOODWIN J. KNIGHT,
"Governor of California."

The Forest Service

EXTENSION OF REMARKS
OF
HON. D. R. (BILLY) MATTHEWS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1955

Mr. MATTHEWS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I should like to pay tribute to the United States Department of Agriculture's Forest

Service, which this year observes its golden anniversary. On April 27, Mr. C. E. Bell, vice president of the Seaboard Air Line Railroad Co., and Mr. Norman Quayle, assistant traffic manager, both of Norfolk, Va., saluted the United States Department of Agriculture's Forest Service by presenting to the chief of the Forest Service, Mr. Richard E. McArdle, in his office a menu of the Seaboard Air Line Railroad which contained on the back cover a tribute to the splendid work of the Forest Service. I am pleased to include this information, and in so doing, I want to pay tribute to the Seaboard Air Line Railroad, which serves so much of the Eighth Congressional District of Florida, for the interest they take in the forestry improvement of our State and Nation, and I also want to pay tribute to the United States Department of Agriculture's Forest Service. The Seaboard's tribute follows:

We salute the United States Department of Agriculture's Forest Service, which this year observes its golden anniversary.

Established in 1905, under the administration of Theodore Roosevelt, the United States Forest Service had as its first chief, Gifford Pinchot. Making forestry the Nation's business, Roosevelt and Pinchot built up the national forests withdrawn from the public domain to 173 million acres. Through their efforts ground work was laid for the eventual purchase of additional millions of acres on the watersheds of navigable streams. Jointly they made both people and Congress conservation-minded.

Since those early years the United States Forest Service has been the symbol of integrated land use. It will continue to face new problems in making the multiple use concept a reality for the increasing population of our Nation.

The United States Forest Service has been a tremendous factor in the cooperative approach to forestry problems. Their work in fire protection, in production and distribution of nursery stock, in extension-education, and in technical service to small owers have been major factors in strengthening State forestry. The Service has spearheaded research in forest management, range management, watershed management, fire control, forest products, forest insect control and forest disease control.

Today, more than 10,000 men and women employed in this organization are charged with the responsibility of developing the multiple-use concept on 181 million acres of national forests in addition to assisting State forestry organizations on cooperative programs.

In the six Southeastern States served by the Seaboard, more than 110 million acres are classified as timber cropland. There are 15 national forests in these States, with an acreage comprising 5,427,049. These forests furnish timber for the manufacture of lumber, pulp, and paper, and furniture, valued in 1953 at $2,464,000,000. The Seaboard Air Line Railroad Co. works closely with industry, State forestry organizations, and the Federal Forest Service toward forestry betterment which contributes to our higher standard of living."

A Reporter in Dreamland

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1955

Mr. BOLLING. Mr. Speaker, the column which follows appeared in yesterday's New York Times and requires no comment from me:

WASHINGTON—A FEW FANCIES, OR A REPORTER IN DREAMLAND

(By James Reston)

WASHINGTON, April 30.—After the President's press conference last Wednesday, this reporter dreamed that Mr. Eisenhower let us go on asking him questions and that he answered every one fully and frankly:

Question. Mr. President, how did the Government happen to say last Saturday that the United States would "insist" on having the Chinese Nationalists in on "any" conversations about the Formosa area, and then announce on Tuesday that we'd negotiate a cease-fire without the Nationalists?

Answer. We goofed.

Question. I beg your pardon?

Answer. We just messed it up. I was up at the farm in Gettysburg Saturday looking over the new decorations in the diningroom when the State Department drafted the first statement.

Question. Who drafted it?

Answer. I think it was that new young Hoover fellow.

Question. Did you approve it?

Answer. Oh, sure, I approved it.

THE BOTTLENECK: HUMAN NATURE

Question. Where was the Secretary of State?

Answer. He was up at Duck Island in Lake Ontario.

Question. Did he approve it?

Answer. No; it was out before he saw it.

Question. Couldn't you get him a telephone up there?

Answer. I've talked to the Signal Corps about that.

Question. But Mr. Dulles got back on Monday.

Answer. Yes; he got back on Monday and thought we should agree to talk to the Communists without the Nationalists.

Question. And what did you think of that?

Answer. I thought that was fine. Great idea. We should never give the world the idea that we are not receptive to talking about peace.

Question. But you didn't think about that Saturday?

Answer. No; as I say, I was busy up the country Saturday.

Question. Mr. President, could I ask you something else?

Answer. Sure ask me anything. (The questioner was really dreaming by this time.)

Question. Didn't you know your switch on negotiations would make Senator KNOWLAND mad?

Answer. Senator KNOWLAND is a ——.

Question. Careful, Mr. President.

Answer. Please keep Senator KNOWLAND out of this.

Question. Don't you like Senator KNOWLAND?

Answer. He's a fine man.

Question. I don't understand.

Answer. He's the only man in the Republican Party who says that if I don't want to run again, nobody should put pressure on me to run. He says he's against having an unwilling candidate in 1956, and so am I.

Question. May I infer from that——

Answer. You may infer from that if nominated I will not run, and if elected I will not serve, unless, of course, I change my mind. Which I may or may not do. Is that clear?

Question. No, sir. How long do you have to serve?

Answer. 20 months, 23 days, 12 hours and, let me see, 45 minutes.

QUEMOY-MATSU: THE FACTS

Question. Mr. President, how did we ever get involved in Quemoy and Matsu?

Answer. I was wondering about that just the other day. We were going along fine, trying to keep our minds on Germany and Japan, and all of a sudden everybody was talking about Quemoy and Matsu.

Question. Can't you defend Formosa without them?

Answer. I can defend anything without them. I never said I'd defend them. We sort of suggested we might have to defend them in the hope that the Chinese Communists would get scared and agree to a cease-fire. But they didn't scare.

Question. If we don't defend them what about the morale of Chiang Kai-shek and his troops?

Answer. And if we do, what about my morale and the morale of my troops? Want me to tell you something?

Question (Eagleriy). Yes, sir.

Answer. I'm sick of Quemoy and Matsu. All I've heard about for weeks is Quemoy and Matsu, and if it isn't Quemoy and Matsu, it's Matsu and Quemoy. I want to get back to Germany and Japan, and all you guys want to talk about is Foster's folly.

Question. May I change the subject?

Answer. You sure may.

ENTER MARSHAL ZHUKOV

Question. On this correspondence you have been having with Marshal Zhukov, isn't it dangerous these days to have a pen-pal in the Soviet Union?

Answer. You mean politically dangerous?

Question. Yes, sir.

Answer. You mean that if I keep on writing to Zhukov, I may get into trouble with the Republican party?

Question. Yes, sir.

Answer. And if I get into trouble with the Republican party for trying to make peace with the Russians, the party might not be so eager to have me run again next year?

Question. I was going to say——.

The President; Oh, Jim; oh, Haggerty, take a letter.

Power Politics in Our Politics

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1955

Mr. PELLY. Mr. Speaker, high in the Cascade Mountains where the weather and climate of Washington State is cut in two is Cloudy Pass. Trying to count the distant and surrounding snow-clad peaks from this lofty ridge of rock, someone once counted to 10,000—and then gave up. The beauty of this spot is surpassing. Standing here once, a woman, with eyes uplifted said, "Thank you, God."

There was more than the beauty of nature to thank God for, although she did not think of other blessings, because

our greatest resource in the Pacific Northwest is not scenery, priceless as that is—it is water. In the mountains, the moisture of the sky is gathered and harbored on high, and as the snows melt, by rivulet, lake, and stream, the water descends endlessly and irresistibly to the sea. Thus, our great resource of power—the force that gives our region the cheapest and greatest potential waterpower in the Nation.

In the Pacific Northwest, people and politician alike, say, "Thank you, God," for their natural resource of water—not only for its potential for needed cheap hydroelectric power, but also because nearly a million acres of arid soil, rich in minerals, lie here awaiting water by irrigation to transform a dry desert into a paradise of food-producing farms.

This makes for a complementary economy; the cheap power means industrialization and more jobs; the reclamation and agricultural development mean an outlet and prospective purchasers for the products of industrialization; and the workers in the factories mean more consumers for the farmers' produce.

Out in the Pacific Northwest, the people are united when it comes to the immediate and pressing need of further developing their resource of water. Strangely enough, of all the areas of the United States, we are the most power starved; yet we have the greatest potential. It is somewhat analogous to the Nile delta in Egypt where the poorest people in the world live on the richest soil. Our problem is that it takes 5 or 6 years after construction of a project is commenced before we will begin to get needed power. Normal population growth means our power shortage will become increasingly acute by 1960, so we must get a major power project started at once.

Aware of the growing reluctance of the Congress for the Federal Government to assume the huge financial investment of the Pacific Northwest power projects, President Eisenhower proposed a partnership program where local interests would pay for power-generating facilities while the Federal Government would contribute toward flood control, navigation, and other improvements properly coming under its realm of responsibility. I think it is fair to state this plan met with widespread approval. Of course, those who wish to see a Federal power monopoly did not approve. These socialistic and bureaucratic-minded individuals were not left to their own devices and desires. An unholy alliance was immediately effected with the keepaways, those secret obstructionists who would sacrifice the needs of this great region on the altar of their own political advantage. Thus, there does exist a small but vocal bloc who would hope to generate votes in 1956 rather than kilowatts because a failure now to carry out the President's program would allow them to scream that this is a do-nothing administration.

To tie in with the partnership program, the 83d Congress deauthorized the Priest Rapids site on the Columbia River to allow local interests to proceed under this plan. Our distinguished and able colleague the gentleman from Washington [Mr. HOLMES] is entitled to great credit for this legislation to meet the impending power shortage, and I am happy to say there would seem to be reasonable expectation that the Grant County Public Utility Department in Washington State will successfully resolve the financing and problems incident to starting such a project.

However, partnership is not the only answer. We have certain multipurpose dam sites which require Federal financing and construction. Here the vast Federal appropriations involved constitute a serious barrier which has seemed almost unsurmountable because the projects are needed now. Defense is a huge drain on the Federal Treasury and the tax burden has been so heavy that it is difficult to get support for appropriations which would have such an effect on the budget.

Our colleague from Oregon [Mr. COON] has introduced H. R. 5789 calling for construction of the multipurpose John Day Dam on the Columbia River. He has recognized the need—that a new start must be made now. The gentleman from Oregon has also recognized fiscal responsibility and the budget situation. In his measure he provides, therefore, that local groups put up the money for the Federal Government. So while the dam would be owned, built, and operated by the Federal Government, like other multipurpose projects, the money to build the generating facilities would be advanced by local groups, as advance payments for the power they will receive when the construction is completed. Thus the Federal budget is not increased; nor are the taxpayers in other areas putting up money for the Pacific Northwest.

Hearings on H. R. 5789, I understand, will be held soon. There are many details which will have to be spelled out. No doubt there will be some areas for dispute as between private, municipal, and local, publically owned distributors of electric power. But in general the people of the Pacific Northwest will wholeheartedly support this measure which may well contain the solution to their future. It may be the difference between economic salvation or ruin in the area. If this bill passes, the citizen can raise his eyes unto the hills and reverently and prayerfully say, "Thank you, God."

Of course some political sour grapesters will wrathfully oppose this legislation, for surely it precludes the issue in 1956 of do-nothing. The slogan of such obstructionists might well be "Power politics is our politics."

I strongly urge consideration of H. R. 5789.

Israel's Seventh Birthday

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Thursday, April 28, 1955

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by His Excellency Abba Eban, Ambassador of Israel to the United States, delivered at the second national dinner of the American-Israel Society in observance of Israel Independence Day on April 26, 1955, at the Willard Hotel in Washington, D. C., the seventh anniversary of the founding of the State of Israel, a democratic nation at the crossroads of the world. The excellent message presents the development of Israel, and its position in the world today. I wish to join in commending Israel upon the seventh anniversary of its creation as a state.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF HIS EXCELLENCY ABBA EBAN, AMBASSADOR OF ISRAEL TO THE UNITED STATES, AT THE SECOND NATIONAL DINNER OF THE AMERICA-ISRAEL SOCIETY, IN OBSERVANCE OF ISRAEL INDEPENDENCE DAY, AT THE WILLARD HOTEL, WASHINGTON, D. C., APRIL 26, 1955

Ladies and gentlemen, once more, at the appointed season, Israel pauses from its daily toil to recollect the splendid annals of its birth.

The fabric of our people's history is rich with enduring memories, both somber and triumphant, stretching out across the broadest tapestries of space and time. Many of Israel's anniversaries have defied the natural forces of oblivion. Generations succeed each other; empires rise and fall; new horizons of opportunity and danger, beyond the imagination of previous ages, arise before the startled vision of mankind. And year by year the descendants of ancient Israel, playing no mean part in all these tumultuous modern changes, continue to preserve the temporal landmarks of their ancient saga. Unfailingly, we celebrate the wanderings and arrivals, the victories and disasters, the revelations and martyrdoms, the harvests and scarcities which formed the experience of those who dwelt in Israel 3 millenia ago.

So deep has been the impact of Israel's experience on the life of other peoples that this intimate national history has entered the spiritual legacy of all mankind.

It is, therefore, a matter of awe and reverence to recall, that we in this decade have added to the list of Israel's festivals a celebration as sublime as any in the record of ages past. For those who assembled to proclaim Israel's new birth of freedom in the Museum Hall on the fifth day of Iyar 7 years ago created a moment of imperishable fame. They restored a nation to its full identity. They reunited a land with the only people whose history, culture, and faith had been cradled in its soil. They consoled the entire house of Israel in its hour of unfathomable grief. They gave shelter of the body and sanctuary of the spirit to the Jewish people, which alone amongst the nations had lacked these essential attributes of a free creative life. The tenacious dream whereby our scattered tribes had preserved their union and identity through the centuries of dispersion had, at long last, completed its cycle of fulfillment.

No wonder that the proclamation of Israel's independence rang out that morning across the ancient valleys in accents of thankfulness and triumph. Nothing since the flight across the Red Sea and Sinai 4,000 years ago can compare in Jewish history with this sudden leap from the blood-soaked agonies of Europe to the pride and exaltation of Israel's sovereignty. The complex symphony of Jewish history had moved to a genuine point of crescendo, with mingled undertones of tragedy and grandeur.

Those who set their hands to our Declaration of Independence were writing history in its highest terms. The world beyond our shores recognized itself as standing in the presence of an unusually majestic event.

Great multitudes in every land owe that which is most precious in their moral lives to the insights and conclusions achieved by the people of Israel in Israel's land through the Hebrew language in the previous epochs of our Nation's history. How could they fail to be exalted by the prospect that the people, land, and language from whose interaction that revelation had emerged would now be restored to their original union? It was true that the Hebrew mind had continued its creative course after the downfall of the Jewish Kingdom. It would be unduly restrictive to measure its achievements exclusively in terms of Israel's life as a nation on its own soil. But the fact remains that it was as an independent nation in the land of Israel that this people rose to peaks of creativeness which it never subsequently attained in conditions of exile and dispersion. Israel's rebirth had created, not indeed the certainty, but at least the opportunity of another memorable stage, in human progress.

Seen in this light the smallness of our State in territory, population and resources became enlarged in the consciousness of men by its broad vistas of historic memory.

But there were other issues closer to the ordinary eye, which went far to explain the special emotion of that hour. So many of the impulses which stir a generous heart were concentrated within the single fact of Israel's nationhood. This was an act of rescue in the truest and most personal sense; it brought a message of redemption for hundreds of thousands of our kinsmen from the abyss of degradation into the dignity of citizenship, labor, and pride of soil. It was also an act of justice. What kind of morality would have marked an international order which inaugurated the freedom of so many nations, while denying the independence of a homeland only to that people which had suffered the most fearful torments under the tyrant's heel? As the nations gathered after the Second World War to write the blueprint of a new world order, they came perilously close to this exclusion. The moral distortion would have been especially grotesque if a small domain of freedom had been begrudged us in the Middle East in which the neighboring Arab people was to inherit sovereign opportunities on an almost imperial scale.

Moreover, this was not merely a benefit conferred upon a people, it was an act of healing to a parched and neglected land, which would now throw off the squalor of centuries and renew its ancient fertility and grace.

The conscience of mankind which had been intimately engaged in the torments of this people and the devastation of this land could not now be indifferent to their reunion. And if anything was needed to enrich the inner drama of the occasion, it was to be found in the slender precarious thread on which the issue hung. Here was a moment distilled out of the hopes and longings of 2,000 years; but no sooner was it achieved than destruction threatened it. Israel came into the world after endless travail, only to feel hostile fingers clutching at its throat. There was a deadly danger that this newborn State so long awaited, would be extinguished with its very first breath of life; and that historians would look back upon that moment as a transient climax to be succeeded by a deep and endless darkness. Few of us will ever forget how at Israel's birth our rejoicing was mingled with a cold stark apprehension, as we saw our embattled, ill-armed forces fighting against invasion from north, and south, and east, with their backs against the sea, which then, as now, was Israel's only salvation from encirclement.

Seven years have passed since then. They have seen sorrows as well as triumphs, frustrations as well as hopes. But as we meet again to pass our fortunes under scrutiny and review, we have no feeling that the brave ambitions of that summer morning have played us false. Seven years ago the prospect of an Israel stable, self-reliant, democratic, progressive, strong was an article of mystic faith. It is now a matter of proven certainty. The permanent advances have enormously outstripped the temporary retreats. In the total balance of these 7 years, the scale is weighted with crushing decisiveness on the side of victory and success. There are breaches in the citadel, dangers to be warded off, imperfections to be repaired, unfinished tasks to be accomplished. But how can any man in his true senses let these anxieties produce a general verdict of doubt or dejection about the ultimate issues of Israel's survival or consolidation.

There is no aspect of Israel's national life which does not reveal an impressive momentum of consolidation. The signatories of our Declaration of Independence represented a Jewish community of 650,000, little more than the bare nucleus of a sovereign community. There are now 1,700,000 citizens of Israel. Month by month they advance toward greater social and cultural unity, establishing a cohesive national personality above the manifold divergencies of their previous abodes. Each year our population rises by 30,000 by natural increase, and the tide of immigration has resumed its flow.

No less expressive than the expansion of population has been the transformation of the land. The cultivated area has been doubled, the irrigated area increased threefold. Four hundred new rural settlements have added their fields and homes to Israel's landscape within the 7 years. It is true that great stretches of our country still lie desolate, a constant challenge to our unexhausted pioneering task. But the swift agrarian progress of these 7 years has already restored to Israel a semblance of its natural abiding grace. The reproach of neglect and erosion will soon be buried beneath broad fields and bountiful forests.

It was only in the third year of our independence that a steady pace of industrial development could be instituted and sustained. Within 4 years the national income has increased by 60 percent. The march towards a solvent economy is most vividly illustrated by the expansion of Israel's export trade which has more than doubled its earnings within the past 2 years. There is little doubt that in the current year our export revenue will cross the $100 million mark, while earnings from invisible exports and tourism will also leap beyond the $29 million earned by these services a year ago. Indeed, this month the unexampled pilgrimage from many lands, in numbers greater than in any previous year, has sustained our country both in its treasury and in its morale—and there are some who see these two points of consolation as in some degree interconnected. Since we met for Israel's anniversary celebration a year ago, markets for Israel exports have been established in 16 new countries. The adverse balance of trade is still acute, but the gap between our requirements and our earnings grows steadily narrower year by year. We enter the eighth year of independence with a merchant fleet of 137,000 tons bearing produce across the oceans under Israel's maritime flag; while 40,000 travelers annually cross the skies on Israel aircraft. We have not begun to see the full perspectives of our economic increase. The past year has seen further progress in the quantity and variety of Israel's mineral resources, which have made the Negev area the most hopeful area of Israel's future potentiality.

There are other evidences of progress which have no physical standards of measurement—intangible but potent symptoms of maturity and strength. Our democratic institutions have stood the test of heavy ordeals.

In a world where the democratic idea faces such comprehensive challenge, the advocates of free government may well draw courage from the manifold and intricate problems which our parliamentary institutions have proved able to sustain. Our people has not lost the genius for sharp disagreement which has distinguished it for thousands of years. But these are always overcome in times of peril, and the unity of our public mind on the main issues of Israel's destiny is all the more impressive because it is voluntarily achieved. Israel's democracy continues to have the special significance which belongs to a solitary example. This summer the peoples of the Middle East, dwelling in the shadow of absolute monarchies, feudal regimes, and the new military dictatorships, may well find serious cause for reflection and emulation in the spectacle of Israel's population asserting their sovereignty through the ballot box. There are few places in our subcontinent where the individual citizen is the undoubted master of his government and the arbiter of his laws.

On this occasion a year ago I suggested that Israel would vindicate the high hopes and vast sacrifices invested in its birth in the measure that it rose to serious levels of performance in the mind and spirit. The past 12 months have seen this aspect of our national life more vigorously emphasized than ever before. New discoveries and acquisitions in archeological research have reminded our people of their roots in the ancient Hebrew past, and strengthened the hallowed associations evoked by the Hebrew language and by the physical associations and environments in which our people live. In many spheres of scientific progress, including those which open the broadest vistas of new abundance and expending power, Israel's scholars and institutions have won a modest but highly cherished international renown. A certain cultural dynamism finds physical expression in the establishment this year of new and more spacious abodes for all our higher institutions of health and learning. The new edifices of the Hebrew University begin to rise on the hills overlooking Jerusalem from the west. The Hadassah University medical center advances towards completion on that very site. The Institute of Technology has burst out of its original walls at Haifa into new buildings housing its five new departments of science, industrial chemistry, architecture, aeronautics and agricultural engineering. The Weizmann Institute at Rehovot has now established its department of nuclear physics, and advanced the high repute which our first president won for Israel in the scientific world.

May I suggest that the experience of the Jewish people in religion and in science are really part of a single harmony. Along the entire journey from Hebrew prophecy to relativity, the central theme has been the belief that the universe and nature are not a wild chaos of unreasoning arbitrary forces, but a pattern of order and progress, guided by an articulate and perceptive system of law. That is the whole difference between Hebraism and superstition. To proclaim this truth has been the mission of Israel's people and Israel's land. We stand with one foot planted on the soil of Hebrew revelation, the other standing firmly in the world of modern technology, overshadowed by the awesome challenge of the atomic age. It is all very well to say that we are a small people. But the great truths are facts of history, not of geography, and it is a fact of history that Israel is the only people whose continuous historic memory comprehends the full cycle from ancient revelation to modern science. Even our geo-

graphic position gives us a vantage point of universality.

Just as we are a bridge between generations so are we a crossroads between continents. Europe, Asia and Africa all lie a few miles from our doorstep. The destiny of each has an impact on our future. Other continents remote in space are brought nearer by links of affinity, sentiment, and mutual aid. America is 6,000 miles from Israel on the map; yet we are united to this hemisphere by intimate relations of friendship with all its countries from north to south; by the kinship which joins us with those who share our Jewish tradition and faith; and not least by the fraternal solidarity which this society has been born to reinforce—I mean the abiding friendship between the United States and Israel as partners in world freedom, and in their aspiration for a peaceful and progressive Middle East.

Israel's international position of which American friendship is a cornerstone is not accurately described by the theory of isolation. Coming to birth against strong hostilities launched against its very sovereignty, Israel has within 7 years achieved ties of mutual recognition with 62 countries, in 48 of which Israel is represented, and 38 of which maintain diplomatic and consular missions in Israel, to promote as well as to symbolize their friendship with us in diplomatic, commercial, economic and cultural relations. Beyond this system of our direct relations stands our membership in the collective world community, in the United Nations and all its specialized agencies dedicated to the vision of a universal community of sovereign States. Against this strongly established integration into modern international life, the fact that there was no such thing as Israel in the jurisprudence of nations a mere 90 months ago seems almost beyond belief. The mark of eccentricity in international life is not to recognize Israel and live in friendship with her. It is the refusal to establish such relations which stands out as the deviation from any normal standards. It is with sadness that I must recall the lack of progress in the disposition of our neighbors to seek peace with us. We have proved our capacity to flourish, if so we must, amidst regional hostility. But this is not our choice. Let us never cease to reassert our will to see our region healed from the plagues of rancor and hostility. The Arab world, in its nine sovereignties extending over a continental expense, can well afford to renounce a useless grudge against a kindred people pursuing its peaceful quest within its lawful domain. How sombre it is to see the Middle East, which by every circumstance of tradition, should lead all humanity in the cause of universal peace, mutilating its own countenance by hatreds, boycotts, blockades and frontier incursions which contribute nothing to the welfare of either people and hang as a weary burden upon the shoulders of a distracted world.

In proclaiming our independence we made no contract with history to solve all our problems in the first 7 years. There is still much to challenge our resourcefulness and faith in the remaining part of this decade. High amongst these objectives stands the cause of Arab-Israel peace. This will come when other nations in our region acknowledge the permanence, the stability and the integrity of Israel, just as we are prepared to hold their permanence, their stability and their integrity in profound and comprehensive respect. We need no mysterious or original formulas for Arab-Israel peace. They and we are signatories of a Charter which obliges us to recognize and respect each other's independence and integrity and harmonize our efforts for the commonweal. The State of Israel precisely as constituted and composed when it entered the United Nations on May 11, 1949, in the precise situation and degree of sovereignty and territorial status wherewith we were accepted, this State of Israel is entitled in the strictest moral and juridical sense, to claim the respect and recognition of the other 59 members of that universal treaty system. The problem is not to find new principles of cooperation for Israel and the Arab States, but rather to assimilate their relationship to the general system of international relations which should prevail everywhere and does prevail in most continents of the world. The independent countries of our continent, most of which only achieved their national freedom in the same decade as we, might well learn and proclaim that men and nations are not at their best when they deny to others the privileges which they loudy claim for themselves. The network of our political and commercial relations now has its outposts in Asia and Africa. The wall dividing us from the destiny of Asia is bound to crumble; and indeed the first promising gaps are already emerging to the view.

As we enter into our eighth year of hopeful struggle, we fix our gaze upon the unique partnership which holds the main promise of Israel's future. The friendship between Israel and American needs vigilant custodians. This friendship is too strong and broadly based to founder upon the rock of any single divergence of interest or judgment.

If our relations were at all times to reflect the various ideals and purposes which we hold in common, there would be no threat to their essential vigor. We hold in common high visions of freedom for individuals and for nations; trust in the inherently affirmative character of human enterprise; devotion to ancient moral precepts which have stood the test of generations; respect for the healing attributes of modern technology and science; faith in democracy as the highest expression of man's social character; a belief that the tolerant harmony of diverse backgrounds, experiences, and creeds may be the avenue to a truly creative culture; warm intimate memories very recent to us, and not too remote for you, of years when pioneer immigrants blazed their trail across many perils toward national identity and strength. In every part of your republic, in its towns and villages, its churches and universities, its State legislatures and public forums, its great media of free opinion and in its departments of central government, I have perceived, and endeavored to transmit, something of the profound sympathy which Israel's cause evokes in the American heart. Similarly in Israel it is to America that myriads of eyes are turned in affection and fraternity, confident that here for the first time in the history of power may be found a union between great strength and deep humility.

The issues on which we are now in counsel are of vital import to the world community. They effect the liberation of our region's natural energies for power and irrigation by just principles of use and distribution; and the urgent need to remove any semblance of preferential treatment in the approach to problems of security and reinforcement. Clearly, if these immediate questions are resolved between us, we shall meet again 12 months from now and celebrate another mighty progress toward a peaceful and stable Middle East.

This society has done much to assert the enduring values which bind us together and determine our destiny of cooperation. I bring my Government's cordial gratitude.

For century after century the mind of the Jewish people, formed and nurtured in Israel, has revolved around the great issues of human destiny and pogress. To the challenge of those issues we now set our gaze as we move with confident stride toward our future. We do so with grateful recollection of the faith, the courage, and the power of decision which we revealed within ourselves 7 years ago this day. To the thousands who fell upon the altar of our freedom we pledge ourselves in an enduring covenant of remembrance. The rich harvest of these 7 years is their monument and our incentive. The fields that we have plowed, the trees that we have planted, the homes that we have established, the fugitives whom we have gathered in, the varied merchandise that we have garnered and created, the ships that we have launched and sailed, the Hebrew life and letters that we have fostered, the enterprise of science and learning that we have promoted, the laws that we have enacted, the friendships that we have exchanged with other peoples, the counsel that we have brought to international causes, the Jewish pride that we have everywhere engendered, the waste places that we have inhabited—all this forms the panorama of our independence celebration. Looking upon this parade of achievement with grateful glance, we move with pride and strength from the contemplation of our greatest yesterday toward the toil and challenge of our everlasting future.

Excerpts From Addresses by Governor Harriman, of New York, on United States Far Eastern Policy

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, May 2, 1955

Mr. LEHMAN. Mr. President, among the courageous voices which have been publicly heard in recent weeks on the question of our Far Eastern policy is that of the distinguished Governor of my State, Averell Harriman.

All except a few of us here in the Senate were silent in the face of the catastrophic implications of the administration's policy in the Formosa Straits. That policy seems to have been sharply modified in the past fortnight—largely as a consequence of the mobilization of public opinion against that policy. One of the courageous public figures who helped mobilize that public opinion was Gov. Averell Harriman.

Governor Harriman is in Washington this week, attending the Governors conference. I am happy to call the attention of the Senate to speeches on this subject which Governor Harriman made, one as long ago as March 8. I ask unanimous consent that appropriate excerpts from a speech Governor Harriman made on March 8, in New York City, before the nationalities division of the Democratic National Committee, be printed in the Appendix of the RECORD, along with similar excerpts from a speech he delivered on April 3, at the inaugural dinner of the joint defense appeal, also in New York City.

Governor Harriman's views command public interest and attention because he is not only chief executive of the largest State in the Union, but he is also a man who speaks with consummate authority on foreign affairs. He was, as everyone knows, one of the principal architects

of our foreign policy and one of the principal leaders of that policy for more than a decade. When he comments on our foreign policy, he speaks from a background of knowledge and experience which few individuals in America can match.

New York State is fortunate to have him as governor; and in these difficult times the Nation is fortunate to have the counsel of his authoritative voice on matters of foreign policy.

There being no objection, the excerpts from the addresses were ordered to be printed in the RECORD, as follows:

ADDRESS BY GOVERNOR HARRIMAN AT THE DINNER OF THE NATIONALITIES DIVISION OF THE DEMOCRATIC NATIONAL COMMITTEE, WALDORF-ASTORIA HOTEL, MARCH 8, 1955

* * * * * * *

You who are here tonight have an especially deep and personal understanding of the need for the United States to take its proper place of leadership in the world.

No nation can go it alone—not even powerful America.

From a military standpoint, we cannot.

From an economic standpoint, we cannot.

* * * * * * *

Last November, Secretary Dulles and Mr. Stassen were talking about what was called a bold, new economic program for Asia. Although late, this made sense. Under President Truman's point 4 progrgam, we had learned much about these countries and what can be done by America to help people to help themselves—in developing resources and raising living standards and productivity and morale.

In this proposal, the Administration seemed to realize that what is needed to counter the external and internal threat of Communist expansion in Asia is a program bold enough to capture the imagination of the people, and vigorous enough to demonstrate that a decent life can be achieved under freedom. They seemed to understand that the cost to us of such an economic offensive would be a tiny fraction of our expenditures for military defense and military aid. And the effect of our help would be multiplied if cooperative undertakings could be developed among the participating countries as was the case in Europe.

So the talk went on. But the men who appear to have had the last word with the President are those who regard this sort of thing as beyond America's capacity—or not worth bothering about. So the idea was laid aside. Great had been the expectations—and equally great was the letdown throughout free Asia.

In this connection, it is significant that a conference of most of the Asian and African nations has been called to convene in Bandoeng, Indonesia, next month. Red China has been invited to participate—whereas Chiang Kai-shek is excluded. We can be sure that the Communists will try to turn the whole meeting into a "hate America" crusade.

Compounding the effects in Asia of all the lack of understanding has been the incredible story of the unleashing of Chiang Kai-shek.

You recall that President Truman, in 1950, ordered the 7th Fleet to neutralize the Formosa Strait—preventing attacks upon Formosa by the Communists and forbidding attacks upon the mainland by Chiang. And you remember how President Eisenhower, in his first message to Congress, reversed all that.

I doubt that anyone would now deny that behind this "unleashing" episode was domestic politics and appeasement of members of his own party.

Yet to the rest of the world it sounded ominous. To the rest of the world, it could only mean that we intended to support Chiang's ambition to return to the mainland; and that, in turn, could only mean world war.

The "unleashing" episode, and the continuing failure to explain or retract it, injured our relations with our European allies—who were quite understandably not ready for such recklessness. And it soured our relations with many countries in Asia.

Last week, Chiang Kai-shek was still asserting that he intended to return to the mainland, with the help of this country. Asked about this, the President finally said "the United States is not going to be a party to an aggressive war." In effect, after 25 months, Chiang was to be leashed again.

The President appears to have realized at long last the wisdom of President Truman's policy of neutralizing the Formosa Strait.

Of course, we should and will defend Formosa. There has never been any doubt about that. But it should also be clear that there is no future in any Asian policy which pays more atention to the objectives of Chiang Kai-shek than to the aspirations of the 900 million people of the other free countries of the East—as well as the peoples of Europe.

I am sure of this: The first thing we must do in the Formosa area is to end our desperately dangerous policy of going it alone. Whenever we take positions alone, it offers a temptation to the Comunists to take risks in the hope of furthering their basic objective of splitting us from our North Atlantic allies, and our friends everywhere. We must get our diplomacy back on a basis of collective action. We must internationalize the defense of Formosa, and do this, if possible, through the United Nations.

What we need now is a new spirit in the conduct of foreign affairs—a spirit of humility, of moderation, of partnership, and of peace—a spirit which would ring with a new sound in the ears of the world, but which would gain its strength because it would be a reaffirmation of the finest strains of American realism and idealism—of the values which made our Nation so long the refuge of the suffering people of mankind and the embodiment of the hopes of freedom and justice in the light of God, everywhere in the world.

Only as we return to this spirit can we hope to lead.

Only as we return to this spirit can we hope to survive.

ADDRESS BY GOVERNOR HARRIMAN AT THE INAUGURAL DINNER OF THE JOINT DEFENSE APPEAL, WALDORF ASTORIA, NEW YORK CITY, APRIL 3, 1955

* * * * * * *

What we are saying applies to world affairs in the same way. In the free world, just as at home, there can be no true strength without unity. And unity in turn depends on a mutual respect and equality of status among peoples of all races and creeds. Prejudice and claims of inherent superiority have no more place in international life than in domestic life.

I submit that we are in danger of losing the whole cold war if we fail to recognize this principle and make it live.

Every time an American rattles the atomic saber in Asia, every time an American talks about Asians fighting Asians, we lose friends among the uncommitted peoples.

Perhaps most tragic of all, for months now our policy in regard to the Formosa Strait has failed to take into account the sensibilities of either our Asian or our European friends and allies. Unhappily, there are those who have put our country in the position of appearing not to care for the judgment of those whom we would have as our friends. This is basically, I am afraid, an expression of that intolerance which we are seeking to stamp out in our domestic life and everywhere.

Surely there is yet time to bring together all of the countries involved—not only in the East but in Europe—in order to internationalize the defense of Formosa, so vital to our own and free world security. The whole world is a party at interest—and it has been not only illogical but deadly dangerous to arrogate to ourselves the sole responsibility for decisions which involve the future of many peoples.

It is a great enterprise in which we are engaged—that of making America and the world more tolerant and happier and stronger. There have been temporary setbacks, and there will be more. But over the years there have been even greater advances, and there will be more. The setbacks serve to make us realize how precious are our liberties, and to stimulate us to work harder for their protection. As long as we are in there doing battle, in good spirits and with confidence, I shall not doubt the outcomes.

For I have infinite faith in the triumph of true brotherhood, not only in this great country of ours, but—with our inspiration and our patient and steadfast leadership—throughout the world.

Secretary Benson's Dilemma

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, May 2, 1955

Mr. HUMPHREY. Mr. President, I ask unanimous consent that an editorial entitled "Secretary Benson's Dilemma," from the Farmers Union Herald, of April 18, published in St. Paul, be printed in the Appendix to the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SECRETARY BENSON'S DILEMMA

Out of the maze of speeches, testimony, and actions, contributed by Mr. Benson in his short reign as chief agriculturist is a pattern, or theory, of prosperity, unique in American history.

Mr. Benson, as the great engineer of the sliding scale of price supports, has consistently forced farm prices into lower levels. Together with this, he has gone the limit of the law in forcing cutbacks in production. With both lower prices and decreased production, Mr. Benson has sought to cut American farm income under an illusion that what goes down must come up again sometime.

Now, when the come-up is so far in the distance even Mr. Benson has lost sight of it, he assays another goal as part of his theory of prosperity.

Just a few days ago he told Congress that, although farm income is slipping, farm population also is diminishing. Thus, he said, even with less pie, each farmer who's left on the land will have a bigger slice.

Obviously, Mr. Benson thinks farming is like automobile manufacturing. Going broke or fearing they may go broke has driven many from that field. There are only a few left and each is making more profit than ever.

That may be well and good; we will not argue the point. But, when you apply the theory to the entire economy, there are some major defects. Under such a doctrine of monopoly, doctors can and do argue there should be fewer doctors so that the few could make more. Lawyers could want the same. So could druggists, hardware mer-

chants, barbers, office workers, factory hands, and everyone else. Who wants most wants competition least.

Now don't laugh. But the problem Mr. Benson seems to face is too many people and not enough of the good things of life to go round.

Will someone kindly tell Mr. Benson he's not the first to be puzzled about that problem. But please tell him also that eliminating people as the solution is not in the best taste. People just don't like to be eliminated.

The real problem, economists say, is how to parcel out more evenly the good things of life to all the people.

Senator George: Preeminent Senator of 1955

EXTENSION OF REMARKS
OF
HON. JAMES H. DUFF
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, May 2, 1955

Mr. DUFF. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article about the distinguished Senator from Georgia [Mr. GEORGE] written by Roscoe Drummond, and published in yesterday's New York Herald Tribune.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WASHINGTON
(By Roscoe Drummond)
PREEMINENT SENATOR OF 1955

Who would you say is the preeminent figure in the United States Congress today?

Would it be Representative SAM RAYBURN, the shrewd, respected Speaker of the House? Or Senator LYNDON JOHNSON, the able, malleable leader of the Democratic majority? Or Senator WILLIAM KNOWLAND, the earnest, lone-wolf Senate Republican leader who sometimes speaks for the administration?

If you name any of these you will at least be going against the majority judgment of the Washington press corps.

Their almost unanimous judgment today is that the single most powerful, most influential person in the whole legislative branch of the Government is Senator WALTER F. GEORGE, the veteran Georgia Democrat, who accepted the chairmanship of the Senate Foreign Relations Committee to President Eisenhower's great satisfaction.

Senator GEORGE is today proving himself to be a more positive force than any of the other preeminent Senators of the last quarter century.

He is far more powerful constructively, say, than Senator William Borah, who was largely a negativist, and who in his implacable isolationism stood astride the Senate Foreign Relations Committee when the United States was trying to free itself from a policy of neutrality as Hitler began to topple Europe and strike at the shores of Britain.

He is more influential than Senator Arthur Vandenberg whose great influence centered principally in foreign affairs.

He seems to me to be more influential than even Senator Robert Taft, whose interest and talents were mostly focused upon domestic legislation, and whose influence did not cut as widely across party lines as does Senator GEORGE'S.

This Congress is hardly 4 months old and Senator GEORGE has personally put his imprint on the mood and substance of the largest and most significant congressional actions.

I think it no exaggeration to report that today the quiet, poised, deep-voiced Senator GEORGE is the second most powerful and most influential man in Washington—second only to the President himself.

When this session of Congress began last January, Mr. GEORGE was the ranking Democratic member of both the Senate Finance Committee and the Senate Foreign Relations Committee. He could be chairman of either one. He chose Foreign Relations because his primary interest was foreign policy, and because he knew that the Senate's greatest decisions would almost inevitably be in the field of foreign policy.

He chose the Foreign Relations chairmanship knowing that President Eisenhower had privately expressed the hope that he would do so. He knew that they could and would work together well. He knew that it would be important—important for the country—for him to help create the climate which would give the President the maximum freedom and flexibility of action to take steps which might run counter to short-run public opinion.

He is accomplishing this objective decisively, sometimes against considerable odds.

By his own quiet authority, by his detachment and by his leadership, he has erected a strong barricade around the bipartisan conduct of foreign policy—a barricade against both Democratic attacks and Republican attacks.

Mr. GEORGE helped put through the Senate the President's fight-if-we-must Formosa resolution with only three votes in opposition—two from Democrats; this at a time when many of his Democratic colleagues were looking hungrily at this issue as a means of belaboring the Administration and when, without his restraining influence, many Democrats might have leaped off the reservation.

He deliberately stepped out ahead of the President to break ground in favor of a Big Four conference at the summit at a time when Mr. Eisenhower needed to have public opinion responsive to a Big Four meeting he couldn't avoid if he wanted to.

While the White House was being indecisive, he spoke out instantly in favor of accepting Chou En-lai's offer of direct negotiations over Formosa, and undoubtedly influenced the administration's policy.

In domestic legislation, it is probable that no single Senator was as influential in helping the President defeat the quickie, premature $20-of-everybody tax cut as Mr. GEORGE.

This is some of the evidence that WALTER F. GEORGE is more powerful than any other Democratic or Republican Senator today.

Position of New York State Bar Association on the Bricker Amendment

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, May 2, 1955

Mr. LEHMAN. Mr. President, the committee on international law, of the New York State Bar Association, has submitted to the Senate Judiciary Committee a statement outlining its views on the Bricker amendment, now pending before a subcommittee of the Judiciary Committee. The statement was prepared by Mr. Sol M. Linowitz, on behalf of the New York State Bar Association. Mr. Linowitz is also New York State chairman of the American Association for the United Nations.

I ask unanimous consent that his excellent statement of the bar association's position on the Bricker amendment be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT REGARDING BRICKER AMENDMENT
(By Sol M. Linowitz)

I am against the Bricker amendment. I am against it because I have too much respect for the Constitution, too much faith in those who established this form of government, too much confidence in the intelligence and integrity of those who lead this Nation to believe that this kind of tinkering with the Constitution is either necessary or desirable at this critical hour of world history.

This does not mean that I am opposed to all of the things Senator BRICKER and his supporters say they want to accomplish by means of the proposed amendment.

Thus, throughout the discussion there has been constant reiteration of the argument that the Bricker amendment is primarily designed to assure that no treaty or other international agreement which contravenes the Constitution shall have force of effect. The simple fact is, however, that if that were really the major issue, then there would be no great quarrel and the only significant question would be one of procedure rather than substance. For proponents and opponents of the amendment alike entirely agree that the Constitution should be supreme with respect to treaties or any other international agreements. And those of us who oppose a constitutional amendment to that precise effect do so only because we are convinced that this is already the established law under the Supreme Court decisions and that modifying the Constitution so to provide is neither necessary nor appropriate.

What is far more disturbing about the Bricker amendment, however, is that it would, if adopted, go far beyond any such presently professed objective and would in fact seriously hamper the conduct of American foreign policy and impose substantial restraints on all of our international dealings.

As reintroduced in the Senate on January 6, 1955, the Bricker amendment proposes several farreaching constitutional changes, most of them now quite familiar. The one about which most of the discussion again revolves is article 2 which would require an act of Congress in order to make a treaty or executive agreement effective internally. This is the famous so-called "which" clause back again but this time without the word "which."

As has been pointed out, this kind of a provision requiring legislation for any international agreement with internal effect would necessarily mean that a treaty or other international agreement could not become operative internally until five separate acts of approval had occurred: (1) Presidential signature of the agreement; (2) ratification of the agreement by two-thirds of the Senate; (3) passage of a confirming law by a majority of the Senate; (4) passage of a confirming law by a majority of the House of Representatives; and (5) signature of the law by the President. Treaties of friendship, commerce, navigation, international air travel, reciprocal rights of aliens here and American citizens abroad, and countless other types could not go into effect until this five-step mandatory procedure—going far beyond anything required by any other country in the world—had taken place. It is interesting that precisely such a constitutional

provision was proposed by Gouverneur Morris at the Constitutional Convention in 1787 and overwhelmingly defeated because of the practical difficulties which would be involved.

Why then, we may ask, is there 166 years later a need for the very proposal rejected at Philadelphia? Does our experience since then indicate that the delegates to the Constitutional Convention were wrong and that Senator BRICKER and his present adherents are right?

The answer we frequently hear these days is that there is presently an urgent need for this kind of constitutional amendment because of our tragic experience at Yalta and because the United Nations may take action which would impair or suspend our personal and civil rights in this country. I submit that neither of these contentions bears scrutiny. In the first place, the simple and undeniable fact is that the Yalta agreement would not have been affected in the slightest degree even if the Bricker amendment had been part of the Constitution at the time the agreement was made. By its very terms article 2 of the amendment would apply only to treaties or other international agreements which are to become effective as internal law and nothing in the Yalta agreement purported to be of an internally operative nature.

As to the assertion with respect to the effect of United Nations action internally, not only is this prohibited by the U. N. Charter terms, but the danger is admittedly predicated solely on a wholly speculative and subjunctive possibility sometime in the future.

In other words, the Bricker supporters do not establish that United Nations action has in fact ever resulted in the deprivation of our rights; they contend rather that a situation might arise in the future in which the United Nations might take such action and that this action might be approved by the President and two-thirds of the Senate. As Prof. Zechariah Chafee of Harvard Law School has reminded us, never before in our history have we found it necessary to adopt a constitutional amendment predicated solely on a conjectural danger. Every amendment to the Constitution came into being to meet an existing problem or to eliminate an existing evil. Why, then, is there such urgent demand for the Bricker amendment now? Why should we take it for granted that the President and the Senate will in the future do what they never have done in the past—approve a treaty or other agreement to which the Bricker adherents could point as bad enough to justify a constitutional amendment? Why should we now, when American leadership in world affairs is most important, lose confidence in the judgment of our own leaders?

The fact is, of course, that Senator BRICKER and his friends are proceeding on the basis of two fundamental assumptions. One is that the safeguards against unwise treaties set up by the Constitutional Convention and deemed adequate since then will no longer be sufficient to protect us. The other is that the President and the Senate cannot be trusted in the future to refuse to approve any treaty or other international agreement which might in fact invade the rights of any Americans, interfere with due process of law, encroach upon our domestic laws, or change in any respect our form of government. I am unwilling to accept either of those assumptions. I am unwilling to sell short our long-established constitutional procedures and our present and future leaders by showing less faith in them than was shown in us.

Beyond all this, I wonder whether there is not something else of deep but overlooked significance implicit in the Bricker amendment: That the President and two-thirds of the Senate who (according to the Bricker view) cannot in the first instance be trusted to make proper international agreements will for some strange, inexplicable reason be deserving of greater trust and confidence the second time around when precisely the same instrument is presented for approval by a majority of the House and a majority of the same Senate and the signature of the same President. The only logical conclusion from the amendment is that its supporters believe some crucial safeguard will come not from another look by the President and Senate, but because of the additional requirement of approval by a majority of the House of Representatives. If this is so, then it must also follow that what those who support the Bricker amendment really seek is not the realinement or clarification of treaty and international agreement functions as between the President and Congress, but rather the shift of treaty-making authority within the legislative branch of our Government itself. The Bricker amendment would, in effect, give the House of Representatives the right of veto in international agreements over both the President and the Senate. This, I submit, is nothing less than a drastic and revolutionary shake-up of respective responsibilities as between the two Houses of Congress and suggests that the most important effect of the Bricker amendment would be to limit the treaty power and authority of the Senate far more than it would the power and authority of the President. Is that what the Senators who support the amendment really intend?

For 166 years the Constitution has given us a firm basis for a Government with a careful balance of powers. Today, as our responsibilities as a Nation are greater, our confidence in ourselves and our trust in our leaders must be equal to the challenge. It is time we recognized that trying to amend the Constitution out of suspicion, distrust, or fear will not fashion for us a sounder Constitution, a stronger Nation, or a safer tomorrow.

We Live Two Lives

EXTENSION OF REMARKS

OF

HON. WILLIAM H. NATCHER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1955

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "We Live Two Lives," which appeared in the April 25, 1955, issue of the Union County Advocate, of Morganfield, Ky. The editorial is as follows:

WE LIVE TWO LIVES

There are 963 weekly newspapers in Canada, with a total circulation of almost 2,500,000. The January issue of a monthly letter issued by the Royal Bank of Canada was devoted entirely to them and their significance. It said: "Singly or taken together these weekly newspapers have a great influence on the thought and action of our people.

"Everyone, in a sense, lives two lives, one in a small and the other in a great circle. He belongs by birth or choice to various intimate groups like his family, his neighborhood, and his cluster of friends. He is also a member of the whole society of Canada, and he is living within an interdependent system of nations. The weekly newspaper belongs to his intimacy."

The same thing is true of the thousands of United States weekly papers and small-city dailies. They are the running record of the community and of the individuals, families, enterprises, and institutions which created, forged, and maintained it.

Love Thy Neighbor

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, May 2, 1955

Mr. HUMPHREY. Mr. President, an impressive address was given by the Most Reverend Albert R. Zuroweste, D. D., bishop of Belleville, Ill., at the third International Catholic Rural Life Congress held the week of April 17 at Panama City, Panama.

His Excellency, as chairman of the international congresses committee of the United States National Rural Life Conference, participated in the formal opening on Sunday, April 17, and delivered an address at an assembly of 6,000 persons in the Plaza de la Cathedral, historic site of the proclamation of Panamanian independence.

Because this vital message should be read by everyone in the Congress, Mr. President, I ask unanimous consent that it be published in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The official opening of our third Catholic Congress on Rural Life took place before the altar of God where we begged God's blessing upon all who will participate in the studies and considerations of the next few days.

In 1951 we inaugurated these congresses on rural problems in the Eternal City with the blessing and encouragement of the Father of Christendom. Our second congress was held in Manizales, Colombia, in 1953, and now it is our privilege to be in Panama for a third congress. This conference has the approval of the ecclestical authorities of 17 countries of the Caribbean area.

Our purpose in holding this congress is to promote the four aims of the International Catholic Rural Life Conference. These aims are listed on your programs. Briefly, we may summarize them by saying that they embrace in a very special manner that second part of God's great commandment of love: "Love thy neighbor as thyself." In this instance our neighbor is the rural dweller and worker, particularly the underprivileged.

We hope to help him spiritually and materially to improve his station in life, to assure him stability and protection of his rights as an individual and give him suggestions for the betterment of his home which is the foundation of all society. We will attempt to offer him opportunity for more leisure time which he might devote to his spiritual welfare and to works of the church. In this program the leadership of sincere, honest, and capable men and women is needed and the spirit of cooperation from the farmer is essential.

We do not come pretending to know all the answers to these problems. We, who are from the United States, hope to learn from you and share with you the results of our experience and experiments. This is to be a cooperative effort based upon Christian principles and the recognition of the fundamental truth that men are made to the image and likeness of God and have an eternal destiny.

The entire program of the Catholic rural life movement has as its objective the teaching and application of Christian ideals in the lives of those who live and work in rural

areas in every country in the world. Naturally it strives to improve social and economic conditions in the home because the home is the foundation of society. In this particular phase of its effort it suggests means of easing the burdens and labors of the wife and mother so that she may have more time to give to the religious training and recreational pursuits of her children. In most countries it has been proved that much of the burdensome daily work of farm life is borne by the woman. It is essential, therefore, in our deliberations, that we formulate plans and methods of improving the status of rural women.

The Catholic Rural Life Conference wishes to emphasize the obligation of non-Communist countries to work together in improving farm methods, animal husbandry, seed and crop development, to foster land and water conservation so that God's good earth will yield a more abundant harvest and thus alleviate the sufferings of mankind. The strong among these non-Communist countries must assist the weak, the weak must cooperate with the strong. The Catholic Rural Life Conference aims at being the beacon light showing the way in proposing plans and programs for increased production, improved social conditions, and elevation of the rural family's status.

Government has an important part in this program and should strive to stimulate in farmers a desire to improve their lot through education, through application of the ability they possess and establish programs of research, education, and assistance which will help them to make better use of their labor and farm resources. Properly organized assistance often would help greatly to develop impoverished people who must do their own work and who find it so difficult to perform tasks which are easily and quickly done by persons better situated. The drudgery of making a living under trying conditions with meager resources and natural inability to complete undertakings easily and well often may be greater than we think. If we do no more than help to lessen this drudgery through early training and to increase the income moderately, we will have done much to help such persons live a comfortable and wholesome life.

In developing the Catholic rural life program it is logical, therefore, for us to seek and welcome the cooperation and assistance of Government. In the United States we urge the Government to use its tremendous productive power to alleviate hunger and distress of people in less fortunate countries. We approve the policy of disposing of surplus farm commodities by selling them to foreign countries at their own currencies.

The technical assistance program finds favor with us because it is indeed the Christian way of contributing to the improvement of living standards of people in other countries. On this point His Holiness Pius XII addressing delegates to the United Nations Food and Agriculture Organization on December 6, 1953, had this to say: "It is a fact, in spite of recent improvements, that the problem of food remains a crucial one for a large part of mankind." The holy father then summarized the work of the FAO and said:

"The plan, so broad and varied, unquestionably raises uncommon problems. The most delicate, as you have clearly seen, will consist of creating social conditions in which workers to whom you are going to give aid and advice will develop a taste for their work, interest themselves in it and exploit to the maximum the resources procured for them. In fact, it is useless to send out experts to teach new methods and improve mechanical equipment when the human conditions in which a man lives keep him from drawing from his efforts the profit he has a right to expect. Thus to your economic task is added a no less decisive social one."

These words of his holiness are truly applicable to us the sponsors, participants and leaders of the Rural Life Congress. It is not an easy task but it will bear much fruit because it enjoys God's blessing. It demands an intelligent approach, a Christian outlook, a zeal and love for our fellowmen. Each participant must be filled with a holy enthusiasm and be convinced that in this congress he is doing the Master's work. We place our cause in Christ's hands and beseech His virgin mother to be at our side. St. Isidore, our patron and his saintly spouse, Maria de La Cabeza, receive our prayerful petitions in this hour of need.

Seaway, Ships, Trade, Tariff, All Connected

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, May 2, 1955

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Seaway, Ships, Trade, Tariff Are All Connected," which was published in the Duluth Herald of April 27, 1955. The editorial deals not only with the St. Lawrence seaway, but refers to reciprocal trade agreements. Inasmuch as the reciprocal trade agreements measure, H. R. 1, is the order of business at this time, the editorial is most timely, since it relates to the need for reciprocal trade.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SEAWAY, SHIPS, TRADE, TARIFF ALL CONNECTED

Three foreign ships, one German, one Dutch, and one Norwegian, docked at Cleveland Sunday. They were the first arrivals from Europe this year. Each is 257 feet 10 inches long, to fit the present locks. All are designed to be lengthened when the seaway is completed, with fewer locks and much longer ones.

Few ordinary commercial events benefit a region more generally than does a new or increased movement of freight into the region and away from it. Imports mean jobs and business. So do exports. We can't expect exports to run far ahead of imports unless we are willing to make up the difference with gifts, under some name or other.

In 21 years, since the beginning of the Reciprocal Trade Agreements Act, our imports have increased remarkably, from $1.707 billion in 1934 to $10.873 billion in 1953. Even after allowing for the shrinkage of a dollar's buying power that remains a huge flood of goods into this country. By old-fashioned protectionist reasoning those goods should have ruined our industries by this time. But the damage has been much more than offset by the increase in exports, from $1.988 billion in 1934 to $15.747 billion in 1953.

The House of Representatives has voted to extend the President's power to make reciprocal trade agreements from 1955 to 1958. The Senate Finance Committee has held hearings which show how much such an extension, without several curtailing amendments, is feared by many industries. Yet the committee has just voted, 13 to 2, to approve the bill without crippling amendments. The committee avoided these through a compromise in which the White House participated—an amendment to empower the President to limit imports of specific products if they become large enough to threaten an industry vital to national security.

Chances for Senate approved in this form are considered good, but we may learn otherwise when debate begins. It has begun to look in recent months as though world trade were about to become a more intense struggle for markets.

Requests for protection are understandable. In a number of cases they seem to be reasonable and could be granted without injuring the whole program. But we can't give all or most industries all the protection their gloomier spokesmen think desirable and still build our export trade as we need to build it. An additional billion or two in exports and imports, a few years from now, might make a big difference in the cities served by the seaway.

Contemporary Life in the Soviet Union

EXTENSION OF REMARKS
OF
HON. FREDERICK G. PAYNE
OF MAINE
IN THE SENATE OF THE UNITED STATES
Monday, May 2, 1955

Mr. PAYNE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD three interesting columns by May Craig, Washington correspondent for the Guy Gannett newspapers in Maine on contemporary life in the Soviet Union. The articles appeared last week in the Portland Press Herald.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Portland (Maine) Press Herald of April 26, 1955]

BEHIND THE IRON CURTAIN—FIRST AMERICANS TO SEE PRAVDA PLANT

(By May Craig)

Moscow.—The newspaper Pravda, famous voice of official communism here, carried a story about the American editors' visit, and people everywhere notice us, recognize us, ask our guides if we are not the American journalists. They noticed us before, because we look different, look foreign, but after the story in the paper, they knew who we were.

We had a unique opportunity to go over the Pravda plant, first time Americans have been there. It has an enormous circulation—about 5 million, with an extra half-million on Sunday. This circulation had never been officially revealed up to the evening we were there and the manager of the publishing company, Georgi Romanchicou told us. About 2½ million papers are published in the Moscow plant; the rest in other key cities, with mats sent there from headquarters here, so that there can be no mistake in the official version—no bad copy—either in the numerous magazines or the Pravda and the smaller newspapers also printed at the plant. Some papers are airmailed out.

We saw the floors where they get out the color magazines, as well as the newspapers, and the children's magazine Pioneer; the humorous magazine Crocodile, which is like the London Punch; the Peasant Woman and others.

The editors were enthralled with the trip; they peered at the presses and the rotogravure machinery and asked a thousand questions. Answer came through an inter-

preter who accompanied us. The editors said most of the machinery was not as good as ours. Pravda has machinery from Germany and Britain as well as the Soviet. None from the United States.

After the tour we went up to the manager's office and had a press conference, also hot tea and cakes. The plant covers 6 acres of ground and has many floors below street level. It is a modern building, but the elevators were not what we would call modern. They buy newsprint by the meter (length) and not by weight as we do.

I asked if they had a union of workers and reporters and he said yes, and he belonged to it. Explanations revealed he really runs it, because he has the final say. He was one of the workers himself in stereotype section, and many greeted him familiarly as he conducted us.

It may sound like nothing to you, that we went through this plant, but it was unusual. None of the American correspondents here had ever been through. The Associated Press man was so envious, he offered to carry a brief case for one of us if he could slip in with us. Of course, there is no such thing as "slipping in," in this country. Each one of the editors is a marked person and our permits are very explicit.

It isn't easy—or cheap—to be a correspondent here.

The cost is one reason there are not more correspondents here. One correspondent said living is expensive—he pays a chauffer $500 a month, a cook $250. This is under the ruinous exchange rate—four rubles to a dollar. Apply that to the prices—calculated on the much cheaper ruble value and you find a small triangular silk scarf for a woman, single thickness, $20. The smallest souvenir costs several dollars.

There are long queues at food stores; the International News Service correspondent's wife said she spent a good deal of her time in queues. You get the servants through the government and there are gimmicks in that, too. An American can't get a license to drive a car—that is, not for years and years and under all sorts of conditions. That means he has to have a chauffeur selected by the government, who knows exactly where he goes and probably listens to every word said in the car. Most Americans don't want a license—one accident and you are in the clink for 3 years maybe.

Shopping in the biggest department store is an experience. It is a state store, of course, though there are some small private enterprise stores. It has a huge arcade from street level to the top, four floors up, roofed with glass. Balconies run along the sides in each wing, on every floor, with little departments along the side. People stroll along the balconies, sit on the steps and eat. It is a whole shopping center, but under cover.

When you select something, the salesgirl gives you a slip with the amount, you take that to a cashier in the corridor, with the money, she receipts the slip and you take it back to get your purchase.

People go to the store to look and gossip and see friends, not necessarily to buy. I didn't find the goods fine even when expensive. The Communists do not go in for consumer goods, that is the policy. The money goes into "producing things to produce other things" needed for their national build-up plan.

[From the Portland (Maine) Press-Herald of April 27, 1955]

BEHIND THE IRON CURTAIN—SUBWAY STATIONS ARE ART GALLERIES

(By May Craig)

Moscow.—The Moscow subway is beautiful and, so far as I could tell, very efficient. It is one of their showcases and they are justly proud of it. Nobody would think of taking anybody down into a New York subway except to get somewhere. But in Moscow the stations are art galleries. I saw four of them, the best of course. What they may be out at the end of the line, I don't know. But I don't know anything like the four I saw, anywhere else. Fare is 12½ cents as long as you want to ride.

In the first place there is none of that ugly clutter of advertisements that disfigure our roads, our railway stations, our streetcars, and buses. The Union Station in Washington is a disgrace, with advertisements stuck everywhere, so you can hardly see the directions for travelers.

There are no advertisements in the subway trains, which are clean, painted, bright, efficient. Trains run every 105 seconds on the main lines. At the Komsomol Station, the big one, they can handle 100,000 passengers per hour. This is under the Komsomol Square.

The stations are mostly marble. "Easy to clean," the guide told us. They are very large. At each end there is a large piece of bronze statuary—in the Byelorussian stations, there was a memorial to soldiers; at the other end a symbolic statue of a man, woman, and child. Byelorussia is one of the Soviet Republics. This station was designed by a woman. Women here do everything—many of the doctors are women. There are more women than men students in the great Moscow University on Lenin Hill, in the Moscow suburbs.

In the ceiling of this subway station, there are colorful mosaic pictures of life in Byelorussia, pictures of people in native costumes. In the Komsomol Station there are historical pictures on the ceilings. The beauty of the stations, their size and fine proportions must be a daily pleasure to the people. I try to remember that this is all done by the state, that the faults of our system of paying by advertising is the price we pay for free enterprise and choice by the people of what they want. It's like having government radio and TV—you may not like the commercials, but the audience gets a control by what they choose to listen to. It's our choice, not the government's choice, with us.

The Moscow subway has three long lines, criss-crossing the metropolitan area. Then they have a complete circle line, half way from center to the ends of the lines. So you can get from one line to another by the circle. Total mileage is 42 miles.

The subways are immensely deep—240 feet is the deepest. Practically all stations have escalators, and some of them are terrifically long. The stations were used for meetings and as shelters during the war, in bombardment. There is absolutely no clutter, no chewing gum stuck anywhere, no litter of old newspapers and cigarette stubs; there are receptacles for trash and the trash is there.

I felt more friendliness in the subways than almost anywhere else. Men saw that we were strangers and got up and gave seats to even the men in our party. One old lady spoke to me and I answered—I knew she asked me where I was from, but neither understood the other. So I leaned over and asked our feminine guide to translate. Sure enough she wanted to know where we were from. She had two children with her and I asked the guide to tell her I had four grandchildren. The lady smiled and said I looked too young—which flattered me immensely—but the women of this country work so hard that they get old at 40.

People do not seem to care about clothes. They go around in all sorts of nondescript clothes; there is no style. Our hotel has as good food as any place in the city, we were told by resident Americans. This is because it is a cosmopolitan place, many foreigners stay here. It is the Intourist Hotel, the official Russian travel agency. There is a dining room on the street floor for outsiders; upstairs is for the guests of the hotel and their guests.

There are guests of every nation and the talk is a polyglot of all languages. The waiters speak some English, but you never know what you will get when you order. One editor asked for the little thin rolled pancakes, with jelly wrapped inside, which are a breakfast specialty. He got four little square pieces of poundcake.

When people came in with very informal dress—though never the kind of undress you see at American beach resorts—I asked how they could afford the high prices. Answer was that prices are about the same anywhere; that workers get paid pretty well; that prices for them were not what the ruinous rate of exchange made our dollars; that they care less for style of clothes than we do. It is a sidelight on character—important.

[From the Portland (Maine) Press-Herald of April 28, 1955]

BEHIND THE IRON CURTAIN, MOSCOW BALLET, SOMETHING TO WATCH

(By May Craig)

Moscow.—The theater and ballet in Moscow are wonderful. They always were, they say, back in the days of the Tsars. The Communists continue them because they want to show the world that they are a cultured people. The ballet is subsidized by the state, controlled by the state, which is probably why it can be so good. The great Bolshoi Opera House, where we saw the Fountain of Tears, wordless ballet adapted from Pushkin's story, is magnificent. Impressive with its great pillars and the bronze horses jutting out over the pediment; it is beautiful inside, gilt and red velvet, and the tremendous curtain with wheat ears woven into a pattern with CCCP, meaning the Union of Soviet Socialist Republics, and the date of the revolution in 1917 woven into the pattern, so that at first you do not notice the words and figures.

Above the large stage, above the curtain, a medallion of Lenin, and above that in gilt and color, the hammer and sickle, and over all, the star, symbols of the U. S. S. R. The hammer and sickle symbolize the union of labor and agriculture. The scenery was also magnificent, bold in concept, imaginative, colorful and, because of the size of the stage, vast in some scenes. The actors, down to the least extra put a verve and enthusiasm into the ballet that made it a thrilling event. The star ballerina was Ulanova and after the show we went back and were received by her and the other feminine lead and the two male leads. The audience was much more demonstrative than I have ever seen an audience in the States. They stood up for curtain calls and shouted praises, as well as clapping; many trooped down the aisles to the edge of the orchestra pit for the curtain calls. The orchestra leader got the spotlight and applause individually, after each act and when they filed in for the next.

We cannot ignore this bid of the Communists for leadership in culture. President Eisenhower is aware of its importance. In his last budget he asked for a small sum for encouragement for arts, for prizes for artistic achievement. In Washington we have difficulty getting private subscription for a modest national symphony; we have only the Daughters of the American Revolution hall for concerts, we have no theater worth the name, only two small old buildings. Should we subsidize theater by Federal aid—will that lead to Federal control? Other American cities have concert halls and theaters, but not Washington, the Federal City.

The highest hill in Moscow is named Lenin Hill and there is the University of Moscow.

It was built in 4 years, completed in 1953. It has a central tower-like building 32 stories tall, with smaller pinnacles below the summit and the spire. On the wings there are lower towers and pinnacles, giving a sort of modified Gothic aspect. I asked if this type of building which you see elsewhere—the Institute of Culture and Science in Warsaw has it—has a name and the guides said "No, it is just modern Russian." There are wide steps leading up to the impressive entrance, marble and bronze, statues and color.

Here they combine classrooms and living quarters, in long wings. There are separate buildings for such specialties as physics. There are 6,000 rooms for students and 200 flats for professors and instructors. Each student has a separate room, tiny, but complete, with couch-bed, clothes closet, table-desk, and his own toilet, basin, and shower.

This combines what would be our senior high school with the first year of our university, in a 5-year term. Entrance is by competitive examination, and there is a complicated system of scholarships and rewards for good marks so that a student may really get both tuition and living free. They have several thousand correspondence students; 2,500 instructors; books and equipment are free; professors and officials are paid extremely well and have a most respected status. Education is highly regarded here, and an effort made to turn out many scientists and technical men and women. The aim of the Soviet is to develop this country materially and mentally, and the State provides the education. This is for both peace and war and while we haggle in Washington about Federal aid to education, Communists are actually doing it.

The system includes jobs for the graduates, more or less compulsory, I gathered. There is a Committee for Distribution of Young Specialists. The various government departments say what they want; the committee offers the graduate a limited range of positions. When he accepts, he must remain in the job 3 years. He need not accept, but may try to find a job for himself, but from my observation of the system, he wouldn't get much of a job except in what is offered by the committee.

While the building is impressive, with statues, paintings, mosaics of the world's great educators, writers, philosophers, doctors, etc., it is not well-built inside. Wooden floors are already wearing; composition-stone stairs are chipped on the edges. There simply cannot be any comparison in fine workmanship with our Mayflower Hill Colby College. We saw one of the swimming pools, with a woman instructor; a gymnasium, with girls doing calisthenics at one end and boys doing push-ups at the other. Physical culture is obligatory. The sports equipment cannot be compared, for instance, with the gymnasium of the new Skowhegan school where I spoke last fall. They go in for size and massiveness—but will it last? I ask that about the whole Communist system.

More Federal Aid Is Needed for Crippled Children

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, May 2, 1955

Mr. LEHMAN. Mr. President, I have had brought to my attention by Mr. George J. Hecht, chairman of the American Parents Committee, Inc., a brief but every informative article which appeared in the April issue of Parents' magazine. The article was written by Mrs. Ada Barnett Stough, executive director of the American Parents Committee, and is entitled, "More Federal Aid Is Needed for Crippled Children."

As Mrs. Stough points out, while the Social Security Act, as amended, authorizes a Federal appropriation of $15 million annually for crippled children services, the past 2 years have seen an appropriation of only a little more than two-thirds of that amount, and the President's 1956 budget calls for the same figure. As the article indicates, the Federal grants to the States are more than matched by the State and local funds. Certainly the Senate, in its consideration of the appropriation bill for the Department of Health, Education, and Welfare, should consider increasing these funds, so as to have them more closely parallel the authorization.

Therefore, I ask unanimous consent to have printed in the Appendix of the RECORD the fine article by Mrs. Stough, of the American Parents Committee; and I commend it to the attention of every Member of this body.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MORE FEDERAL AID IS NEEDED FOR CRIPPLED CHILDREN

(By Ada Barnett Stough, executive director, the American Parents Commitee, Inc.)

The United States program for crippled children has been in operation since 1936 when the Social Security Act became law. Under it Federal, State, and local Governments work together to help crippled children whose parents cannot provide the necessary medical, surgical, or other services needed to help them develop into normal, self-supporting adults. The Federal grants to the States are more than equaled by required State matching, and to this considerable local funds are added.

It is estimated that there are about 2½ million children in this country who are crippled or who have conditions which lead to crippling. Private doctors are caring for those whose parents can meet the cost. About 250,000 are receiving treatment under the crippled-children's program each year, but State and local funds are not adequate to take care of all the crippled children who have no other place to turn for help. Most States give primary attention to their program to children who are orthopedically handicapped. Not much treatment is available under the program for children with epilepsy, rheumatic fever or cardiac conditions. Granting that many are being treated privately, there is evidence that large numbers are receiving no care.

The Social Security Act, as amended in 1950, authorized a Federal appropriation of $15 million a year for crippled children. Yet for each of the past 2 fiscal years only $10,800,000 has been appropriated, or $4,200,000 short of the $15 million authorized.

It is infinitely more economical, quite aside from the humane aspects, to treat and rectify crippling conditions among children than to provide institutional care and support for crippled adults.

Every year Congress votes many millions of dollars for roads and airports and for the control of beetles and the protection of wild ducks. Certainly we cannot refuse to appropriate the necessary funds to help our crippled children.

The American Parents Committee is leading an organized effort to get Congress to increase the appropriation from its present $10,800,000 to the full $15 million authorized by law. Other national organizations are joining in the effort. A 24-page pamphlet called The United States Program for Crippled Children has been published by the APC. A copy may be obtained from the Washington office, 132 Third Street SE., Washington 3, D. C.

In a section addressed to parents and citizens the pamphlet says: "The amount of money available for your local health department to help the crippled children of your community depends on amounts appropriated both by Congress and your State legislature. Congressmen and legislators are always interested in hearing what you, the voters, expect of them."

Security and Censorship Are Sometimes Confused

EXTENSION OF REMARKS
OF
HON. GEORGE MEADER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1955

Mr. MEADER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Ann Arbor News of April 30, 1955:

FROM OUR POINT OF VIEW—SECURITY AND CENSORSHIP ARE SOMETIMES CONFUSED

Representatives of the mass communications media, which is just a $2 name for newspapers, radio, television, and magazines, have a difficult time enlisting support in their continuing campaign to keep open legitimate channels of information in Government. The public is apathetic about the matter because it gets only occasional hints of what life could be like without an informed populace.

Americans probably won't suffer because of this apathy because the natural competition among the various news agencies insures continuous pressure on Government officials, local, State and National, to give out the information which will enable citizens to make intelligent decisions. There are two phases to the present debate on the issue in Washington which may confuse rather than enlighten the mildly interested layman.

The statement often is heard that we in the United States know nothing about what goes on behind the Iron Curtain but that we tell our enemies and potential enemies everything by picture and story. That's an exaggeration, but there is enough truth in it to warrant concern.

One should be careful not to confuse the matter of military information leaks with the legitimate flow of news from Government sources. On the one hand we find generals, admirals, high Government officials and paid aides for congressional committees making socalled exclusive disclosures for a price in national magazines, while at the same time some Federal agencies are issuing directives that amount to censorship of news, not of value to a potential enemy but information to which the American taxpayer is entitled.

Such a directive is the one issued recently by Defense Secretary Charles E. Wilson. Wilson's order tightening Defense Department rules on giving out military information was well-intended. It was designed

to curb the practices mentioned previously, but the end result is a form of censorship. Whenever an official is given wide latitude in withholding information on a security basis, there is a danger that he will use security as a cover for suppression of news that might be embarrassing to the Department but important for the people to know.

Another phase of the question relates to columnists, not those whose opinions on news of the day are followed avidly by readers, but the columnists who make their living by supposed revelations of the "news behind the news." by paying tipsters in one way or another for exclusives, and by breaking a story a day or so ahead of the time it would have been available anyway through ordinary news channels. Some of them have big followings among persons who don't bother to check back on the accuracy of their predictions or their pontifications. Readers, like newspapermen, glory in knowing something ahead of someone else, although in this case they share the exclusive with a million or so others.

This type of columnist must have a certain number of behind-the-scenes stories to survive, and he can always find a Congressman or Government official willing to leak something in return for the columnist's friendship. There is no bribe involved, though a columnist may sometimes give him a favorable mention in his column.

It is important that Government leaders differentiate among the occasional science-type article which may be ghost-written for a member of the military or some other official, the leaks to columnists grasping for something sensational and the ordinary flow of news that will keep the citizen intelligently informed about his Government. This is not to disparage the story that goes under the surface to uncover what someone is trying to hide from a public that is entitled to know. Indeed, it is this type of information most likely to be suppressed when Government leaders use the term security as a cloak under which to operate the people's business in secret.

The Socialistic Road

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1955

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Derrick, of Oil City-Franklin-Clarion, Pa., dated April 29, 1955:

OUR OPINION—THE SOCIALISTIC ROAD

How would you like to see Federal price controls and regulations over all goods and services that Americans sell in the process of earning their livelihood?

Fantastic, dangerous, and undemocratic, you probably will say. Why that would constitute a Government-controlled economy—that's socialism.

You'd be so right with an answer like that. And the fact is, you have every reason for concern. For a situation exists in the United States today which, if it should constitute a pattern, would pave the way for just that sort of a condition.

The situation was brought about by a Supreme Court decision last year which held that the Federal Power Commission under existing law can regulate the operations of independent gas producers by fixing the field price on natural gas sold to interstate pipeline companies.

Heretofore, 2 of the 3 principal segments of the natural gas industry—interstate pipelines and local distributing companies—have been regulated because they constitute enterprises which enjoy the monopoly-like privileges of public utilities. But the third segment — the producer — has functioned without regulation since production activities are carried on under the typically competitive conditions of the American free-enterprise system.

Operating under this sensible and logical pattern, the gas industry has progressed until it now provides a quarter of the Nation's energy requirements and serves 3 times as many consumers as it did in 1938. Meanwhile, demand has increased rapidly and continues to increase.

The record of the gas industry provides ample proof that the pattern of limited regulation under which it has been functioning is in the national interest. But under the Supreme Court decision, this pattern is disrupted by extending regulation to independent producers who sell a commodity for private consumption in a free competitive market.

This regulation of the prices, profits and general operations of private producers is bound in the long run to be extremely costly to consumers. The search for and production of gas is a high risk enterprise. On an average, 8 out of 9 wells drilled prove dry. Only 1 in 44 discovers a substantial field. It is self-evident that only the incentive of a profit commensurate with this long-shot risk is going to keep producers hunting for more gas. Under regulation, this incentive will be sharply reduced. And the result is bound to be decreased supplies which clearly mean higher costs to the consumers.

Far more dangerous, however, than this matter of cost is the new precedent which regulation of the gas producer sets. It is a step toward what could prove to be an all-inclusive control by Government of virtually everything produced and distributed in what we used to regard as a free economy under free enterprise.

It's the road to socialism.

New Orleans-Mexico Air Route—Let's Not Cut Latin Oil

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1955

Mr. HÉBERT. Mr. Speaker, George Chaplin, editor of the New Orleans Item, has directed my attention to two editorials which recently appeared in the Item and which I believe should be brought to the attention of this body.

Both editorials pose very serious problems. One is more or less limited in scope to a local condition but most definitely involves a very serious and basic deficiency in the operation and conduct of the Civil Aeronautics Board. There is indeed something very peculiar and most strange in connection with the activities of this particular board. As a matter of fact, there is such great suspicion as to its operation that my distinguished colleague from New Orleans, HALE BOGGS, has before the Rules Committee a resolution to which I heartily subscribe, to investigate, fumigate, and ventilate the whole business.

There is one thing certain about the granting of a permit for direct service between New Orleans and Mexico City and that is that it is most assuredly bipartisan. When President Truman was in the White House he voided an order of the then constituted board, and now President Eisenhower refuses to vacate the order of his predecessor. I have always been of the opinion that what one President can do the other can undo, but apparently neither the desire nor the inclination is here.

The failure to establish a direct airline between New Orleans and Mexico City is one of the most discriminatory acts charged against any board created by the Congress.

There is something present which does not meet the eye, and I frankly do not believe all the cards have been placed face up on the table, and I would not be at all surprise if there were several cards concealed in somebody's sleeve. How to shake them loose is the real problem.

The item in its editorial gives a splendid statement of the case.

In the second editorial which Mr. Chaplin has called to my attention the very provocative question of Latin oil is dealt with.

Here are the two editorials in question:

DIRECT FLIGHT 9 YEARS OVERDUE—NEW ORLEANS-MEXICO AIR ROUTE

The 22d of next month marks the 9th anniversary of a frustrating case in New Orleans' aviation history.

On that day in May 1946, President Truman authorized a direct air route between New Orleans and Mexico City. He was acting under executive power, pursuant to the Civil Aeronautics Act.

What's happened since shouldn't happen to a dogma—much less to a great transportation center like ours. New Orleans today is the only large city on the United States southern border without direct air service to the Mexican capital.

Here, in brief, is the story:

After Mr. Truman O. K.'d the route, the State Department and Eastern Air Lines—which was given the permit to operate the service—ran into snags with the Mexican authorities.

These included a Mexican demand that the United States grant similar rights to a Mexican airline, with the proviso that the agreement would be in force only as long as the Mexican company continued service. The State Department objected that this proviso would set a bad precedent for other bilateral pacts.

This stalemate continued until Mr. Truman on September 8, 1952, withdrew his approval of Eastern's permit and of two other unimplemented certificates concerning service to Mexico City from Laredo, Tex., and Los Angeles.

His view was that this would clear the air and enable a more effective new negotiation.

This was the situation when last November the Civil Aeronautics Board began hearing Eastern's request for a New York-Washington-Mexico City service.

The airline contended that the way in which President Truman had revoked its New Orleans-to-Mexico City permit was unconstitutional. On April 18, CAB bureau counsel made the same argument, that the President had not complied with the pro-

cedures set out in the law of canceling, suspending, or revoking a certificate.

Earlier in the hearing, there had been several different approaches taken on behalf of New Orleans.

Mayor Morrison and a spokesman for Governor Kennon asked the CAB to suspend the hearing of the New York-Washington-Mexico City case until our prior claim is satisfied.

The chamber of commerce took—and presently maintains—a somewhat variant view. It is less concerned with whether the New York-Washington-Mexico case is halted—possibly because it doubts that it will be—than with whether New Orleans-to-Mexico City service can be made a part of that case.

Contends the chamber: No agreement as to any route should be negotiated between our country and Mexico, unless such agreement includes the New Orleans-Mexico service.

That's a sound, practical stand.

New Orleans is entitled to such a direct route.

This is an international city—in location, in ideas, in trade and in communication.

Particularly is all of this true in relation to Latin America. We are a natural north-south gateway, a fact of which the CAB is, of course, fully aware.

We urge the CAB to end this delay and to make direct service between here and Mexico City a requisite of the next bilateral air agreement between the two countries. Let's "rev" up and get off the ground. This flight is 9 years overdue.

NEELY PROPOSAL HARMFUL—LET'S NOT CUT LATIN OIL

An amendment by Senator MATTHEW NEELY, West Virginia Democrat, threatens to cut the heart out of President Eisenhower's foreign-trade program.

NEELY hails from a State whose coal industry unfortunately is having a rought time. But the Senator's plan to drastically curtail oil imports into the United States—especially heavy-fuel oil imports—isn't going to solve whatever is wrong in the coal fields.

Homeowners who heat with oil or natural gas aren't going back to coal furnaces. Ships and factories fueled by oil won't turn the clock back either. And diseled locomotives are going to stay dieselized.

We can understand NEELY's feeling that something must be done to help coal. Certainly, a thriving domestic coal industry is desirable. But his amendment, while failing to provide the remedy he seeks, would work incalculable harm to our foreign relations.

Reciprocal trade is a cornerstone of our foreign policy. To sell abroad, we must buy abroad.

The State Department stressed this among the 10 points it advanced this week why the Neely amendment is contrary to the national interest.

A good example of what the State Department is talking about is one of our neighboring lands to the south, Venezuela, whose economy largely floats on oil. (In the last 9 years, United States companies have invested $800 million in Latin American oil; of this $575 million in Venezuela.)

Our trade with that country has jumped thirteenfold since World War II. She spends almost a billion dollars a year for United States goods and services. And on a per capita basis she buys more from us than any other country in the world except Canada.

The investment climate there for United States capital is healthy—and our venture dollars have helped Venezuela to develop her resources, expand and begin to diversify her economy, and to raise her living standards.

The desirability of such conditions was the dominant theme of the recent Inter-American Investment Conference here. The Latinos sought United States capital. American businessmen wanted assurances of a favorable atmosphere in which to operate. Venezuela, now the world's largest oil exporter, combines both.

We have in recent years cited her as a model of what good trade and friendship with us can achieve. It has been a big talking point in our good-neighbor policy.

But such legislation as that proposed by Senator NEELY would wreck this policy and convince the hemisphere, in particular, that our actions do not square with our words.

• • • • •

Some independent oil men share the coal industry's belief that legislative quotas should be placed on petroleum imports.

Their views, too, must be fairly weighed in terms of both our domestic economy and our foreign relations.

The State Department, in expressing its opposition to NEELY's amendment, noted that the domestic oil industry is operating at or near its all-time peak, that it is prosperous and its outlook is bright.

We use about half of the oil the free world produces. But our known reserves are only about a fifth of the free world's.

The demand for oil products in the United States is expected to double by 1975. And we must not overlook the possibility of having to sharply and quickly step up the rate of domestic oil output in event of war.

Against this backdrop, the State Department's stand makes good sense.

There should be an intelligent balance between oil imported and oil produced domestically, but it is best to achieve that balance by voluntary action of importers.

Unless and until it is demonstrated, after a fair test, that such voluntary restraints will not work, we as a Nation should steer clear of legislative intervention. The Neely amendment should be roundly defeated.

The Richest People in History

EXTENSION OF REMARKS

OF

HON. D. R. (BILLY) MATTHEWS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1955

Mr. MATTHEWS. Mr. Speaker, this week more than 1,300 representatives of professional pharmacy and the pharmaceutical industry are meeting in convention in Miami Beach, in my home State of Florida. This convention of the American Pharmaceutical Association and its affiliated societies focuses attention on the great good that we all receive from modern medication, something that we sometimes forget.

I have recently seen an editorial entitled "The Richest People in History" which I feel is of high interest to the Members of the House of Representatives, as well as the public at large. It was written by Edward P. Fleming, a pharmacist, and editor of the Prescriptionist. It appeared in that publication, as well as in the March 1955 issue of the Prescriber. Inasmuch as these are both professional magazines, circulated to a limited audience, I hereby request unanimous consent for the reproduction of Mr. Fleming's editorial in the Appendix of the RECORD, where it will have wider dissemination to the public:

THE RICHEST PEOPLE IN HISTORY

(By Edward P. Fleming)

To the couple looking down upon that small figure lying so still in the big bed it all must have seemed to have happened very quickly. The small boy coming in from the drenching rain, next day the sore throat, then the horrible cough, the high fever, the succession of nurses and doctors, the never ending vigil by the bedside, the alternating hope and despair and, finally, the irrevocable end. Their son was dead. What mattered their position, their influence, their power, when all of it was unavailing to save their boy. No ordinary couple were Abraham and Mary Lincoln, yet Death had entered the White House as devastatingly as though it had been a hovel. Five dollars worth of antibiotics would have had Willie Lincoln playing out on the lawn within the week but the word "antibiotic" had not yet been coined. Of course, that was 90 years ago.

Not so remote in time was the era of Calvin Coolidge, Jr. He had known automobiles from his earliest memories, he seldom glanced up when an airplane flew overhead, he enjoyed his radio as does every modern boy. Yet a heel was blistered on the tennis court, infection set in to be followed by the dread septicemia and once again Death eluded every barrier to invade the White House and carry away a President's son. Two or three dozen sulfa tablets would have been an effective barrier but the Coolidges knew no more of sulfa than did the Lincolns of antibiotics.

Many other times has the dark specter invaded the White House because the medicines we now dispense so casually had not yet been discovered. To name just two: William McKinley was struck down by an assassin's bullet but it took him 9 days to die; the wound in itself would be considered trifling today but McKinley died because that bullet opened the way for peritonitis. How long has it been since you heard of a fatal case of peritonitis? Warren Harding died of pneumonia, another disease which is rapidly taking its place among the diseases of the past.

And what does this all mean to us today? It means that the humblest person is infinitely better off than were the most powerful people in the land just a few years ago. For half a day's pay the laborer of today can buy these precious things which the Lincolns, the Coolidges, the McKinleys, the Hardings, and untold others could not obtain at any price.

In these days of statistics, we read much about the tremendous sums spent for research, but forget these stories that we know, but have never applied directly to ourselves. Willie Lincoln, and Calvin Coolidge were warm, vital boys, filled with promise and loved by their parents just as are the boys and girls of today. Life to them was no less precious than it is to our children, yet they did not have the sulfa drugs, the antibiotics, the other health protecting drugs that we accept so lightly today.

Truly, we are the richest people in history.

Atoms for Peace—Phases of the Great Challenge

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, May 2, 1955

Mr. WILEY. Mr. President, on August 8 there will convene in Geneva the

United Nations Conference on Atoms for Peace.

At that time, the United States will open an historic exhibit, where a research reactor will actually be demonstrated.

The participating nations among the 84 governments who have been invited will be able to see at first-hand how the United States is moving ahead toward harnessing of the atom for peace.

The following month, I am glad to say, here in our own country, and indeed in our own Nation's Capital, will occur an important event when the first Trade Fair of the Atomic Industry will open. This will mark a significant occasion in America's own progress of applying the atom for an ever-higher standard of living for our own and other peoples.

Of course, the making available of the atom for peaceful purposes has not been without its problems.

The United States Atomic Energy Commission, heavily burdened by its massive responsibilities, has been moving ahead, although numerous suggestions have been made to it for intensified efforts in "flashing the green light" so that United States private industry can carry the ball more and more.

Meanwhile, on the international front, the need is increasingly apparent for the United States to accelerate its efforts to bring the peaceful miracles of atomic energy more meaningfully to foreign countries, particularly among underdeveloped peoples.

I have in my hand three important expressions on the various phases which I have mentioned.

The first is a welcome release from the Atomic Industrial Forum announcing the First Trade Fair of the Atomic Industry. I know the fair will receive the fullest cooperation from the Washington community.

The second is an editorial from the Wall Street Journal of April 12. It comments frankly on the need for encouraging increasing private participation in atomic work so as to speed what has been called the "atomic revolution."

And, finally, there is an important editorial from the April 27 Milwaukee Journal stating that the atomic power ship of peace, while an outstanding contribution, is by no means more than an introduction to what America can and should do in bringing the atom miracles to the attention of foreign lands.

I ask unanimous consent that the text of these three items—each pointing up an important phase of the problem—be printed in the Appendix of the RECORD.

There being no objection, the release and editorials were ordered to be printed in the RECORD, as follows:

The First Trade Fair of the Atomic Industry will be held in Washington, D. C., at the Sheraton-Park Hotel, September 26–30, it was announced today by the Atomic Industrial Forum. The trade fair, which will be held in conjunction with the forum's fall meeting, will have as its theme, "Marketing the Products of Atomic Energy."

According to the forum's executive manager, Charles Robbins, this pioneering trade fair will demonstrate the extent to which peaceful atomic energy and its associated products and services have advanced as an important sector of our industrial economy.

The fair will be seen by an audience of key management and operating officials in organizations engaged or considering participation in atomic-energy development and use, Members of Congress, the staffs of interested Government agencies, and the commercial and scientific attachés of the various embassies and legations in the Nation's capital.

A survey of the exhibit plans of member organizations indicates that there will be displays in such fields as design engineering, package power, medical and research reactors, control systems, reactor materials, instrumentation, construction and fabrication techniques, isotope sources and applications, shielding materials and devices, and reactor components and auxiliaries, in addition to various consultant services.

REVIEW AND OUTLOOK—ATOMIC INITIATIVE

At a conference on atomic energy in industry held in San Francisco last week, it was evident that many companies are putting far more manpower and money into the field than anyone expected at this early date.

At the same time the Atomic Energy Commission announced it has received four new proposals for the construction of demonstration nuclear electric powerplants to cost an estimated $150 million and produce a total of 455,000 kilowatts. These were in response to the AEC's offer of financial aid in such construction. Significantly, though, the share asked of the Government was only 10 to 20 percent—far lower than had been expected.

These 4 projects, all except 1 of which were suggested by groups of private companies, are in addition to the 250,000-kilowatt, $55-million powerplant New York's Consolidated Edison Co. plans to build without any Government help.

All this—the specific power projects and the general industrial atomic fever reflected at San Francisco—is a direct consequence of the amended atomic energy law enacted last summer. It is a startling tribute to those who got the bill through against the embittered opposition of men willing to stultify progress for the sake of what they thought could be a political issue.

But the progress, impressive though it is, is not an occasion, for complacency. To speed the atomic revolution the amended law will need further liberalizing, and it is none too soon for Congress to be thinking about this.

For the 1954 law did not make atomic industry so much a free enterprise as a mixed Government private enterprise. That is better than leaving it a wholly Government monopoly, but the faster the emphasis can be further shifted to private activity the faster will the benefits of the atom be realized.

Meanwhile there is reason to believe that more could be done even within the framework of the present law. Several witnesses before the Joint Congressional Committee on Atomic Energy have pointed to continued secrecy as 1 of the major deterrents to more widespread participation in the field.

Partly the complaint is that the AEC could make nonsecret material more readily accessible and explain to industry just how much is already available in the nonsecret category. But there is also a strong feeling that much information presently classified could be made generally available under the 1954 statute without impairing national security.

One recent witness, Francis McCune, vice president and general manager of the Atomic Products Division of the General Electric Co., put the case for more information particularly well. Nothing that bars to the availability of information about atomic energy cannot but operate as obstacles to entry into the industry, he said: "Information should be made available not merely to those who are already interested but, perhaps even more importantly, to those who are not yet interested, for information is required to stimulate interest."

The suggestion here is not that any and every kind of company would promptly plunge into atomic energy if more were known. Rather, it is that a company cannot determine whether or not it should be interested in atomic energy in the absence of sufficient knowledge. "Without adequate information," Mr. McCune said, "industry cannot be expected to show real initiative."

Considering the hobbles on it, industry is showing considerable initiative. It is in the interest of the AEC, Congress and the people that this initiative should not now be frustrated either by too much law or by too little knowledge.

ATOM SHOW SHIP NOT ENOUGH

President Eisenhower's announced plan for an atomic-powered ship of peace is a dramatic proposal. Sent on a world cruise, the merchant vessel would be a floating showcase in which people everywhere might see the promise of atomic science to improve human living—not destroy it.

For us, the vessel would have additional practical value. Its construction and operation would teach us valuable lessons about the cost and efficiency of an atomic surface ship now that we have the submarine *Nautilus* in use and other atomic submarines under construction or planned.

A danger inherent in the President's plan, however, is that the peace ship might become a gimmick that would constitute our do-all in the field of international atomic energy. Instead of a supplement, it might turn into a substitute—a huckster's blurb rather than the production followthrough.

People of the world, we are sure, will be mightily impressed when a sleek ship, driven by atomic power and displaying the good things the atom can bring, sails into their harbors. But unless they are shown a way whereby they can enjoy these atomic benefits, won't they feel like a waif at the candy shop window, permitted to admire the mouth-watering sweets but denied the means of obtaining them?

Like the test reactor that America plans to display at the International Conference of Atomic Scientists in Geneva this year, the peace ship should represent the salesman's sample case of products which America stands willing and ready to help bring to the world.

The peace ship must implement President Eisenhower's atoms-for-peace plan. An atomic powerplant in India, Japan, or Egypt—built with American technical help, manned by native technicians trained in American skills and fueled with some of the fissionable material America has earmarked for world use—will do more to demonstrate American good will than just a showcase ship.

Address by Representative John J. Rhodes, of Arizona, Before the Indiana Young Republicans

---

EXTENSION OF REMARKS

OF

HON. BARRY M. GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Monday, May 2, 1955

Mr. GOLDWATER. Mr. President, on April 22, 1955, Representative JOHN J. RHODES, of Arizona, addressed the Collegiate Division rally of the Indiana Young Republicans, in Indiana. I ask

unanimous consent that his address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY REPRESENTATIVE JOHN J. RHODES, OF ARIZONA

In deciding the mental makeup of the 1955 model Republican, it might be well to first consider the type of party which the Republican Party has always been. It was born amidst the strife and dissatisfaction preceding the War Between the States. It came of age during the terrible test of physical and moral courage which this country underwent and which we know as the Civil War. It presided over the destinies of this Nation during the boom period of the 19th century, which saw the construction of railroads from coast to coast, the western land migration, and the beginning of the industrial revolution in this country.

This era also produced such industrial giants as the oil and steel trusts, and witnessed the evils of railroad rebates, yellow-dog contracts, and other abuses of "bigness," which were to the detriment of all American people. This party was responsible for the Interstate Commerce Act, the Sherman Anti-trust Act, the Clayton Act, and many other pieces of legislation aimed at maintaining the interests of the average individual as against the industrial giant. It is to the credit of this party that this great purpose was accomplished without materially slowing the rapid development of our natural resources and industrial plants. This party ended the spoils system when it enacted the Civil Service Act.

In the early 20th century, the Republican Party was responsible for the Reclamation Act which has been so instrumental in the development of the West. The Panama Canal was conceived and constructed during a Republican administration. The first attempts to protect the farmer from the speculator at the market place, and to assure the farmer of a fair return on his investment and labor occurred during the Republican administration in the 1920's.

Domestically, the Republican Party has always stood for progress under the mantle of free enterprise. Yet this party has always jealously guarded the rights, political and economic, of our citizens. In other words, this is a party which does not believe in giving advantages to special groups or interests, or allowing such groups or interests to possess advantages which are used to the detriment of the average citizen. Our theory of government places the Federal Government in the middle of a teeter-totter, acting as a balance so that neither side is able to gain advantage to the detriment of the other side.

It is significant to note that although the Republican Party has brought this country its greatest periods of prosperity, it has not, in this century, been in power at the start of any war. Therefore, Republican prosperity is based upon sound economy and does not arise from the stimulus provided by emergency situations. We have not, and I pray that we may never follow the policy of government by crisis.

So what kind of a party are we?

We have never been moss-backed; we have never been reactionary. Whether we are dynamic-conservative or enlightened-liberal, we have never believed in standing still or going backward. We have created a climate favorable to the full development of our resources by private endeavor, with only such help from the Government as is needed to get the job done.

The 1955 Republican should continue to provide a government which balances all interests to benefit the whole Nation. We should neither insert the Government into situations where it is not needed, nor should we shirk governmental action where such action is necessary. As President Eisenhower has said on occasion, "We should walk forthrightly up the middle of the road, because no real progress is made by those who walk in the gutter to the right or the left."

It is hard to be a Republican. During the New Deal era, the pendulum swung to the left. The cry of "soak the rich" rose. This fallacy, sponsored by the Democrats, failed to take into account the facts that: (1) All income of persons who made more than $100,000 a year was very small compared to the Federal budget; and (2) to provide jobs, you must provide a climate favorable to the investment of capital. Roosevelt recognized this, finally, when in 1936 he tried to get Congress to exempt all dividends from taxation. (When we just exempt 5 percent, Democrats say we favor the rich.) But priming the pump did not produce prosperity, nor build it.

But we still have attempts made to prime the pump for the political advantage to be derived from posing as the friend of the little man.

I deny there is a permanent class of people known as little men. There are many of us who are not doing as well as we would like to. We can afford to help those people when they are unemployed, injured on the job, and too old to work. But we can best serve the little man by creating a climate in which he can (1) get a job and hold it, at fair wages; and (2) get as big as he is big enough to get. Do not make him a little man all his life. A job is worth more to a man than is a $20 tax cut.

In order to provide this climate for investments which means jobs, we have had to make some unpopular decisions. In the 83d Congress we had to forego the pleasure of increasing the personal exemption by $100. In this one, we had to vote against a $20 tax cut across the board. We have had to cut spending, curtail contracts, and thereby create local economic crises, and, in general, "kill Santa Claus." This is because a serious Government deficit would cause another round of inflation, and siphon off the capital needed for industrial expansion, which, in turn, means jobs.

After the free-and-easy days of New Deal hand-outs, it is hard to explain to our average citizen that he must forego his candy to have his bread. But we Republicans must continue in the path President Eisenhower has set up for us, and sell Mr. Average American on the wisdom of this course.

I repeat, it is hard to be a Republican.

At home, it must be the job of the 1955 model Republican to keep our country strong, free, and prosperous, by maintaining conditions in which the inherent ambition, ingenuity, and resourcefulness of our citizens may have full sway. But today we live in a world which is becoming, more and more, one community. We of this generation will mould the face of this community. Our actions, or inactions, will determine whether this community will be devoted to individual freedom, or to the 1955 model of slavery known as communism.

I do not believe that Republicanism and communism can exist in the same community, or world. Therefore, we must inevitably conclude that we must pit our way of life against theirs in a struggle for survival.

When we think of such a struggle we inevitably assume that trial by arms will become necessary, as indeed it may. But to assume that this is our only means of triumph is to sell our way of life short. The peoples of the world, if fully informed and free to choose, would certainly choose our free society to the chains of communism. Our task is to so inform them, and to help create a situation in which their composite will may assert itself.

The Bible tells us that at one time all men spoke the same tongue. Then man got too big for his pants, and to chasten him, God caused all men to speak different tongues. The inability of man to communicate with his fellowman has ever since provided us with our greatest inconvenience and our greatest challenge. We have means of sending signals throughout the earth, but still a very few methods of really communicating thoughts. It is still very difficult to determine the composition of the soul of our fellow man.

I hope that some day we will put our brains and treasure to work to learn to communicate thoughts to each other. But maybe something else comes first. Maybe there is still a lesson to be learned from the ancient punishment visited by God on Man. Maybe the sentence was that we must learn to live together before our souls may communicate.

Therefore, with the feeble means at our disposal, let us try it. Let us keep our guns, tanks, planes, and hydrogen bombs, but let us add a new weapon to our arsenal—truth.

Our Government, and most of our people, believe in telling the truth. Most of us can spot a lie—it takes some longer than others. On the other hand, communism, fascism, etc., are nurtured by lies, for they are themselves the greatest fabrications of all time.

Therefore, our best weapon is truth. It is devastating to the enemy; beneficial to us. Imagine the impact it would make on the world if we were to offer Russia free space in our newspapers, free time on radio and TV, to tell whatever they might desire, in exchange for similar free time and space in Russian mediums which would reach an equal number of people, who would be free to listen.

There is no doubt in any of our minds that the Communists would feed our people their choicest selection of tall tales. Let them. We will tell the people of Russia the truth, which the rulers of Russia will brand as lies. But truth can be masked only for a short time, and lies can remain undetected for an even shorter period.

The end result would be a thorough knowledge on the part of the Russian people of our lives, our aspirations, and our souls. Also, they would be able to see that our republican form of government creates a climate for a better life than the one the Russian people have under communism. Once this realization occurs, all the secret police in the world cannot save communism.

An immediate benefit might be a lessening of war tension; 99.44 percent of the peoples of the world want peace. With direct knowledge of our own peaceful intentions, you can imagine the resistance the Russian people would have to aggression and saber-rattling on the part of their leaders. Not even a police state can wage a major war successfully without the support of the people.

I do not offer this idea as a panacea to cure the world's ills, but as a step in the direction of a peaceful world, devoted to the preservation of the freedom of the individual. In this struggle with communism, we must win the minds of men, or the product of those minds may destroy man and our planet. These thoughts consist of my individual ideas on the best weapon to use in winning this war for the minds of men. Only by winning this war can we avoid fighting another and far different kind of war.

This, then, is the challenge which is faced by the 1955 model American of all parties. God give us the strength, wisdom, and courage to face up to this great responsibility.

Air Age Could Be Great Instrument for Peace

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1955

Mr. BEAMER. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD the attached article by Leslie Gould entitled "Air Age Could Be Great Instrument for Peace," which appeared in the New York Journal-American Sun of April 17, 1955:

AIR AGE COULD BE GREAT INSTRUMENT FOR PEACE

A trip half around the world in 10 days—with time for playing "tourista" as we have just done—gives you the full impact of the age of air:

What it means now and in the future to commerce, to travelers and vacationists and most importantly what it can mean for achieving what has been so elusive—peace.

The only way peace will ever be won—and it certainly hasn't been won by two world wars and a couple of smaller ones like Korea—is through a better understanding of people and problems peculiar to them and to their land. This the airplane is helping to accomplish.

Just what the airplane has done, is doing and will do in the future is brought home sharply in a trip such as the one we took introducing TWA's new Super G Constellation—the last word in luxury and close to the fastest thing in commercial aviation. Yet these magnificent planes with Curtiss-Wright turbo-compound engines are already outmoded by what is on the drawing board and will be flying 2 or 3 years hence.

These planes bring Cairo within 18 hours of New York. Distance is no longer the measurement. The planes coming along will cut that time in half.

America has the lead in aviation—both in manufacturing and in design. Our planes dominate all the airways. The British, for example, are taking all our planes they can get, even secondhand ones. What the foreigners haven't got and apparently don't know how to get it—that is the secret of mass production.

When talking of plane travel abroad, most people think of vacation. While that is increasingly important, particularly in broadening the understanding of other lands and their problems, the big impact of this air age is on commerce. It opens every corner of the world to American business.

The air age coupled with the nuclear developments, chiefly in the field of electric power, gives promise of a worldwide prosperity never before dreamed of. They will mean a worldwide rise in living standards—with only the one if—if there is peace.

PEACE WAS BUNGLED

Unfortunately, the peace was bungled at the close of World War II due to stupidity or treachery—more likely a little of both—in the United States State Department. Now incidently, 10 years later, the State Department isn't geared to this air age. This was brought home in Cairo where the embassy made no effort to make direct contact with the newspapermen on this trip. This was not so in Spain where Ambassador John Lodge, his beautiful wife and the staff were on the job—it seemed almost like 24 hours a day.

A shakeup is overdue in the foreign service—there are too many leftover, starry-eyed, New and Fair Dealers. This goes for London as well as most other spots. Also for the FOA.

The real ambassadors are American businessmen who are traveling the airways and who are operating branches and offices around the world, and companies like TWA, which, by the way, operates without a subsidy. TWA makes a point of having almost 100 percent local citizens running its services in the other countries.

In this quick trip, we visited three countries—Ireland, Egypt and Spain—and no three countries of greater contrast could have been selected. Egypt and Spain are bustling. In both, there is a great deal of construction of all kinds—roads, housing, hotels, office buildings and industrial plants. Very little construction is going on in Ireland.

Egypt with its new revolutionary regime—which is a dictatorship and will continue so for some time—the leader frankly admits this—has the most ambitious program. It ranges from a gigantic dam far up the Nile, to school and highway construction—and, of course, a big military expansion. With 23 million people—82 percent of whom are illiterate—and 96.5 percent of the land uninhabited and uncultivated desert. Egypt's main problem is water—irrigation.

Egypt is about the size of Texas and New Mexico, but only a narrow strip of 6 million acres along the Nile is cultivated. The planned Aswan Dam, a 10-year project, will add another 2 million acres to cultivation. This will also supply needed electric power.

The United States is helping out some in Egypt. The technical cooperation program through this year will have spent $19 million, matched by $26 million in Egyptian funds. In addition, the United States has allocated for next year $40 million for development assistance. One of the American projects is to try out 100 different kinds of grass seeds to find one to grow in a farm area that had been worked out by centuries of use.

The Middle East is one of the world's trouble spots and the Egyptians privately look for some time to come to nothing more than an armed truce.

PEACE NEEDED EVERYWHERE

The peace is what the world everywhere needs. It is nonsensical in an area like the Middle East that needs so much—schools, water, roads, housing, modern farm machinery—that money has to be diverted to a military buildup. U. N. was supposed to have the answer to such situations—to bring peace.

American business can and usually does run up against some unusual problems in its foreign expansion. For example, Conorado Petroleum—a joint venture of four American oil companies in its drilling ran into a World War II mine field. There were some casualties, until a special crew with a helicopter was brought in to clear the area under development. This will add considerably to the cost.

So again, it is the age of air that is making the job possible.

Forest Service Budget Week

EXTENSION OF REMARKS
OF
HON. HARLAN HAGEN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. HAGEN. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD an editorial from the Bakersfield Californian under date of April 23, 1955, relating to the pressing need for additional Forest Service recreational funds:

FOREST SERVICE BUDGET NEEDS

Each year, the use of the national forests for recreation, for use of natural resources and exploration of mineral possibilities takes a tremendous upward trend, and the income from the sale of forest products and permits and other items rises, yet the money that is allocated for the upkeep of these forests, their protection, the development of recreation areas, and the maintenance of those already in existence is pitifully small compared with the needs.

At present, the Senate Appropriations Subcommittee on the Forest Service budget is holding hearings, and one of the principal matters of interest is the provision that will increase money allotted to the Service for recreational development work and timber sales management.

These amounts are infinitesimal when compared with amounts distributed around the world on global projects, yet they concern deeply the average American citizen to whom national forest vacations offer the most economical opportunity for healthful sojourns and to whom timber resources mean a great deal in terms of comfort and income.

According to Representative HARLAN HAGEN, of this district, the bill now before the Senate calls for an increase of $200,000 for recreation and an additional $800,000 for timber sales management. California's stake in the matter is, according to Mr. HAGEN, approximately $40,000 or nearly 20 percent, of the new recreation money which would be used in forests here, and this State would get about $100,000 of the timber sales money.

Mr. HAGEN points out that the California national forests are the most heavily used in the Nation, with thousands of visitors coming from the San Joaquin Valley. For many years, he reminds us, the use of our forests for recreation has far outstripped the money made available by Congress for the upkeep of present recreational facilities and the development of new ones, with the result that the public has been denied full enjoyment of their opportunities here.

In the field of timber management, the need for more money to assist the Forest Service in this field is imperative because there is much timber that should be cut now in its prime for proper use, and other areas must be developed as better timber-producing spots, all of which will return dividends of many kinds on the money invested. Timber sales revenue has been increasing steadily and in order to keep this resource profitable, funds for management and access roads, fire protection, and other operations must be increased. The money comes back in many forms, including cash for the Treasury in the form of timber-sales receipts.

Together with the watershed protection necessity, and other factors involving the national forests whose proper management contributes vitally to the California economy, the San Joaquin Valley people have a huge stake in the improvements that will be possible with an increase in appropriations for the Forest Service, and they believe that this purpose for the money is more important than some that call for the expenditure of far greater sums and will accomplish far less good here and on a national basis.

Mr. HAGEN, aware of the implications of this matter here, has been strong and steadfast in his support of additional help for the national forest organization to be effective now, and he has also been instrumental in advocating a plan whereby more help in a financial way will be extended to the Forest Service in the years to come.

Through the efforts of the 14th District Representative, and his associates in the

House of Representatives has approved the desired increases and favored the plan for future assistance in this field, and it would be a good idea for Californians to let their Senators know that they are in complete support of the project, so that favorable action will be forthcoming in the upper Chamber of Congress and the benefits hastened for the people.

Minimum Wage and Parity

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. METCALF. Mr. Speaker, those interested in maintaining at least minimum standard of living for all Americans have long been convinced that just as workers need a minimum wage the farmers need price supports. The farmers minimum wage law was the law guaranteeing him 90 percent of parity on basic crops.

But it took opponents of 90 percent parity and firm price supports to dramatically emphasize the relationship between labor's minimum wage and the farm bill.

Following are examples of telegrams I have recently received from people in my district who want me to vote against H. R. 12 and $1.25 minimum wage. As the author of H. R. 3452 providing for 100 percent of parity on basics on H. R. 3124 providing for $1.25 minimum wage, I will not be able to comply with these requests from my district—requests that do not reflect the opinion of the majority of the people I represent:

HELENA, MONT., *April 30, 1955.*
LEE METCALF,
House of Representatives,
Washington, D. C.:
Hope you will oppose H. R. 12 and also minimum-wage law.
A. L. NEILSON,
Wolf Creek, Mont.

HELENA, MONT., *April 27, 1955.*
Hon. LEE METCALF,
Washington, D. C.:
Farmers other than wheat growers are caught in a squeeze between labor and the things we have to buy and on the other hand what we receive for our livestock and irrigated crops. Why give wheat man a subsidy of better than $2 per bushel when they can make money at $1 per bushel with new methods and modern machinery. We hope you will oppose bill H. R. 12 continuous rigid support, also $1.25 minimum-wage bill.
TOM HERRIN,
Chairman of Lewis and Clark County Farm Bureau Legislative Committee.

HAMILTON, MONT., *April 30, 1955.*
LEE METCALF,
United States Montana Congressman,
House Office Building,
Washington, D. C.:
I am opposed to high rigid price support for agriculture and also a minimum-wage hour of $1.25. Request you oppose H. R. 12.
EARL BJORK,
Stevensville, Mont.

HAMILTON, MONT., *April 30, 1955.*
LEE METCALF,
United States Montana Congressman,
House Office Building,
Washington, D. C.:
Minimum wage of $1.25 and high price supports are not beneficial to agriculture. Mrs. McPherson and I request you oppose this legislation.
JAMES L. MCPHERSON,
Stevensville, Mont.

HAMILTON, MONT., *April 30, 1955.*
LEE METCALF,
United States Montana Congressman,
House Office Building,
Washington, D. C.:
Urge you to oppose H. R. 12 on floor of House. High rigid price supports have failed to meet the farmers problem of surpluses. Minimum wage of $1.25 is very inflationary so urge you to oppose this bill.
GEORGE ANDERSON,
Vice President of Ravalli County Farm Bureau.

HAMILTON, MONT., *April 30, 1955.*
LEE METCALF,
United States Montana Congressman,
House Office Building,
Washington, D. C.:
Ravalli County Farm Bureau of representing farmers and ranchers in Ravalli urge you to oppose H. R. 12 on floor of House. High price supports put too much control in hands of Government and inflationary inflates and creates surpluses and cuts net income to farmers. I also oppose $1.25 minimum wage.
ANDREW M. POLSON,
Corvallis Secretary Ravalli County Farm Bureau.

Loyalty Day

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1955

Mr. DAVIS of Georgia. Mr. Speaker, it is a matter of pride and gratification to me that the Governor of my home State of Georgia has proclaimed May 1 as Loyalty Day. I am proud also that many of the mayors of cities and towns in my congressional district at home likewise proclaimed May 1 as Loyalty Day, and that pursuant to these proclamations Loyalty Day was observed by parades, rallies, and patriotic activities. Participating in these ceremonies were many of our officials, numerous patriotic groups and veterans organizations, as well as individual men and women, boys and girls who love our country and appreciate the priceless blessings which we enjoy as free American citizens.

It is fitting that May 1 has replaced the spot on the calendar that for many years was a rally day for Communist organizations and the other units of radicalism which oppose every concept of patriotism, every right of free men, embodied in our Constitution and the Bill of Rights.

Loyalty to flag and country is the keystone in the arch of good citizenship. Designation of May 1 as Loyalty Day takes the battle to the hordes of subversion on the date such forces had preempted over many years as their day of demonstration.

Today I received a letter from Charles A. Moran, chairman of the loyalty day committee of the Veterans of Foreign Wars of the United States in Atlanta, Ga., who has enlisted the aid of radio stations, newspapers, and speakers in publicizing Loyalty Day by repetition of patriotic slogans.

I would like to place 1 or 2 of those slogans in the RECORD. One reads:

On Loyalty Day let us recite the new pledge to the flag: "I pledge allegiance to the flag of the United States of America, and to the Republic for which it stands, one nation, under God, indivisible, with liberty and justice for all."

Another reads:

Loyalty means liberty. Observe Loyalty Day May 1 in your own way. Reaffirm loyalty to God, our country, and our flag.

To these sentiments, Mr. Speaker, I join with millions of Americans in saying a fervent "Amen."

Should Have Been an Open Session

EXTENSION OF REMARKS
OF
HON. HARLAN HAGEN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. HAGEN. Mr. Speaker, under leave to extend my remarks, I wish to call the attention of my colleagues to the following editorial from the Bakersfield Californian, a fine newspaper which is published in the congressional district which I am privileged to represent. It relates to the controversy over the release of the Yalta documents and appeared on April 22, 1955:

SHOULD HAVE BEEN AN OPEN SESSION

Currently there is an altercation between two United States Senators over the testimony of Secretary of State John Foster Dulles concerning how certain newspapers obtained advance release of the Yalta Conference papers to the disadvantage of the remainder of the press and press agencies.

This testimony was given at a hearing that was closed to the press by Senators, an ironic note, indeed, and one that hardly coincides with the ideas of freedom of information we hear so much about, even freedom to know why discrimination was practiced in the release of documents that according to the campaign platform of the party now in power should be repudiated.

Information reaching the press after this hearing concluded yesterday put Mr. Dulles in a peculiar position considering all that has been said in certain quarters concerning Yalta. This information indicates that Mr. Dulles, now Secretary of State and for decades considered an authority on international affairs, does not agree with those who have excoriated the Yalta agreements and does not follow the campaign platform line demanding their repudiation.

According to Senator HUBERT HUMPHREY, of Minnesota, who was present at the closed session and gave newsmen a detailed account of the proceedings afterward, the Secretary

of State admitted to the hearing that the Yalta decisions have actually been advantageous to American foreign policy instead of the treasonable acts they have been termed by some.

Mr. HUMPHREY declared that Mr. Dulles asserted to the group of Senators that he still disavows the Republican platform pledge of 1952 calling for repudiation of the Yalta agreements. This is a significant point, since the Secretary of State and the President are the chief architects of American foreign policy and neither has made any move to implement the execution of this pledge.

The views of Mr. Dulles, as expressed to the committee, indicate that in his informed belief, most of the criticisms of the Yalta agreements are groundless or politically inspired and not consistent with good policy.

Senator KNOWLAND, of California, who has been, strangely enough, one of the principal leaders of the majority party yet the most consistent and vocal critic of its foreign policy, is apparently incensed over the action of HUMPHREY in allowing reporters, and the people at large, to learn what went on at the meeting, calling HUMPHREY's action "a violation of the rules and precedents of the committee."

Nowhere, however, has Mr. KNOWLAND been found to express direct contradiction of Mr. HUMPHREY's account of the Secretary of State's testimony nor of the assertion by Mr. HUMPHREY that during the hearing he would not agree to withhold information concerning questions put to Mr. Dulles and the answers of the Secretary.

On the other hand, Senator JOHN SPARKMAN, who attended the meeting, has issued a statement generally corroborating the report of Senator HUMPHREY, so that it would seem that the furore about violating the rules and the precedents of the committee is less of an expression of concern over the integrity of the rules and precedents than it is an expression of profound and anguished consternation at the Secretary of State's fatal thrust at one of the great shibboleths of a certain wing of his own party.

This Mr. Dulles accomplished with remarkable skill, if Mr. HUMPHREY's account of his testimony stands. The Secretary has, with prime authority, registered defense of the Yalta agreements and rendered the competent opinion that they served the foreign policy of the United States well, disposed of the partisan criticism of the agreements and disclosed obliquely that the administration and presumably the Republican Party will make no move to carry out the repudiation terms in the 1952 campaign platform.

This is a major development, and it would have been more appropriate and far safer to have allowed the press to cover this important session and reported its proceedings in the proper manner than to have barred the doors and caused the present rumpus.

Resolution Adopted by the County Commissioners Association of Georgia

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1955

Mr. DAVIS of Georgia. Mr. Speaker, in the State of Georgia, a board of commissioners constitutes the governing body of the individual county governments. These county commissioners have formed an association which is known as the Association County Commissioners of Georgia. Each year this association holds an annual convention at which convention discussion is had and action is taken upon current problems and subjects of importance to these county government officials.

These county officials are elected by a vote of the people in their respective counties. They are persons of recogized ability and standing. I would say that their collective judgment is an accurate reflection of the sentiment and collective judgment of the people of Georgia.

This County Commissioners Association held its annual meeting last week in Augusta, Ga., and one of the subjects which came under discussion at the meeting was the United States Supreme Court school decision of May 17, 1954.

This attempt of the Supreme Court to usurp legislative functions which the Court does not possess has been the subject of discussion at a number of meetings and gatherings which are representative of Georgia citizens and which reflect their feelings. Such a meeting was the State convention of the Democratic Party held at Macon, Ga., in the autumn of last year. A strong resolution was adopted at that convention condemning the outrageous action of the Supreme Court in attempting to amend the laws and change the Constitution illegally.

There have been other meetings, some statewide, some local, at which similar resolutions have been adopted expressing the resentment which people of Georgia feel and expressing their condemnation of this high-handed action on the part of the Supreme Court.

At the County Commissioners Association convention above mentioned, on April 26, 1955, that group of representative Georgians adopted the following resolution:

Whereas the people of this sovereign State of Georgia have been and are devout and law-abiding people, and throughout the history of our country have opposed tyranny in any form; and

Whereas on May 17, 1954, the United States Supreme Court chose to abandon all principle and to strike down legal precedent established by able, representative, and distinguished jurists, and by such untoward decision it threatened to attempt to destroy the peaceful relationships existing between the white and black races in the South and Nation; and

Whereas this untoward and unwarranted decision of the Supreme Court was encouraged by the President of the United States through the office of his appointed Attorney General; and

Whereas such a decision is an affront and challenge to the traditions of our people, to the peace and goodwill of our black and white citizens and to our way of life; and

Whereas this decision will breed chaos where there is now harmony and mutual progress: Now, therefore, be it

Resolved by the Association County Commissioners as follows:

(1) That this association and the members thereof both jointly and severally pledge to the Governor and all public officials of the State, full support in each and every way or means required or necessary, or advisable to protect and maintain the segregation of the races in our schools;

(2) That regardless of what the Federal Government or any division thereof says or does, that there will not be a mixing of the races in our schools and we positively and unequivocally so pledge ourselves;

(3) That a copy of this resolution be sent to the President of the United States, the Attorney General of the United States, the clerk of the Supreme Court of the United States, to the Governor of Georgia and to the governors of each of our sister Southern States, and to each member of the Georgia delegation in the Congress of the United States.

Mr. Speaker, I pointed out on the floor of this Congress as long ago as 1949 that the Supreme Court was planning to usurp legislative functions, and to assume authority which the Court in fact does not possess,, by handing down a so-called decision, the effect of which would be to amend the Constitution and to change the law of the land.

The Court has endeavored to do exactly that. When this so-called decision was published, the then Governor of Georgia characterized this outrageous and highhanded action of the Supreme Court as an unwarranted assumption of authority, and as the chief executive of a sovereign State, declared that Georgia would not submit to any such assault upon her rights as a State and upon the constitutional rights of her citizens. The present Governor of Georgia has likewise declared himself and stands firmly upon that same position.

This resolution of the County Commissioners Association is another declaration by the people of Georgia that they know their rights, and that they will not suffer those rights to be wrongfully taken from them by a group of would-be reformers who happen for the moment to be sitting in high place in one branch of our Government.

New Cotton Support Plan Is Favored

EXTENSION OF REMARKS
OF
HON. HARLAN HAGEN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. HAGEN. Mr. Speaker, I wish to make available for the edification of my colleagues the following worthwhile editorial which appeared April 22, 1955, in the Bakersfield (Calif.) Californian:

NEW COTTON SUPPORT PLAN IS FAVORED

A new support plan for cotton is reported to be winning the favor of Secretary of Agriculture Benson, who seeks to avoid insofar as possible any fixed high supports and rigid controls on the cotton crop for the coming year.

The new plan would lower the price support level but permit larger planting allotments. Although little has been heard generally about the new plan, it is known that the new arrangement has been devised to permit the cotton farmers to get out from the present rigid controls that have cut the acreage down to the minimum, due to the tremendous carryover and somewhat dim market outlook, as reported by Department officials.

Washington reports point out that the crop, while being cut to the minimum, is being supported at the highest point permitted by law, 90 percent of parity. At a news conference this week, Secretary Benson declared that a program such as that suggested would permit farmers to sell more cotton at home and abroad, and would subsequently permit larger planting allotments.

Mr. Benson said he is finding widespread backing for the plan on the farm level and growers of wheat and rice, also having difficulty with prices and allotments, are seeking a similar program to cover their crops.

The reaction of Western cotton growers to the new arrangement has not been heard, but it is believed that a plan that awards a premium for efficient production of quality cotton and relieves the industry of restrictive practices will find favor here.

Any development that assists the cotton industry to meet market conditions and increase economic returns will be approved by the growers, who are not in favor of restrictions of any kind. Western growers are also anxious to receive equal consideration with others and want no discrimination in any arrangement.

Insofar as high support trends are concerned, here is one view from the New York Times that is interesting:

"High support prices tend to keep farm prices in this country at higher levels than they would be under the operation of natural market forces. We cannot sell farm products at prices above the world market price; the result is pressure to subsidize such export sales. But export subsidies are a form of economic warfare directed in the main against our friends and allies of the free world. They bring animosity and recriminations which weaken free world unity. Moreover, as the growers of cotton have learned to their sorrow, high United States prices stimulate the growth of competitive plantings in other countries.

"All of us are consumers and taxpayers. We pay for high support prices twice, at the grocery store and in our tax bills. Farmers, who are also consumers, also pay a higher price, because high supports require that farmers accept a high degree of governmental regulation for their chief crops. Surely it is time that we made an approach to sanity in our farm policy by adhering to the flexible support program."

H. R. 5928

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1955

Mr. QUIGLEY. Mr. Speaker, on Thursday last I introduced H. R. 5928, a bill which extends tax-amortization benefits to those who construct new plant facilities in areas of labor surplus as designated by the Bureau of Employment Security, United States Department of Labor.

In remarks made on the floor at that time, I referred to a resolution adopted by the General Assembly of Pennsylvania memorializing the Congress to enact legislation of this type. As a part of my remarks, I include the text of the resolution to which I referred:

Whereas under the provisions of the Internal Revenue Code it is permissible to amortize more rapidly certain expenditures made for emergency facilities; and

Whereas the President of the United States if he so finds may declare any area in the United States an acute distress area because of unemployment surplus of labor or other economic cause: Therefore be it

Resolved (the senate concurring), That the General Assembly of the Commonwealth of Pennsylvania memorialize the Congress of the United States to support and enact into legislation amendments to the Internal Revenue Code so that capital expenditures in any area in the United States declared by the President to be an acute distress area because of unemployment surplus of labor or other economic cause may receive the same treatment with regard to depreciation allowances as emergency facilities receive under section 168 of the Internal Revenue Code; and be it further

Resolved, That copies of this resolution be transmitted to the presiding officers of each House of the Congress of the United States and to each Senator and Representative from Pennsylvania in the Congress of the United States.

The United States Shipbuilding Industry and Merchant Marine

EXTENSION OF REMARKS
OF
HON. FREDERICK G. PAYNE
OF MAINE
IN THE SENATE OF THE UNITED STATES
Monday, May 2, 1955

Mr. PAYNE. Mr. President, many people in the United States are alarmed about the present status of the American merchant marine and the American shipbuilding industry. A strong and modern merchant marine is vital to our Nation's commerce and defense. In the April, 1955, issue of the American Federationist there is an excellent article entitled "Why Should America Stand Last?" written by Mr. James A. Brownlow, president, American Federation of Labor metal trade department. He discusses our merchant marine and our shipbuilding industry. I commend the article to the attention of every Member of Congress. I ask unanimous consent that Mr. Brownlow's article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHY SHOULD AMERICA STAND LAST?

(By James A. Brownlow, president, A. F. of L. metal trades department)

America's shipbuilding industry and merchant marine are vital links in our national defense. On the strength and readiness of the shipbuilding industry and the merchant marine the safety and economic well-being of all Americans depend to a considerable degree. We should have learned this lesson well—the hard way—from our experiences in World War I, World War II and, more recently, the Korean conflict.

Each time our shipbuilding industry and our merchant marine were completely unprepared to meet the emergency. Each time our shipbuilding industry had to perform its tasks in a great rush and at great cost. Each time the industry had been allowed to stagnate until the next emergency hit us.

It is high time that all Americans—regardless of where we live or what we do for a living—awake to this national problem. We must see to it that our elected spokesmen in Congress are aware of our concern and of our insistence on legislation to meet this critical situation effectively.

What has happened to our once vast shipbuilding industry and our merchant marine is a sad saga hidden in statistics. Seldom does the story make the headlines. The reports and the releases of the Maritime Administration and the various shipbuilding and merchant marine associations tell a tale all Americans should know and do something about.

Lloyd's latest report indicates that the United States has dropped to last place among the major shipbuilding nations of the free world. During the last quarter of 1954 our country fell from sixth to twelth place. On January 1 the gross tonnage on the ways in our private United States yards was less than half of that on October 1 of last year.

Lloyd's report is based on all vessels under construction having a gross tonnage of 100 gross tons or more. The Shipbuilders' Council of America collects figures on merchant vessels of 1,000 gross tons or over and which are under construction or on order. The Council's report for January 1 reveals the same shocking story.

On that day the shipyards of the free world had under construction or on order 1,347 vessels of 11,249,398 gross tons. Of this total only 14 vessels of 193,660 gross tons were in American yards. The United States had dropped to tenth among the major shipbuilding nations. On January 1, we had only 1.7 percent of the total tonnage building or on order.

What were other countries doing? Here is the picture:

Country:	*Percentage*
Britain	35.1
Germany	12.6
Sweden	12.3
Holland	9.8
Japan	7.0
France	5.3
Norway	4.8
Italy	3.9
Denmark	2.7

While the United States has been slipping rapidly in ship construction, other countries have been experiencing remarkable gains. During the last quarter of 1954 the yards of the United Kingdom, Japan, Germany, Holland and Italy all rolled up substantial increases in new-tonnage construction. Japan nearly doubled her tonnage during the last quarter of 1954. She claims that during the last three quarters of 1954 she had more ships on order than in 80 years of shipbuilding. Japan now claims to be third in the world in shipbuilding capacity. The yards of Western Germany turned out 920,000 gross tons in 1954—the largest tonnage since World War II. And British yards have a backlog of 4,250,000 gross tons, the president of that country's Shipbuilding Conference has announced.

Meanwhile, our own American shipbuilding industry is in a distressed condition, and it is indeed a sad commentary that this condition has been aggravated—and to a large measure caused—by American firms and their affiliates. They have aggravated the condition by placing ship construction orders in foreign shipyards.

While American yards and their skilled work forces are suffering from lack of work, United States companies and their affiliates have seen fit to build large numbers of ocean-going vessels in the busy shipyards of foreign countries which have been rolling up substantial tonnage.

As of last June 30, United States companies and their affiliates were building or had on order in foreign yards and for foreign registry 57 vessels totaling 888,687 gross tons—roughly 4 times the entire merchant ship tonnage which all our United States private yards had building or on order as of that date.

The orders for 57 vessels to be built in foreign yards included 41 tankers of 678,252 gross tons, 10 ore carriers of 187,150 gross

tons, and 6 dry-cargo vessels of 23,285 gross tons.

These orders of American companies and their affiliates placed in foreign shipyards amount to almost five times the total tonnage under construction or on order in our American yards on February 1. As of that date, our yards had on the ways or on order only 13 sea-going or inland merchant vessels of 1,000 gross tons or more. These 13 vessels, 7 for Government account and 6 for private United States flag account, total only 188,960 gross tons.

These foreign shipbuilding orders of American companies and their affiliates would have assured employment for 1 year for more than the 36,000 skilled worker nucleus which the Maritime Administration figures we need to maintain our private yards in a position to meet the needs of rapid expansion in the event of full mobilization.

If we include our coastal, Great Lakes, and inland waterways and the repair facilities, 130,000 workers are needed in the shipyards of the Nation. These workers and yards should be distributed in the proper ratio on the three coastal fronts and also inland and Great Lakes waterways.

A few weeks ago another large American oil company (Tide Water Associated Oil) announced that it had ordered four 50,000-ton supertankers, the largest such ships ever built, to be constructed in France and delivered in late 1956 and early 1957.

The Maritime Administration has estimated that the construction of a considerably smaller supertanker of 35,500 deadweight tons provides approximately 750 man-years of shipyard work. On this basis, it would appear that these 4 supertankers alone would have supplied our shipyards with at least 4,000 man-years of shipyard work.

Each of these vessels ordered abroad is a direct loss to our shipbuilding industry. As all of them are to be operated under a foreign flag, they will also constitute a loss to our American merchant marine. It is through such practices that these companies fail to sustain our American standard of living and the purchasing power of American workers, which is principally responsible for the broad American markets for their products.

These companies are American companies. They have a moral obligation to support American industry and our standard of living. It is unfair of them to ignore the plight of American workers. The patronage of American workers has made their success possible.

Trade unionists are well acquainted with the tactics of the runaway shop and farming-out of work. What is this practice of American companies in placing their ship construction work in foreign yards and then operating the vessels under foreign flags but another form of this same old problem?

It is true that construction costs in foreign yards are substantially less than in our own. The American standard of living is higher. Direct and indirect costs are greater. Therefore, even though our shipyards are more efficiently operated than those in foreign lands, the end-product costs more.

The construction of a large ocean-going vessel is not nearly so susceptible to the techniques and economies of mass production which have enabled so many American industries to meet foreign competition and constantly improve American living standards. It is still essentially a construction operation requiring specialized skills and large amounts of hand labor.

The fact that a merchant vessel is an instrument of foreign commerce makes it particularly vulnerable to cost advantages of foreign construction. Foreign construction is further stimulated and encouraged by the savings which accrue through foreign-flag operation. Foreign-flag construction and operation under a foreign flag constitute a runaway from the decent living standards established over many years of struggle by American ship-building workers and merchant seamen through their respective trade-union organizations. The saving on construction averages at least 30 percent, and thereafter foreign flag operating costs are only about one-fourth of the costs of operation under the American flag.

Ten short years ago the United States led the entire world in ship production. Between 1941 and 1945 our yards produced 5,280 ocean-going ships totaling 54 million dead-weight tons. For every 100 workers employed in our private yards during the wartime peak, less than 5 are employed today. Today the United States is fighting for its life as a shipbuilding nation. We stand in last place—not first—among the major shipbuilding countries of the free world.

America's shipbuilding facilities are a vital part of our national defense. The success of any wartime overseas operation depends directly on the availability of speedy modern vessels to transport men, equipment, and supplies. Prompt and adequate action by Congress on a program, including subsidies, to offset advantages of foreign-yard construction and foreign-flag operation is essential if we are going to maintain the necessary hard core of our shipbuilding industry and our merchant marine.

The merchant marine and the shipbuilding industry go hand in hand. The merchant-marine picture is dark. For the first time since 1939 we have lost our world leadership in the volume of privately owned ocean-going tanker tonnage. As of the close of last year, according to the American Merchant Marine Institute, our privately owned ocean-going tanker tonnage had decreased by 38 vessels and 320,000 deadweight tons. This left us at the start of 1955 with 6,624,658 deadweight tons, as compared with the United Kingdom's 7,054,000 deadweight tons.

United States petroleum imports in 1954 were a little above 1953 and five times those of 1938. However, our American-flag tankers hauled only 33 percent of this oil in the first 9 months of 1954, while in 1938 American tankers hauled 53 percent of our incoming oil and in 1946 they hauled 76 percent.

Our tanker-fleet tonnage is at its lowest level in 6 years. The standing of the leading tanker nations on January 1 was as follows:

Country:	*Deadweight tonnage*
United Kingdom	7,054,000
United States	6,624,658
Norway	5,693,000
Panama	3,578,000
Liberia	2,609,000
Italy	1,642,000
France	1,442,000
Sweden	1,166,000

The American people are the largest users of petroleum in the world. A vast portion of this petroleum comes from overseas. Recent testimony before the House Ways and Means Committee indicated that six companies import 70 percent of the foreign oil used in the United States. Five of these are American companies. These five are purported to have 89 percent of their proved oil reserves and 64 percent of their present oil production outside of the United States.

Increasingly these American companies are resorting to foreign-ship construction and foreign-flag operation (frequently through their foreign-controlled affiliates). Foreign construction gives them an initial cost advantage. Often this is supplemented by a healthy-sized construction subsidy, accelerated cost-writeoff allowances and, in at least one country (which has now passed us in construction tonnage), a complete exemption from income tax of all revenue derived from new ships for the first 3 years of their operation.

Tonnage itself does not tell the whole story. The American Merchant Marine Institute estimates that about 75 percent of our American tanker fleet was built during World War II and only 12 percent since the war. By contrast, only 25 percent of the foreign-flag tankers were built during the war and more than 50 percent of foreign tankers are relatively new, having been launched since the war.

About 85 percent of our tankers will face the problem of obsolescence within the next 10 years. Replacement of our tankers as they reach the 20-year age limit will require careful planning of industry and Government and the availability of large sums of money if our privately owned and operated tanker fleet is to be maintained.

During the last 12 months increasing numbers of American merchant seamen have been beached. These Americans are jobless because of generally slow conditions in our shipping industry, the transfer of more than 130 ships to foreign flags and the construction of new vessels for foreign-flag operation.

On January 1, according to the Maritime Administration, our merchant fleet offered 58,800 berths. This was 7,550 fewer than a year earlier. Unemployment rolls and union waiting lists "reflect the sad state of the Nation's seagoing force," says the New York Times. According to this newspaper, the A. F. of L. Masters, Mates, and Pilots report only one-third of 12,000 members at sea. This union supplies deck officers for virtually all of the Nation's deep-sea shipping. The other unions of seagoing workers report longer-than-usual waits for jobs.

America's shipbuilding industry and America's merchant marine operate directly in the national interest. They are part and parcel of our national defense. Last year Congress enacted various measures designed to bolster the shipbuilding industry and the merchant marine. These included:

The so-called 50–50 cargo bill, requiring that at least one-half of all cargoes financed by the United States Government—whether inbound or outbound—must move in American flag ships. A ship mortgage insurance law. A law providing for the private construction of 15 tankers for long-term Navy charter and the building of 4 by the Navy. The Liberty ship conversion program, providing for the experimental conversion of four of these vessels. The tanker "trade in and build" program. The passenger-cargo ship replacement program providing for the replacement of four passenger-cargo vessels for South American and Caribbean trade. The Navy (MSTS) special ship program, involving seven special-type ships. The emergency repair program providing $12 million for repair of vessels from the laid-up fleet.

These programs are helpful. They mitigate—but do not solve—the national crisis in shipbuilding and the merchant marine. The long-term merchant ship construction program, which the 83d Congress failed to act on, is sorely needed. This proposal called for the construction in American shipyards of 60 cargo and cargo-passenger ships per year.

Adoption of this program would be a long step toward meeting the "block obsolescence" which faces our merchant fleet and would assure a nucleus of about 36,000 skilled workers employment in our merchant shipyards for our ocean-going ships. According to the Maritime Administration, this is the minimum peacetime employment which must be maintained in our merchant ship construction program as a "mobilization nucleus" if our private yards are to be in a position to meet the needs of rapid expansion in the event of full mobilization. The 84th Congress, which is now in session, should take prompt and favorable action on similar legislation.

The present growing trend toward foreign construction and foreign flag operation is sapping the strength of our shipbuilding industry and our merchant marine. Our national safety, which demands the maintenance of our shipbuilding at least at the "mobilization nucleus" level and a speedy modern merchant marine fleet with the skilled men to man it, is endangered.

Our merchant marine is our lifeline in wartime overseas operations. It must be ready and available to transport men, equipment and mountains of supplies, should the need arise.

We must keep our American corporation-controlled ship construction work in our American yards. We must see to it that American-owned vessels operate under the American flag. Effective action to solve these problems must be taken promptly by the 84th Congress.

National Reserve Program

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1955

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks I present below an editorial appearing in a recent issue of the Washington Post, Washington, D. C. I feel this editorial presents a clear picture of the proposed national Reserve program which will soon be before the House of Representatives for consideration. The editorial, entitled "A Compulsory Reserve" is as follows:

A COMPULSORY RESERVE

The House Armed Services Committee has produced what probably is as good an Armed Forces Reserve bill as can be obtained in present circumstances. The bill in no sense provides universal military training, which has become a sort of emotional bugaboo on Capitol Hill. Because there is a possibility, with lowered draft quotas, that some young men will escape both active duty and Reserve obligations, there will be charges that the bill is unfair. Nevertheless, the measure retains the one most essential feature of all: authority for the armed services to compel participation of trained men in Reserve programs, with failure to participate penalized by call to active duty and possible court-martial. Obviously this authority should be used sparingly and sympathetically, but the authority itself is necessary.

Legislators as well as military officials are aware that the present Reserve program, at least in the Army, is very largely a joke. It is virtually impossible to tell how many effective, trained reservists actually could be counted on in an emergency. Some of the trouble arises from the slipshod manner in which, until recently, the Army managed reserve training; but some also arises from the tenuous nature of the present law which makes participation in the Reserves difficult to enforce once men have been released from duty.

The new bill recognizes a reserve obligation of up to 7½ years, depending on the length of time served on full-time duty, for young men who are drafted for regular service or who volunteer for the proposed 6-month UMT-type training program. The committee declined, however, to give the Armed Forces authority to draft men for the 6-month basic program if volunteers should not fill the quotas. Thus the Armed Forces will draft men for active duty only, as at present. The appeal of the 6-month program will lie in the chance it offers young men to volunteer and get their full-time duty over with rather than to wait out the possibility of 2 years of draft service.

Although the requirements of the atomic age may change the patterns of manpower use, there is no reason to think that there will be any less need for trained men than in the days of more conventional defense. A genuine universal training program would still be the most equitable way to build a strong Reserve. If the UMT concept is politically infeasible, then what the House committee has devised is the next best thing. We hope that the full House, as well as the Senate, will recognize that mandatory training is the only key to a reliabe Reserve.

Censorship

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1955

Mr. QUIGLEY. Mr. Speaker, under leave to revise and extend my remarks, I include a pertinent editorial from the Carlisle, (Pa.) Sentinel of April 26, 1955:

GOVERNMENT CENSORSHIP

In a recent interview, Senator STUART SYMINGTON, chairman of Armed Services Committee and former Secretary of the Air Force, declared that long-range, guided missiles are, currently, the gravest threat to the United States; this Government is far behind in development of these missiles; that Russia has made much greater progress along this line, and—going back in history—if the Normandy invasion had been delayed 2 months it could not have been made because Hitler's rockets would have been sufficient to stop such an invasion.

This information came as a complete surprise to the public, but the Senator is in a position to know what he is talking about. The only reason the public has not known is because information has been suppressed by the Defense Department on orders of Secretary Wilson. Secretary Wilson, of course, is acting on orders from his boss.

It is within the right of the President to order the withholding of information which could be detrimental to the program of defense, but it is tragic that the Defense Department is permitted to withhold information which the public should have, by marking it "classified"—not only because the public has a right to know but because pertinent information such as the status of the missile situation should, and will bring an increase in public interest and will help the Civilian Defense and Ground Observer Corps programs.

The long-range, guided-missiles situation is, however, only one of many subjects of which the people of the Nation should have knowledge. Others are (1) cutbacks in the military—the elimination of men and women who volunteered for service, have been taught, and have experience, while at the same time men who do not want to serve and are green are being drafted daily to take the places of those discharged; (2) the Air Force which, instead of having 143 wings as planned, has only 58; (3) the overall lack of strength to fight a war in the Far East and lack of United States foot soldiers to hold territory gained; (4) the cool relationship between the United States and her allies; (5) bombs, and methods of protection against bombs.

For some imperceptible reason the administration thinks information on vulnerability to attack, military strength, weapons, and all else, would be bad for the public. That kind of thinking is false. Americans want to know the best and the worst. They proved in 1776 and ever since that they can face good and bad news calmly. They should be given the news. Supersecrets they want kept supersecret.

But if the administration has any notion that much of that same "classified" information and secrets are not known by enemies, the administration is incredulously naive.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

PRINTING DOCUMENTS AND REPORTS

Documents and reports of committees with the evidence and papers submitted therewith, or any part thereof ordered printed by Congress, may be reprinted by the Public Printer on order of any Member of Congress or Delegate, on prepayment of the cost thereof (U. S. Code, title 44, sec. 162, p. 1940).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

Appendix

Emergency Controls Over Salk Vaccine

EXTENSION OF REMARKS
OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1955

Mr. BOLAND. Mr. Speaker, Congressman FOGARTY, of Rhode Island, and I have today filed identical resolutions directing the Secretary of Health, Education, and Welfare, to exercise, for a limited period of time, certain emergency controls with respect to the distribution and use of the Salk vaccine.

It is with some reluctance that we arrived at this decision to provide some elements of compulsion to the great problem of price, priorities, and distribution affecting Dr. Salk's great achievement in the field of infantile paralysis.

However, events of the past several days clearly indicate that voluntary cooperation in this matter on the part of the drug industry, the medical profession, distributors, and local communities is deteriorating into a state that requires compulsion.

Already rumors have given way to fact that a black-market, profiteering, sales to adults rather than provision for children are being established. There is considerable evidence that the vaccine will be in short supply. This situation necessitates compulsion.

You will note, Mr. Speaker, that in section 8 of the resolution we ask that its effect end on May 31, 1956, except that if, prior to that time, the Secretary finds and makes a public announcement that the emergency which necessitated this resolution no longer exists. Then the resolution shall cease to be in effect at the close of the day upon which such public announcement is made.

The following editorials and news account bring sharply into focus the need for the kind of resolution presented to this House today:

[From the New York Herald Tribune of May 2, 1955]

WASHINGTON MUST ACT

The Salk vaccine against poliomyelitis is a national blessing which has created a national emergency. Experts have confirmed the vaccine's general efficacy. The demand is far greater than the supply. Every child in America has a right to its protection.

The serum can only be, and must be, controlled nationally.

Prior to the publication of the Francis report on the success of Dr. Salk's discovery, no agency, public or private, had thought through all the problems involved in the production and distribution of this great boon.

The National Foundation for Infantile Paralysis, which deserves great credit for initiative, efficiency, and determination, had made contracts for the purchase of vaccine for free administration to children. It is delivering the serum to communities, but has no authority over private distribution of quantities produced in excess of its own contracts, nor can it effectively control community action after the vaccine is in the hands of local health authorities.

States and localities have improvised their own distribution systems. For the most part, these are based on voluntary allocations and priorities, and are concerned more with the acquisition of and payment for the vaccine than with seeing to it that priorities are absolutely observed. Only on Friday, after it was clear that the voluntary system was breaking down, did New York City place penalties on the unauthorized sale or possession of the Salk serum. This was a purely local move; the penalties, moreover, are light in view of the great temptation offered by the short supply of the vaccine: $500 fine, a year in jail, or both.

The Federal Government, the only authority capable of exercising national controls, made no serious effort, before the release of the report, to anticipate its responsibilities. The Public Health Service licenses and supervises the manufacture of the Salk vaccine under the National Biologics Control Act. Powers under this act have been exercised in withdrawing the product of the Cutter Laboratories from distribution.

But the law applies only to the source, only to quality. It gives the Federal Government no authority over allocation, over price, over violators of agreements. The administration has relied on voluntary cooperation and on advisory committees.

The fear of polio has haunted parents for generations. It is too much to expect of human nature that when the promise of release from that fear appears, voluntary arrangements will hold against a mother's insistence on the protection of her children or the greed of those who want to make money out of that emotion. New Yorkers remember the near-riots that were produced by the distribution of gamma globulin, far less effective than the Salk vaccine. They are aware that already supplies of the new serum have disappeared into unauthorized channels and been diverted to adults when the moral right of children to priority is unchallenged.

To bring order out of this explosive situation, a national law is essential. There are five requirements for such a law:

1. It must be simple and sweeping, giving the Federal Government the authority to follow the Salk vaccine from the producing laboratory to the person receiving the injection, fixing the price, imposing strict regulations as to records, setting firm allocations to various regions and absolute priorities according to need.

2. It must provide for the prompt dissemination of fully evaluated information on all medical aspects of the program. Doubts have arisen across the Nation over such matters as provocation and the timing of shots in relation to the incidence of polio. Parents are entitled to know what disinterested experts think of these questions as they arise. Their children's lives are at stake.

3. It must be clearly limited in time and subject, so that there will be no doubt that this is an emergency answer to an emergency situation, not a step toward socialized medicine. A year, or at most two, will probably bring supply and demand into balance.

4. It must have teeth. Penalties for violators—both users and sellers—should be harsh, several years in jail, some thousands of dollars in fines, so that there will be no prospect of profit in flouting the law.

5. Finally, and of the utmost importance, the act must be passed immediately and administered vigorously. The emergency is now—not tomorrow or next month. Congress can pass a law through both Houses in a single day, if the need is great enough. It should pass this legislation forthwith. The Government should be prepared to put its execution in the hands of the country's top administrators, experienced in allocations and priorities.

Given such leadership, working in harmony with all interested parties, red tape could be cut, the machinery set in motion, and speedy enforcement assured.

The parents and children of the Nation demand it. The whole world is waiting to see whether the United States will use this great new weapon against polio swiftly, efficiently and—above all—equitably.

[From the Springfield (Mass.) Daily News of May 2, 1955]

FAIR PLAY FOR ALL

It is estimated that it will take roughly 2 years to get the Salk polio vaccine inoculations on a standard national level; to the point where supply and demand become compatible and the whole matter is more or less routine.

Two years is a long way off, when you start measuring time in terms of human life. Between now and then, there will be millions of Americans who will want, and need the polio preventive, and what has happened during the past 2 weeks demonstrated how poorly prepared we were, as a Nation, to utilize fully this tremendous medical boon to all mankind.

Very naturally, all parents want their children to be among the first to be protected. This is manifestly impossible and already there are ugly rumors that predators in the guise of human beings are moving in to take advantage of a difficult situation by organizing and running a black market in the Salk vaccine.

The penalties for any such outrageous offense should be swift and drastic. These vultures are trading in human lives, and the quicker they are exposed and removed from this society the better it will be for everyone. Because of the magnitude of this entire enterprise, the United States Government should be the agency to shoulder the responsibility and see to it that every child gets his fair share of this golden opportunity to rid the human race of one of its most dread diseases.

The announcement that the inoculations would still go forward, despite the unfortunate circumstances surrounding the Cutter vaccine, should provide heartening news. Eventually, research will disclose whether the California-produced vaccine was faulty, or whether its makers just had the bad luck to be participants in a series of coincidences they had no way of predicting.

All of this is part of the current uncertainty that is rapidly reaching critical proportions. Because the human element is so vital, it behooves all agencies connected with

the dissemination of the vaccine to employ the utmost caution in their dealings with those who are to handle it, and to make sure that it gets into only the most trustworthy hands.

This is easy to say and hard to do, yet it certainly must be done. That there should even be rumors of a black market in the vaccine is enough to turn the stomach, and one way to wipe out that menace would be to have every vial and all its contents officially accounted for right up to the point where it reaches the person to be inoculated.

Such a system of controls won't come into being overnight, but the sooner someone in authority starts on it, then the sooner the whole country can begin getting the greatest good from this modern-day miracle.

We are given to understand that the Salk vaccine will not be 100 percent effective. This was predicated in the Ann Arbor findings. There will be those who will still be victims of polio, but the majority will be protected. This is more than we have ever been able to say before and the measure of hope is wonderfully comforting.

There are going to be adults who will try to get themselves in line for the shots ahead of little children, and for them we have nothing but the utmost contempt. They, too, should face some sort of penalty, and be forced to recognize their responsibilities if they haven't the moral stamina to understand them of their own accord.

All of these elements should be part of any comprehensive program to protect the vaccine from racketeers and to insure its getting to the correct destination as safely and as quickly as possible. The same rules should apply everywhere, and every child should get a square deal. It is unthinkable that any other procedure can be allowed.

[From the New York World-Telegram and Sun of May 3, 1955]

VACCINE

NEW YORK.—The World-Telegram and the Sun reported that Salk polio vaccine was pouring steadily into offices of many New York physicians but not a single drop had been made available for the city's 281,000 school children.

The Scripps-Howard newspaper said this unpleasant picture on vaccine distribution via commercial channels had been made available to it by a top pharmaceutical source:

1. At least two manufacturers of the Salk vaccine are mailing, or delivering directly, three to nine cubic centimeters of the vaccine to hundreds of New York doctors—in exchange for orders on other pharmaceutical items.

2. One manufacturer has sent free samples of the vaccine to all stockholders who hold 20 or more shares in the company.

3. Some 4,500 vials of the vaccine, in three and nine cc packages, have been earmarked for 3,000 New York physicians by the Parke-Davis Laboratory in Teterboro, N. J., according to William R. Peer, executive secretary to Mayor Robert F. Wagner.

[From the New York Post of May 3, 1955]

VACCINE MAKERS EXPECTED TO REAP $20 MILLION PROFIT DURING 1955

(By Robert G. Spivack)

WASHINGTON, May 2.—The Salk polio vaccine, which yields no royalties to Dr. Jonas Salk who discovered it, is expected to bring $20 million in profits this year to its manufacturers, the Post learned today.

Pre-tax profits for the 6 drug houses licensed to produce the vaccine will be more than 33 percent, well-informed Wall Street sources estimated. This figure includes deductions for manufacturing and distributing costs.

Stock market speculators also stand to realize handsome profits.

Mrs. Jean Cummings Collingwood, Washington's "Mother of the Year"

EXTENSION OF REMARKS

OF

CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1955

Mr. HOFFMAN of Michigan. Mr. Speaker, it gives me not a little pleasure to include in the noteworthy events to which the attention of the Members of the House is from time to time called, the selection of Mrs. G. Harris (Jean Cummings) Collingwood as Washington's "Mother of the Year."

Mrs. Harris came to Washington with her husband, G. Harris Collingwood, from the Fourth Congressional District of Michigan, which it has been my honor and privilege to represent for some years. She was born in Centreville, Mich., 7 miles from the city of Three Rivers, and a few miles from the village of Constantine, my boyhood home.

One of her six children, her daughter Jean, was also born in Centreville, and now resides in St. Joseph, Berrien County, Mich., also in the Fourth Congressional District of Michigan, as the wife of my good friend, John H. Spelman, presently prosecuting attorney of Berrien County.

An interesting article about Mrs. Cummings, written by Mrs. Esther Van Wagoner Tufty and published in the Three Rivers (Mich.) Commercial, follows:

MICHIGAN IN WASHINGTON

(By Esther Van Wagoner Tufty)

WASHINGTON.—Washington's mother-of-the-year, Mrs. Jean Cummings Collingwood, still calls Michigan "home" although she's lived in the Capital since 1923.

She's one of the first Michigan-in-Washington people I met. Handsomely tall and attractively-alert, she was helping her friend, the late Mrs. Arthur Vandenberg serve tea and those tiny Vandenberg-doughnuts to a hundred or more visiting Michigan Daughters of the American Revolution in the Capital, for their spring congress. (Mrs. Collingwood retains her membership in the Abiel Fellows Chapter of DAR in Three Rivers.)

Born in Centreville, 7 miles from Three Rivers, which is still her voting residence, she is the daughter of the late Frank Cummings, who manufactured these well known Denton sleeping garments for children. His daughter laughingly recalls, "My sister Margie and I wore the first models."

Two of the six Collingwood children were born in Michigan: Charles, in Three Rivers (he's named for Circuit Court Judge Charles B. Collingwood who served for 25 years in Ingham County); and Jean in Centreville (she attended Michigan State College and is married to Prosecuting Attorney John H. Spellman and lives in Berrien County). Another daughter, Rebecca, graduated from Western Michigan College of Education at Kalamazoo and presented her mother with twin grandchildren. Married to James P. McHale, Rebecca now lives in Hopkinton, Mass.

The local American Mothers Committee chose wisely as this Michigan-born woman gives special meaning to the word "homemaker." Her husband, G. Harris Collingwood didn't chose a profession (forestry and conservation) that produced lavish luxuries for their six children.

But the six * * * all of whom had to write "supporting letters" * * * are really exceptional. One son is an artist. Another is a well-known radio-TV news star. The youngest is a preacher. The three daughters are "well married."

Now mother Jean, at 60, has 9 grandchildren. But she continues her civic interests, although she's dropped out of the PTA and church youth work. Still active in Westermoreland Congregational church and volunteer YWCA activities, Mrs. Collingwood inherited a desire to participate in things political, social, and cultural. She was singing at a political meeting (Republican) attended by the Cummings and Collingwood families when she met her husband.

Mrs. Collingwood will compete for the national title at a luncheon in New York later this month.

Polish Constitution Day

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1955

Mrs. FRANCES P. BOLTON. Mr. Speaker, it is our privilege today to pay tribute to a national holiday which cannot be observed in the homeland of the people we are honoring. This is Polish Constitution Day, commemorating May 3, 1791, when the people of Poland wrote a document which won wide acclaim as an achievement in creative statesmanship. Although Poland was shortly thereafter overrun, when its people again won their freedom they returned to that fine constitution and observed its tenets until the armies of two dictators—Hitler and Stalin—enforced the brutal partition of Poland in 1939. Today, the terrible force of international communism is maintaining that despot rule.

What do the Poles think of their Communist overlords? Any of you who know the Poles and their descendants who are in America today realize that communism is alien to the very nature of a Pole. Despite a fanatic band of traitors who do the bidding of the Russians, the Communist Polish Government has great difficulty finding persons it can trust to leave the country.

Look at a few of the Poles who have defected to the West during the past year:

Andrzei Panufnik, Poland's leading composer in Switzerland in July 1954.

Antoni Klimowicz, a stowaway in London in August 1954.

Krystyna Bujnowska, of the famous Mazowsze dance ensemble in Paris in November 1954.

Twenty-two Polish sailors from the ships *Praca* and *Gottwald* on Formosa.

And so many others. They all tell the same story: That Poland will not be destroyed; that the overwhelming majority of Poles are bitterly anti-Communist, and that they need reassurance from the free world that we have not forgotten them.

Can we ever forget the nation which was first to resist Hitler's aggression and was an original signatory of the Declaration of the United Nations on January 2,

1942? Can we forget that the Polish Constitution—which was adopted only 2 years after our own—was inspired by the same faith in freedom?

Our own freedom was won, and has always been maintained, at great cost and through constant endeavor. Wherever freedom is suppressed, it is a threat to our liberties. We must dedicate this day to the great people of Poland and observe for them this constitution day which sometime in the future they will be able to celebrate again as free people.

The John Day Multipurpose Dam

EXTENSION OF REMARKS
OF
HON. SAM COON
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1955

Mr. COON. Mr. Speaker, on May 1 the Dalles Chronicle, published at The Dalles, Oreg., carried an editorial entitled "Let's Be Specific." This editorial deals with an explanation of H. R. 5789 and is such an outstanding example of what the public press can do in the way of educating the American public on current legislation which affects them that, under unanimous consent, I include it in the CONGRESSIONAL RECORD, as follows:

LET'S BE SPECIFIC

For the first time the proposal for Federal-partnership construction of the John Day multipurpose dam can be debated on the detailed provisions of the measure.

The new bill sponsored by Representative SAM COON, of eastern Oregon, is so detailed in its requirements that the debate on the question can be argued on specific provisions. Up to now, debate has been largely confined to political philosophies with insufficient reference to the facts.

Now the people of The Dalles area, at least, have had the opportunity of acquaint themselves with the provisions of the new bill that would provide the means for early construction of the vitally needed project only 30 miles upstream from here.

Representative COON has explained the provisions at length in news stories and this past week the Chronicle ran a four-part series reviewing the bill, section by section. The Eastern Oregon Congressman's vigorous advocacy of his project has served to throw light on a subject that has been more denounced than explained.

Examination of the bill indicates that every effort has been made to include provisions that will meet reasonable objections. There is no reason to believe the bill cannot be amended to meet other objections.

There has been the outcry that the Government would receive the short end of the partnership proposal. One way to test the accuracy of the accusation is to check what the Government gets out of the bill. First, the Government puts up $37 million and the partners $273 million for a $310 million dam that the Government would own lock, stock, and barrel. The Government would sell the power to the partners and this revenue would be used to operate the dam and retire the cost of 88 percent of the project. When the power facilities were paid off in 50 years or less the Government then would sell the power to anyone.

The next step in checking the accuracy of the charge that the Government would suffer a loss is to reverse the positions of the Government and the partners. Can you imagine the outcry that would go up if the Government were to invest $273 million in a dam that would be owned by groups that would put up only $37 million?

Most of the furor over the partnership principle comes from Democratic Party leaders who apparently are unfamiliar with the record set by Presidents Franklin Delano Roosevelt and Harry Truman.

Representative HARRIS ELLSWORTH, southwest Oregon Congressman, notes that the Government has engaged in partnership contracts for more than 30 years and under Democratic and Republican administrations. To quote Representative ELLSWORTH:

"Under the Truman administration in July 1950, the Federal Government began replacement of a navigation lock and dam at St. Anthony Falls, Minn., which cost the Federal Government $9,743,000. The partnership was entered into with the private utility, Northern States Power Co., which remodeled and installed power facilities at a cost of $1,535,000."

The latest in date of four partnership projects during the Roosevelt administration listed in the statement is given by the Congressman as follows:

"The Roosevelt administration in 1941 approved a partnership at the Harry L. Englebright Reservoir project in California where the Federal cost was $4,003,000 and the cost to the partners for installation of the power facilities was $1,500,000. The partners were private hydraulic mining interests and private utilities, the Sacramento Valley Utility Co. and Pacific Gas and Electric Co."

What is more, Democratic Party's 1952 presidential candidate, Adlai Stevenson, made a statement in Portland that has been interpreted to mean that he favored the partnership principle when local interests were able and willing to finance a project.

Until both Houses of Congress show a willingness to finance all-Federal construction of the John Day dam, the Federal-partnership bill should be considered on its merits.

If opponents kill the John Day Federal-partnership bill they will be obligated to produce an alternative that will accomplish the same purpose—early construction of a vitally needed multipurpose project.

The Effect of Spiritual Guidance in the World Today

EXTENSION OF REMARKS
OF
HON. JOHN M. VORYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. VORYS. Mr. Speaker, each year the American Legion of Ohio conducts an essay contest, and the winners are given a trip to Washington. Out of the thousands of essays submitted, three winners are selected from each grade from 9 to 12. This year the subject was The Effect of Spiritual Guidance in the World Today. This noon members of the Ohio delegation in the House and Senate entertained the prize winners at lunch. Each of them made brief speeches. It was a great experience for all of us. I congratulate the American Legion of Ohio for their carrying on this contest and on the timely and important subject selected for this year. I congratulate the winners. Two of them were from my congressional district. I want the House to see their essays, and I have therefore obtained leave to place them in the RECORD at this point:

THE EFFECT OF SPIRITUAL GUIDANCE IN THE WORLD TODAY

(By Charlotte A. Jenkins, 1517 Elaine Road, Columbus, Ohio)

Spirit guidance has played a great part in the world of yesterday; today, its importance must still be deeply stressed, for it can cause our lives to be bountifully rich or miserably poor.

Our Nation today shows the effects of the spiritual guidance of our colonial forefathers. Those men fought and died with hope and guidance from one divinely strong. All was not glory, for there were times when the black thundercloud of despair prevailed. Take, for instance, the year 1787, the year of the Constitutional Convention. The delegates continually gossiped among themselves, argued, and were faced with resentment and rivalry. A general air of dissension prevailed until an elderly gentleman of 81, namely, Benjamin Franklin, stood up and instilled in those men's hearts the importance of spiritual guidance and prayer. After adjournment, heads bowed asking for guidance from God. God answered these humble pleas and under His guidance that great document of liberty, the Constitution, was penned. We today feel the effects of this spiritual document. Just think. You or I can rise from the realms of nothing to a position of highest respect. We are free to worship, free to think and act, free to work and play, free to look toward new heights. These are the effects of spirtual guidance of the past.

The world's greatest people of today and yesterday have asked for and received spiritual guidance. George Washington, Abraham Lincoln, Benjamin Franklin, Thomas Edison, Florence Nightingale, Pope Pius XII, President Eisenhower, and countless others under God's guidance have played star roles in our lives. They have affected the world by preserving liberty, by inventing marvelous wonders, by shining as an example to the millions of people. The agony of one of our most tragic diseases of today, polio, has been greatly alleviated because of one woman who had the courage to defy sneers and jests, and who prayed for guidance. This woman was Sister Kenney, and her work shall always hold a place of the highest respect.

In today's modern world, we need more spiritual guidance. Delinquency of both juveniles and adults, the high rate of divorce, the growing tentacles of communism, and the threatening menace of war testify to the lack of this guidance. The delinquency of our adolescents is a crucial matter. A few mischievous pranks is a symbol of youth, but crimes of brutality and savagery committed by young people call for action on the part of everyone, young and old, rich and poor. In a home under spiritual guidance, a youngster can grow where all physical and spiritual needs are supplied. This youngster will become a better citizen, equipped to protect his heritage of freedom. Great men have asked for guidance on this problem of delinquency; in answer, organizations, such as the Big Brothers and Father Flannagan's Boys' Town, have been established. These organizations have made their mark in the world, for most of their boys have become good citizens, prepared to live useful lives.

We have something which can change the life of the whole world and is, in my opinion the greatest product of spiritual guidance: the Bible. Missionaries, carrying this message into the densest forest and jungle regions have brought new hope and faith to peoples once hidden in darkness. In some parts of the world, the complete lack of belief

in the Bible and spiritual guidance has caused morale to sink to a low ebb, and brutality and barbarianism to prevail. In countries of Christian belief, the people have faith and a higher moral code.

When we consider the men who play the most vital part in our spiritual guidance, we must, without doubt, mean our ministers. These men, in sorrow and joy, administer guidance in a way that satisfies each individual group.

Yes, through spiritual guidance today, we can hope to enjoy a better world tomorrow. Because of our American heritage, we are destined to be a beacon of light and spiritual guidance to the world.

THE EFFECT OF SPIRITUAL GUIDANCE IN THE WORLD TODAY

(By Paul Redmond, 1466 Oakwood Avenue, Columbus, Ohio)

There is in the world today what I believe to be the beginning of a great spiritual awakening. Already its effects are being felt in all phases of life. A constantly increasing number of people are becoming concerned about the lack of Godliness in the world and are trying to do something about it. I am going to give a few examples of the effects of this growing interest in spiritual matters by telling what some people and organizations have already accomplished.

The great American evangelist, Billy Graham recently toured Europe. He preached in England, Finland, Sweden, Denmark, Holland, Germany, and France, proclaiming Christ as the only salvation for the world today. He preached every night for 3 months in Great Britain; from there he went to the continental cities, staying only 2 or 3 days in each city. Everywhere he spoke there was an overflow of people who had to be turned away because of the great throngs of people who had come to hear him proclaim his message. At one place where he spoke there was a crowd of over 120,000 people. Under his spiritual guidance hundreds of thousands of people have accepted Christ and His way of life. When interviewed, Billy Graham said, "Britain is at the beginning of what could be the greatest spiritual awakening of all times."

This last summer there was a meeting at Evanston, Ill., of the World Council of Churches. This meeting was composed of representatives from 161 denominations, 48 countries, and every continent on the globe. The object of this meeting was to bring those who believe in Christ together in one big effort to put Christ back in the world today.

During the last 2 years there has been a great spiritual awakening in our own United States. President Eisenhower has helped in this greatly. He realizes his personal need for God's guidance, attends church regularly, and sees that each of his cabinet meetings is begun by prayer. Our President has become a good influence on the spiritual life in America today. Recently a new Prayer Room in the Senate chambers has been opened so that the Senators might have a place to go to beseech divine guidance.

Several months ago the Pledge of Allegiance to the American Flag was changed by act of Congres. It has been changed from "One Nation indivisible, with liberty and justice for all" to "One Nation under God indivisible, with liberty and justice for all." This was another stepping stone toward bringing God back into His rightful place.

In the field of literature, religious books in America last year outsold all other books put together by 3 times. Along this same line, there has been a great increase in church attendance.

I hope, and I believe, that the world is gradually turning more and more to God for spiritual guidance. If the people continue to do this, it will not be too long before this world will be a better place to live in. It is the prayer of all nations that there shall be peace in our times.

The Polish Spirit of Liberty

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. BOLAND. Mr. Speaker, when Americans study the history of their revolution, they cannot fail to be impressed by the participation therein of certain foreigners, who were attracted to these shores to fight for liberty. Among these illustrious men none was more valiant, and none was more valuable to the cause of freedom, than two officers from far away Poland, Gen. Thaddeus Kosciusko, and Gen. Casimir Pulaski. The former was to a considerable extent responsible for the defenses of West Point, the latter was our first commander of cavalry, and gave his life for our yet unborn country in 1779.

In serving the cause of freedom, Generals Kosciusko and Pulaski were given expression to the characteristic Polish love of liberty. Indeed, Poland had a long tradition of democracy, a tradition which found its expression in the Polish Constitution of 1791, whose anniversary we celebrate today. That constitution, proclaimed only 2 years after our own beginnings as a nation, was a classic statement of the philosophy which holds that the source of government's power is found in the people. It provided for a bicameral legislature, limited the rights of the king, guaranteed freedom of religion, granted political rights to the common people, and improved the status of the peasants by bringing them under the protection of the law.

Soon thereafter, however, tragedy struck. Poland was partitioned for the second time by the rapacious powers of Russia, Prussia, and Austria. From 1795 until the end of the First World War, Poland was under hated foreign rule. During all that time, however, she never passively accepted tyranny, but revolted repeatedly. During all that time also, she had the ardent sympathies of the United States, a sympathy repeatedly expressed by many groups in our society.

The new Polish state which arose in the wake of the First World War was confronted with the twin problems of security against external aggression and the provision of an adequate standard of living for her people. She struggled manfully to meet these problems in a world of increasing tension, both economic and political.

Finally, in 1939, Poland was to make the world's first stand for liberty against the onslaughts of the Nazi hordes. But her strength could not avail against the blitzkreig, supplemented as it was by the Soviet stab in the back. In short, Poland suffered a new partition, and one far worse than the old. No people endured more, or resisted more defiantly than the Poles. When the circumstances of war made the Russians our allies, hope rose again in Polish hearts that Poland might yet be free.

To our profound regret, this was not to be. With utter hyprocrisy the Soviet Government failed to carry out its pledge to permit free elections in Poland. Instead it clamped ever tighter the vise in which Poland is held today.

Today all Americans join our brethren of Polish descent in affirming that we cannot believe that this is the final destiny of Poland. We know that in God's good time the hirelings of Moscow who rule today in Warsaw will be deposed. When that time comes, the spirit that will move the Polish people will be the spirit and the tradition of the constitution of 1791.

The Effects of Spiritual Guidance in the World Today

EXTENSION OF REMARKS
OF
HON. OLIVER P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. OLIVER P. BOLTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following essay which won a prize in the essay contest conducted by the American Legion of Ohio:

THE EFFECTS OF SPIRITUAL GUIDANCE IN THE WORLD TODAY

(By Raymond J. Zeman, Jr., Geneva, Ohio)

It is encouraging to note that religious influence is at work in the world today. In many countries the children are guided along religious beliefs as soon as they are old enough to read and write, and are taught the difference between right and wrong. In this way the young people grow up properly guided which is beneficial not only to their locality but to their country as well.

Today, more than ever, spiritual guidance is needed in this world. Inspired men like Bishop Fulton Sheen and Dr. Norman Vincent Peale have dedicated their whole lives to God and the Church. They broadcast on television and radio with people half-way around the world listening to, and benefiting from their programs. Both of these great orators have recorded several long-playing records of their inspirational talks, and have written many books, begin to realize that we are all here for one purpose, which is to love and serve God. If more people would understand this, our world would be a much better one in which to live. Fortunately, the effects of such inspirational help are beginning to take root, as the sale of religious writings have reached an all-time high.

A country, like Russia, that doesn't have religious freedom experiences many difficulties. Since everything belongs to the state, the people don't have anything to live for. The productivity of their farms is declining, since most of their hard-earned products are taken from them, leaving scarcely enough food for the poor peasants' own sustenance. Personally, I think that if the Russian people were allowed to worship as they pleased, their agricultural standards would improve rapidly, and this in turn, would result in an improved philosophy toward life.

In a democracy, such as the United States, spiritual guidance is well demonstrated by binding the country together. Without religion the people of this country would not work or live together in peace for 5 minutes. Spiritual guidance helps the people to work with their neighbors, which results not only

in self-improvement, but it benefits the country as well.

All of our presidents, from George Washington to Dwight D. Eisenhower, have demonstrated their faith when taking the inaugural oath. This divine guidance has made it possible for our leaders to solve the many problems which have confronted them in the past years, and it is apparent that in the future all major problems will definitely be solved by this spiritual influence. Woodrow Wilson, during the depressing years of World War I, said, and I quote, "I fairly believe in divine providence. Without God I think I would go crazy, without God, the world would be a maze without a clue."

The effects of spiritual guidance have been manifold. Never before have there been so many charitable organizations whose purpose is to relieve man's suffering. By ship and plane, food and clothing are being sent to the hungry and destitute people of the world. State and national contests, such as this one inspire our youths to think constructively about things that are worthwhile. The YW and YMCA are instilling Christian principles in our young people. By posters, television, and radio, people are urged to attend church; the Bible heads the list of best sellers, theological universities have increased enrollments, far in excess of past years. National days of prayer have become customary; the trend toward God is definitely encouraging, so much so in fact, that the day will surely come when His children can say: "God's in His heaven; all's right with the world."

Economic Growth of South

EXTENSION OF REMARKS
OF
HON. EDWIN E. WILLIS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. WILLIS. Mr. Speaker, one of the most interesting, instructive, and well-prepared reports on the economic growth of the South, with special emphasis upon trends as shown by the gulf coast area and Louisiana, has been prepared for the Central Louisiana Electric Co., Inc., of Lafayette, by Dr. William H. Baughn, Ph. D., professor of business administration, Louisiana State University.

I am advised that this publication entitled "Economic Expansion, Louisiana, the Gulf Coastal States, the South" will receive widespread distribution by the Central Louisiana Electric Co., the Louisiana State Department of Commerce and Industry, and other State offices. It will certainly add considerable impetus to the ever-growing interest in the South's rapid progress and unlimited opportunities.

Subjects covered include area and population; income and purchasing power; resources of the region, including climate, water, raw materials and energy sources; agricultural industry; total business activity; mining industries; construction activity; transportation and public utilities; trade and services; foreign trade activities; financial activities; regional market; regional advantages for manufacturing industry; and list of manufacturing industries. The latter embraces paper and pulp industry; petroleum industry; chemical industry; primary metals production; fabricated metals; machinery production; transportation equipment; lumber industry; furniture industry; food processing industries; tobacco industry; textile industry; apparel industry; stone, clay, and glass; printing and publishing.

Further evidence of the wide scope of this study is offered in its introduction, which follows:

The central characteristic of the South today is growth—absolute growth of proportions not fully realized and appreciated by man, and relative growth that is enabling this region to catch up with the Nation in its economic position. The South has been and is getting more than its share of the tremendous economic expansion that the Nation has enjoyed since the 1930 decade. This region, which was labeled in a report to the President of the United States in 1933 as the Nation's No. 1 Economic Problem, is now being described as the Nation's No. 1 Economic Frontier. Actually, it is not a frontier in the usual sense of the word, for much of the development is already in place. Its frontier characteristics stem from the fact that its many inherent economic advantages offer expanding opportunity for those business enterprises that are willing to become a part of its future.

The southern region has many assets—many raw materials, a climate conducive to year-round operation, more than its share of the energy resources of the Nation, the most adequate water resources found in the country, and people. Of these, its people are by far its greatest asset, with the highest natural rate of increase of any region in the country, and with large numbers of rural people who will be leaving the farm as a result of farm mechanization. This area can supply, in almost unlimited numbers, personnel for industrial plants. It can furnish people who are capable of receiving training at a rapid rate and who, when trained, provide as dependable and productive labor supply as any available in the Nation. People also provide markets. Expanding incomes, as a result of more productive agriculture and of growth in nonagricultural employment, make the South an increasingly attractive market.

The South, which was once almost entirely agricultural in its way of life, has been attracting industry at such a rapid rate that it can boast an economy based on neither agriculture nor industry, but upon both. Industries which have been coming South in recent years to seek the many advantages the region has to offer are industries with a strong technological base. These industries have a high productivity per worker and pay good wages and salaries. With this industrial expansion has come even more rapid growth in dependent economic activity. The record shows that, for each new job created by a new industry, several additional ones were created by this related economic activity. Consequently, markets in the South have been expanding at a rate several times the rate of industrialization.

Within this southern region, there is a smaller region which stands out above the rest in its economic promise. The gulf coastal region of the South, centered around the mouth of the great Mississippi River and blessed by nature with raw materials in quantity, quality, and type so necessary for certain major industrial processes, is this special region.

This study seeks to analyze the major economic characteristics of the South with special emphasis upon what is occurring in the gulf coast area and in Louisiana in particular. Economic trends have meaning only if they are judged within a frame of reference. It is believed that the most accurate conclusions with regard to the economic trends can be arrived at by comparing what is occurring in our region with what is going on in the Nation as a whole. Absolute progress is important, but relative progress is even more significant. Throughout this entire study, the economic trends in the Gulf Coastal States and in Louisiana will be compared with national averages.

No effort has been made in the study to analyze economic trends from an historical point of view. To understand the extent of this economic expansion of the South and of this area in particular, one needs only to analyze the growth patterns since 1939. Since a substantial proportion of this expansion had its roots ineconomic activity coming as a result of World War II, it is meaningful to review the trends for a period which would include those wartime years. At the same time, the dynamic aspects of the South's economic growth should also be related to what has occurred in the region since World War II. For this reason, wherever possible, quantitative economic data have been analyzed in such a way as to focus attention on trends and growth patterns for the entire period since 1939, and also for the period since 1946.

May 3: A Date To Remember

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. ADDONIZIO. Mr. Speaker, this is the 164th anniversary of the establishment of constitutional government in Poland on May 3, 1791. In that constitution the Polish people discarded many class discriminations and made many privileges available to the people. Absolute religious toleration was established on that memorable day, and provision for further reforms from time to time was made.

This is the anniversary of a constitution which marked a notable step forward for liberalism in Europe. We pay tribute to the love of freedom which inspired the writing of that great document, which was designed to safeguard Polish liberty and independence.

Unfortunately, the freedoms gained by the Poles in the 1791 constitution were to disappear during the next few years. Seizures of parts of Poland by her neighbors resulted in the subjection of the Poles to the Russians, Prussians, and Austrians. In many instances Polish culture and even the Polish language were erased and replaced by those of Poland's alien rulers. But no matter how heavy the burdens of oppression, the Poles in the decades that followed continued to look forward and to work for freedom and independence. Throughout the 19th century many Polish intellectuals—writers, artists, and patriots—lived abroad. In Western Europe, and especially North America, these patriots saw a different way of life, free from oppression, and free also from discriminations which were present in their native land.

A new Poland was born again in the peace treaty following World War I. President Woodrow Wilson, who was a friend of the Polish patriot Ignace Paderewski, was instrumental in securing

the re-creation of this country which for so many years had not enjoyed the right of self-government. In a speech to Congress on January 8, 1918, Woodrow Wilson announced as one of his famous 14 points:

An independent Polish state should be erected which should include the territories inhabited by indisputably Polish populations, which should be assured a free and secure access to the sea, and whose political and economic independence and territorial integrity should be guaranteed by international covenant.

From 1918 to 1939, Poland as an independent country made considerable progress in advancing the happiness and welfare of its people. It was, however, difficult at first—because the Poles had to undo 123 years of division and foreign domination; the country was in ruin; almost every segment of its new independent life had to be reconstructed—from the unification of the laws to the building of elementary schools for thousands of illiterate peasants.

Between the wars the Poles made noteworthy progress in developing their national economy. Poland ranked third in Europe in coal reserves. Hydraulic power was greater than in Switzerland or Yugoslavia. Mineral assets of potassium, rock salt, zinc, lead, iron ore, and oil were developed. From 1920 to 1937 the population increase was nearly 30 percent. Between 1919 and 1938 nearly 1,400,000 acres of fallow land were brought under cultivation. In 1920 agriculture provided approximately two-thirds of the Nation's income—the other one-third was from industrial production. In 1938 industrial production equaled that of agricultural production. The lumber, food processing, chemical and mining industries all progressed by leaps and bounds. The tiny fishing village of Gydnia in 1919 became the fifth largest port in Europe by 1938.

In the educational field 70 percent of the peasants under Russian domination were illiterate in 1918. But within the next 20 years education made great strides. By 1938, 28,722 elementary schools were attended by 4,851,000 children. The 722 secondary schools had an enrollment of 221,200. Nurseries and kindergartens numbered 1,651. By 1939 there were 6 universities, 21 colleges—2 of these engineering, 314 learned societies, 141 museums, and 10,146 amateur theatrical companies.

However, Poland's progress was abruptly ended in 1939 when she again became a victim of aggression. On September 1 of that year the Nazi hordes poured across the border into Poland. The Poles, jealous of their freedom and willing to die for their rights, chose to defend their beloved homeland in the face of hopeless odds. By virtue of their mutual defense agreements with Poland, Britain and France responded to the Nazi onslaught by declaring war against Germany. Less than 3 weeks later the Soviet Union, united with Germany under the infamous Molotov-Ribbentrop pact, stabbed Poland in the back with an invasion from the East. Poland was soon crushed by the blitzkrieg tactics of the Nazi war machine.

But the Poles did not willingly submit to the Nazi occupation. They founded what was practically a complete underground state, consisting of a government, parliament, judiciary, and an army.

After Hitler attacked the Soviet Union in June 1941, and Soviet Russia joined the Western Powers as an ally, the Poles entered into an understanding with the Russians. By the Polish-Soviet agreement of July 30, 1941, Poland was to receive territory which had been taken away by the German-Soviet treaties in 1939, and the liberation of Polish citizens held as prisoners of war or otherwise by the Soviet Government was to be effected. At first the understanding with the Communists looked hopeful, but as time went on and since no list of Polish deportees was submitted by the Soviet authorities, serious doubts of Soviet good faith began to arise. Subsequently these doubts were verified as Polish citizens of Jewish faith and of Byelorussian and Ukrainian origin were jailed. Others were conscripted into the Soviet Army. When the Red Army crossed the prewar Polish-Soviet frontier in January 1944, the Polish underground was betrayed by the Soviet hordes. Many of the Poles were liquidated by the invaders. In Lublin alone more than 50,000 persons were arrested between July 1944 and January 1945.

The duplicity of the Soviet Union and their treachery toward their Polish "allies" was shown in a remarkable manner in the case of the Warsaw uprising—lasting 63 days—from August 1, 1944, to October 2, 1944. This uprising was one of the most daring and patriotic feats performed by the Polish people. The Soviets had urged the people of Warsaw to rise up against the Germans and they promised they would assist their fight for liberation. This the Poles did. But the Red Army deliberately did not assist and the Nazi war machine rolled over the people of Warsaw. Two hundred and fifty thousand perished, including 40,000 of the underground. Today the Soviet commander, Marshal Rokossovsky, who carried out this diabolical order from the Kremlin is now "marshal" of Poland, commander in chief of the Polish armed forces, and keyman in the Communist Polish government in Warsaw.

The Yalta Conference of 1945 provided for a coalition government in Poland. But the majority of the cabinet posts were filled with Communists or Communist followers. From 1945 through 1947 they imposed their will on the Polish people. After the January 19, 1947, election, which the Communists manipulated for the success of their own candidates, immediate mass liquidation of democratic elements took place. After 1948 no longer did open opposition exist in Poland. In the elections of 1952 only one ballot existed—a voter went to the polls, took a ballot, put it into a prepared envelope and dropped it into a box. No one was permitted to cross out any candidate's name, add new names, or abstain from voting. It is obvious from such conditions as these that for the present at least the Communists have Poland tightly in their grip.

Yet, as we find this gallant country overrun by the godless, alien philosophy of communism, and trampled under the tyrant's heel, those Poles who are in a position to do so are celebrating the anniversary of one of their first steps toward a democracy, the adoption of the constitution of May 3, 1791. There is no doubt that Poland will some day rise again and recover its freedom and independence. It is my earnest hope its resurrection will be hastened by the United States and the American people in every practicable way that they can. In this way we can have the satisfaction of honoring a gallant, unconquerable people, who possess the spirit of truth and freedom and the utmost spiritual integrity.

May 3: The Constitution Day of the Poles

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. RODINO. Mr. Speaker, Poland's contribution to the civilization of the West is considerable and varied. In the realm of the arts and literature, and also in science, the sons and daughters of Poland have been among the most distinguished. Particularly in music, Poland's place among the nations is very high. Polish warriors, statesmen, and martyrs for the cause of freedom have registered inspiring achievements that are known throughout the world. In all of these distinct domains the accomplishments of the Poles are recognized and admired by all of us. But their contribution to the science of government, especially as pioneers in that field in Eastern Europe, more than a century and a half ago is probably not as well known as it should be. For most of the time during the last several centuries the Poles have been governed either by monarchs or have been subjected to unwanted alien governments. But, at the same time, they have had a deep desire for liberty and have striven to introduce truly democratic features into their Government. One of the most significant and remarkable of these attempts was made in 1791. In that year a constitution was drafted and adopted by the Polish Government which, judged by the standard of those days, seemed quite revolutionary. This document, as drafted by men of penetrating intellect and fervent patriotism, represented a decisive advance over anything of the kind yet attempted in that part of Europe. By this constitution Poland became a limited monarchy. The intricate and incongruous features of the old system were abolished and ministerial responsibility in government was introduced. The towns were allowed to have a certain amount of parliamentary representation and were given administrative autonomy. Personal privileges enjoyed solely by the gentry were made available to the townsmen. Absolute religious toleration was established and religious freedom was guaranteed.

Compared with the long lists of human and political rights which are written into present-day constitutions, some people might not consider the Polish Constitution of 1791 one hundred percent democratic and liberal, but according to the standards of those days it was a genuinely progressive instrument and has been widely acclaimed as such.

Today in celebrating the 104th anniversary of the constitution we pay our respect to the memory of its patroitic and humanitarian drafters and hope that the liberal spirit of that document will soon prevail in a free and independent Poland.

Polish Constitution Day

EXTENSION OF REMARKS
OF
HON. GERALD R. FORD, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. FORD. Mr. Speaker, on May 3, 1791, the Polish Constitution was adopted, and that day is now celebrated as Poland's Constitution Day. It has been said that the Poles have sometime had a large country, sometime a small one, and sometime none at all, but nevertheless, the Polish people always stanchly maintained a strong national loyalty and patriotism.

For this we honor them. We are also grateful to the thousands of Poles and the millions of Polish-Americans who have contributed so much to the growth and strength of these United States.

Count Casimir Pulaski was one of those Polish volunteers who gave his life for American independence. Killed during the siege of Savannah, he had distinguished himself at the Battle of Brandywine, had endured Valley Forge, and had organized an independent cavalry corps known as Pulaski's Legion. He died to make us free.

Then there was Thaddeus Kosciusko. He left Poland in 1776 to serve in Washington's revolutionary army. Appointed chief engineer in charge of the construction of West Point, he later became adjutant to General Washington. His work in fortifying the battlefield at Saratoga contributed greatly to the American victory in this battle, the turning point of the Revolutionary War. Today, Kosciusko is memorialized in Lafayette Park, oposite the White House, as a hero of American freedom.

It is through men like Pulaski and Kosciusko and thousands of their compatriots, both here and abroad, that the common bonds of liberty, decency, and loyalty bind our country to the Polish people and nation.

Enslavement, oppression, destruction are no strangers to the Poles. But neither are hope, struggle, and victory.

On this day in which Poland again finds itself in subjection, this time under the heel of atheistic communism, we reaffirm our devotion to our common bonds.

This common enemy of America and Free Poland is no simple power-drunk dictator. He is not a military genius merely exploiting his talents. We fight against a vicious ideology which twists and warps the human mind and degenerates human beings.

We oppose the enemy because he is morally wrong; because he denies God, and destroys the dignity and worth of the human soul.

On this Polish Constitution Day, we invite all Poles and all peoples everywhere to make common cause with us against this mortal enemy. The struggle is deep-seated, difficult, and dangerous. But the Poles are accustomed to such. They felt the force of Soviet Russia in 1919, and the power of Aloph Hitler in 1939. But they also experienced the assistance of their democratic brethren in those dark days.

Today we share with them the knowledge that wrong cannot always be on the throne, and that our cause shall prosper because it is fair, just, and right.

Israel's Seventh Anniversary

EXTENSION OF REMARKS
OF
HON. ALBERT W. CRETELLA
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1955

Mr. CRETELLA. Mr. Speaker, April 27 marked the seventh birthday of the State of Israel. I offer my congratulations and warm regards to the citizens of that bastion of democracy in the Middle East.

Israel's display of friendship and hope for peace sets a bright example for all freedom-loving nations on earth. She is to be commended for instilling in her society full political, cultural, and religious freedom. Israel has constantly sought to enhance relations with the Arab nations. This declaration of peaceful intentions is a thorn in the side of the Communist tyrants who would feed on dissension in this oil-rich land.

The courageous, industrious citizenry of Israel knows well the horrors of oppression, toil, slavery, and mass murder. For 20 centuries, they and their forefathers have been herded through the lands of Asia and Europe. The end of these privations and a forced nomadic existence become doubly significant on this anniversary of the building of a homeland which shines as a symbol of freedom in the shadows of the Middle East—a homeland raised from the sinews and the strength of these determined people.

As the youngest nation in the world, Israel has made gigantic strides in the development of her country. Since her birth a short 7 years ago, her population has more than doubled, as well as her cultivated and irrigated farmland. She has taken her place with honor as the 57th member of the United Nations.

As years pass, greater things can be expected from the State of Israel. She can look forward to progressive and inspiring leadership as that given by such great men as David Ben-Gurion, President Ben-Zvi, and Moshe Sharett.

From all America and those who have cherished the cause of Zionism, congratulations and best wishes to Israel on her seventh birthday.

Sick Leave for Postal Workers

EXTENSION OF REMARKS
OF
HON. DeWITT S. HYDE
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. HYDE. Mr. Speaker, in justice to the many hard-working postal employees, I think there should be some reply in the RECORD to the recent newspaper articles based on a statement from the General Accounting Office which spoke of widespread abuses of sick leave by the postal workers. This article also stated that "Federal employees are entitled to 28 days sick leave a year." This, of course, implied that all postal workers get 28 days sick leave when, as a matter of fact, postal employees get 13 days sick leave. For the RECORD, I am inserting the following letter from a postal worker in my district:

CUMBERLAND, MD., *April 24, 1955.*
Hon. DEWITT S. HYDE,
House Office Building,
Washington, D. C.

DEAR REPRESENTATIVE HYDE: Certainly hope you will steer the press release from Washington, D. C., correctly. Is it right for my wife and two children to be faced with false statements of the press? This article appeared on the front page of the local evening Times. It refers to all postal workers but in percentages it uses substitute employees. Clarifying these employees it must be understood that these employees work 7 days a week; are on call 24 hours a day. They may work 6 a. m. to 3 p. m. and be called out 10 p. m. the same day. They are worked exhausting hours which sacrifices health. These employees comprise one-sixth or 16⅔ percent of all postal employees.

The article further states postal employees get 28 days a year sick leave. All postal employees get 13 days not 28 days.

It further states employees use sick leave before retiring. Two cases locally, one man had cancer and through willpower and determination he struggled to work until he could not move. As a result he started taking sick leave as a source of income with hopes of returning to duty. The same is true of another employee who had two heart attacks. He is using sick leave in hopes of recovering to return to duty. His doctor advised him to retire but 40 years in a post office it is hard to change to a new way of life after such loyalty.

In Russia false statements go unchallenged. In America we must protect the truth.

I'm sure if you speak against this false press release we'll be happy for you though you didn't vote for our recent pay raise. Money isn't everything; morale, spirit, and truth of facts are more important to me.

I've worked in four different private enterprises. I know much more is expected of a postal clerk than a factory worker.

Sincerely hope you will preserve the truth for 500,000 employees.

Sincerely yours,
WILLIAM H. SEITER,
Secretary, P. O. C.

The Polish Constitution of 1791: A Landmark of Liberty

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. VAN ZANDT. Mr. Speaker, today is Poland's Constitution Day and Free Poland's national holiday, but the occasion is being commemorated with the gallant Polish Nation in chains.

As a nation the Poles are proud of their great deeds and accomplishments, and they are fully justified in their pride. Not only are they well known as diligent and skillful workers, but they are equally well known as accomplished masters in the arts and the sciences. They are no less famous as brave and courageous warriors for great human causes. The names of all the Poles who have staked their lives for freedom and liberty are too numerous to mention here. Of the many Poles who have taken an active part in struggles for liberty, two that are best known to the people of our country because of their roles in our revolutionary war are Kosciusko and Pulaski.

The Poles have, as individuals as well as a nation, struggled hard for independence and freedom. This was particularly true during the latter decades of the 18th century when they were grievously threatened by Russia, Prussia, and Austria. At that time they remodeled their governmental machinery hoping thereby to increase their power of resistance against the aggressors. It was at that time that the Constitution of 1791 was framed and adopted. This was an important fundamental document in which many of the old abuses of monarchial government were eliminated and a type of limited monarchy was introduced. Parliamentary representation was expanded and the peasantry was placed under the protection of the law. Freedom of conscience as well as religious toleration were established.

Even though the Polish Constitution of 1791 may not be regarded as a perfectly democratic instrument according to the criteria of our day, yet it was at that time far in the vanguard of constitutional development in Eastern Europe. In that respect it was a pioneering document, a landmark in the history of Poland as well as in that of European governmental reform.

Because of international complications and the eventual partition of Poland—in 1795—there was little chance to carry out the provisions of this constitution. Even so, all Poles as well as the friends of Poland regard it as an epoch-making document. I am glad to join in the 164th anniversary of that memorable constitution and express my hope that the spirit and memory of that constitution will afford solace and encouragement to the people of present-day Poland as they pass through the darkness of suffering and tyranny that has fallen upon them. They may be sure that the people of the United States will take every practicable measure to hasten the day when the light of freedom will return again in its full brilliance to their country.

Congressional Night at the Press Club

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. PHILBIN. Mr. Speaker, the National Press Club, the largest of its kind in the world, has a very enjoyable annual custom of holding congressional night. It is a pleasant moment of relaxation and fun for Members of Congress. And it is a gracious gesture by Washington newsmen, correspondents, columnists, and commentators—a gesture which we are certain all Members of Congress who have attended appreciate very much.

Last Wednesday night, through the courtesy of the American Society of Composers, Authors, and Publishers, we heard a prediction of things to come, not by a columnist, but by one of America's top songwriting teams, Lyricist Howard Dietz and Composer Arthur Schwartz. They collaborated on such Broadway hits as the Band Wagon, Inside U. S. A., At Home Abroad, and Revenge With Music. And they wrote such songs as Dancing in the Dark, I Love Louisa, Louisiana Hayride, and You and the Night and the Music.

It is indeed a pleasure and privilege to join with my distinguished colleague from Pennsylvania, Congressman CARROLL D. KEARNS, not only an outstanding Member of Congress but also a former illustrious concert singer of great talent, in inserting into the RECORD the latest composition of the famous American popular composers, Mr. Arthur Schwartz and Mr. Howard Dietz.

This composition was especially composed for congressional night at the National Press Club, which was held in the banquet hall of that great association. The composition entitled "You've Got To Be an Actor Today," was personally performed by Mr. Schwartz and was received by the audience with most enthusiastic acclaim. As readers will observe, it is a colorful, satirical treatment of a public career in these advanced days of television and electronics.

The gathering was attended by a large number of Members of Congress led by our distinguished and beloved Speaker, whom we all hail as one of the greatest living Americans, the gentleman from Texas, Mr. SAM RAYBURN. From the executive department of the Government, and the United States Senate, we were all greatly honored by the presence and participation of a former Member of the House, whom we all highly esteem as a dear friend and great American and a sterling public servant, the distinguished Vice President of the United States and Presiding Officer of the Senate, Mr. RICHARD M. NIXON, who demonstrated to the assemblage that, in addition to his other brilliant attainments, he is a gifted and talented piano player. His piece de resistance was, curiously enough, not the Londonderry Air, but a Democratic air heretofore closely associated with our former great President from the State of Missouri, our friend, colleague, and beloved Harry S. Truman. The Vice President demonstrated his great skill and ability as a piano virtuoso to the enjoyment and delight of everyone present.

Our beloved Speaker, not to be outdone by a member of the opposite political faith, not only willingly assumed direction of the Congressional Choraleers, which regaled the gathering with nostalgic melodies, but also, in accordance with his long-established rule, preserved decorum and order during the singing program.

On the whole, it was a great occasion to which we were all deeply indebted to the Press Club and the friends who so kindly invited us to be their guests for this exhilarating event.

To Mr. Arthur Schwartz, great composer and fine gentleman that he is, we are most grateful for the splendid performance he gave us of his world-famed melodies, and for his kind and gracious presence which contributed so greatly to making the evening so enjoyable and unforgettable.

The topical song of the evening, effectively rendered by Mr. Schwartz, follows:

YOU'VE GOT TO BE AN ACTOR TODAY
(By Howard Dietz and Arthur Schwartz)

Politicians nowadays
Have adopted thespian ways
For they have to be performers on TV
Their oratory mingles
With all the commercial jingles
On channels CBS and NBC
In Washington the Republicans
Have appointed Bob Montgomery
To organize the bureau of mummery
The Democrats are working on a plan
To have their candidates directed by Kazan

CHORUS

You've got to be an actor today
Your manner must be affable
Your features photographable
You've got to be good in an audio-video way
Max Factor is a factor today
Powder and paint can make you look like you ain't.
Years ago any candidate could be the people's choice
Even tho he never had a sexy voice
Like Marlon Brando
Vocal education will pay
And down in sunny Florida they say
That the mayor of Tallahassee
Was coached by Raymond Massey
You've got to be an actor today

SECOND CHORUS

You've got to be an actor today
The people who examine you
Appreciate the ham in you
Yot gotta rate high in a Hooper and Nielson way
Your chances of election are fine
If you're the mystery guest on What's My Line
Have you heard that the Ways and Means Committee formed a band
When they played they were panned and they were canned
By Arthur Godfrey
Senators who are anxious to stay
Obey their campaign managers who say:
Don't be noble
Don't be global
Just be like Georgie Gobel
You've got to be an actor today

Systematic Terrorism

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. BOSCH. Mr. Speaker, the representatives of the United States are presently meeting with the other three great powers to consider the Austrian State Treaty. We must make sure that the lives of anti-Communists who have escaped from behind the Iron Curtain into Austria are protected. In my opinion, if we ratify this treaty with article 16, as now proposed, contained in it, we will be a party to a small-scale forced repatriation program. We must not repeat what happened under the forced repatriation program from 1945 to 1947.

Under leave to extend my remarks, I include the following letter to the New York Herald Tribune by the General Committee of the Assembly of Captive European Nations:

SYSTEMATIC TERRORISM

To the New York Herald Tribune:

Concerning the state treaty with Austria, there is one aspect of that problem which appears to us of major importance not only for the maintenance of the spirit of resistance against communism behind the Iron Curtain but also for the political and moral position of the Western Powers.

It is a most regrettable fact that 10 years following the war's end in Europe there still remain in Austria some 30,000 refugees from behind the Iron Curtain whose status and fate have not yet been solved. Should the text of the state treaty with Austria agreed upon at the Berlin conference be signed, these 30,000 refugees and all future escapees throughout Austria would, on the basis of article 16 of that treaty, be deprived of all aid and subjected to procedures tantamount to forcible repatriation.

Denial of the right of asylum and insistence on the return of all refugees to the Communist-dominated homelands is and has been all the time a tenet of Soviet policy. In June, 1946, at the meeting of the Council of Foreign Ministers, Molotov refused even to consider the first draft of the Austrian Treaty unless "the forcible repatriation of displaced persons in Austria" was accepted by the West.

During 8 years of negotiations concerning the Austrian Treaty the Soviets have never given up this demand. As late as March 30, 1955, at a meeting of the ECOSOC in Geneva, the Soviet delegate repeated his demand for "repatriation, if necessary, by force of all refugees from Central and Eastern Europe," and also complained that the United Nations High Commissioner for Refugees is granting "illegal" protection to refugees who really are guilty of "crimes" against their fatherland.

After withdrawal of the troops of occupation, the Austrian Government will have to negotiate the completion of the repatriation of all refugees on a bilateral basis with the Soviets. Having all the trump cards in their hands, the horrors of the early postwar years may be expected to be renewed in Austria after ratification of the treaty.

Fundamentally, Soviet policy is based on systematic terrorism. To make that system effective it must be demonstrated that there is no escape from the Communist stranglehold. Thus, by discouraging desertions from their armed forces and by plunging their dissatisfied populations into hopelessness, the Soviets maintain discipline and build up power for the perpetration of further acts of aggression against the free world.

Fully aware of the dangers resulting from the state treaty with Austria, we ask for a speedy resettlement of all the displaced persons still in Austria. The three Western Powers are also entitled to demand from the Soviets additional guaranties against abduction, forcible repatriation, brainwashing, and other abuses against fundamental human rights generally practiced by the Communists against their nationals who refuse to return to their homeland.

The fighting in Korea was prolonged by 14 months at the cost of 130,000 additional casualties to the United Nations and South Koreans only because of the demand for forcible repatriation. We cannot believe that even if camouflaged by hypocritical verbiage this principle should now be accepted by the West.

The General Committee of the Assembly of Captive European Nations: Hasan Dosti, Albania; Dr. George M. Dimitrov, Bulgaria; Dr. Stefan Osusky, Czechoslovakia; Leonhard Vahter, Estonia; Dr. Tibor Eckhardt, Hungary; Dr. Vilis Masens, Latvia; Vaclovas Sidzikauskas, Lithuania; Karol Popiel, Stefan Korbonski, Poland; Constantin Visoianu, Romania.

NEW YORK, *April 26, 1955.*

Dr. John F. Enders, of Brookline, Contributor to the Research Which Lead to the Salk Polio Vaccine

EXTENSION OF REMARKS
OF
HON. LAURENCE CURTIS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. CURTIS of Massachusetts. Mr. Speaker, I should like to call attention to the large contribution made by Dr. John F. Enders, of Brookline, Mass., to the research which culminated in the Salk polio vaccine.

Dr. Enders discovered 6 years ago a method of growing polio virus in test tubes. Previously, scientists had to depend upon experimentation on live animals, principally monkeys, in order to observe the effects of the polio virus. Faced with the problem that the live polio virus, only 1 millionth of an inch in diameter, cannot be seen with the most powerful microscope, Dr. Enders found that its presence, growth, or arrest could be observed by the deterioration or lack of it on non-nervous tissues of monkeys. Thus the great work of John Enders, in effect, put antipolio research on a mass-production basis.

For providing this formidable weapon in the great battle against a dreadful disease, Dr. Enders and 2 of his associates at Harvard Medical School received the 1954 Nobel prize for medicine.

A doctor of philosophy and a doctor of science, a native of West Hartford, and a graduate of Yale College, John Franklin Enders is an individual of whom New England and the world can be justly proud.

A Tribute to the Polish Constitution of 1791

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. PATTERSON. Mr. Speaker, peace, security, and progress are fundamental objectives which most people of the world seek; but, goals such as these are seldom achieved in their entirety. Certainly among the peoples of the world who have not long enjoyed the fruits of peace and security are the Poles; for since the first partition of Poland in 1772, with the exception of the period between World War I and II, the history of Poland has been one marked by oppression and strife.

The constitution of 1791 which all free Poland commemorates today held out to the Poles a great promise for the future. This memorable constitutional document contained elements which would undoubtedly have brought Poland to the threshold of renewed national greatness. But, Russia, then as in so many instances since, intervened and through treacherous means destroyed the Polish hopes for the future.

Much has been said about the tragedy of Poland. And indeed, the modern history of this nation is tragic; for it reveals a long catalog of grievances and oppression. Once a great nation, Poland was reduced by the Russians to a condition of subservience. After the third partition in 1795 the Polish state no longer existed. Only the people remained to carry on the great traditions of Poland. Russia and Poland's two neighbors to the west, Austria and Prussia, shared the spoils of this formerly great state. And for over a century Poland no longer existed as an independent state. Only in the minds and hearts of this oppressed people did the idea of Poland remain strong and virile. World War I brought freedom to Poland; but again at the beginning of the last great war, Poland was despoiled by her powerful neighbors, Nazi Germany and Soviet Russia. Then, at the close of this conflict when all the free world believed that peace, security, and progress would again be the preoccupation of mankind, Poland along with her sister states along the eastern borderlands of Europe were brought forcibly into the Communist empire.

As one views the world scene since 1945 it becomes clear that one principal factor which frustrated the advance of the world toward peace, security, and progress is the activity of the Soviet Union. In every way Soviet Russia wantonly and recklessly dissipated any hope for a world at peace and relieved of international tensions. Throughout Eastern Europe the Soviets imposed a new and awesome tyranny, and in international affairs they have acted in such a way as to inspire distrust and fear. And today they have advanced a new propaganda theme designed to conceal

their real treacherous intentions, a theme entitled "peaceful coexistence." Try as they will the Soviet shift in policy will not divert the attention of America from its attachment to relief for the oppressed; for no tactic of the Communists could ever obliterate the humane impulses of America to see those oppressed peoples freed from the bondage of Soviet tyranny.

This anniversary of the Polish Constitution of 1791 provides a proper occasion for us to rededicate ourselves to the cause of oppressed Poland. To a great extent this cause of Poland is our cause, because it has its roots in a desire for freedom. And, so long as Poland and the other oppressed nations of the world do not enjoy the blessings of liberty, the world itself will never know peace, security, and progress.

Chicago Representative Urges Congress To Protect Consumers' Interests in Natural Gas Question

EXTENSION OF REMARKS
OF

HON. PETER F. MACK, JR.

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1955

Mr. MACK of Illinois. Mr. Speaker, last week Mr. Joseph F. Grossman, special assistant corporation counsel of the city of Chicago, and head of the public utility division of the office of the corporation counsel, appeared before the Interstate and Foreign Commerce Commission in opposition to the removal of jurisdiction from the Federal Power Commission over the sale of natural gas for resale by producers and gatherers. Mr. Grossman is one of the leading authorities on this subject, and I feel that his statement should be made available to our colleagues in the House. I therefore wish to include the following statement made by Mr. Grossman and a resolution adopted by the city of Chicago as part of my remarks:

STATEMENT OF JOSEPH F. GROSSMAN TO THE HOUSE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE

I am special assistant corporation counsel, head of the public utility division of the office of the corporation counsel of the city of Chicago. On January 26, 1955, the city council of the city of Chicago passed a resolution directing the corporation counsel to oppose any action of Congress to nullify the decision of the Supreme Court of the United States that the sale of natural gas in interstate commerce by independent producers is subject to regulation by the Federal Power Commission and to make such representations to the Congress of the United States to prevent the enactment of such legislation. Certified copies of that resolution are filed herewith, together with a letter of authority from the corporation counsel designating me as the official representative of the city of Chicago to testify in opposition to such legislation.

This committee is engaged in an investigation and consideration of legislation materially affecting the cost of national defense, the cost of living of every inhabitant, and the burden of every individual taxpayer of the United States. The subject of pending natural gas legislation affects the public interest so extensively and so vitally. The White House directive to the Advisory Committee on Energy Supplies and Resources Policy respecting the committee's assignment and the report of that committee amply testify to the general public interest which I have described in the proposed amendments to the Natural Gas Act.

To begin with, the effect of the proposed amendments upon the supplies, discovery, and development of reserves "in the interests of national defense, and expanding domestic economy, and reasonable prices to consumers," stated to be the concern of the White House Committee, with which no one can find fault, must be clearly understood and reasonably appraised in the light of the present Natural Gas Act as construed by the United States Supreme Court.

The Phillips case did not expand the Natural Gas Act to control or regulate the production or gathering of natural gas. It did not subject the operations of independent producers of gas to the jurisdiction of the Federal Power Commission which would in any way interfere with free competition in the exploration for gas, or with the development of energy supplies and resources fuels in the interest of national defense and for public consumption.

The present Natural Gas Act does not impose upon independent producers the obligations or status of a public utility. It does not require them to dedicate their resources or supply of natural gas to public use or for sale in interstate commerce. No one claims that the Federal Government should control the production, gathering, processing, or sale or natural gas by independent producers, unless such gas is sold for transportation in interstate commerce for resale for ultimate public consumption. Independent producers have a free choice, to their best advantage, in the use or sale of their gas for local purposes or local distribution, without FPC regulation, or for sale in interstate commerce, subject to regulation by FPC.

On the other hand, in the most important area of the use of energy supplies by the largest number of consumers, there is no free choice. In the city of Chicago and many other metropolitan areas throughout this country, the residents are dependent upon gas for cooking. Coal and petroleum are not adaptable for such use in modern day city living. Consumers who have a substantial investment in gas waterheaters and space-heating equipment have created a captive market for natural gas and are now at the mercy of the producers of such gas for their supply at ever-increasing cost, under contracts subject to unilateral termination, escalator or so-called favored nations provisions, without regulation under the Natural Gas Act.

Within the last 4 years the cost of natural gas to the distributing company in Chicago was doubled principally because of competition in the sale of gas in the producing fields. The following table[1] of the average cost of all natural gas purchased by Peoples Gas Light & Coke Co. of this city, including low-cost gas purchased at interruptible rates, indicates the effect on the wholesale rates for gas to the Chicago area of the kind of competition which now exists in the gas fields:

	Cents per thousand cubic feet
July 30, 1950	12.07
July 30, 1951	12.45
July 30, 1952	14.32
Mar. 2, 1955	24.01

The Chicago gateway rates are based on the present cost of gas produced and purchased in several fields ranging from 6.03 cents to 15 cents per thousand cubic feet. But there are now pending before the Federal Power Commission proceedings for authority to one of the natural-gas companies supplying the Chicago area to construct pipelines to a new field involving an investment of $32 million based on contracts negotiated with independent producers which will bring the price of gas from that field at its present pipeline terminal in Texas to more than 35 cents per thousand cubic feet.

The increased wholesale rates for gas now effective have already resulted in successive increased rates to consumers in Chicago up to 30 percent.

It has been said that regulation of the price of natural gas at or near the field of production is an impossible task for the Federal Power Commission to undertake. In the month of January 1955, the Federal Power Commission conducted an investigation respecting the principles and methods to be applied in fixing rates to be charged by independent producers for natural gas sold in interstate commerce for resale. The producers, their bankers, the pipeline companies, the retail distributors of gas and the consumers' interests were heard.

The producers and their bankers advocated acceptance of the prices and conditions of sales governed by competition in the field of operation without and investigation of the propriety thereof, including the right to increase their price of gas, pursuant to escalator and so-called favored nations provisions in their contracts or by renegotiation of old contracts to the current prices prevailing in the field offered by pipelines who seek a source of supply to satisfy the potential demand of their customers.

The representatives of integrated natural gas systems engaged in the production, transportation, and distribution of natural gas to consumers in municipalities pleaded for the current field price of gas for the production department of their operations, to increase the return on their investment in mineral rights, wells, and gathering lines reflecting the market value of gas purchased from independent producers.

The city of Chicago representing consumers of gas insisted that the Commission should resort to the rate base approach in determining a fair and reasonable return for the production, gathering, transmission, and sale of natural gas in interstate commerce, without preference or discrimination in applicable principles of rate regulation, between independent producers and pipeline operators who produce the gas from their own reserves.

The difference in principles and methods to be applied in fixing rates proposed by each class of parties affected thereby cannot be resolved without the power of regulation by the Federal Power Commission in the interest of ultimate consumers as well as in the interest of investors in the production of natural gas, in interstate transmission lines, and in the local gas distribution facilities.

The Federal Power Commission, with the assistance of its expert staff, can and should be relied upon to work out the criteria for the determination of just and reasonable rates for all natural gas companies subject to its jurisdiction under the present Natural Gas Act. Indeed, the President's Advisory Committee has recommended that FPC retain a measure of regulatory supervision of the price of natural gas in the field, to provide some protection for the consumer, when considering the certification of new transmission lines and applications for increased rates based on new or renegotiated purchase contracts.

The difference between the regulation recommended by the President's Advisory Committee and the regulation authorized by the present Natural Gas Act is that under the Natural Gas Act regulation is a continuing function which is subject to a changing na-

[1] Computed from exhibits in proceedings before FPC and Ill. C. C.

tional economy, whereas in the White House report the measure proposed is unalterable, once "the contract prices of the natural gas which the applicant has contracted to buy are competitively arrived at and represent the reasonable market field price." Regulation of the price of gas at the source of supply by competition is nonexistent. The competition is not between producers who seek customers for the gas, but between pipelines who seek an adequate supply of gas for their customers.

It has been argued, pretentiously, that natural gas when produced is a commodity, similar to wheat and other produce and to timber, coal, ore, and oil, which are sold in the open market free from price regulation; that natural gas in the field should likewise be free from price regulation. The forests and produce of the land must be differentiated from the mineral resources which cannot be replenished or restored when consumed. These mineral reserves constitute the primary wealth of the Nation and the public has such vital interest in their products that they are inherently subject to Government regulation for conservation and necessary use. The necessity for regulation of traffic in such products depends upon the degree of freedom of the channels through which they can be brought to the market for ultimate consumption, as well as upon the balance of supply and demand.

Under our pattern of dual government jurisdiction, and in accordance with long-established tradition, the States have assumed control of production of natural gas to prevent waste and rapid depletion of the resources within their respective boundaries and the local distribution of gas for consumption. Congress has undertaken to regulate the transmission and sale for transmission of natural gas in interstate commerce to protect the ultimate consumer from economic pressure incident to virtual monopoly of the interstate channels for distribution of the gas.

The producers of gas are primarily engaged in the production of oil. They explore the country for oil and may discover gas which, but for the demand of distant consumers developed by investors in interstate transmission facilities, would be flared off or carried away by the winds. They are not interested in the security, comfort, or convenience of posterity or, for that matter, in the welfare of the present generation. They are bent upon immediate exploitation of domestic resources for all the oil and gas which they can sell in the present advantageous market with preferential taxwise consideration of 27½ percent of their gross receipts for depletion. Since oil and gas are competitive fuels, the producers can control the price of both if the gas can be sold without price regulation.

The domestic producers of oil and gas have organized an unprecedented lobby for legislation to fortify their market on all sides against competition while declaiming their right to a free competitive market price for natural gas in the field of production. Not only are they here seeking exemption from regulation of the sale of natural gas in interstate commerce, but in the Senate they are fighting, as they did in the House, the extension of the Reciprocal Trade Agreement Act to make importation of petroleum prohibitive or at least to impose quotas on imports of fuel oils. These are the measures they advocate under the banner of the American way for free competitive market prices. What chauvinism can we endure?

Such are the measures which are claimed to stimulate exploration for natural gas to supply the present unsatisfied demand of consumers and conversely encourage conservation of fuel resources in the national interest. How inconsistent can we be?

Contrary to their insatiable quest for profits the producers of natural gas have suggested or threatened to withhold their supply from interstate markets or suspend their operations entirely. This is patently a squeeze play and we urge Congress to call their bluff and await their action under the present Natural Gas Act. In this way the future public policy in regulating the price of natural gas sold by producers for transmission in interstate commerce will nowise be impaired.

Respectfully submitted.

JOSEPH F. GROSSMAN,
Special Assistant Corporation Counsel.

RESOLUTIONS ON EXEMPTION OF INDEPENDENT PRODUCERS OF NATURAL GAS FROM REGULATION BY FEDERAL POWER COMISSION

Whereas more than 1 million homes in Chicago are dependent upon a supply of natural gas from the Peoples Gas System for cooking, and many of them for other domestic uses, such as water heating, refrigeration, and space heating; and

Whereas the Peoples Gas System is an integrated system of interstate natural-gas companies and the Peoples Gas & Light Coke Co., the sole distributor of gas in the city of Chicago and said system is dependent in great measure upon a supply of gas purchased from so-called independent natural-gas producers who have heretofore been free to sell their gas at prices affected by competition between natural gas pipeline companies seeking a supply of natural gas to satisfy their respective customer demands; and

Whereas the Supreme Court of the United States has recently determined in the case of *Phillips Petroleum Company* v. *Wisconsin*, that independent producers are natural-gas companies within the purview of the Natural Gas Act and are subject to regulation by the Federal Power Commission to prevent unjust, unreasonable, and discriminatory prices for natural gas produced and sold in interstate commerce; and

Whereas the oil and gas interests in the United States have initiated a nationwide campaign through the press and other media for enactment of legislation by the Congress of the United States to exempt producers of natural gas from regulation by the Federal Power Commission so that they may exact from those who supply gas for ultimate consumption in the homes of Chicago and elsewhere the highest price obtainable by the incidence of competition among the pipelines for their sources of supply; and

Whereas such competition and competitive prices will rapidly increase the cost of gas for domestic uses in Chicago and elsewhere and will inevitably increase such cost as to restrict the normal use of gas necessary for the health and comfort of residents of Chicago: Therefore be it

Resolved, That the House of Representatives and the Senate of the United States be fully informed of the consequences of such legislation and that the corporation counsel be and he is hereby directed to use all proper means, and to make such representations to the Congress of the United States, to prevent the enactment of legislation exempting producers of natural gas from regulation by the Federal Power Commission.

National Reserve Plan

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. ROOSEVELT. Mr. Speaker, I have received a considerable amount of mail on the subject of H. R. 5297—the national Reserve plan. Under leave to extend my remarks in the RECORD, I bring to the attention of my esteemed colleagues the following letter from Mary Locher, chairman, conference of Christian citizenship of the board of education of the Methodist Church. This letter expresses the sentiments of the majority of those persons and organizations which have written me on this subject:

BOARD OF EDUCATION OF THE METHODIST CHURCH,
Los Angeles, Calif., April 27, 1955.

The Honorable JAMES ROOSEVELT,
House of Representatives,
Washington, D. C.

MY DEAR MR. ROOSEVELT: We thought that you would be interested in the resolution adopted April 24 by the senior Methodist youth fellowship house of councils.

"We, the elected legislative body representing the 350 Methodist Churches and 10,000 youth of the high school Methodist youth fellowship of the southern California-Arizona conference of the Methodist Church, feel that the national Reserve plan in the new bill H. R. 5297, which embodies the idea that each person who volunteers or is drafted into the Armed Forces or their reserve components must serve a total of 8 years is in opposition to our freedom of choice of armed service duty prompted by a love of country, and that this bill makes the military way of thinking a guiding part of American living, and in this respect is contrary to our concept of Christian love and brotherhood."

Sincerely,

MARY LOCHER,
Conference Christian Citizenship Chairman.

What Democracy Means to Me

EXTENSION OF REMARKS
OF
HON. W. R. HULL, JR.
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. HULL. Mr. Speaker, I have read with great appreciation the fine articles by Miss Mudgett from Illinois, and Miss Swanson from Arizona, on What Democracy Means to Me, as printed in the Appendix of the RECORD last week, and under unanimous consent, I would like to extend my remarks in the Appendix and to insert a similar essay written by Miss Bonnie Cotter, a 17-year-old student at Benton High School in St. Joseph, Mo. This essay recently won the George Washington Honor Medal in a contest sponsored by Freedom's Foundation at Valley Forge. Before entering Benton High School, Miss Cotter attended a rural grade school in Missouri where she was active in 4–H Club work, and I think her essay is a timely tribute to those institutions:

AS THE CORN GROWETH

I was reared on a farm. There every year I saw seeds put into the earth where they grew. First just the bare fields, then small flora just above the ground, later small stubs with leaves, much later tall, slim, sturdy green poles which were "corn sticks" growing into ears of corn, which mean life to the earth.

Like each grain of corn growing and multiplying, our Nation has grown strong with its freedoms and the many privileges resulting. "There was a dream—that men could one day speak the thoughts of their own choosing; there was a hope—that men could stroll through streets at evening, unafraid; there was a prayer—that each could speak to his own God, in his own church. That dream, that hope, that prayer became America."

As I dreamed over the ear of corn I imagined its some 12 hundred grains to be our privilege, surely as many in number. Here is the grain of freedom, in fact there is a whole row of these grains, freedom to work, to laugh, to get an education, to worship, to travel, to speak our thoughts, to read whatever we wish.

Next I see a row of our privileges, the fruits of American labor and skill. Each family can have its telephone, its car, radio, television. My mother can have her electric washer, dryer, mixer, iron, and deep freeze. I may have my orlon sweaters, my own wrist watch, a job after school.

Then there are the grains which in my fancy symoblize the vision which a democracy allows to its people. Down through the years we have been able to dream, to explore, to invent. And out of dreams have come realities. We are able to have faith in the future, to dream of a new family home, a better job, life insurance to protect our home, a better job, life insurance to protect our loved ones, with some assurance that by work, energy, and saving we may bring the dream to fulfillment. These grains may come to fruition because a democracy allows its children to make the most of their opportunities.

I woke with a start from my day dreaming over the ear of corn to find twilight fading and the friendly lights coming on in the farm houses. I saw the father relaxing in a big lazy chair, calmly reading the evening paper, perhaps reading the finals in an election where that day he had placed his own free vote. Bob, the 18-year-old son, having an individual choice of what he may be in later life, is reading some engineering pamphlets. Connie, 16, is listening to her favorite radio program while sketching a party dress. She hopes someday to be a dress designer. Mother sitting on the other side of the room is mending socks that Bob and father walk out of as fast as she mends them.

Love and security in the warmth of their home, cast out fears that a knock on the door will mean a raid on the house or that one of the family will be taken away for speaking his mind.

Yes; we have as many privileges today as there are grains on an ear of corn. Yet like the corn needing care and close attention, in order to mature into fertile, wholesome grains, we must constantly protect and guard our democracy so that no Communist or Fascist ideas may succeed in coming into our country of freedoms.

H. R. 12

EXTENSION OF REMARKS

OF

HON. COYA KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1955

Mrs. KNUTSON. Mr. Speaker, I feel it is wise to be aware of tendencies in other countries which could leave a similar result in our own country should prices our farmers receive continue below what they must pay to produce their commodities. Under leave for extension of remarks, I include the article, The Kremlin's Big Problem: The Peasant, taken from the New York Times magazine section of April 24, 1955:

THE KREMLIN'S BIG PROBLEM: THE PEASANT—RUSSIA'S FOOD SUPPLY IS NOT KEEPING PACE WITH HER POPULATION GROWTH—A MAJOR REASON FOR THE CRISIS IS THE FARMER WHO DEEPLY HATES COLLECTIVE FARMING

(By Thomas P. Whitney)

Farm problems are still very much at the front of the Soviet stage. They refuse to retreat to the rear. When, on February 8, Georgi Malenkov "resigned" as Premier of the U. S. S. R. he blamed himself for the failure on the agricultural front. This self-implication was reminiscent of the confession allegedly extracted from former Soviet Police Chief Lavrenti Beria in 1953 that he had sabotaged the party's farm program. Neither Malenkov nor Beria, of course, was more guilty in this field than their colleagues. The truth is that the failure of the Communist Party leadership to produce enough food was so self-evident that there had to be scapegoats. The most guilty of the criminals in this field—Joseph Stalin—could not be exposed for political reasons. So Beria and Malenkov took the rap for his mistakes.

This year, as last, Soviet newspapers are talking of little else but agriculture. There was a radical shakeup recently in the Government's agricultural leadership. The boss of the Communist Party, Nikita Khrushchev, is spending substantially all his time on implementation of the programs for increasing food production which he himself proposed.

The reasons for this interest are simple. Russia is being haunted by the ghost of a moral and philosophically inclined English clergyman who died more than a century ago—Thomas Robert Malthus. Malthus developed the theory that the growth of population outruns the food supply. His concept became an organic element in the foundation of British classical economics and also of Darwin's theory of evolution. Through both these channels it entered into the theoretical foundations of Marxism.

Nevertheless, in the Soviet Union, Malthusianism has come in only for castigation. The modern disciples of Malthus in the West are labeled "cannibals" and in effect charged with desiring to exterminate human beings. The Kremlin claims that the law of Malthus holds only for capitalism and not for socialism. Thus, it is ironic that it should turn out to be in the Socialist paradise of the world that the food supply is not keeping pace with population growth. In the United States food piles up in surpluses difficult to manage—even to the extent that certain farm groups have been proposing a big food gift for the Russians.

Here is the heart of Russia's food problem: according to official Soviet statistics, from 1940 through 1952 over-all agricultural production rose by only 10 percent. In the meantime, the population rose by slightly more than the same margin. Thus, if in 1940 Russians were poorly fed, though not starving, in 1952 they were slightly worse off.

From 1928 to 1954, the population of the Soviet Union rose by roughly one-thrid. Meanwhile, the livestock population (cattle, pigs, sheep, poultry, and other animals) declined sharply. In other words, the average consumption of milk, butter, meat, eggs, and all other animal and poultry products fell rapidly. From the modest beginnings of a protein diet which they had in 1928, Russians have since been forced more and more to live on potatoes and cabbage and bread.

Furthermore, the population of Soviet cities has been increasing by about 3,400,000 each year, while the population of the countryside has been declining very slightly. This means that in order to maintain the standard of food consumption in cities, the government has to force a higher and higher percentage of production out of Soviet farmers.

In any case, from a standpoint of farming and climate, Russia is by no means a dream country. Moscow lies in about the same latitude as Glasgow in Scotland, Hopedale in Labrador, or Hudson's Bay or southern Alaska. None of these areas is exactly noted for farming opportunities. There is little Soviet farm land south of the 45th parallel—which runs roughly through mid-Maine, Minneapolis and Portland, Ore., or, in other words, through the northernmost United States.

Soviet farming gets squeezed between mid-Asian desert climates in the south and Arctic short growing seasons in the north. This creates a narrow zone. Fortunately for the Russians, the best climatic conditions more or less coincide with a large wedge of fertile black earth which begins in western Russia and thins out toward mid-Siberia. It is on this soil that the most profitable farming takes place. But even here drought is frequent.

In the best of circumstances, the Russian farmer would have no easy time feeding the present Soviet population on North American standards. But in addition to his other difficulties, the Soviet agriculturist has had forced on him a system of organization of agricultural production which deprives him of the land and thus leaves him with inadequate incentive to be efficient. In a sense, this summarizes the agricultural history of Russia: it can be written in terms of a frustrated struggle of the Russian peasantry for the land.

Just 100 years ago the overwhelming bulk of the Russian population consisted of serfs. The great-grandparents of most of today's citizenry began their lives as slaves who could be bought and sold. The serfs resented their own lack of freedom, but more than anything else they resented their lack of property rights over their land. They considered that they owned the land and that their owners had taken it away from them. "We are yours, but the land is ours" was their favorite proverb.

When, in the 1860's, the Czar liberated the serfs, he did not give them all the land, and, in effect, made them pay their former owners for what they did receive. When the Revolution came in 1917, the peasants were acutely discontented and prepared to take over by main force that portion of the land they did not own. The Bolsheviks encouraged them and thus won their support. The peasants got it—for a time. During this period, Russia recovered from the destruction of war and revolution, and by 1927 and 1928 began to enjoy the greatest farm prosperity it had ever known.

But this did not suit the Communists. They had established themselves firmly and they decided to carry out,at gun point, collectivization of all peasant farms. They took the land from the peasants and merged small farms into big farms with several scores of families on each.

All peasants who had a little more than other peasants were labeled "kulaks" and sent away to dig canals in northern Russia or to cut wood in Siberia. Centralized control of all farming was established. The farmers no longer had any right to decide what they would sow. The whole collective farm system meant that the Government, instead of extracting from the farmer perhaps half of his produce in taxes, could take up to three-quarters or even nine-tenths of it.

The peasants resisted collectivization. They killed their livestock and Soviet livestock culture has never recovered from the blow. They went on a sitdown strike. The Stalin government answered with mass terror and intentional famine in which millions died. Stalin broke open peasant resistance.

But terror and famine proved to be poor means of producing more food. Stalin was never willing to face the problem he had created. He simply bequeathed it to his heirs.

And thus his successors have got the bear by the tail and can't let go. Collectivized agriculture has become one of the foundations of the Soviet system. It cannot be undone without undoing the system as a whole. The problem of Nikita Khrushchev, the man who has become the farm czar of Russia, is to produce more food without abolishing collective farms. That is no easy task. By now the peasants hate collective farms so deeply that they are not likely to change their attitude toward them even if a lot of changes are made. Yet more food must be found.

What is the Russian peasant like? This is worth knowing, for the Russian peasant is still the most important man in the Soviet Union. There are still more Russian peasants than there are city folk.

Zakhar Kuzmich Ilichyov is a farmer on the "Dawn of Communism" Collective Farm in the Oryol region. He is a composite, representing several dozen collective farmers I have met.

The "Dawn of Communism" farm is what is known in Soviet terminology as a "backward" collective farm. This means that it is far behind some others known as "progressive" collective farms which have better production and technology. But the fact of the matter is that the backward collective farms of Russia are many and the progressive farms are few. It is the backward farms which are typical of the country as a whole.

Zakhar is 60 years old. He has a thin, wispy beard. He has worked hard all his life and he is still healthy. He had 6 children, 4 of them daughters. Both of his sons were killed during the war. The daughters have all moved away to the city. Two of them have husbands who are alive and the two others are war widows. Zakhar lives with his wife, who is his own age and who grew up in the same village as he.

Zakhar works on the collective farm fields about two-thirds of the time. Recently, because of new laws, he has had to raise the proportion of time he puts in on "government work," as he calls it.

The reason he calls it government work is that he sees very little result from it. He gets a few kilograms of grain each year and a sort of mythical sum of rubles, which disappear somewhere into taxes and loan subscriptions. He feels about government work roughly the same way his grandfather felt about the work he did for an estate owner under serfdom. The main difference is that he has to put in about 4 to 5 days a week for the Soviet Government, while his grandfather put in 3 days a week for the serf owner. Zakhar isn't conscious of this precise difference, but he knows that he is getting very little back for what he does for the collective farm—for the government.

He has never seen more than 100 rubles as income from the collective farm paid to any of its members. He once heard someone read an article from Pravda about a peasant who got some thousands of rubles a year for his work for the collective farm. Zakhar laughed quietly to himself. He knew it was all a fairy story. Nobody can fool him.

Zakhar has seen a lot of money at one time and another. But he got it by working very hard on his own little private plot during the war. He raised a lot of potatoes then and he still does. He eats them and he sells them. That's where he gets his living.

But he has pretty much given up any hopes for anything better in his life. He is glad his daughters are in the city. He doesn't see any future in the country for anyone. At the same time, he makes up food parcels for all of them ever so often and sends them off from the nearest post office, some 10 miles away.

Of one thing he is certain: The work he does for the Government is nothing to him. He will do just as much of it as he is compelled to and no more. He knows that it is the Government that gets all the profit, anyway.

It is perfectly obvious, of course, that such people as Zakhar are not going to increase their productivity; are not going to think up means of raising crops which the Government will get in the end; are not going to pay much attention to anything that Moscow wants done.

There are, to be sure, collective farmers in the Soviet Union who get much larger incomes in cash and food for the work they do on the collective-farm fields, as distinct from their own private plots, than Zakhar Kuzmich. Some of them even have a fairly favorable attitude toward the collective-farm system. But there is hardly a farmer in all the Soviet Union who would not prefer to have his own private farm to belonging to a collective farm—if he had the choice.

Zakhar Kuzmich once had his own small farm. It was very small, but it was his own. He has given up all hope of getting it back. But he knows what he thinks of the Government in Moscow. For the fact of the matter is that the nine top men in the Kremlin have one thing in common. None of them was ever a peasant. None of them ever tilled the soil for a living. Not one of them ever looked out at the world from behind a plow.

One is bound to wonder whether this lack of experience is not one of the reasons for some of the mistakes of the Soviet leaders in farm matters. Any peasant could have told them that some of the things they did were just plain silly.

While it was Stalin who made the most egregious blunders, his heirs have also continued his tradition of adopting drastic approaches in agriculture. The leaders keep turning up with a cure-all which, they hope, will revolutionize Russian food production overnight. It was such a drastic approach that led to the big mistake of collectivization in the first place. It was such an approach that led Stalin, in 1950, to proclaim his plan for afforestation of the steppes of southern Russia, a program now junked. A similar cure-all was the perennial grass-crop rotation system, which has now been plowed under.

And so it happened, time after time. Something new, a new crop, a new rotation scheme, a new idea, was turned up and publicized by the Kremlin as the answer. And all were found wanting.

It would be a serious mistake, however, to classify the present drive on the farm front as merely a continuation of the Stalin line. Unlike Stalin, his successors need more than faked crop figures. It is in these circumstances that the Kremlin has decided to pour investments into agriculture at a rapidly increasing rate. The overall picture of the agricultural campaign as it has developed since Stalin's death includes far more than just a highly publicized fad for corn. It is a large operation:

1. In 1953, the Government more than doubled prices paid to farmers as a stimulus to greater production. At the same time the hated agricultural tax was cut in half in order to ease the pressure against private, small-scale agriculture.

2. In late 1953, the Government decided to send tens of thousands of technicians and party people into the countryside in order to bolster collective farms and their staffs.

3. In 1954 the Government adopted the new-lands program which now envisions the ultimate cultivation of 75 million acres of unused and virgin land, most of it in the eastern reaches of the Soviet Union. The plan was to get as much as 30 million metric tons of wheat out of all this.

4. Now, in 1955, the Kremlin has adopted a plan to plant 75 million acres to corn for fodder.

5. With this there has emerged the concept of more decentralized controls and planning.

6. For 1960 the overall production plan is stated now as 164 million metric tons of grain and doubled supplies of all livestock products as compared with 1954.

7. Now a new campaign has developed to send experienced Communist Party leaders from the cities down to the collective farms to take over all the positions of leadership. Khrushchev has announced that the heads of tens of thousands of farms are to be replaced with his new appointees.

The results for 1954, the first post-Stalin year, are now in. They are not brilliant. The grain harvest, it is claimed, increased slightly. Livestock herds increased by modest margins, less than planned. The big success of the year was allegedly in the "new lands" program where grain production was said to have reached 4.5 million tons. It is claimed that by 1956, 75 million acres will be under cultivation and yielding crops under the program.

This whole plan for putting under crops vast areas of previously unused and virgin lands in the heart of Asia is a fascinating and dramatic demonstration of the economic might of the Soviet Government.

In general, the entire new post-Stalin farm program of the U. S. S. R. is deadly serious and a tremendous undertaking. It cannot be laughed off as a paper fantasy.

However, nothing so far has been decided. It is by no means clear, for instance, whether permanent agriculture is, in fact, possible on the new lands. It is not clear whether the corn program of Nikita Khrushchev is really practical.

But the really crucial question is quite different. Has the attitude of the Russian peasant toward the Government and toward the collective farm system changed or not? New land schemes and corn-hog plans are important enough. But the only ultimate factor is what the peasants think about the post-Stalin farm regime.

The Soviet leaders have spoken many tens of thousands of words on the new farm policies of the U. S. S. R. But the only decisive words in Russia on these programs have not yet been heard. What is the Soviet peasant saying about them?

FARMERS AND BUSINESS PEOPLE SHOULD BAND TOGETHER

Mr. Speaker, ideas from Main Street are very essential to a full knowledge of what people want and need. Under leave to extend my remarks, I include these editorial observations from the Middle River Record, of Middle River, Minn., of April 21, 1955, in my district, the Ninth District of Minnesota:

An oft-discussed subject on Main Street is the trend toward fewer and fewer farmers. Small towns in rural areas have prospered in proportion to the number of farm families living in the trade area; yet most people feel so helpless about doing anything about the trend. The sooner business people band together with farmers to reverse the trend, the sooner bad situation is going to become better.

Nationally, all trends point toward bigger farms and less farmers. Farm programs and policies seem designated to aid that trend.

Here's the way one commentator discussed the situation: "Answer to the farm problem." That's the claim made in the headlines on a special report appearing in the current issue of Business Week. And, under the comforting headlines, we get a story with a rosy glow, telling us how neatly the problems of agriculture are being solved in two short, simple ways, (1) more farmers are finding more part-time jobs off the farm and supplementing their farm income and (2) more farmers are getting off the land and going to the cities for employment.

Charts are provided to show how neatly all this is working out. Total income for farmers is on a downward trend in the first. But the second shows farm population dropping rapidly.

So farmers, per capita, are not doing badly, says the magazine in describing the third chart.

In brief the farm-income pie has been getting smaller, but so many farmers have been pushed from the dinner table, that actually there is a tiny bit more of the pie available to those who remain. And that is what provides the happy situation, which Business Week magazine sees in agriculture. The magazine describes it as, "This cheerful outlook—directly contrary to what most experts have been predicting.

"The idea is to cut the number of people now living on about a million subsistence farms—farms that just eke out a bare living for their occupants. That's what the Department of Agriculture is said to be working on. The approach is said to be one of latching on to trends already in motion and giving them a boost with legislation.

"Secretary of Agriculture Benson said much the same about trends when he was before the House Subcommittee on Agriculture Appropriations last month. He said sure, farm income has fallen from 1947 to 1954 by some 25 percent, but, look, things aren't so bad, because our farm population has fallen by a good 20 percent in the same time. That's the way his testimony added up.

"And the chairman of the subcommittee, WHITTEN, of Mississippi, replied, 'The committee cannot subscribe to such reason. It didn't believe that the fact that farmers are being forced off the land is any cheering sign that we've got the farm problem licked.' "

Victims of false thinking is an editorial of remarkable logic and intensity. This nutshell summary is a remarkable statement of the trend under "quicksand parity." Under leave to extend my remarks I include this article from the Northland Times of Bemidji, Minn., of April 22, 1955:

VICTIMS OF FALSE THINKING

(Adapted from the Grand Rapids Herald Review)

Reports from Washington indicate that the leadership of both major political parties are beginning to worry about the farm vote. It is about time. Because of this, the politicians may do something for those who have been the victims of both political cupidity and thoughtlessness.

There are two great misconceptions which have been used to justify the administration's farm program.

First, that high parity prices have produced surpluses. The apparent logic is that there have been parity prices and there have been surpluses. Therefore the price is the cause of the surplus. Unfortunately, there have been surpluses before, caused by good weather, good crops, ability on the part of the public to buy farm products, and stimulated production to meet the demands of war.

Second, a theory that low prices will reduce production. This is just as wrong as it is cruel. For most farmers, the set expenses remain the same. So much for the mortgage; so much for machinery purchase, upkeep, and repair; so much for clothing, etc. When parity supports are removed, the farmer can only do one thing. In order to maintain his gross income to meet these set expenses, he must produce more. If he does not, he is out of business.

We must face the fact that establishment of even 100 percent of parity would not have a noticeable effect on the price of the finished product you buy in the store. Yet this would give us the best possible insurance for a stable economy that this country could have.

It is time to stop the present experimenting and start giving the farmers some support in making a living. Unless we have actions in Washington, we will have auctions here, and will see a way of life disappear from the American stage.

Mr. Speaker, under leave to extend my remarks I wish to include an editorial from the Henning Advocate of Henning, Minn., of April 21, 1955, in my district. It contains fears raised by many of my constituents about the tragic consequences to both community and farmers if we fail to solve problems confronting our farm families:

LARGE FARMS—GHOST TOWNS?

An interesting letter appeared in a daily paper recently, written by a Miles Otto—he hits the nail on the head with this contribution:

"It has often been said that if we could sell our experience for what it cost us we could retire. That certainly would be the case if we were to follow some lines of thinking."

"Our surpluses did not come from the small farmer, they are the result of a farm program which favored the larger farmer. Ninety percent of the grain in Government storage was produced by 10 percent of the farmers, perhaps much less than 10 percent.

"Efficiency? Yes, along with mass production. But these are not the things which made America great. We became great through our constitutional right to own property and participate in free enterprise. Are we to force the small farmer off his farm—not because he is inefficient but because he is in someone else's way? Are we to consolidate our small farms into such big units that in a matter of 1 or 2 more generations no one but a millionaire will be able to own land?

"Many farms have already been bought by larger operators, the buildings removed or destroyed or in sad need of repair. Many villages where this condition prevails will soon be ghost towns. Schools and progress which depend on property owners will be at a standstill."

[From the Christian Science Monitor of April 9, 1955]

POLISH FARM COLLECTIVES FALL SHORT OF GOAL

(By Ann Su Cardwell)

Of the 3,000 new farm collectives which the Polish Communists ordered to be set up during the past year, only 2,000 have been organized.

Apart from the general failure to reach the target, the majority of the new farm collectives were not set up in the designated districts of eastern and central Poland but in the western parts, formerly German territory, where there are many new holdings resulting from divided estates or abandoned farms.

No provision was made for supplying the new settlers with any kind of equipment or aid.

Review of the work and achievements of the longer established collectives and the annual elections to the administration of the individual units has brought to light disturbing facts. For one thing, faulty management of the collective is prejudicing the peasants against the socialist idea of reconstruction of rural life. The private plots, to which collective members are entitled, are immeasurably larger than they should be by rights, and horses and livestock are kept on them that should be added to the collective. There is no fixed daily work norm, and altogether the management of collectives where horses are used is deficient, a report declared.

It is apparent that the regime has been far from successful in its collectivization policy. The state farms have been a particular cause for worry. They have fallen far short of production goals, their management has been severely criticized, and the laborers have been loud in complaints of inadequate housing, harsh treatment, and delayed pay. To better the situation, the authorities called for volunteer workers—so-called pioneers—and hoped that by the end of February 10,000 new workers would have been enrolled and on the farms.

Experts in rural development and experienced farm workers, particularly for the neglected and ill-managed state farms in the West, are urgently sought. Recruiting for these pioneers is going on chiefly in Krakow, Katowice, and Rzeszow districts, where agriculture has reached its highest development and where most experts in that field are to be found.

But the state farms do not attract trained men. There is too much bureaucracy, too much politics, always the danger of being denounced as a saboteur or an enemy of the people.

Associated with this problem of the collectives and state farms is that of the independent peasant farmer, called by the regime a kulak, or rich peasant, who is the object of continual denunciation by the press and radio. The authorities are bent upon breaking him morally and financially and forcing him to enter a collective.

By the authorities' own admissions they have not progressed much yet, but time works for them. One new decree after another is meant to hasten the process, the latest empowering the new local councils (soviets) to compel delivery of farm quotas. Failure to make the demanded milk and meat quotas is noted especially now, and this, like all other rural shortcomings, is blamed on the kulaks, "who hold back deliveries."

The fact, as observers remark, that the peasants have had to make compulsory deliveries of grain and fodder in the fall and therefore are short of feed in the winter, with the resulting poorer milk and meat production is never mentioned.

Polish Constitution Day

EXTENSION OF REMARKS

OF

HON. THADDEUS M. MACHROWICZ

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1955

Mr. MACHROWICZ. Mr. Speaker, today marks the 164th anniversary of the adoption of the Polish Constitution. In connection with this anniversary, Gov. G. Mennen Williams has issued a proclamation designating May 3 as Polish Constitution Day. I wish to take this opportunity to insert into the RECORD the governor's proclamation, which is as follows:

STATE OF MICHIGAN,
EXECUTIVE OFFICE,
Lansing.

PROCLAMATION

POLISH CONSTITUTION DAY

In a day when the democratic ideals of men are undergoing their severest test, it is important that we remember one of the greatest examples of men's will for freedom and liberty. On May 3, 1791, the people of Poland instituted their constitution.

This constitution expressed the Polish people's belief in individual liberty. It contained this statement: "All power in civil society is derived from the will of the people."

Despite the fact that within a few years Poland was completely overrun by foreign troops, this will for independence has been one of the hallmarks of the Polish nation.

Today even though Poland has been subjugated to godless communism, people throughout the world look on the Polish constitution as a symbol of the day when Poland will again be free.

Therefore, I, G. Mennen Williams, Governor of the State of Michigan, do hereby proclaim Tuesday, May 3, 1955, as Polish Constitution Day in Michigan, and urge all citizens to join with their brethren of Polish descent in remembering the great aspirations expressed in the Polish constitution of 1791, and in paying tribute to the gallant struggle for freedom which Poland has constantly waged.

Given under my hand and the great seal of the State of Michigan, this 14th day of April, in the year of our Lord, 1955, and of the Commonwealth the 119th.

G. Mennen Williams,
Governor.

By the Governor:

James M. Hare,
Secretary of State.

The Alaska Railroad

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. BARTLETT. Mr. Speaker, much publicity has been given in Alaska, and elsewhere, to a statement credited to the former general manager of the Alaska Railroad noting a profit for that government-owned line for the year ending June 30, 1954, on the order of three-quarters of a million dollars. With this publicity there was the clear implication that the Alaska Railroad had gone into the black for the first time, at least in a long while. The Homer (Alaska) News disproves this in an editorial statement which I present here:

Alaska Railroad Finances Seem To Have Been Misreported

Several months ago the general manager of the Alaska Railroad, Frank Kalbaugh, told an Anchorage audience that the Alaska Railroad made a profit of $750,000 for the year ending June 30, 1954, compared to $750,000 lost by the organization in the preceding 12-month period. At the time we felt that there might be something wrong with the statement, especially after we learned that Douglas McKay, Secretary of the Interior, used it in stateside talks with obvious political motives.

In January we wrote to Delegate Bartlett and questioned the profit statements. In turn, the Delegate wrote to William Strand, Director, Office of Territories, and requested information that would answer our question.

All of the information is in and we were right in questioning Manager Kalbaugh's original statement.

In the first place the Department of the Interior figures show that the Alaska Railroad net income was only $719,624.65 for 1954. This figure is $30,475.35 less than the $750,000 quoted by Kalbaugh. Perhaps to the general manager of the Alaska Railroad this is a trivial amount, but wouldn't it have been just as easy for him to have said that the railroad made approximately $720,000 in 1954?

Secondly, Kalbaugh stated that the Alaska Railroad had lost $750,000 in 1953. According to the Department of the Interior report that we have, the Alaska Railroad lost only $42,045.95 in 1953. In this case the Alaska Railroad manager exaggerated $707,954.05. Why? We think it was pure political propaganda and it was exploited to the utmost by Kalbaugh here in Alaska and by the Secretary of the Interior in public speeches in the States.

Our readers might be interested to know that in a summary income statement of the Alaska Railroad covering the years 1940–54, the railroad showed losses for only 4 years, 1946, 1949, 1952, and 1953. The remaining 10 years of the statement indicate that profits as high as $5,242,824.45 (less depreciation which is running at approximately $1,500,000 per year at the present time) in 1944 have been made. In 1948 the Alaska Railroad had a net profit of $2,326,855.85.

It might also interest our readers to know that Congress has not made an appropriation for Alaska Railroad since 1939, according to a Strand report.

So the Kalbaugh-McKay myth that the Republicans are the only ones who can make the Alaska Railroad pay is dissolved.

We have no argument in regard to the operation of the Alaska Railroad by Kalbaugh. His laying off of several hundred employees was probably a sound move made by an experienced administrator. We hope that the money he saved in salaries is put back into the railroad in the form of better equipment, roadbed, etc. But in the future, we hope that the manager will get his facts straight before making a public statement.

Recovery Without Inflation or Farewell to Colin Clark

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. OSTERTAG. Mr. Speaker, under leave to extend my remarks, I include in the Record a column by Edward H. Collins from the New York Times of Monday, May 1, 1955:

Economics and Finance

(By Edward H. Collins)

Recovery Without Inflation

Just about a year and a half ago, with production sliding off from the high record reached in the second quarter of 1953 and with employment just beginning to feel the effects of the post-Korean readjustment, the administration's antirecession policies were under heavy attack. This attack came both from the political opposition and from those economists whose unvarying prescription for any and every disorder of the body economic is a generous injection of the wonder drug of inflation.

In some cases this offensive, which was conducted on an international scale, bordered on the hysterical. It reached its peak of recklessness, perhaps, in Britain, in November 1953, when the Manchester Guardian weekly (while prudently dissociating itself editorially from their contents) ran two spectacularly lugubrious pieces by the Australian economist, Colin Clark, under the title "Danger Signs of an American Slump." Wrote Clark:

"If events take the course predicted, and only a $5 billion tax reduction is made in January, then by next June (1954) business activity will have fallen and unemployment risen to about the 1949 level. By that date public and congressional opinion may have had time to become alarmed and be prepared for drastic measures. At any rate, if it has not become so by then, it will be no use later; it will be the last chance. An additional tax reduction of about $20 billion per annum, commencing on July 1, next, would suffice to turn the corner."

The President, however, had chosen as his economic advisers key administration officials on the economic and financial fronts men (1) who shared his own deep convictions as to the primary importance of the individual and private initiative in the American way of life; (2) who were not shackled to the past in their thinking, and (3) who were socially minded in the most genuine sense of the term. In fact, in the annual economic reports to Congress, where the ideas of these men have been synthesized, we have witnessed the unfolding of a philosophy regarding the Government's role in the national economy that is as refreshing for its reinvigoration of these traditional values that have carried this country to its present position of world leadership as for its repudiation of the spirit of doctrinarianism either of the right or left.

THEIR JUDGMENT ACCEPTED

Having selected his advisers with great care, the President never wavered in acting on their judgment.

A year ago it was possible to applaud the economic logic of the administration's antirecession program and to feel strongly that its authors were on the right track; but at that time the process of inventory reduction was still in full swing; and while the decline in industrial production had flattened out, unemployment, which had not begun to reflect the impact of the business readjustment until 5 months after the downturn in production, had just passed what was to prove its crest. Six months ago it was clear that administration policy had succeeded in achieving its first, and most important objective. The retreat, which some had feared might turn into a rout, had been halted. The only question that remained to be answered 6 months ago was whether, with the defending forces now dug in and refusing to give further ground, the next stage would be a stalemate, and possibly one of considerable duration, or a swift counter-attack.

By January of this year, when the figures of the Department of Commerce revealed that the gross national product, after hovering around $356 billions for the first three quarters of 1954, had rebounded to $362 billions, we had had a tentative answer to that question. But if any doubts remained these would seem to have been dissipated with the publication of the basic economic statistics for the first quarter of 1955.

The gross national product, which had recovered from $355.5 billions to $362 billions in the final quarter of 1954 had risen by another $7 billions in the opening 3 months of 1955, to $369 billions. At the same time, the statistical evidence seemed clearly to indicate that the two elements that had been mainly responsible for the contraction of economic activity since mid-1953 had either completely or largely spent their force.

These were (1) the downward readjustment of business inventories, and (2) the decline in Federal expenditures. Inventories were expanding during the first three quarters of 1953 at an average rate of more than $3 billion annually, this phenomenon reaching its high point in the second quarter of that year, at $5.4 billion. In the fourth quarter business began reducing inventories at an annual rate that was to average $4.4 billion from that quarter through the third quarter of 1954.

FIRST BREAK IN TREND

The first break in the trend came in the fourth quarter of 1954, when the rate of such cutbacks fell to $1.6 billion. In the first quarter of 1955 inventories were reported as

unchanged. An even bigger influence making for contraction of economic activity has been the steady reduction in Federal spending (chiefly as a result of the leveling off of the rearmament program and the end of hostilities in Korea). From an annual rate of $62.2 billion in the second quarter of 1953, Federal spending on the whole had receded by the first quarter of 1955, to $45.5, a decline of $16.7 billion.

Of this overall decline the decline of spending in connection with national security has accounted for $14.6 billion. Now it is plain that had nothing been done to cushion the impact of these two forces we might have expected a contraction, in the GNP $14.4 billion, but of $10.4 billion plus $16.7 billion, or $27.1 billion. We might have expected a decline in the GNP, not from $369.9 billion to $356 billion, but from $369.9 billion to around $342.8 billion. That we didn't is explained by the fact that, as the economic report has put it:

"The Federal Government has contributed significantly to the process of recovery. It influenced the economy in two principal ways, first, through the automatic workings of the fiscal system, second, by deliberately pursuing monetary, tax, and expenditure policies that inspired widespread confidence on the part of the people and thus helped them to act in ways that were economically constructive."

If anyone wishes statistical evidence on this point, let him turn to the figures of personal consumption over this period of contraction and incipient recovery. Only in one quarter—the fourth quarter of 1953—did the rate of personal savings recede. At that point it stood at $229.7 billion. As early as the second quarter of 1954 when it reached $233.1 billion, personal consumption had set a new high; and it has continued to set new highs in every quarter since then. In short, it can now be said with every reason for assurance that we have just witnessed the early snuffing out of a business recession by a Government program at a time of declining Government spending, without any instability of prices, and to the accompaniment of a tax reduction of historic dimensions.

Poland: Freedom's Symbol

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. DAGUE. Mr. Speaker, we Americans who have been free for over a century and three-quarters cannot—indeed we must not—overlook the plight of a nation whose freedom antedates by centuries our own, and who today, although left in the hands of a harsh taskmaster by her erstwhile friends, remains the symbol of man's eternal fight for individual liberty.

The shame of America is that our leaders, without the consent or approval of the American people, sold the valiant Polish Nation into slavery and then at the request of the Soviet slavedriver turned over a score of her most brilliant statesmen who had stood valiantly by our side while we were fighting the Nazis.

Today we hear much of peaceful coexistence as the pious hope of those who seek an easy "out" to a policy which we underwrote at Yalta and Potsdam. We, in our mature judgment, must realize that you cannot exist peacefully with liars and murderers, and the Poles know from centuries of sad experience that you cannot live in peace on the same continent with men in whom there is no honor. Poland, by every right that has been spelled out in Christian ethics, deserves her freedom and will continue to look to total liberation as her goal. Indeed, we insult a valiant ally when we expect her to settle for less.

Toward Statehood

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Washington Daily News for April 30, 1955:

TOWARD STATEHOOD

Perhaps the most curious aspect of the long controversy over statehood for Alaska and Hawaii is the almost complete lack of opposition from the American people. The last Gallup poll in February showed 82 percent favorable to Alaska and 78 percent to Hawaii.

It now appears that the House will vote soon on a bill to admit both Territories this year.

While combining the two proposals largely was the work of men who expect them to inherit each other's opponents, it makes sense politically. The Republican Party is much stronger in Hawaii than in Alaska, and a member of the GOP would have to be unpardonably naive to expect a Democratic Congress to give his party such an apparent advantage as Hawaii's admission alone would mean.

This newspaper has advocated statehood for these two Territories ever since their qualifications became evident.

While we have suggested the Federal Government turn over to Alaska all its land there, the President and his military advisers consider it necessary to permit a large part of the uninhabited areas to be taken over by the Armed Forces. This bill will do that, and at the same time give the new State an amount of public land greater than the area of any State in the Union except Texas, and more than it could survey in a lifetime.

Hawaii's political and economic maturity and the stanch Americanism of its people have been demonstrated in peace and war.

Alaska, though smaller in population today, has an infinitely greater future. It already is the fastest growing area under the American flag, and has attracted from all parts of the country the kind of adventurous, confident young people who built our great West. Its natural resources are almost legendary.

But only under statehood, with self-government, liberal land laws and full citizenship for its people, can Alaska achieve the destiny for which nature favored it.

We hope this Congress will have the vision to approve statehood for these Territories, and we have no doubt President Eisenhower will complete their emancipation with the pride and the sense of historic decision that the occasion will deserve.

High Water on Lake Ontario

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. OSTERTAG. Mr. Speaker, I have frequently called the attention of this body to the problems caused by high water on Lake Ontario. I shall shortly have more to say on that subject.

The lowest and smallest of our great inland seas, Lake Ontario is subject to wider fluctuations than any of the other Great Lakes, and it is also subject to storms of severe intensity, which sometimes convert it into a churning cauldron of wind and waves.

In a state of nature, the high-velocity winds accompanying the storms tend to occur when the lake level is low. Thus their damage to the shores is minimized. If and when the levels are artifically raised and sustained at high levels, wind and water combine to wreak havoc on the shores.

One of the ablest analyses of the relation between wind velocities, water levels, and shore damage has been made by Miss Melissa E. Bingeman, of Rochester, N. Y., in studies published by the Rochester Academy of Science, of which she is a fellow.

Miss Bingeman is also a poet of note, however, and it is to a poem written by her concerning the effect of high water on the lake shores that I wish to call attention at this time. The poem was originally published in the Gleam, the annual anthology of the Rochester Poetry Society, of which Miss Bingeman is a member.

It is entitled "High Water on Lake Ontario":

HIGH WATER ON LAKE ONTARIO

THE ROCK

The rock, now liberated by a raging surf,
Fallen and submerged,
Had, since the ice age, fortified this hill.
The turmoil of the breakers on the beach
Is magnified as they behold
The new-made cavern, now within their reach.

THE HILL

Time rolls its centuries, while the wooded hill
Shrinks, tree by tree, and rock by fallen rock,
As waters rise or ebb, and wild geese northward flock.

THE WOODS

It matters not to heron or to hawk
That shorelines change, or forest patriarchs fall.
Another tree provides as high a roost,
Another cove provides as safe retreat,
Only to man are changing shores, defeat.

THE SHORE

The shambles on the shore is eloquent
Of tempests gone berserk.
Nor is there testimony anywhere
Of gardens buried deep beneath the rubble,
Of iris, fern, of violets or mint.
Uprooted stumps, oil drums, a boatswain's chair,
Dead fish, a rubber boot, fragments of wall,
Bleached bones of forest monarchs—these are there.
This monstrous cairn, built by an angry sea
Entombs the hopes that once were part of me.

THE SHOAL

That shoal, due north, long centuries ago—
Was that a promontory,
Where eagle-feathered warriors scanned the lake
For sign of friend or foe?
When nomads ranged this countryside
Was that their lookout, then?
Did tepees rise, and smoke from campfires curl
Where now the waters turn
From indigo, to green, to dun.
Here fishing boats repair at setting sun,
While fishermen troll endlessly, nor know
Their shoal was shoreline in the long ago.

—*Melissa E. Bingeman.*

Raise Minimum Wage

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article prepared especially for the Pilot, Boston, Mass., by Dr. Laurence J. Phalan, former professor of economics at Boston College.

I have sponsored legislation providing for an increase in our minimum wage to $1.25 an hour, since the economy generally will benefit, I feel from the increased purchasing power which a realistic minimum would put in the hands of families who need it most and will put their increased income right back into economy.

The article follows:

[From the Boston (Mass.) Pilot of April 23, 1955]

HOW LOW CAN YOU GET?—RAISE IN NATURAL MINIMUM WAGE RATES WOULD BENEFIT NEW ENGLAND INDUSTRIES

(By Dr. Laurence J. Phalan)

Once again the question of a new minimum wage is under consideration by Congress. President Eisenhower has proposed raising the minimum under the Fair Labor Standard Act from 75 cents to 90 cents an hour and other advocates of increase have suggested that the minimum be raised to $1.25.

These amounts are a far cry from those set forth in the original Fair Labor Standards Act. Not so long ago, in 1928, when the act first became effective, it was set forth that during the first year of the law the minimum should be not less than 25 cents an hour, and during the next 6 years, not less than 30 cents an hour and after the expiration of 7 years not less than 40 cents an hour.

In January 1950, the act was amended raising the minimum to the present 75 cents an hour. This Federal minimum applies to workers who are engaged in interstate commerce or in production of goods for interstate commerce including those in any closely related processes or occupations directly essential to such production. These workers are contrasted with local retail clerks and others who are not subject to the provisions of the law. It is estimated that about 24 million workers are covered by the act.

Minimum wage legislation is designed to protect employees from employers, to defend the latter from other employers and possibly to protect regions of the country from other regions and to increase consumer purchasing power.

NOT LIVING WAGE

Since the basic minimum wage established has generally borne little relationship to a living wage—certainly 75 cents or 90 cents an hour does not represent an adequate living wage in this country today—the legislation is directly concerned with the economically weak workers, and with preventing them from exploitation. However, it does affect other workers because of the tendency of all wages to increase with increases in those received by the lowest paid workers.

While often there are objections raised by employers to legal minimum wages, there is generally much support to such wages by employers paying in excess of them in order to defend themselves from unfair competition by those who pay inordinately low wages.

Employers in one region who wish to protect themselves from low wages in another region are also supporters of minimum-wage legislation. This has been particularly so in industries like the textiles where New England employees have been continuously faced with the lower wages paid by southern manufacturers.

While industrial diversification and economic growth has eliminated a considerable amount of the wage inequities between the North and South, the impact of the proposed higher minimum wages will still be greater on the South. A recent study by the United States Bureau of Labor Statistics showed that 4.6 percent of the production workers in manufacturing industries in New England had received less than 90 cents an hour whereas 20.2 percent of those in the South were so paid. While 9.2 percent of production workers in manufacturing in the New England States were paid less than $1 an hour, 28.2 percent of such workers in the South received less than that amount.

TO AID NEW ENGLAND

All of these figures show that it is generally to the advantage of the New England employers to have a new minimum which would to some extent eliminate the wage advantage of the South. Of course, it may be held by some that the wage differences do not mean actual differences in labor costs because the productivity of the southern laborers is less. However, facts would not seem to support such a conclusion and there would seem to be ample evidence that the wage differences are based upon historical practices and lack of unionization in the South rather than related to productivity differences. And, therefore, as long as the southern producers are permitted to pay low wages they enjoy a competitive advantage over New England.

Some advocates of a new, higher minimum wage are chiefly interested in a higher wage because of the support which it is claimed it will give to the Nation's economy through placing greater purchasing power in the hand of those who would use the extra money rather than save it. This reasoning runs into many arguments which get very technical and elusive.

PURCHASING POWER

There are two general approaches to the question of stimulation of the economy through wage adjustments. Under one, wages are kept down, thus reducing costs, increasing profits and thereby stimulating the employer to expansion of activities. The other method is to increase wages thus giving more purchasing power to consumers who buy the goods produced.

While higher wages may increase purchasing power, some marginal producers may be so adversely affected by increased costs brought by wage increases as to be forced to contract operations, thus making for increase in unemployment. Particularly is this possibility present in a period of falling prices. So much weight was given to this line of reasoning that, before the New Deal in this country, the chief way out of depression was thought to be through cutting costs including wages. With the New Deal and wide acceptance of what is known as Keynesian economics, came greater stress on the role of consumer purchasing power as a support to the economy. Instead of approaching the problem primarily through labor costs reductions, chief concerns was given to support to consumer purchasing power. Thus, we had such depression agencies as the WPA, which was really more concerned with getting money into the hands of consumers than with actual work done.

Of course, conditions today bear little resemblance to those of the depression, WPA days. Nevertheless, possibilities of recession and depression are always present in the thinking of economists and Government officials. So much so is this presence felt that a committee headed by Leon Keyserling, former economics advisor to the Truman administration, has recently proposed that the minimum wage under Federal laws be raised to $1.25 an hour rather than the 90 cents advocated by President Eisenhower. The claim is that unless steps are taken to bolster purchasing power, we will have 5 million unemployed in this country by the end of this year. Unemployment in January was estimated at 3,347,000 up from 3,087,000 in January 1954.

While January 1955 unemployment exceeded the comparable month in 1954, there is generally greater optimism because in 1954 employment was falling sharply and gave indication of an impending recession while employment this year is generally turning upward.

Keyserling and others believe that there are indications that consumer purchasing power will not be sufficient to maintain an upward swing in employment and have advocated the higher minimum wage, decreased taxes for lower-income families, and a strong public-works program.

JUSTIFICATION

A detailed discussion of those areas is too great for an article of this length. It would not seem too difficult, however, to see the justification of a higher minimum wage when we know that the 75 cents minimum bears so little relationship to a living wage. Moreover, the proposed 90-cent minimum is related rather to ability of industry to pay than to a living wage. Certainly $36, for a 40-hour week, is not sufficient to adequately support a family at today's prices.

A yearly wage, at $36 a week, of $1,872 compares very unsatisfactorily with various budget estimates of the amount required to support a family today. For example, in October 1951 the Bureau of Labor Statistics estimated that $4,217 a year was required to sustain a family of four in Boston at a modest but adequate level of living. Since October 1951, the cost of living has increased about one and one-half percent.

On the basis of these figures, it would seem that a very strong case can be made for a new and higher minimum on moral and ethical grounds. Certainly anything which can be done to aid the economically weak to obtain a wage more in keeping with human dignity finds support in the teachings of the church.

Voting and Attendance Record

EXTENSION OF REMARKS
OF
HON. GERALD R. FORD, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1955

Mr. FORD. Mr. Speaker, under leave to extend my remarks, I include a report

of my voting and attendance record during the 2d session of the 82d Congress.

The record includes all rollcall votes and all quorum calls. The description of bills is for the purpose of identification only; no attempt has been made to describe the bills completely or to elaborate upon the issues involved.

The purpose of this report is to collect in 1 place information which is scattered through thousands of pages of the RECORD. I want to be able to provide any interested constituent with a simple compilation of my voting and attendance record:

Voting and attendance record, Representative GERALD R. FORD, JR., 5th District, Michigan; 82d Cong., 2d sess.

Roll call No.	Date	Measure, question, and result	Vote
1	Jan. 8	Call of the House	Present.
2	Jan. 15	Quorum call	Present.
3	...do	H. R. 5715, providing for an across-the-board increase of 10 percent in pay and allowances of members of the Armed Forces. On passage (Passed, 270 to 89).	Yea.
4	Jan. 30	Quorum call	Present.
	Feb. 4	H. R. 401, providing that any person not a citizen and regardless of age who serves with the Armed Forces between June 25, 1950, and June 30, 1955, may be naturalized after compliance with the naturalization laws (Passed, voice vote).	Yea.
5	Feb. 5	H. Res. 517, citing Sidney Buchman for contempt of Congress by his refusal to comply with a subpena issued by the Committee on Un-American Activities. (Adopted, 314 to 0.)	Yea.
6	Feb. 19	H. R. 5893, as amended, authorizing not to exceed $125,000,000 additional for revolving fund for the purpose of making direct loans under Servicemen's Readjustment Act for housing at 4 percent interest rates where such loans are not available from private sources. (Passed, 342 to 0.)	Yea.
7	Feb. 20	Quorum call	Present.
		House Resolution 514, directing Secretary of State to transmit to House information relating to any agreements made by the President of United States and the Prime Minister of Great Britain during their recent conversations:	
8	...do	On motion to table resolution. (Defeated, 184 to 150)	Nay.
9	...do	On adoption. (Adopted, 189 to 143)	Yea.
10	Feb. 27	Quorum call	Present.
11	Feb. 28	...do	Present.
12	Feb. 29	...do	Present.
13	Mar. 3	...do	Present.
14	...do	H. R. 6854, making appropriations for the Treasury and Post Office Departments for the fiscal year ending June 30, 1953: On amendment reducing the operating expenses of the Coast Guard by $1,600,000. (Adopted, 191 to 128).	Yea.
15	Mar. 4	Quorum call	Present.
		H. R. 5904, Universal Military Training and Service:	
16	...do	On adoption of substitute providing that training shall be provided as part of high school curriculum. (Defeated, 155 to 235.)	Nay.
17	...do	On motion to recommit. (Adopted, 236 to 162.)	Yea.
18	Mar. 10	S. 2667, establishing daylight-saving time in the District of Columbia for 1952. On amendment exempting all Government offices and departments from the daylight-saving time provisions and keeping them on standard time. (Defeated, 48 to 240.)	Nay.
		H. Res. 539, providing authorization by the Special Committee To Investigate the Massacre of Polish Soldiers in the Katyn Forest during World War II to hold hearings in Europe:	
19	Mar. 11	On previous question. (Defeated, 164 to 156.)	Yea.
20	...do	On adoption. (Adopted, 206 to 115)	Yea.
21	...do	Quorum call	Present.
		S. 2077, transferring from the FBI to the Civil Service Commission the task of investigating loyalty of personnel prior to their being employed by the Government in certain agencies:	
22	...do	On motion to recommit. (Defeated, 86 to 233.)	Yea.
23	Mar. 12	Quorum call	Present.
24	Mar. 13	...do	Present.
25	Mar. 18	...do	Present.
		H. R. 6444, omnibus claims bill for the relief of sundry claimants:	
26	...do	On amendment striking out title II. (Defeated, 147 to 184.)	Yea.
27	...do	On amendment deleting claim of John Fleckstein for compensation due to physical injury received in 1912 while employed in the service of the Isthmian Canal Commission and the Panama Canal. (Adopted, 186 to 141.)	Yea.
28	Mar. 19	Quorum call	Present.
29	...do	H. Res. 578, providing for consideration of H. R. 7072, making appropriations for the Executive Office and sundry independent offices for the year ending June 30, 1953. (Adopted, 228 to 133.)	Yea.
30	Mar. 20	Quorum call	Present.
31	...do	H. Res. 556, providing $65,000 to send a committee to Europe to investigate the massacre of Polish soldiers in the Katyn Forest in Russia during World War II. (Adopted, 235 to 114.)	Yea.
32	Mar. 21	Quorum call	Present.
		H. R. 7072, making appropriations for the Executive Office and sundry independent offices and agencies for the year ending June 30, 1953:	
33	...do	On Fisher amendment limiting to 5,000 the number of public housing units to be started in fiscal year 1953. (Adopted, 192 to 168.)	Yea.
34	...do	On Coudert amendment reducing by $14 million the funds allocated to the Tennessee Valley Authority. (Adopted, 199 to 159.)	Yea.
35	Mar. 25	Quorum call	Present.
36	Mar. 26	...do	Present.
37	Mar. 27	...do	Present.
	...do	H. R. 7176, making appropriations for the Department of the Interior for the year ending June 30, 1953:	
38	...do	On amendment reducing from $18,816,800 to $18,000,000 for the Bureau of Mines. (Adopted, 192 to 164)	Yea.
39	Mar. 28	Quorum call	Present.
	...do	H. R. 7216, making appropriations for government of the District of Columbia for the year ending June 30, 1953:	
40	...do	On motion to recommit with instructions to reduce by $2,400,000 the Federal Government's appropriation to the District's general fund. (Adopted, 162 to 143.)	Yea.
41	Mar. 31	S. 1415, providing for payment for compulsory labor by, and inhuman treatment of, prisoners of war as well as the relief of certain organizations in the Philippines which aided Americans during World War II. (Passed, 325 to 0.)	Yea.
42	...do	H. R. 6661, on motion to suspend the rules and pass bill amending the Foreign Service Buildings Act of 1926 authorizing the Department of State to expand its building program overseas through the utilization of $90,000,000 of foreign credits owed the United States. (Passed, 240 to 82.)	Yea.
43	...do	Quorum call	Present.
44	Apr. 1	...do	Present.
45	Apr. 2	...do	Present.
46	...do	H. Res. 591, providing for consideration of S. 1203, providing for appointment of 23 permanent and 4 temporary circuit and district judges. (Adopted, 192 to 182.)	Nay.
47	Apr. 4	Quorum call	Present.
48	...do	H. Res. 561, creating a special committee to conduct an investigation and study of tax-exempt foundations and other comparable organizations. (Adopted, 194 to 158.)	Nay.
		H. R. 7280, making appropriations for the Departments of State, Justice, and Commerce, and the Judiciary for the year ending June 30, 1956.	
49	...do	On amendment reducing from $43,400,000 to $40,399,000 the amount allowed for salaries and expenses of the Immigration and Naturalization Service. (Adopted, 193 to 136.)	Yea.
50	...do	On amendment limiting, with certain exceptions, the filling of only 25 percent of the vacancies which occur in the offices and bureaus, etc. covered by this bill in 1953. (Adopted, 208 to 114.)	Yea.
51	...do	On passage. (Passed, 200 to 55)	Not voting.[1]
52	Apr. 7	Quorum call	Present.
53	...do	...do	Present.
54	Apr. 8	...do	Present.
55	Apr. 9	H. Res. 602, citing Henry W. Grunewald for contempt of Congress. (Adopted, 334 to 0)	Yea.
56	...do	H. R. 7391, making appropriations for the Department of Defense and related independent agencies for the year ending June 30, 1953. On amendment limiting to $46 billion the amount to be expended by the military in 1953. (Adopted, 220 to 131.)	Nay.
57	Apr. 22	Quorum call	Present.
58	...do	...do	Present.
59	Apr. 23	...do	Present.
60	...do	S. 1203, providing for the appointment of additional circuit and district judges. On motion to recommit. (Adopted, 165 to 150)	Yea.
61	Apr. 24	Quorum call	Present.
62	...do	H. Res. 532, directing the Committee on Education and Labor to conduct an investigation of the Wage Stabilization Board. (Adopted, 255 to 88.)	Yea.

[1] Absent. Would have voted "Yes" if present.

Voting and attendance record, Representative GERALD R. FORD, JR., 5th District, Michigan; 82d Cong., 2d sess.—Continued

R. 7289, making appropriations for Departments of State, Justice, Commerce, and the Judiciary for fiscal year 1953: On motion to recede and concur with Senate amendment deleting language barring use of funds for preparation or prosecution of any suit or proceeding in any court by or on behalf of the United States against a State of the Union. (Rejected, 119 to 181.)	Nay.

Cleveland Press for Statehood

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks I take pleasure in calling to the attention of the House an article which appeared last Saturday in the Cleveland Press. The article makes a strong plea for statehood for Hawaii and Alaska. It follows:

For years, the hopes of the citizens of Alaska and Hawaii for statehood have been shamefully enmeshed in partisan politics.

Hawaii is a mature and prosperous country, a keystone of our Pacific defense ring, a land of spectacular beauty and friendly people.

Alaska is a large booming Territory, populated by sturdy, pioneering folks who insure its bright future.

Both are fully prepared to assume the reponsibilities of statehood, to stand on their own political feet. Both deserve voting representation in the Congress which governs them.

But both are the victims of political jealousy, of political conniving and maneuvering.

Democrats don't want Hawaii in, because they suppose it would send Republicans to Congress. With Alaska it's vice versa. So, the whole question has bogged down in political stalemate.

Some—including President Eisenhower—also raise objections to statehood (especially for Alaska) because of the fancied fear it might water down the authority of military commanders.

This is a difficult argument to swallow, since the military forces have successfully maintained huge bases on the mainland—in States—for scores of years.

The statehood issue is before Congress again this year. There's no excuse, good or bad, for further delay. Alaska and Hawaii deserve to be States. Now.

ALASKA

Almost 70 years ago the United States bought Alaska from Russia for a whopping $7,200,000 in a transaction hootingly referred to as "Seward's Folly." When it developed 30 years later there was gold in them thar Klondikes, the price looked mighty good.

The population figure of Follywood, 170,000 at last count, is streaking upward in a vast area twice the size of Texas. The big towns aren't very big. Anchorage tops them all with 11,000 and Juneau, the capital, boasts 5,000 plus.

There are resources aplenty. Walt Disney's fabled Pribilof Islands in the middle of the Bering Sea are home base for millions of fur seals that the Federal Government takes proper care of. Interest in oil leases is high with 1,800 fields going at present. In 1954 the first major pulp mill opened in Ketchikan—a modern $52 million plant. And there are plenty of fish in the brooks, $70 million worth last year.

The crying need is for farmers and the means to get crops to market. Most of the fertile land is concentrated in the Matanuska Valley north of Anchorage. There are only 470 miles of rail, this from Seward to Fairbanks.

Alaska got territorial status in 1912 and gets a governor every 4 years appointed by the President of the United States. Two years ago Eisenhower named B. Frank Heintzelman, a Yale Forestry School grad who had served previously as a regional forester. The Alaskans send 1 delegate (nonvoting) to our Congress.

HAWAII

Smack in the middle of the Pacific lies a cluster of eight islands. Gentle blue waves lap the shores, palm trees sigh at tropic breezes and half a million people bustle about the business of daily living. That's the Hawaiian Islands.

Lump them all together any they're just half as big as Rhode Island. Hawaii is the biggest of the islands but by far the most important is Oahu which boasts the capital, Honolulu—a city the size of Akron.

It surprised no one when Sanford Ballard Dole, the pineapple king, became the first American-appointed governor in 1900, a post now held by Samuel Wilder King. Popular Delegate to the United States Congress is Mrs. JOSEPH FARRINGTON, who was elected to the same office her husband held until his death last year.

The rich, reddish-brown soil of the islands is just right for growing sugarcane and pineapples, the kingpins of Hawaiian economy. The pineapple business amounted to $150 million last year and the sugar was almost as sweet—$100 million.

Hawaii's progress is especially apparent on the bigger islands with their fine network of roads—over 2,000 miles of them paved.

The islands are now a greater melting pot than the United States itself. Two hundred years ago there were 300,000 natives who much resembled the Polynesians. Now there are less than 21,000—mainly because of intermarriage. Largest single groups are the Japanese and whites ranked second.

Ten Turbulent Years Since Meeting at the Elbe

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1955

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Ten Turbulent Years Since Meeting at the Elbe" which appeared in the April 24, 1955, issue of the Messenger and Inquirer, of Owensboro, Ky. The editorial is as follows:

TEN TURBULENT YEARS SINCE MEETING AT THE ELBE

Ten years ago tomorrow United States and Soviet troops met on a partly demolished bridge over the Elbe River at Torgau. At this time Russian troops had already entered the outskirts of Berlin and victory for the United States and allies in Europe—a victory that has brought no peace—was almost complete.

In those days the United States, Great Britain and Russia were closely allied fighting nazism, as if they were scientists joined to fight a plague against mankind. A drastic switch since the opening of World War II had brought Russia into the allied fold, and a common effort had wiped the slate clean. Russia, which had decided with Germany on the partitioning of Poland, found it to her interest to change sides.

As the soldiers of the United States and Russia met on that bridge in Germany, marking the cutting in two of the Reich, there was a common bond which enabled them to greet each other with open arms. Despite a language barrier dividing them, it was an occasion which will probably never be forgotten by the parties who met on that day.

Approximately 40 of the 91 Americans in the patrol, which met the Russians on the Elbe, are planning to meet in Washington tomorrow to celebrate the 10th anniversary of the event. And, in a rare postwar gesture of amity, the newspaper Pravda announced on April 16 that nine Soviet soldiers, who were in the Russian patrol, have accepted invitations to attend the Washington celebration. It will be interesting to follow this meeting. It is difficult to believe that those who were actually fighting for a common goal could now be so far apart. The Russians fought to drive the Germans from their land and to seek revenge for Nazi ruthlessness. We fought to keep our freedom and the pre-

vention of what happened to Russia from happening to others, including ourselves.

On the April date Allied troops in the field were heady with the wine of victory—as well as with assorted spirits "liberated" from the Germans. The German surrender in Europe was only a few weeks away—May 7—with VE-day and the formal ratification of the surrender following in Berlin on May 8.

Hindsight is always better than foresight. When the story of the linkup came out, a day of jubilation for the handful of soldiers who met at the Elbe and a significant day for the free world, an entirely different story was in the making. A dictator was busily at work preparing to consolidate the gains he had made, and one of the most important was his advantage in the taking of Berlin and the area around that once great center of Nazism. Stalin was determined that his will would reign over all that his troops conquered, and he apparently had ideas beyond that. His soldiers were of no concern to him, other than that they forwarded his aims. This was especially so of the troops who met with the United States patrol on the Elbe.

Churchill knew what Stalin was doing and what he had in the back of his mind. At least the plans he forwarded indicated he realized the situation. His country had been battered for 6 years. His people knew what they were fighting for as well as the Russian people. There was only one difference between the two, one was led by a democracy, the other by a dictator.

Churchill lost his fight when he tried to get the United States to move into the underbelly of Europe. He was going to play Stalin's own game. That which was taken by world forces could be negotiated much better than that which was taken and occupied by the Russians. He lost his second fight when he put a premium on the capture of Berlin.

But compromise had to come in. Eisenhower and the general staff knew that an attack in southeastern Europe would be costly in lives, and would mean a long, drawn out war. A beachhead on Normandy would be much more expeditious. Too it would better relieve the pressure on the Russian front, which was needed, and Russia was demanding that plan.

To complete the compromise, the British had taken a licking on the Continent and on their island. Britain's resources were limited and her best were at war. Churchill was determined to husband his forces, many of whom would have to accept future responsibilities of the Empire.

He lost his second battle of wits when he was turned down on his Berlin proposal—beat the Russians to the German capital. Even Eisenhower at one time saw the sense in this. By this time the Russian poker hand showed badly. It was a hand with very little secrecy of the hole card.

Undoubtedly the primary factor which ruled against this decision was the closeness to the conclusion of the war, and the great effort which would be needed to beat the Reds to the Nazi capital. It is doubtful if the attempt would have been accepted as necessary at home. Families wanted their husbands and children back home, and crumbled Berlin was no longer an important military objective.

What has happened since, we all know. How it happened we have a fairly clear idea. The question of the future depends upon the morale and faith of the free world.

The pity of it all is that the men who fought hard for sincere causes, such as those who met on the Elbe, could not have had the determining voices at the conclusion of the war. Had that been the case, we are sure that the world would be a quieter place today.

But, again, things have changed in 10 years. Whether the nine Russian infantrymen who are coming for the Monday anniversary celebration will be able to express themselves freely is doubtful, for the fear of influence of the few at the Kremlin reaches to the ends of the world. But certainly the meeting cannot hurt, and it may kindle a spark which will start a comforting warmth in the future. After 10 years of turmoil between the victors in World War II, there is ample reason to wish for an honorable settlement soon of their differences, in the hope that the next 10 years may bring the world into paths of peace and happiness.

What Makes Congressman Run

EXTENSION OF REMARKS
OF
HON. TORBERT H. MACDONALD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1955

Mr. MACDONALD. Mr. Speaker, I desire to include at this time a most interesting article describing how my distinguished colleague the Honorable CLYDE DOYLE, from the 23d District of California, decided to run for Congress. The article was written by Bernard Kahn, sports editor of the Daytona Beach Evening News, and published in the April 6, 1955, edition:

As "Admiral" Judge's *Seaborn* plowed through the river and passed Moore's siding near New Smyrna Beach, an elderly, small, white-haired lady stood on the dock with an old man standing beside her and his arm around her shoulder. She waved a miniature American flag, no bigger than 6 inches, at the passing Congressmen.

I noticed one Congressman wave back at the old woman and I took a chair next to him. The result was no great shakes of an interview or story, either. But this man struck me as a kind fellow with a warm face. At the time I knew nothing about him, whether he was a Democrat or a Republican; nothing whatever about his personal affairs or his political career.

It was something I felt about him as he answered the casual and unimportant questions that I asked him.

His name was CLYDE DOYLE, Democrat, United States Congressman from the 23d District in California, outside Los Angeles. He is a member of the House Armed Forces Committee and the House Un-American Activities Committee.

DOYLE practiced on the baseball diamond Monday, "and my feet are still sore," he said sadly. "Guess I'm not as young as I used to be. The ball looked funny when I tried to bat. Must be these bifocals," he added, carefully cleaning his specs.

He's 65, and looks 55. He was a pitcher for the University of Southern California 47 years ago.

"Not a very good one," DOYLE apologized.

Mrs. Doyle accompanied the Congressman here. She's been at his side ever since 1908, when he run for the student body presidency of Long Beach Poly High School and she managed his campaign.

"We won, too, DOYLE declared. "We're a team, Mrs. Doyle and I."

The insignificant incident of the little old lady waving her little flag was significant to DOYLE.

"You get away from it all here, yet you really can't get away from the people," DOYLE explained. "I thought that elderly lady was very inspiring."

I asked DOYLE how he came to run for Congress.

"I had a successful law practice," replied the Irishman. "We were thrifty and sober. And we saved a little money.

"My boy was going to USC and he was a good athlete. Then my boy and 11 other fraternity brothers volunteered for the Air Force in World War II. Nine never came back.

"My wife and I talked about these boys risking their lives to protect us folks at home. As a successful lawyer, I thought why shouldn't I do something, too. So I ran for the United States Congress and won in 1945.

"Just 2 months after I was elected my boy was killed in action. He was our only son."

DOYLE reminisced. He told me what his son, Clyde Doyle, Jr., had told him; that he could never hate the enemy, but that he learned to shoot to kill to protect the people at home who were too old to fight.

"He was a fine young man and a fine athlete," the Congressman continued. "He was doing well at USC. I wanted him to enjoy life and the things that I didn't have. I remember when I went to USC I didn't have enough money to join a fraternity and I was too proud to allow others to pay it for me. There's a very reputable judge in Los Angeles, Walter Gates, who was at USC when I was there. Judge Gates and I were the only students who wore celluloid collars. We couldn't afford linen ones."

DOYLE recalled his first meeting with General Eisenhower before he was President, when he was our war leader.

"When I was introduced to Eisenhower, the general put a hand on my shoulder and said, 'Congressman, I'd give my right arm not to ever send men into battle again.' Now Eisenhower is our President."

He dug into his wallet and extracted a picture of a handsome, tall young man.

"That's my son," said CLYDE DOYLE.

He hauled a handkerchief out of his pocket and dabbed at his moist eyes.

"Sea spray is clouding my glasses," said the United States Congressman, as he wiped away the tears.

Oppose Hoover Commission Recommendations on REA Program

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. JOHNSON of Wisconsin. Mr. Speaker, under leave to extend and revise my remarks, I wish to insert in the RECORD a resolution adopted by the Pepin County Farmers Union in opposition to proposed recommendations of the Hoover Commission with respect to the REA.

Following is the resolution explaning this organization's views on the subject:

Whereas the Hoover Commission is attempting to do away with our present REA setup by opposing Government lending; and

Whereas it would be necessary in the future to rely on private capital at higher rate of interest, thereby forcing service rates to go higher and also curtailing much needed future expansion: Be it therefore

Resolved, That the delegates attending the Pepin County Farmers Union quarterly convention, held on April 18, 1955, go on record this day as opposing such action; and be it further

Resolved, That a copy of this resolution be sent to our United States Senators and Congressmen, urging them to oppose any reduc-

tion in Federal lending for REA, in the event such a bill should come before Congress in this or any future session.

This resolution was voted upon at the county convention and passed with a unanimous vote.

PEPIN COUNTY FARMERS UNION,
HERMAN ORNE, *President.*

A St. Patrick's Day Message

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following message from the Prime Minister of Ireland, Mr. John A. Costello, addressed to the people of the United States and Canada for St. Patrick's Day 1955. It seems to me that the warmth and sincerity of this message brings home to us very well the close and intimate ties of affection and friendship between this country and Ireland. It illustrates too the community of interest existing between the two countries and, for my part, I think that it should lead all right-thinking and freedom-loving Americans to look with favor and sympathy upon the aspirations of the Irish people:

Once again I am happy to be able, through the medium of the International News Service, to send a message of greeting and good wishes, on behalf of the Irish Government and on my own behalf, to our kith and kin and our numerous friends in the United States and in Canada.

To us in Ireland the feast of St. Patrick is our great national festival, but our pride in our faith and in our race is enhanced by the fact that this great festival is so significantly and distinctively honored and observed in so many countries throughout the world.

The United States has always had a special place in the hearts of Irishmen. There is no country with which we have stronger ties or more friendly relations.

BARRY STATUE

The erection of the statue to Comdr. John Barry, the Wexfordman founder of the American Navy, which we hope will take place during the coming year and the gift of the statue from the American Government to the Irish nation will emphasize and bring home to both our peoples the close association which still and must forever exist between them.

Frequently, but hardly adequately, I have endeavored to express gratitude for the assistance given over the years by the United States to our people toward the realization of their national aspirations and appreciation of the material help given in recent times by the generous people of the United States to the economic development of our country.

We watch with pride and thankfulness that great nation assuming tremendous and ever-increasing responsibilities in world affairs and using its wealth and power in the cause of that worldwide peace which small nations such as ours particularly and passionately desire.

That pride and thankfulness are all the greater because of our realization that citizens of the United States who are of Irish origin, while abundantly discharging their duties as citizens of the great nation to which they are proud to owe allegiance, never forget their Irish mother country.

It is not merely gratifying to our national pride to recall that so many men and women of our Irish race have contributed toward the building of the Nation which has become the greatest in the community of free nations, but it is satisfying to realize that thereby we have in some small measure helped to discharge our debts of gratitude.

Irishmen, too, played a part in Canada's march to nationhood, and to the Canadian nation and people we are also indebted for unfailing sympathy and support which we received at all times in our need.

And therefore to Canada, a young nation which has achieved greatness and which is directing its growing influence and prestige in world affairs to the cause of peace in our time, we send our greeting, our gratitude, and our desire for even closer association and friendship.

As a small nation and one that has fought so tenaciously and for so long to achieve its freedom, Ireland desires peace and liberty for all nations to live their lives in peace. This desire for peace is all the more intense because of the horrors that must follow the use in war of modern instruments of destruction.

Peace-loving peoples, and more particularly small nations, appalled at the frightful possibilities of such instruments of destruction, can only clutch at the hope of the deterrent effect of mutual frightfulness and look to the great nations faithfully to discharge their duties as trustees for humanity and civilization.

UNIFICATION

A united Ireland might give a significant contribution to the cause of world peace. A partitioned people can only feel frustrated at being deprived of the opportunity of giving such a contribution.

If the forces which are inexorably, if slowly, at work to break the unnatural barrier which spreads across the face of our motherland could be accelerated, Irishmen of all creeds and classes at home and abroad could unite in a common effort to aid and save our civilization.

Resolution of Spokane Public Forum

EXTENSION OF REMARKS
OF
HON. EUGENE SILER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. SILER. Mr. Speaker, with permission to extend my remarks in the RECORD, I wish to copy below a resolution of the Spokane Public Forum, Spokane, Wash., dated April 23, 1955, as follows:

RESOLUTION

Whereas the Honorable EUGENE SILER, of of Kentucky, has introduced H. R. 4627, a bill to prohibit the transportation in interstate commerce of advertisements of alcoholic beverages; and

Whereas the Spokane Public Forum previously went on record for the Bryson bill to take the nauseating beer and cigarette commercial off the TV and radio, reaching into the home for youthful converts to the deadly poison they misrepresent;

Resolved, That the Spokane Public Forum go on record highly commending the Honorable EUGENE SILER for his courageous stand to protect the public, especially the younger generation, from said vicious and false advertisements about the light temperance beverage beer.

JOSEPH E. NESBITT, *President.*
MARY J. WELSH, *Secretary.*

Questionnaire

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. MILLER of Nebraska. Mr. Speaker, for the fifth time since I have been a Member of Congress, I recently mailed questionnaires to the 86,000 boxholders in Nebraska's Fourth Congressional District. The following tabulation shows the results of this poll in (a) the rural areas and (b) the cities:

1. What type farm program do you favor?

	Flexible	*90% parity*	*100% parity*
(a)	50.7%	26.9%	13.4%
(b)	73.0%	19.0%	8.0%

2. Would you favor a bushel quota on wheat?

	Yes	*No*
(a)	66.7%	33.3%
(b)	57.7%	42.3%

3. Would you favor a two-price system on marketing wheat?

	Yes	*No*
(a)	48.4%	51.6%
(b)	45.3%	54.7%

4. Should 18-year-olds vote?

	Yes	*No*
(a)	38.4%	61.6%
(b)	40.9%	59.1%

5. Do you favor present Social Security for farmers?

	Yes	*No*
(a)	58.7%	41.3%
(b)	63.1%	36.9%

6. Your choice for President in the next election—

	Eisenhower	*Stevenson*	*Others*
(a)	73.1%	7.2%	19.7%
(b)	76.3%	7.6%	16.1%

7. Should tariffs be—

	Lowered?	*Raised?*	*Kept as they are?*
(a)	24.8%	20.8%	54.4%
(b)	28.7%	18.3%	53.0%

8. Do you favor the present foreign policy?

	Yes	*No*
(a)	43.5%	56.5%
(b)	48.0%	52.0%

9. Should we grant more or less foreign aid?

	More	*Less*
(a)	9.0%	91.0%
(b)	8.0%	92.0%

10. Should there be Federal aid to education?

	Yes	*No*
(a)	41.8%	58.2%
(b)	44.6%	55.4%

11. Should there be Federal aid for school construction?

	Yes	*No*
(a)	50.2%	49.8%
(b)	55.5%	44.5%

12. Do you favor universal military training?

	Yes	*No*
(a)	49.3%	50.7%
(b)	58.2%	41.8%

13. Do you prefer the present Selective Service System?

	Yes	*No*
(a)	64.6%	35.4%
(b)	67.3%	32.7%

14. Do you favor raising postal rates to meet the cost of service?

	Yes	*No*
(a)	59.1%	40.9%
(b)	65.6%	34.4%

15. Should Communist China be admitted to the United Nations?

	Yes	*No*
(a)	6.5%	93.5%
(b)	7.3%	92.7%

16. Should Alaska be made a new State?

	Yes	*No*
(a)	77.1%	22.9%
(b)	79.2%	20.8%

17. Should Hawaii be made a new State?

	Yes	*No*
(a)	74.4%	25.6%
(b)	79.9%	20.1%

18. Do you favor a State sales tax?

	Yes	*No*
(a)	43.4%	56.6%
(b)	46.9%	53.1%

Free Enterprise

EXTENSION OF REMARKS
OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 20, 1955

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an address which I had the privilege of delivering at the annual businessmen's day to the students of the school of business administration at Southern Methodist University in Dallas, Tex., on April 26, 1955, as follows:

FREE ENTERPRISE VERSUS THE SOMETHING-FOR-NOTHING PHILOSOPHY

Mr. Chairman, students of the SMU School of Business Administration, faculty, and alumni, it is a real pleasure to be present with you today. Since your kind invitation was extended me, I have realized how much I have in common with those who are going out into business on their own.

First, I think of my college days when, like yourselves, I was greatly concerned over my future and what career or business endeavor to embark upon. In my case the answer came one night at dinner in a friend's New York apartment, when for the first time I saw a picture show broadcast over the air—television. From the moment of this strange introduction, I knew this was to be my field of business. So it was that after graduation, I plunged into the merchandising and distribution end of this fascinating new industry which, in 1940, was in its marketing infancy.

Another comparison is my situation today when, as you know, I am in an entirely new field of endeavor. I have just plunged into this tremendous task much as will many of our young business people starting out on their own. In the case of a Congressman and the young businessman, both must shift for themselves. The Congressman learns on arriving in Washington and thereafter that while his colleagues are sympathetic, they would never volunteer help but only answer questions, because they know, as I even now know, that part of the job of being a Congressman is learning to make the adjustments and being left alone to make the adjustments, since each Congressman is an individual coming from a particular district and the strength of our system is built upon the differences which each Congressman represents. Through the adjustment and the struggle, there comes of course a corresponding satisfaction when challenging and new tasks are met and overcome. I appreciate the system in Washington as I have come to learn it.

In much the same way a newcomer to business enters his new endeavor, somewhat alone, where his character and ability are developed through the challenges which are presented. He is a free agent. This is possible because we have free enterprise. We believe in this country in this growth of human personality and character within the framework of a master plan which only the Almighty knows.

My own personal convictions have been tested, as have those of others here present, through those first business endeavors which I was privileged to participate in before the Great War. Then in the war these convictions were further tested, and others came to light that had been lying dormant and were what I now recognize as innate spiritual and religious beliefs. Now, in Congress, my convictions are still tested almost daily, as at this moment in speaking to you, because I am in a position, as a Congressman, where the fundamental ethical, moral and spiritual beliefs, as a yardstick, must continually be applied in making decisions concerning the big issues that face us today.

Through all of the trials and struggles, I have found no reason to change my basic belief in the principles which I was taught going through school. I believe in human freedom, and that means economic freedom. I have come to understand why our forefathers and my forebears believed as they did in free enterprise, competition, the open market place, to establish demand-supply and price, as contrasted with the foreign planned economies and isms they left behind when they left the old country.

So it was that when thinking of talking to you today, the titles that sprang to mind were: "Free Enterprise, the American Way," "Government and Free Enterprise," "Let's Put Business Principles Into Government, and Take Government Out of Business," "The Government in Your Business Future"—but no matter what the title they all started and ended with free enterprise, because within the framework of the definition of free enterprise, as we Americans have traditionally defined it, is found the individual worth and dignity of the man or woman, our spiritual beliefs, the best system for economic growth, the "merit system," individual incentive and intiative. In short, the sum total of American beliefs. To me free enterprise and Americanism are one.

My title finally became "Free Enterprise versus the Something-for-nothing Philosophy." The something-for-nothing philosophy is based on the erroneous belief that government can do for us what we cannot do for ourselves. Forgotten is the fact that ours is a Government of, by and for the people. Through the declared emergencies of a depression and two wars has arisen a Federal bureaucracy of such scope that few, if any, know all the present services offered by Government—many unnecessary to the people. This philosophy spawned on regulations and controls of our economy, through planned deficit financing which resulted in spiraling inflation and cost of living. States rights have been usurped by Federal domination, until the State-Federal proportion of operation and tax income has changed from 75–25 percent to 25–75 percent.

In this something-for-nothing philosophy is found the belief the Federal Government can manufacture, finance, merchandise, market, and compete in every way with private industry, that it can do so without paying tax on its operation which is passed on to private businessmen to pay, who must also pay their own taxes. Simultaneously, the Government often blames free enterprise business which staggers under the Government-imposed regulation and heavy tax, saying that free enterprise is faulty. It is of interest to note that at this moment the Government is still the Nation's biggest electric power producer, the biggest power consumer, the biggest banker, the biggest employer, the biggest insurance company, biggest landlord, biggest tenant, and biggest publisher. In fact, Uncle Sam owns more wheat than the wheat farmers, more grass land than the cattle men, and more trucks than General Motors. Our national debt is $278 billion and we have a hidden debt of $250 billion, an overall tax rate of 30 cents on the dollar.

In the something-for-nothing philosophy, there is the belief that wealth can be redistributed to the point of confiscation by a heavy progressive income tax. This money can be placed in the hands of the low-bracket purchaser who then can stimulate business by buying. This is called the percolate up theory by some. It overlooks the fact that production is necessary or there'll be no goods to buy—and production needs money for plant and equipment to produce, to expand, and to create more jobs.

The advocates of the something-for-nothing philosophy are intentionally or unintentionally disloyal Americans. Some are avowed socialists. These are the most dangerous because as Americans considering themselves patriotic devoted citizens they are undermining the country's economic strength as a friend—not an avowed enemy such as the Communist we have come to recognize as antithetical to all we believe—and who is dedicated to the overthrow of our country. We recognize communism as an enemy, yet communism is economically a socialistic form of government, and there is the great danger. Too many of our well-meaning socialistic friends of the last 2 decades are playing right into communistic hands. The godless materialism of this philosophy must not be for this great country of ours. As idealists we Americans acquiesce to the goals that social measures propose. It is easy to succumb to the belief first, that government can do it, and second, that we can pay the cost, not only for our own people, but the world. Too often lost in the shuffle is the free-enterprise system that must pay the cost of our grandiose schemes.

The present administration is struggling valiantly to satisfy the increased citizens' demands of its government and at the same time build our economic strength by freeing our business to operate with minimum government intervention or control—of this I approve—but I would counsel this or any administration to always remember an earlier American adage "that government is best that governs least." Our forefathers believed this and they built the free-enterprise system into the world's greatest productive system.

This system was based on freedom—to think, act, and do as an individual—in business as well as government. They recognized that our freedoms were so interrelated that the loss of one meant the loss of all. Therefore economic freedom was fostered in the free-enterprise system. Everyone had a stake in it. They knew and we should remember that "eternal vigilance is the price of liberty." Further, there was no caste system. Unlike many foreign countries, an American was not forced to stay in the same level that he was born into. A man was recognized for whatever he made of himself. The great accomplishments in the production of American industry is testimonial to the many free men and women who dedicated their efforts to business within the free-enterprise system. These are our traditions—our heritage. We must carry them on.

In the United States there is still no limit to your goal. Each of us can become what we are capable of achieving. Surely, we have proven too that what a mind is capable of thinking, a man can do; witness the new duct-fan helicopter, the modern flying carpet. Since 1900 the world has produced airplanes, radio, television, and countless other scientific discoveries. We all know we have just scratched the surface in new inventions and ideas, that untold worlds may open up ahead of us. New ideas and opportunities need only to be thought of and recognized.

The United States has a magnificent future. The Southwest area of the United States may very well have an even more brilliant future than the national average. Its population and industries are growing.

And you have freedom of choice. You can look around and decide—stay put or move along as new horizons open, and let me assure you from my personal experience that there will be countless vistas unrolling before you, challenging you to new effort—if you stay alert.

In your business ventures you are not likely to forget the part that government plays in our lives, and I hope you will not neglect your duties as a citizen. Using myself as an example in the establishment of my corporation and two small individually owned companies in real estate, I often worked 7 days and some nights. My par-

ticipation in government suffered. Actually, I deprived myself of the right of participating—a right and privilege all Americans should treasure and enjoy. One day I realized with a shock that many of the bureaucratic policies of our Federal Government and our loss of many States rights were contrary to my beliefs. So here I am.

Many other business people are guilty of leaving the charting of their country's course to others. They are so enmeshed in their personal worries they will not take time to vote, much less in political work. Because of this the very men who could inform our people most of the value of our free-enterprise system do not speak out and the result has been the lack of emphasis on the greatness of traditional American enterprise. It is my hope, therefore, that you will always keep an active interest and participation in your government at the local level. Otherwise, you are leaving the decisions to others whose views may not embody your own.

The weakness of our system, as Plato pointed out centuries ago, is the lack of an informed electorate, or apathy on the part of the people. Businessmen in our country by their neglect of citizen participation in governmental affairs have failed to protect free enterprise by influencing legislation.

Businessmen realize through hard-earned experience that private enterprise and Government cannot compete in business. Businessmen operating on a profit system know that deficit financing is an impossibility, and any system based on it is unsound and should be corrected. Businessmen, having learned these lessons, permit their Government in many instances to make mistakes which their experience and judgment could have prevented if they had been taking a part in the direction of their Government.

My final thought then would be some conclusions I reach in forecasting the trend our Government would take if more business people participated in it. I believe the program would be accelerated in getting the Government out of business. I believe that businessmen in our Government would throw their weight behind balancing the budget, reducing the national debt, reducing taxes, thereby stimulating incentive, further investment, and creating more jobs. They would reduce the gigantic intended redistribution of wealth the Socialists and Communists are so pleased to see us engage in. There would be further incentive for those talented individuals whose property in the form of earnings is almost entirely confiscated in the upper bracket, and whose responsible positions create more jobs by this stimulated effort. The so-called little man who bears taxation's heaviest burden numerically would be given greater relief in his taxes, made possible by reducing the cost of Government. This reduction would be made possible through decentralization and return to the States of many of the Federal activities. The businessman might insist, I believe, that the Government operate within its income. In fact, the businessman might insist upon a constitutional amendment controlling the Government's ability to tax, borrow, and spend, thereby assuring a sound economy by whoever the elected officials were. Businessmen in Government would continue to remove the Federal Government from areas of operation which do not pertain to government.

It is my heartfelt belief that the future greateness of our country is interwoven with the perpetuation, strengthening, and success of our free-enterprise system. It must be kept free. I believe that people with business experience must join together to continue to remind the American people of the advantages that we enjoy, the high level of production and prosperity, the great economic, moral, and spiritual strength resulting from our beliefs. These are the things, I believe, which business people should remember and practice. I hope that all of you will take your part in the good faith to preserve the free-enterprise system.

I have enjoyed this opportunity of being with you and sharing a few thoughts. I wish you all the very best of everything in whatever you undertake. May you be successful and happy, and in return for the blessing of living and working in this great Nation take an active part in its guidance. Thank you.

Appeal by the American Bicycle Industry for Relief From Imports

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. PATTERSON. Mr. Speaker, under the "escape clause" provision of Tariff Act of 1930, as amended, the American bicycle industry appealed to the Tariff Commission on June 1954 for relief from "injury" caused by excessive importations. During September 1954, the Tariff Commission began hearings on the subject and interested parties were able to present their cases to the Commission. At that time I asked the Commission for relief from excessive imports, since the bicycle manufacturers in my district were notifying me that their businesses were suffering because imports were supplanting their products in local markets and that a rising unemployment rate was inevitable. From advices which I have received later from manufacturers and from labor unions, it seems as if the situation is getting progressively worse.

The Tariff Commission has now completed its findings on the case. In studying the facts the Commission had two avenues of action open to it; one, in the event that no injury to the industry was proved, the Commission could make those findings available to the general public immediately; on the other hand, if the possibility of injury is proved, the Commission could present its findings and recommendations concerning relief from excessive imports to the President for his own disposition of the matter.

Under the tariff law the President has 60 days in which to decide whether he would follow the recommendations or not. On this coming May 14 the waiting period of 60 days expires. At that time the President can notify the Senate Finance Committee and the House Ways and Means Committee that he does not intend to follow the recommendations of the Tariff Commission as regards action on the appeal or he may refer the case back to the Commission for further information. When this latter situation arises—as has occurred to many appeals in the past—the appeal generally dies on the vine, as it were.

On the other hand, the President may follow the recommendations tendered to him by the Tariff Commission and on May 14 he will announce his action and his reasons for such action. This may be either in the form of announcing that tariffs will be increased to a level that will tend to offset the competitive advantage enjoyed by foreign manufacturers or some type of quota may be worked out. The eventuality of a quota being instituted, either a flexible or a straight percentage quota, is unlikely, since up to the present that type of tariff procedure has been avoided in the case of manufacturers and also because it is a cumbersome procedure.

Should the Senate version of the Reciprocal Trade Agreements Act with its national security clause be passed, then the President will be able to set quotas on imports.

Mr. Speaker, since I am vitally concerned with the plight of the unemployed in my district as well as the plight of the small-business man who cannot meet the low prices of foreign bicycles, I wrote a personal letter to the President on Friday, April 29, asking that tariffs be raised on imported bicycles. I insert a copy of this letter as sent to the White House at this time.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., April 29, 1955.

The PRESIDENT,
The White House,
Washington, D. C.

MY DEAR MR. PRESIDENT: I have been advised by the United States Tariff Commission that they have submitted to you their findings and recommendations on an appeal for relief filed by the bicycle industry under the escape clause proceedings of the Tariff Act of 1930, as amended.

Since the employment situation in my district is vitally affected by the excessive importation of foreign bicycles, I wish to add my voice to those of others in the industry asking that you give action to positive relief proposals for this segment of our economy.

In 1930 imported bicycles averaged 1.3 percent of the American market. In the immediate postwar years the total gradually rose till by 1953 the percentage was 22.8; by 1954 it had risen to 37; and now during the first 3 months of 1955 the percentage has climbed to well above 50. In 1953 alone more bicycles were imported than the accumulated total of the 20-year period 1931–51.

Foreign bicycle manufacturers thrive because they have an unbeatable price advantage due to low cost of labor and materials, and subsidies, as well as protective legislation in their own countries. In addition our tariffs are so low that foreign exporters derive great benefits by shipping their bicycles to our shores.

Mr. President, I have always felt that the administration of the Trade Agreements Program could be accomplished without causing undue injury to the workers employed in American industry and agriculture. However, it is only a matter of time before the entire domestic bicycle market is lost to foreign imports. Affirmative action by you, Mr. President, is imperative if the bicycle industry is to survive.

In January 1955, in your state of the Union message, you said: "Nothing in our trade program will operate to injure or damage American industry."

Again, on February 17, in your special communication to us in Congress asking that the Trade Agreements Act be continued, you stated: "No American industry will be placed in jeopardy by the administration of this measure."

Mr. President, in 1930 the tariff rate was 30 percent ad valorem. The present rate is as

low as 7½ percent, and now the request is for even further cuts in this very low tariff.

The Tariff Commission has voluminous statistics to show that our freer trade policy does "injury or damage" to many small plants with thousands of workers. Certainly the American bicycle industry is suffering injury because of the substantial portion of the domestic market being taken over by bicycles imported under our low tariffs.

I am especially concerned because of the acute unemployment in my district caused by the influx of foreign-made bicycles. Because of this interest, I requested our Secretary of Labor, the Honorable James P. Mitchell, to conduct a special unemployment survey of the Torrington area, Connecticut. This survey was conducted and on April 4, 1955, Secretary Mitchell advised me: "The survey showed that a substantial labor surplus does exist in this area. Accordingly, we are officially classifying the Torrington area in Group IV–A—area of substantial labor surplus." From advices received from manufacturers and labor unions in my district it is evident that this labor surplus has been caused largely because so many workers in the bicycle industry were laid off.

I am vitally concerned because of the realistic approach we must exercise as regards unemployment. Our country is embarking on a freer trade policy and we seem to adopt a strictly doctrinaire position, namely: free trade is sound in theoretical economics, and therefore, free trade should be pursued. What freer traders fail to realize is the fact that if limitless imports produce unemployment in our country, the uneconomic effects would eventually result in restrictive tariff on the high side.

Mr. President, the very fact that the Tariff Commission has not made public its findings supports the assumption that positive "injury" to the American bicycle industry has been caused by excessive imports and that recommendations have been made for the alleviation of this "injury." What the Tariff Commission's recommendations are, I do not presume to know, but my personal recommendation would be that tariffs on bicycles should revert to the status of July 1, 1945. In the event that you feel this cannot be done, then I would recommend a flexible quota based on a certain percentage of domestic sales over a 5-year period.

I am submitting this request to you, Mr. President, having regard to your concern for the welfare of our economic structure as a whole and with due expectation that you will give relief to this hard-pressed sector of our economy.

Respectfully yours,

JAMES T. PATTERSON,
Member of Congress.

Mr. Speaker, I have received letters from bicycle and bicycle parts manufacturers from many sections of the United States. The problem of foreign bicycle imports is touching a $200 million industry to such an extent that in the first few months of 1955 fully 50 percent of our domestic market was being taken over by these importations.

It had been suggested in the Randall Commission report that many industries should retrain their workers for similar type of manufactures in cases where their domestic industries are being injured by excessive imports of the type of commodity which they produce.

Anyone knows how difficult that type of program will be. I well remember the case during the war of the gold-mining industry. The War Production Board had advised that no machinery or parts would be available to the gold-mining industry. Workers in that industry should be shifted to similar types of mining or retrained for similar types of employment. Some of you may not know this, but the relocation and the retraining program was an abysmal failure. The men refused to be relocated in other areas, and special efforts were made by the companies to keep the men at their current locations in case the mines opened at sometime in the future.

Mr. Speaker, I want to stress the fact that the American domestic bicycle industry is not of such minute proportion that its dislocation can be ignored. In our small factory towns the men have lived and brought up their families, bought their homes, and have grown roots, as it were. It is hard to remove men from these small towns. Yet, when their means of livelihood are being undercut they have to do something else to provide food for their families. This they will do, no matter what hardship they undergo. Yet, when the time comes for this type of mechanic to go back into the bicycle industry it will be hard for them to rechange their employment status. Once men leave an industry it is not easy to build up such an industry again.

Mr. Speaker, all this points up the reason to which I am coming now. I am in favor of a reorientation of our foreign-trade program. I believe in the interchange of goods between nations. But the whole trade-agreements program seems to be encumbered at present with such a vast amount of administrative procedures as to make it practically impossible for an industry to get amelioration of its difficulties should excessive imports hurt such an industry. There is the matter of appeals, the holding of hearings, the searching and investigating of reports of injury, the dislocation of labor; the research of possible retraining efforts, a recommendation to the President, a waiting period of 60 days, a possible denial of such appeal or a type of action which might not give relief to the affected domestic industry.

Mr. Speaker, it seems to me that although the Smoot-Hawley Tariff Act of 1930 has been stigmatized as the highest in United States history, that tariff has now been cut down to such an extent by successful percentage cuts under the renewal of every Trade Agreements Act extension as well as by concessions granted at Geneva, Torquay, Annecy, and now at Geneva again, that to find the exact rate in operation is a difficult matter indeed.

I think the time has come, and I would urgently stress the sooner the better, that we in this Congress initiate a new study for the revision of our basic tariff act. Not only is such a revision overdue but, it is of prime importance to us in Congress that we do not relinquish too much of our authority to any one executive agency. I mean by this that in Congress our ultimate responsibility is to our constituents and yet here, because of a multiplicity of procedures concerning tariff cuts or the reimposition of tariffs, we are unable to give relief to our constituents.

Mr. Speaker, quite a few of us in this Congress have been importuned time and again by our constituents for intervention on their behalf against excessive importations. My feeling is that we should revise our tariff law that our constituents may know that their interests are being protected. I wish to state that I think the time is ripe and a beginning should be made in the restudy and rewriting of our basic tariff law.

A Citation for Father Kelley

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to have printed an article which appeared in the Washington Post and Times Herald of Saturday, April 30, 1955. The article announced the award of the Eastern Labor Press Conference's annual citation for individual achievement in the field of labor relations. The award this year was appropriately presented to the Reverend William J. Kelley, of Catholic University, who has devoted 25 years to the important work of promoting stable labor-management relations. His Christian devotion to this field of human relations is a worthy exercise of his holy office.

The article follows:

LABOR PRESS HONORS FATHER KELLEY, OF C. U.

The Reverend William J. Kelley, of Catholic University, was honored by the Eastern Labor Press Conference yesterday for 25 years of "promoting rational cooperation between industry and labor rather than class conflict."

The citation was presented to Father Kelley by Frank B. Powers, president of the organization which is made up of editors of labor papers in the East which have a combined circulation of 5 million.

The citation read in part:

"Through the years, his able service and wise counsel have been available to all those in need without regard to religion or wealth. Father Kelley has provided an inspiring example of a man courageously dedicated to serving the brotherhood of all men."

A member of the Oblates of Mary Immaculate who celebrates the 25th anniversary of his ordination next month, Father Kelley served as head of the New York State Labor Relations Board before coming to Catholic University.

He has served as a mediator in scores of labor-management disputes, and recently engineered the historic agreement between the International Association of Machinists and the United Brotherhood of Carpenters which ended a 40-year jurisdictional feud between the two unions.

This year he took an active part in fighting a proposed right-to-work law which was considered and turned down by the Maryland Legislature.

During the Willard Hotel meeting yesterday the 50 labor editors took part in workshop sessions devoted to improving the readability and content of their papers.

The Democratic Party and the General Welfare

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, May 3, 1955

Mr. LEHMAN. Mr. President, on April 26, Gen. Telford Taylor, a leading citizen of my State, a distinguished author and political observer, and an able public servant, made a speech before the New York Young Democratic Club.

He said some things which are worthy of general note, and I ask unanimous consent that a press release summarizing General Taylor's remarks on that occasion be printed in the Appendix of the RECORD.

There being no objection, the press release was ordered to be printed in the RECORD, as follows:

"A general reshaping of national policies to meet the changing structure of domestic and international affairs" was called for tonight by Telford Taylor, New York attorney and former Federal Government official. Addressing the New York Young Democratic Club on the subject The Democratic Party and the General Welfare, Taylor ridiculed the contention that the Democratic Party has no major issues to advance in the current Congress and next year's elections:

"Issues are one thing we have plenty of," Taylor declared, "and what are most needed now are the initiative, eloquence and follow-through to burn these issue into the public consciousness. It is the opportunity and responsibility of the Democratic Party to manifest these qualities and to furnish the leadership in grappling with the issues."

"Among the major problems confronting the Nation which the administration and the Republican Party are abjectly failing to recognize and cope with," Taylor listed:

"1. The disastrous decline in America's capacity for leadership in the international community and in the development of a stable and peaceful world order under the rule of law—a leadership which is just as vital to our security and far more important to America's enduring glory than leadership in the evolution of nuclear weapons.

"2. The trend toward an inflexible military establishment designed only for the total world war which may and should never be fought, and inadequate for the localized wars that are almost certain to continue and recur for some years to come.

"3. The nationwide crisis in education, resulting from the rapid growth of population without comparable expansion of educational facilities, which, unless resolved, will soon present a far more dangerous threat to the national well-being than the Red Air Force.

"4. The progressive paralysis of the executive branch and deterioration of the civil and military services of the Federal Government, as a result of benighted personnel policies and security hysteria.

"5. The new wave of banking and industrial mergers, resulting in a dangerous trend toward economic concentration which must be checked by an antitrust policy designed not to penalize bigness, but to enable the big and the little to coexist."

Taylor contrasted these issues with those that had faced the Nation in the early years of the Roosevelt administration:

"The very phrase 'New Deal'—implying that a few people held all the high cards—indicated that the main purpose then was to iron out the worst inequities in the distribution of wealth and power between labor and capital, farm and market, investor and financier. Of course, many flagrant injustices of distribution persist today, and we will never strike a perfect or permanent balance. So, too, the present administration has revived old abuses of governmental favoritism toward special interest groups, and the administration's squalid surrender of national resources, which can fitly be described only as public corruption on a vast scale, is a glaring reminder that constant vigilance is the price of administrative integrity.

"Nevertheless, the most serious problems of the present day do not lie in the conflicting interests of classes or regions. Rather, they are matters of common concern to the national community as a whole. A poorly educated generation, or an inefficent Federal service, is as bad for the farmer or workman as for the corporation executive.

"The Democratic Party must remain the party of the common man, but the time is past when the common man means only the underprivileged. As David Riesman has pointed out, the very success of the New Deal has brought about its own demise. It is a proud tradition, but no longer a living political slogan. The common American man is not longer an underpriviliged man in the New Deal sense.

"Today the common man is every man. The Constitution was adopted to promote the general welfare, and the general welfare of the national community must now be the core of the Democratic Party program and of national policy."

Not the Right Occasion for a Veto

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks I include an editorial from the Providence Journal, Providence, R. I., of April 23, 1955. The editorial entitled "Not the Right Occasion for a Veto" argues that a Presidential veto of the postal pay bill would be politically unwise and economically unsound. I heartily concur in the sentiment expressed and I urge all my colleagues to read the article at the earliest opportunity.

The editorial follows:

NOT THE RIGHT OCCASION FOR A VETO

Mr. Eisenhower will have to dig very deep if he is to come up with a convincing reason for vetoing a postal pay increase bill because the House voted six-tenths of 1 percent more than he has indicated he would approve.

A year ago he denied the postal workers a raise for the legitimate reason that Congress provided no funds to pay it. But this year the responsibility rests with him to make sure that these faithful public servants get their proper share of the pay boosts that economic circumstances have persuaded him to recommend for other civilian employees. These circumstances have already compelled the Government to provide increases for its military personnel and, more conspicuously, for the Members of Congress themselves.

Where the conference committee will finally fix the percentage point remains to be revealed. It must stand somewhere between the House's 8.2 percent pay increase and the Senate's 10 percent. But obviously there is no reason to expect that either branch will drop back to Mr. Eisenhower's 7.6 maximum.

And considering that the administration in the next fiscal year plans to spend upward of $60 billion, with at least 3.5 percent of total expenditures allotted to alien peoples, it can hardly afford to haggle over perhaps a dozen million extra dollars that Congress may decide to give the postal workers beyond the amount the President prefers to ratify.

In the circumstances, if the conference committee sticks to the House's 8.2 percent, Mr. Eisenhower should not compel the legislators to attempt to override a veto. Such Presidential action would be politically unwise and economically dubious.

National Reserve Program

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I wish to have reprinted in the CONGRESSIONAL RECORD an editorial from the Shreveport Times of Shreveport, La., of April 29, 1955. The editorial is on a subject of vital importance which will be before the House within the near future and I commend it to all Members for reading. The editorial, entitled "Keep It Voluntary," is as follows:

KEEP IT VOLUNTARY

Defense Secretary Wilson said, after testifying before the House Armed Services Committee, that he had given up hope of having a provision in the new military reserve bill for drafting 17- and 18-year-olds for 6 months of training.

Secretary Wilson pointed out that Chairman VINSON, Georgia Democrat, was opposed to such a draft and probably a majority of the Committee feels the same way. VINSON later confirmed this.

Wilson should not feel too bad about not getting the draft proposal which was included in the original version of the Eisenhower administration Reserve bill, as drawn in the Pentagon. The provision for training of youngsters for 6 months at the ages of 17 and 18 remains in the bill, but this program will be on a volunteer basis instead of a draft basis. It was worked out that way in the Armed Forces Subcommittee which handled the bill and which was under chairmanship of Representative OVERTON BROOKS, of Shreveport.

In all probability this change, and other changes which may be made in the original version of the bill, will meet with full approval of President Eisenhower himself and of his administration. The sentiment against setting up a new draft of 17- and 18-year-olds is not partisan in any way. In fact, opposition to such a program is somewhat inherent in the American character, which always has wanted to avoid military draft at any age in peacetime but has recognized in recent years that there is no such thing as real peacetime.

But the age of 17 simply is too low for military draft—as a matter of fact, the Times always has held that 18 was too low, even in wartime unless there was absolutely no other way to get the manpower needed.

This new program of 6 months' training for teenagers should go over without difficulty under a voluntary basis. It is being

made especially attractive to the 17- and 18-year-olds because it keeps them out of the present regular military draft so long as they carry out the provisions of reserve service which include a certain number of drills each year and a certain period in summer camp training.

The greatest advantage in it is that the boy getting out of high school and not going to college can settle down pretty quickly into whatever he has chosen for his life's work without having to give up 2 or 3 years to military training. If the volunteer system does not work, then it may be necessary to work out some form of compulsion if the training of youngsters at the ages of 17 and 18 still is considered essential to national security.

American Legion Essay Contest

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1955

Mr. JENKINS. Mr. Speaker, the American Legion of Ohio has, for a number of years been putting on an annual essay contest among the young boys and girls of each of the congressional districts of Ohio. The prize offered has been a free trip to Washington and other eastern points with all expenses paid, and under the guidance of high American Legion State officials and high officials of the ladies auxiliary of the American Legion of Ohio.

One of the leaders of the American Legion who has been prominent in putting on these contests has been Mr. Peter DeWeese. His success has been so consistent that he is assigned this task annually.

The Members of the House of Representatives and the Senators from Ohio have, from the beginning of these contests, been giving a luncheon in honor of the essay winners here in Washington in the Capitol Building, and this luncheon for 1955 was given today. The State commander of the American Legion and the State legion auxiliary representatives were present, and most of the Members of Congress and Senators from Ohio were present. Each of the winners was introduced and given a chance to speak. Each of them in his or her speech showed his or her appreciation of what the Legion and the Members of Congress have done for them. And every Senator and Congressman spoke feelingly about the program of the American Legion, and of the ability and fine purpose shown by the winners, all of whom were present.

One of the prize winners was Miss Anna Belle Lanning, of Murray City, Ohio, which is a fine historical town located in the 10th Congressional District of Ohio, which is one of the finest congressional districts in the country, and which is the congressional district which I have had the honor to represent for 30 years.

The American Legion is to be congratulated upon the fine subject which was selected to be the subject about which the essays should be written. The subject was The Effect of Spiritual Guidance in the World Today. No more fitting subject could have been selected in these trying times. The young lady from my congressional district surely discussed this timely and important subject most effectively; her essay is logical and shows that she has a brilliant mind, and has a proper spirit. I am glad to have her fine essay printed in the CONGRESSIONAL RECORD, and I hope that it will be read by the many readers of the CONGRESSIONAL RECORD. I also hope that this brilliant young lady may be able to continue her education, and thereby be able to take her place in the world as a brilliant woman and as a woman of spiritual guidance and influence. Her prize-winning essay is as follows:

THE EFFECT OF SPIRITUAL GUIDANCE IN THE WORLD TODAY

Our free way of life was developed by men and women of deep religious faith. America has always been conscious of the need for religion. The founders of our Republic were sincere and profound men, men who looked to God for guidance. Today our religion and democracy are so strong that they can never be conquered by direct and open attack. They can succumb only to indifference and neglect.

Fortunately for America and for the world, there seems to be developing a spiritual awakening that has been growing in the hearts of men.

Every citizen of every political and religious faith must feel a sense of security in realizing that our distinguished President understands the importance of prayer and faith in God. Mr. Eisenhower recently made the statement, "Only a people strong in Godliness is a people strong enough to overcome tyranny and make themselves free and others free."

There is nothing strange about the word "spiritual" today. It's on every tongue, in every newspaper column, and in the title contents of some book on almost every bookshelf. There isn't a phase of life where it doesn't apply.

Effectualness is a noun too little used. What evidence we have so far of the effectualness of spiritual guidance in the world today are sufficient to make the free people of the world very thankful for the spiritual guidance they have received down through the years from men and women who were devout Christians.

Increasing interest in religion becomes more evident as time goes by. For example, at the top of the nonfiction best seller list for most of the year of 1953 was a religious book, Dr. Norman Vincent Peale's the Power of Positive Thinking. The revised standard version Bible, published in 1952, had sold more than 2,500,000 copies by the end of its second year. Even the old half-forgotten custom of grace before meals was undergoing a revival. The American Legion and the undenominational Laymen's National Committee conducted campaigns to get Americans to say grace. They sent prayer cards with three graces—Protestant, Catholic, and Jewish—to thousands of restaurants and eating places where they were displayed on menus or tables. In Los Angeles paper napkins were printed on which were written some old-fashioned prayers for parents to give their children to learn.

While commenting on the progress of religion and spiritual guidance in the world today, we must always be alert to the one most dangerous threat to our spiritual freedom—communism. The best way to keep godless communism out of the world is to have a strong, active Christianity everywhere. Christian citizenship is a rock of Gibraltar that will withstand all outside and inside attacks by communism.

The first and the best place for spiritual guidance to begin is in the home. The Scriptures tell us, and I quote, "Bring up a child in the way it should go, and when it is old it shall not depart from this way." It is the duty of every parent to give their children spiritual guidance from the time they are able to understand the meaning of Christianity in order to protect them from the ungodliness in the world today.

Award for Distinguished Leadership

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1955

Mr. MULTER. Mr. Speaker, I am pleased to direct the attention of our colleagues to the following remarks of Mr. Harry Seeve, director of the Greater New York Committee for State of Israel Bonds, at the Israel bond organization dinner honoring the Honorable Carmine G. De Sapio, which was held on April 25, 1955, at the Waldorf-Astoria.

Mr. De Sapio's response to these fine words has already been inserted in the CONGRESSIONAL RECORD of April 26, 1955, by Congressman ARTHUR G. KLEIN:

REMARKS BY HARRY SEEVE AT PRESENTATION OF AWARD FOR DISTINGUISHED LEADERSHIP TO HON. CARMINE G. DESAPIO, APRIL 25, 1955, WALDORF-ASTORIA HOTEL GRAND BALLROOM

Mr. Guest of Honor, Mrs. DeSapio, Your Honor the Mayor, Mr. Harman, honored guests, ladies and gentlemen: It is my honor and privilege, in behalf of the officers of the Greater New York Committee for State of Israel Bonds, to present the unique award for which our guest of honor, the Honorable Carmine DeSapio, has been selected.

As the director of the State of Israel bond organization in Greater New York for the past years, I am in a better position than anyone else to know the people who have really helped to make our campaign in these years successful. More than anyone else I can give the most telling evidence of the tremendous role which our guest of honor has played in the bond campaign and the warrant for his receiving the award tonight.

But perhaps even more significant than the choice itself is the name of the award, which is being made tonight for the first time—the award for distinguished leadership. That term carries with it the most important connotations of which I hope the committee will take note and will make an annual custom.

Leadership is a term that is much overused and greatly abused. It is often and loosely applied to many whose claims to it are not valid.

Our guest of honor has in the past year been the recipient of many and varied appellations—enigmatic, stoic, sphinx-like, mystery man. Words of adulation, honor, and respect have been heaped upon him. On the other hand, there are those who have applied names which we would not care to repeat this evening. But he is one of the few men I know to whom the term "leadership" is applied with unchallenged unanimity by friend and foe alike. It is an overriding quality for which his closest friends love him; others admire him; and for which his enemies respect him.

Leadership is the most difficult and heartbreaking career of all human endeavors. It imposes responsibility for the welfare of many; it requires a capacity to make farsighted decisions on a long term course of action. It demands determined and immutable adherence to that course, regardless of the constant difficulties which arise all the time; it requires an ability to maintain a self-confident persistence despite the defections and importunings of even the closest and dearest of friends. Many times it requires an imperturable facade and the strongest stomach to withstand obloquy, ridicule, scepticism, and the most vicious opposition.

And all the time, no one must know about the personal problems, the deep anxieties, the heartaches, the questions, the doubts. To friends and enemy alike, there must be presented a face of assurance and self-confidence.

Leadership is the most difficult role which life and human affairs have to offer to any man. And when a man appears who has the qualities of strength, wisdom, and tenacity to carry them off—the public, the people, the Nation, and the world is that much the richer for it.

That is why all of us, friend and foe alike—all Americans should welcome the emergence of this powerful, young leader upon the national scene of American political affairs.

We pray that he may be given the health and good fortune to continue his enormous contributions to the American society.

For Israel and for the bond organization, I want to say that we are humbly grateful that on top of all the rest of his problems and "tzores" he has been generous in lending the influence of his leadership to us. It has meant much—not only in the concrete results which have been achieved, but also in the encouragement and hope he has given to all of us. I hope he will not mind that I also add a personal word of thanks for myself and my entire staff for all that he has done, both in connection with this affair and the many times he has interested himself in our campaign in the past.

As a very slight token of gratitude and appreciation our committee has asked me to present this first award for distinguished leadership to him. With this award goes our profoundest gratitude and our sincerest good wishes for the future.

(Mr. Harry Seeve then presented the Honorable Carmine G. Desapio with the plaque of award for distinguished leadership.)

Department of Civil Defense

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. MULTER. Mr. Speaker, yesterday I introduced in the House a bill to abolish the present Federal Civil Defense Administration and to create within the Defense Department a Department of Civil Defense, under the direction of a Secretary appointed by the President.

With an initial allocation of $25 million the new Department would be authorized to prepare on a nationwide scale a comprehensive and effective program of civil defense, to make known to the public to the fullest possible extent, consistent with national security, the facts about the destructive power of the instruments of modern warfare, and to supply itself with an adequate number of personnel, either through the normal voluntary procedure, or, if necessary, by means of the Selective Service System. The bill also gives the President the power to transfer personnel into the Department of Civil Defense in case of a national emergency, as and when proclaimed by the President or the Congress.

There is an immediate, pressing need for such legislation. The civil defense program in the United States at present is utterly inadequate to cope with the danger of enemy attack. The problems of civil defense cannot be effectively separated from the problems of military defense.

The fiscal resources of the individual States and local communities are inadequate to guarantee equal minimum protection to all peoples in the United States, and although the patriotic efforts of part-time volunteer citizens is commendable, the complex requirements of an effective civil defense system call for full time, thoroughly trained personnel recruited on a national scale as in our present military departments.

Observations in Soviet Russia

EXTENSION OF REMARKS
OF
HON. FREDERICK G. PAYNE
OF MAINE
IN THE SENATE OF THE UNITED STATES
Tuesday, May 3, 1955

Mr. PAYNE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two articles entitled "Collective Farms Have Not Worked" and "A Look Around the Kremlin," written by May Craig, Washington columnist for the Guy Gannett newspapers in Maine, and published last week in the Portland Press Herald. The articles are based on observations during her recent trip to Russia.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Portland (Maine) Press Herald of April 29, 1955]

BEHIND THE IRON CURTAIN—COLLECTIVE FARMS HAVE NOT WORKED

(By May Craig)

Moscow.—Agriculture is the basis of life because it is the source of food. That makes it a fatal failure that communistic collective farming has not worked. It has not worked because it violated the fundamental human desire for reward for effort; because it means interminable rigid bureaucracy.

Russian communism has a monolithic principle, the state supreme, all for the state. It must control agriculture to succeed, as it must control labor and the basic production of all kinds. It is now trying variants of the original collective farm which has failed to produce food for people of Communist countries.

The collective farm is an entity, workers, acres, animals, poultry, professional men such as agronomist and veterinarian, technicians, and farm machinery and equipment. There are social services for the people. There is a complicated method of payment. Sop to human nature is the private garden allowed each family, with a few animals. Trouble is, they spend too much time on their private plots to the detriment of the collective. Krokodile, the Russian humorous magazine, is always making jokes about the collective farmers who are so busy shuffling papers they cannot dig potatoes.

Marketing is 3-way: compulsory deliveries to the government, additional voluntary sales to the government, and free sales in the open market. There have been many changes and adjustments in these methods of sale. There is complicated payment for work by a working day unit, which is measured by output, not by time. State farms are a little different in method of approach and are complicated too; they are generally engaged in one specialized type of production, maybe a special kind of milk cow. A state farm does not share its produce. It is more like an agricultural experiment station in the United States. Workers on state farms get cash wages. There are always goals and plans for these collectives, no matter what brand; always a plan that must be "fulfilled," with bonuses for overfulfillment.

The new regime here, of which N. S. Khrushchev seems to be the bossman, is turning to a different effort to meet agricultural production. This is to open up new land. He knows that agriculture is the Achilles heel of communism. One reason given for the demotion of Malenkov is that he was responsible for the poor agricultural showing.

The Soviet won't accept foreign capital with all that implies. It had none of its own. The only place to get it is from the peasant. That means so little return to the farmer, after the state share is taken for capital, that it requires force to make the farmer farm. Some little incentive has been given, such as the private plots. This has not produced the quantity needed, if Russia is to be industrialized and her millions of industrial workers fed from the farms. Agriculture is not keeping up with the increase in population, and that is bad omen for the future.

So, the plan is to open up the steppe areas of Kazakhastan, Siberia and in the Volga River area. This is thin crust of good earth, but it is flat, rain is scanty, and the winds are strong. Russia might take warning from what we did when we ripped the grass from our prairies. We got a dust bowl. It has happened in other countries, which eventually got deserts.

Khrushchev is said to want a "grain base economy" in the new lands and leave the old land to vegetables and other crops. Already some pioneers have been sent out to the new land and say they exceeded their goal of acres plowed and grain reaped. State farm system is being used. One advantage of the new land plan is that the settlers will be young people, veterans, many who have not farmed before. The land will be new to them, they will not have the passionate attachment to the bit of land that old people have to land they have held for years, perhaps their family for generations. The Communists have found the attachment of farmers to their land one of the most unmalleable traits of human beings. It is one of the factors in the failure of the original collective farm system—this clinging to the land.

The hope is to create an agricultural proletariat, like the industrial proletariat, controllable by the state more easily than the old-time peasant, clinging to every grain of his land obstinately, and wanting to keep what he wrings from the land.

It is estimated that 14 eastern regions of the Russian Federation and 8 regions of Kazakhastan, alone, have 100 million acres of virgin and long-fallow lands, with more beyond. Railway lines and roads are being constructed, machinery shipped out. Soviet youth is being called to come "because we are young and brave and love our country."

[From the Portland (Maine) Press Herald of April 30, 1955]

BEHIND THE IRON CURTAIN—A LOOK AROUND THE KREMLIN

(By Mae Craig)

Moscow.—Moscow is the heart of Russia and the Kremlin is the heart of Moscow. Behind its age-old brick wall, on an eminence, are the golden cupolas of the churches, the well-kept office buildings and palaces and museums dominate the city. Nobody but the rulers know what goes on inside, but it is there that the 220 million Russians are governed and the satellites and provinces that add up to six or seven hundred million more.

On a bright blue day, but sharply cold, we visited the Kremlin, with a guide and the several woman guides who had taken us around the city and Lennim, the pleasant, keen young man who had been with us constantly from our arrival.

He made a point of telling us that the restoration of the churches and cathedrals and the icons had been done by the Communists. The restoration of the icons—paintings of sacred persons, rather than statues—was an artistic triumph, because in some cases there had been 3 or 4 paintings superimposed. X-rays were used to discover how many layers there were, and in some cases they had exposed only a portion of each to show how many there were.

In the Annunciation Cathedral, floored with jasper, which was the chapel of Ivan I, grandfather of Ivan the Terrible, there were exquisite frescoes, one arched doorway of carved stone fine as lace, with the background of the raised carving painted blue. The icons and other objects go back to the 12th century. We saw the Archangel Cathedral, begun in the 16th century, where all the czars and princes are buried, up to Peter the Great, who is buried in Leningrad. There is the great belfry of enormous bells—and outside it the biggest bell ever cast, silver and copper, cast for Michael, the first Romanoff. And the biggest cannon ever cast—three balls piled in front, each weighing 2 tons; gun weighs 40 tons. Never fired—nor the bell ever rung.

In Assumption Cathedral, the oldest, all czars were crowned. Patriarchs were elected there, and buried there in tents of fine metal grill work. There is the throne of Ivan the Terrible. These buildings are warm and comfortable; not for the people, but for the paintings which must have right temperature and moisture content.

There is the great palace of the Tsars which is now used for meetings of the Presidium, the supreme government body; for congresses of the Communist Party; for the New Year children's parties, for all official occasions.

We saw the museum, the churches and the bell-towers—but we never saw the inside of any office building, nor did we come near the buildings where modern official work is carried on. We could take pictures of the Kremlin churches and museums, even inside some of them—but never did we come near anything that was not ancient. Our tour was strictly managed.

The museum, which was founded in 1720, is really excellent in arrangement and scope. The exhibit of ivory and gold and jeweled thrones is extensive and extremely valuable. There were glass cases of dresses, the silver wedding and coronation gowns of Catherine the Great. There were dresses of Elizabeth, daughter of Peter the Great, who left 15,000 dresses.

There were exhibits of armors and armor; of horses with jeweled harness, even gold horseshoes. Exhibits of the presents from foreign ambassadors to the Tsars and Tsarinas. There was the exhibit of crowns—including many old ones with fur around the bottom where they touched the head. There was the exhibit of carriages—sometimes several hundred horses were hitched to a royal carriage. There were gold carriages, carriages with cupids painted on the sides, gift of the French, heated by coal braziers, lined with satin.

The value of the jewels in this place must be colossal. There was one cape with 120,000 pearls. A church robe with two emeralds big as walnuts, weighing 100 carats each—so many that one stopped appreciating them. There were household utensils of all sorts, drinking cups, jeweled, round on the bottom, so you had to empty it, you could not set it down. Clocks, big and little, one decorated with eagles which dropped pearls every 3 seconds into mouths of hungry eaglets in the nest below. (It was not working.)

We asked where were presents from American Ambassadors and the guide said they stopped making presents before we became a Nation. Everything about the Kremlin is in perfect condition—except where in process of reconstruction. Must cost immense amount of money. Planting is well-planned, cannon polished, buildings heated. Communists preserve the past as evidence of culture—no church is in use as such in the Kremlin enclosure. No one gets in without permit. The enclosure works under orders and the rulers are never seen except when they want to be.

Polio Vaccine

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. MULTER. Mr. Speaker, I have today introduced in the House a bill to authorize the President to control, regulate, and allocate the use and distribution of medicinal substances used for the prevention or treatment of disease, if the prevalence and seriousness of the disease creates an emergent national-health problem.

The President would be authorized to issue a proclamation setting forth such finding and declaring that it is necessary to exercise the powers that would be granted to him, to allocate such medicinal substances, and regulate the use and distribution thereof, to such extent as he may deem necessary or appropriate for the protection and preservation of the health of the American people. The President would also have authority to fix price ceilings on such substances.

The President would be able to delegate any power or authority granted to him, to the head of any department or independent establishment in the executive branch of the Government.

The President or the Congress would have the power to declare the emergency at an end.

Representative MULTER's bill contains a penalty provision. Anyone who willfully does any act prohibited, or willfully fails to perform any act required, under any order or regulation issued by the President, or the head of the department or establishment to whom the power or authority is delegated by the President, would upon conviction be fined not more than $10,000, or imprisoned for not more than 1 year, or both. Representative MULTER's bill provides that the act would be effective immediately.

Introduction of the bill was prompted by the current situation involving the use of Dr. Salk's serum for the prevention of infantile paralysis.

Newspaper accounts and editorials, as well as telecasts and broadcasts by persons familiar with the matter, clearly demonstrate the need for the bill. It is not intended as a reflection on the medical profession or upon any health department.

In every walk of life there are persons, who will do what is required of them only under compulsion of law. It is because of those few and in order to guarantee equal and fair distribution to those who should be taken care of first that this legislation is required.

I hope the House Banking and Currency Committee will conduct hearings on this bill in the very near future and present it to the House for consideration.

The March of Bigotry in the United States

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, May 3, 1955

Mr. IVES. Mr. President, Mr. Jack Steele, of the Scripps-Howard newspapers, has written a series of six articles entitled "Hate, Inc." The articles deal with the march of bigotry in the United States, and are appearing daily in the Washington Daily News. The first article appeared yesterday.

Concerning them, there appeared in yesterday's issue of the Washington Daily News an editorial entitled "Hating for Pay." I ask unanimous consent that the editorial be printed in full at this point in my remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Daily News of May 2, 1955]

HATING FOR PAY

One of the most diligent reporters we know is our Jack Steele.

For more than 2 months, Mr. Steele searched official records, hunted down elusive facts, interviewed people and dug up background for a report on the professional peddlers of prejudice.

One of the least reported stories in the country today is the story of organized bigotry.

The results, carefully set down and documented, are reported in a distinctive series of articles titled, "Hate, Inc.," which begins today.

It is solid reading for all Americans. To many of our readers, we suspect, Mr. Steele's articles will come as a shock. In recent years, hatemongers have not been as noisy as they were. But there's a revival on.

To all readers we commend Mr. Steele's series. The articles will describe those who seek to foster hate, usually in the name of the finer citizen attributes—religious belief or patriotism.

Arrayed against these salesmen of bigotry are hundreds of church, civic, fraternal and

veterans' organizations, who make it their business to promote better understanding among all groups, and who quietly and persistently combat the insidious operations of these enemies of tolerance, reason and decency.

Yet the bigots rave on, preying on the gullible and the biased, exalting themselves, sometimes with considerable guilt—many of them for pay.

It is not a pretty report Mr. Steele has to make, but it is one we all ought to know about.

Mr. IVES. Mr. President, the articles are most interesting and illuminating, and deserve the consideration of every thoughtful American. In the course of their publication, I shall request that they be printed in the Appendix of the RECORD. At this time, I ask unanimous consent that the first two of the articles be printed.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Daily News of May 2, 1955]

HATE, INC.—BIGOTS ARE ON THE MARCH AGAIN IN UNITED STATES

(By Jack Steele)

Organized bigotry is on the upswing in the United States.

Professional hatemongers, ranging from cynical racketeers to hysterical zealots, again are doing a thriving business.

Scurrilous venom sheets and pamphlets are flooding the mails and turning up, often unsolicited, on breakfast tables and businessmen's desks throughout the country.

Hawkers of hate are capitalizing on cold-war tensions between communism and western democracy, just as their predecessors did on depression-born frustrations and war fears during the 1930's.

Bigotry had its heyday in the late thirties. It went into eclipse in the brief era of peace, prosperity, and good will following World War II. Some of its peddlers, on their uppers then, even had to hunt for jobs.

But now a revival is on. It's been coming up over the past year or two.

The House Un-American Activities Committee recently reported a resurgence of neo-Fascist and hate activities.

The Post Office Department has noted an increase in complaints about hate literature, some of them resulting from the discovery by bigots that they could use the now abandoned junk-mail service.

VITRIOL

A 2-month study of current vitriol sheets and their sponsors by this reporter has produced these major conclusions:

Hatemongering today is not as obvious or dangerous a menace as it was in the late thirties, when it fed on deep economic unrest and was supported by Nazi and Fascist funds. There are perhaps 100 groups active in the country today, compared to 400 to 500 then. None has an organized membership such as those of the defunct Christian Front or German-American Bund.

But today's bigots are growing bolder and are reaching an ever-expanding audience. Unless checked by exposure and education, they again may grow strong enough to subject the Nation to a bath of hate.

New leaders—armed with new techniques and gimmicks to trap the unwary—have emerged from the underground era.

Copying the fifth-column tactics of the Communists, hate specialists have had some success in infiltrating legitimate rightwing and anti-Communist groups.

The resurgence of venom spreading is largely an unwelcome dividend of the Nation's awakening to the greater menace of the Communist conspiracy.

Many of its current hucksters use anti-communism as the cloak for their bigotry. They have learned that anticommunism is an effective sugar coating to make the bitter pill of hate palatable to some Americans.

HATE FACTORY

Thus Conde McGinley's semimonthly Common Sense—denounced by the Un-American Activities Committee as a hate factory—masquerades under the title of "The Nation's Anti-Communist Newspaper."

It was in warning against such covers for bigotry that the committee said last year in its annual report: It is not sufficient to be simply anti-Communist if one is anti-American at the same time.

Haters also use anticommunism to screen themselves from attacks. Anyone who turns the spotlight on their practices can expect to be branded by them as a Red.

Hate sheets from coast to coast let loose furious tirades at the Un-American Activities Committee after its brief report on hate groups was issued in December.

A California zealot wrote that the committee had been infiltrated by Communists and become a tool of subversion.

A Vermont hate sheet called The Green Mountain Rifleman had this heading: VELDE Plays Swan Song on a Jew's Harp. Representative HAROLD VELDE, Republican, of Illinois, was committee chairman when the report was issued.

Chicago's Elizabeth Dilling called the report a plot to silence all honest Christian patriots.

Today's hate brochures have many targets—chiefly Negroes, Catholics, Jews, and members of other minority groups.

Some of their most vicious barbs are aimed at President Eisenhower to whom the more blatent sometimes refer at "Iky" or "Ike the Kike."

The ever-recurring theme in these attacks is that the President is a front for Bernard Baruch and that his administration is the captive of a Jewish invisible government.

Incredible as such attacks seem to most Americans, some hate crusades are even more fantastically ludicrous.

Some recently have exposed fluoridation of drinking water—to retard tooth decay—as a Red-inspired plot to poison all true patriots. And others see equally sinister motives in the labeling of kosher foods.

COURT CALLED SUBVERSIVE

The United Nations is depicted as the instrument of a "Jew-Communist" plot to rule the world. The Supreme Court is called subversive because of its antisegregation decision.

Most fanatic groups hitched free rides last year on Senator JOSEPH R. MCCARTHY's bandwagon, all without any apparent encouragement, or discouragement, from him.

But some embraced McCarthyism warily. They could not reconcile his Catholicism and his use of Jewish investigator Roy Cohn with their own bigotry.

NEW TACTICS

Rabble rousers have adopted some new tactics since the late thirties.

Then they blared out their admiration of Hitler and their hatred of minorities on street corners and in hired halls.

Then synthetic storm troopers patrolled bund meetings and native bigots tried to organize semimilitary forces such as the Silver Shirt Legion and the Knights of the White Camellia.

Today few of them try to stage public rallies in competition with TV. Vanished, too, are elite-guard forces copied after those of Hitler and Mussolini.

Largely ignored by the press and radio, many have turned to pamphleteering, copying the style of slick magazines and advertising brochures.

Some use newsletters and intelligence services to give their bigotry added appeal and an air of authenticity.

DIRECT MAIL

These haters have discovered the value of direct mailing lists to get their "literature" into the hands of people who would never subscribe to or pay for it. Funds are solicited from wealthy "angels" to pay for the mailings.

It is impossible to tell how much money some hatemongers are now raking in or how many people they reach with their messages of discord.

Gerald L. K. Smith is one of the few who makes a public financial report. Since his Christian Nationalist Crusade operates as a political party, he has to report to Congress on its finances.

His reported receipts for the last 3 years averaged over $185,000 a year. This compares with the $113,000 he reported in 1950.

Common Sense claims to have distributed nearly 500,000 copies of The Coming Red Dictatorship—an anti-Semitic broadside.

A west coast purveyor claims to have put out more than 2 million pieces of his "literature."

HOPE

Despite all this fanaticism, there are some hopeful signs:

The hatemongers—unlike the Communists—lack central direction and organization. They copy each other's ideas, plug and sell each other's publications, and sometimes even trade mailing lists. But whenever they try to get together they end up fighting like alley cats.

Outside of the Deep South, hate appears to be waning as a political force. Elsewhere, no politician dares openly to embrace bigotry today. And most recent excursions into politics by hatemongers themselves have been dismal flops.

Some disavow their bigotry. They issue vigorous denials of anti-Semitism, for instance, even though their publications openly attack Jews. Others resort to euphemisms (like Zionist for Jew) in hope of escaping the stigma most Americans place upon prejudice peddlers.

Some have even gone far afield for interest catchers to help sell their hate sheets. Their gimmicks include spiritualism, quack cures, and recently even flying saucers.

[From the Washington Daily News of May 3, 1955]

HATE, INC.—A GALLERY OF PROS IN THE HATE RACKET

(By Jack Steele)

Early in World War II the Federal Government indicted 29 assorted bigots and Bundists for conspiracy to commit sedition.

Their mass trial in Washington was an 8-months farce. The defendants used disruptive tactics which were copied by the Communists a decade later in the first Smith Act trial before Judge Harold Medina.

In the sedition case, the presiding judge died, a mistrial was declared and the indictments were eventually dismissed.

The trial demonstrated the difficulty of prosecuting hatemongers.

But it did turn the spotlight on the pre-war hate ring. It hampered—temporarily—the operations of its leaders, including some who were not named in the indictments.

Today, a surprising number—older, seedier but unreformed—are back spreading hate. Others have faded into oblivion.

Here is what has happened to some of the old-timers who were not indicted in the sedition mistrial:

GERALD L. K. SMITH

He's the No. 1 "Old Pro" of the haters. He has poked a finger into many efforts to stir up prejudice and disunity in the last 20 years. Some of his one-time lieutenants

run little hate shops of their own. He taught them not only how to hate, but how to make hate pay.

Although he was not indicted in the sedition case, Mr. Smith rushed to Washington to raise a "$1 million defense fund" for the trial.

He started out as a preacher. William Dudley Pelley claims to have initiated him into the bigotry business. A hot-shot rabble rouser, Mr. Smith's raucous voice graced many prewar rallies.

He helped push Huey Long's share-the-wealth plan. After Long's assassination, he preached the funeral oration. Later he moved to Detroit, where Father Coughlin's social-justice program was in full swing.

In 1947 Mr. Smith shifted again to St. Louis where he founded the Christian Nationalist Crusade as a vehicle for his own political ambitions. That, too, failed to catch on.

Now he operates from Los Angeles. He recently reported that 45 of 104 contributions of over $100 he received came from California.

Mr. Smith currently confines most of his rabble rousing to the west coast. But he also roams the country as a self-anointed go-between of the hate fraternity—living in the best hotels and sometimes traveling incognito.

Here are a few of his recent ventures:

He helped engineer the abortive plot to block confirmation of Mrs. Anna M. Rosenberg as Assistant Defense Secretary in 1950.

He led the hate attack on President Eisenhower in 1952 and, at the GOP convention, tried to stage a stampede for Gen. Douglas MacArthur. He ran General MacArthur as the Christian Nationalist candidate for President—without the general's permission—but got only about 15,000 votes for him.

In 1953 he organized a new San Francisco conference to abolish the United Nations. Last year he tried to muscle in on the McCarthy movement.

Smith tries to make his monthly magazine, The Cross and the Flag, a sort of bible of bigotry, doling out praise and criticism of his colleagues. But some refuse to accept him as the arbiter of the hate brigade.

FATHER CHARLES E. COUGHLIN

The so-called radio priest also was not a defendant in the sedition trial. He was silenced on political issues by the Catholic Church in 1939.

Since then, Father Coughlin has stuck to running the spiritual affairs of the Shrine of the Little Flower near Detroit. His magazine, Social Justice, is defunt. The Christian Front, which he inspired, is inactive.

He emerged briefly 2 years ago to make a public speech endorsing the guaranteed annual wage.

GEORGE VAN HORN MOSELEY

General Moseley, onetime Army Deputy Chief of Staff, likewise was not indicted in the sedition case, but he was a hero to many of the defendants.

Now living in semiretirement in Atlanta, Moseley was until recently chief adviser to Judge George W. Armstrong, oil millionaire of Fort Worth and Natchez, Miss., who devoted his wealth and declining years to fomenting anti-Semitism and white supremacy.

Judge Armstrong in 1950 offered oil lands worth $50 million to Jefferson Military College if it would teach white, Aryan supremacy. The little Mississippi college turned down the offer.

He died last fall, but willed the bulk of his estate to two fronts for his bigotry. They may continue to put out his scurrilous pamphlets, including one devoted to the Korean war entitled, "Third Zionist War."

LYEL VAN HYNING

Unlike her frequent collaborator, Elizabeth Dilling, Mrs. Van Hyning was not indicted in the sedition case. But these Chicago sirens of hate are equally strident.

Mrs. Van Hyning founded "We, the Mothers, Mobilize for America" and still issues her hate-sheet, "Women's Voice."

A recent issue carried an article headlined "Impeach Eisenhower." It attacked the President as the tool of Communists and Jews.

In a signed editorial in response to the Un-American Activities Committee's report on hate groups, she wrote: "I welcome any investigation which will expose the real enemies of my country, the Jews."

Viereck was a prewar paid Germany propagandist. Although not a sedition trial defendant, he served a jail term for violating the foreign agents' registration act.

He is now living quietly in a New York hotel and claims to have gone back to his first love—writing poetry.

Among his friends, however, are some of the ringleaders in the National Renaissance Party, branded as "neo-Fascist" by the Un-American Activities Committee.

Viereck celebrated his 70th birthday recently at a cocktail party arranged by H. Keith Thompson, a former registered agent for the neo-Nazi Socialist Reich Party. He was given a bound volume of "tributes" from such persons as Hjalmar Schacht, Franz Von Papen and the Rev. Gerald B. Winrod.

Here is what has happened to some of the sedition mistrial defendants:

WILLIAM DUDLEY PELLEY

Pelley has managed to blend hate and mysticism. An aristocratic mien and trim goatee have been his trademarks. In the 1920's he promoted California real estate and a book purporting to describe his personal voyage to heaven. It was a round trip.

An early admirer of Hitler, he organized the Silver Shirt Legion the day after the Fuehrer came to power. For years he flooded the mails with such anti-Jewish, anti-Negro hate sheets as Roll Call, Liberation, and The Galilean.

Pelley drew a 15-year jail sentence after a separate trial for sedition in 1942. He was paroled in 1950, but the Supreme Court recently refused to restore his civil rights.

Now he lives in California, but issues a curious publication called Valor from his old headquarters at Noblesville, Ind. Its subtitles are The Golden Times Weekly and A Journal of Applied Spirituality.

His big pitches are spiritualism and flying saucers. He has fathered a cult he calls Soulcraft—a name worthy of the advertising agencies where he might have flourished but for his obsession with bigotry.

Pelley has another new gimmick. Hour-long recordings of his mystical preachings and fund appeals are played at meetings of his followers.

GEORGE DEATHERAGE

Another dean of the venom dispensers, Mr. Deatherage is remembered for his Knights of the White Camelia. The Un-American Activities Committee accused him in a 1940 report of trying to create a united Fascist movement with his American Nationalist Confederation. Its emblem was a swastika.

After the sedition mistrial, Deatherage ran a contracting business in Baltimore. Last year he turned up in Florida as a research specialist for Upton Close and Don Bell, two former radio commentators who now put out nationalist newsletters.

ELIZABETH DILLING

She plunged into bigotry in the 1930's with a book entitled "The Red Network" and an organization she called the Patriotic Research Bureau. She was one of the noisiest of the sedition trial defendants.

Hysterically anti-Semitic, Mrs. Dilling still puts out irregular bulletins and writes for Common Sense and other tip sheets of prejudice. She recently sent a diatribe to the Un-American Activities Committee demanding that she be heard or indicted.

EDWARD JAMES SMYTHE

His chief claim to fame was an abortive attempt to unite the Ku Klux Klan and the German-American Bund. He also organized dozens of Protestant front groups as fund raising ventures.

Smythe still sends out hate literature from Washington under the imprint of his latest front—the Protestant Press Association. He recently moved out of an office here and claims he was dispossessed by Jews.

He pleaded no defense to a mail fraud indictment in Newark, N. J., in 1950 and was given a 3-year suspended sentence.

Smythe has been violently anti-Catholic and anti-Semitic. He wrote several years ago that, if forced to choose between catholicism and communism, "we would gladly accept communism as the lesser of two evils." He recently told this reporter: "We're not Fascists or Nazis, but we are anti-Jewish."

JOE M'WILLIAMS

In the late thirties he incited street-corner crowds in New York's Yorkville section with pro-Hitler, anti-Semitic tirades. After the sedition mistrial, he moved to Chicago and then to the Northwest. He has not been heard from for several years.

LAWRENCE DENNIS

Once called the brains of American fascism, he now puts out a newsletter entitled "Appeal to Reason" from Becket, Mass. A recent issue referred to World War II as the war against anti-Semitism.

OTHERS

Another aging sedition case defendant, Col. Eugene N. Sanctuary, still finds an outlet for his hate in the pages of Common Sense. Robert E. Edmondson in 1953 Published a book, I Testify, which was advertised as American invisible Government unmasked. James B. True, who once patented a club he called a "Kike Killer," died soon after the mistrial.

Natural Gas

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 20, 1955

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the statement which I had the privilege of making before the House Committee on Interstate and Foreign Commerce on H. R. 4560 and related bills to amend the Natural Gas Act which would remove Federal Power Commission jurisdiction over independent producers and gatherers of natural gas, as follows:

My name is BRUCE ALGER. I represent the Fifth Congressional District of Texas, Dallas County. I was elected last year, running on a platform advocating free competition in the marketplace and less Federal control of our economy—a platform quite similar to that of our great President, Dwight D. Eisenhower.

This action of the electorate made me the first Republican elected to Congress from Texas in a regular election in many years. It also indicated to me that the people of my district likewise realize the vital importance of a return to the free-enterprise principles that made our country great.

My interest in the legislative efforts to correct the Supreme Court's decision in the Phillips case is more than a desire to correct an injustice to one of the large industries of my State. It is a determination to overcome a new and dangerous philosophy announced in the Supreme Court's decision.

Why should natural gas, the product of an intensely competitive and high-risk industry, be singled out as the only commodity so produced to be brought under Federal price-fixing while in the hands of the producer?

If a bureau in Washington can fix the price of gas, can it not just as easily fix the price of other products?

If natural gas is singled out for Federal price-fixing today, might it not be oil or cattle or cotton or dairy products—or all of them—tomorrow?

If there is any doubt that natural gas is a commodity produced by a highly competitive industry—far removed from the utility status—let us take a look at some of the facts about the demand-supply-price picture. They will show not only that the industry is competitive, but also that the consumer of natural gas inevitably receives his greatest protection from competitive activity.

First, there is a great and growing demand. Natural-gas customers have tripled and natural gas delivered to residential consumers has quadrupled since 1938. Consumption of natural gas has just about tripled since World War II. Today almost 25 million gas customers are residential users. The American Gas Association estimates that an additional 1.2 million users will be added each year in 1955 and 1956 if supplies are available. Countless other potential customers are anxious to see their communities served by natural gas.

Obviously, the efficiency and cleanliness of this fuel contributed to its popularity. Obviously, also, its reasonable prices have been considered among its advantages to the constantly growing gas consuming public.

Competition between producers of gas—as well as between them and other fuels—has been evidenced by the refusal of prices of natural gas to react to inflationary conditions as sharply as have the prices of other fuels. Natural gas is one of the few items in the family budget for which price has remained comparatively stable.

Based on 1935–39 averages for 50 representative cities compiled by the Bureau of Labor Statistics, natural gas in 1953 had an index of 99.6, or just under average prices for the 1935–39 period. Contrast this with 233.4 for anthracite coal, 212.9 for bituminous coal, and 205.5 for No. 2 fuel oil. Contrast this also with the 191.3 overall cost-of-living index for 1953.

If the tremendous demand is not matched by a similar rise in supply, the price of natural gas naturally will tend to rise. But this increase will be even larger if the producers' prices are regulated. Supply is the great consideration, and price-fixing regulations will have a tendency to reduce, rather than increase, the search for new supplies. They also will tend to divert more of the supply from the interstate market into the intrastate, which even now represents half of the total marketed production. Intrastate sales were not made subject to Federal control by the Phillips decision.

With the tremendous expansion of the market made possible by the many large interstate lines built since World War II, the ratio of new supply to net production has diminished rapidly. In the first 5 years after the war new gas supply was proved up at an average of almost 3 trillion cubic feet for each trillion produced. Then the ratio dropped to 2 million for each trillion produced. During the past year, new supply barely exceeded actual production.

Which represents the greater need—to fix prices with a hope of keeping costs to consumers down, as long as the present supply lasts; or to rely on time-tested free competition to encourage wider search for greater reserves to supply the present consuming public and the millions who hope to join today's fortunate consumers?

Developments of recent years clearly show that all reserves possible are essential to meet future needs. Roughly speaking, we have 21 years of supply at the current rate of withdrawal, but that rate of withdrawal may continue to grow.

Certainly an adequate price is essential to prevent waste of casinghead gas, which is produced with oil. Prices for natural gas must be at least enough to pay for the expense of conservation measures. Adequate price also is essential to promote production from wells whose primary product is gas. Leading geologists are convinced that we have not reached the limit in our discoveries of oil and gas. However, the incentive provided will determine to what extent we are able to make additional discoveries.

Because of joint costs and the infinite number of variables, it is impossible to determine a regulated price based on a cost formula, such as would be necessary if gas producing is considered a utility. Gas must be allowed to seek its true price level through free competition with competitive fuels, or it will be found necessary to regulate the prices of these fuels, also, and thus establish a Federal bureau control over all of our energy resources.

If reserves are to keep pace with demand, every producer—not just a few big companies—must have price incentive to search for and produce more gas. The minor or independent producer is the typical wildcatter. He finds the big majority of new fields, and we cannot meet our needs without him. He needs incentive.

There are thousands of these independents in action today. All told, about 8,100 producers of natural gas operate in the country, counting only those who report to the various State agencies. The picture some would paint of a monopoly industry controlled by a few large companies is far from true. Of all the extractive industries, bituminous coal is the only one in which leading companies produce as small a portion of the total as in the natural gas industry. Compared with manufacturers of all kinds, natural gas is less concentrated in the hands of a few companies than 382 out of the total of 452 studied.

The picture of gas production is: First 4 companies, 17 percent; first 8, 28; first 20, 46; first 50, 66; and first 100, 78. There also is a gradual gradation from one size to the next in order, a condition ideal for competitive behavior. Seekers of monopoly can look elsewhere.

The ease of entry into production of natural gas is a sure sign of the absence of monopoly. Natural gas companies even seek additional competitors, frequently looking for partners because of limitation of funds when they spend so much on exploration, title clearance, and leasing.

Competition definitely is present when the producer or gatherer meets the interstate pipeline or transmission company at the bargaining table. The pipeline companies are not so numerous as the producers, but between them they have an interconnecting network of lines covering the large producing areas of the Southwest. With one exception, the various large lines all are connected either directly or indirectly with most of the producing areas of the Southwest. Thus they have widely scattered supply sources to which they can turn if one source prices itself out of the market. Neither the seller nor the buyer has the other "over the barrel."

These active competitive conditions which prevail are pointed up by the price behavior of natural gas. Prices have shown great flexibility and continually have lagged behind the rising cost of living.

Indicating their responsiveness to competitive conditions, prices paid under contracts executed in 1952–53 ranged from 21 to 29 cents per thousand cubic feet in the Appalachian region; from 7 to 18 cents in Panhandle-Hugoton; from 4 to 13 cents in East Texas-North Louisiana; and from 3 to 16 cents in Louisiana-Texas Gulf Coast.

The increased rates paid by consumers today are not due primarily to higher field prices, but to generally higher prices of everything that enters into the distribution, transmission, and production of gas. These include sharp rises in the cost of steel, labor, taxes and many other expenses. Only about a tenth of the total cost to the residential consumer is represented by the price received by the producer for natural gas at the wellhead.

Under free competition, the natural gas producing industry has met every test of service to the consumer. What sound reason is there for fixing the wellhead price that a producer may get for his gas?

Regulating only the "larger producers" is no answer to the problem. Who is the "larger producer"? What if royalty owners, owners of divided interests, small producers feeding into a single gatherer or natural gasoline plant, and others demand payment in kind and insist on separate sales?

Price-fixing is not in the long range interest of the consumer. Putting gas production on a utility status would bring staggering problems and costs, with no benefits and very probably some definite losses.

Consider the staff necessary and the expenses involved if the Federal Power Commision must review 30,000 separate sales transactions, with thousands more each year. Consider the insurmountable difficulties in trying to determine prices on a cost basis. What about loss of incentive to producers? Futility compounded.

No five men can solve all of the problems that have been solved by millions of individual decisions from day to day. The vast machinery for regulating prices would be only one of many costs, both tangible and intangible. The consumer will pay the price, both in taxes and in increased charges for the gas itself.

Regulation in the form of price-fixing is not the answer. The consumer's greatest protection is competitive activity. His true interest lies with a continuing supply. He deserves the benefits of competition.

The Natural-Gas Problem

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1955

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks I wish to present for the attention of the Members an editorial which appeared in the Shreveport Journal, of Shreveport, La., on April 27, 1955, entitled "How To Undermine an Industry." I feel this editorial deserves careful reading:

HOW TO UNDERMINE AN INDUSTRY

Concerning Federal regulation of prices of natural gas at the wellhead, against which we have editorialized on several occasions, the Industrial News Review has come to our aid with the following well-documented argument:

"As a result of a Supreme Court decision, the Federal Power Commission now regulates the field prices of natural gas at the wellhead. And authority after authority, both within and without the natural-gas and oil industries, has urged in the strongest terms that Congress act to free producers from this control.

"Lieutenant General Thompson, of the Railroad Commission of Texas, one of the country's foremost conservation authorities, said that Federal control 'will shrink the actual and potential supply' of this vitally needed fuel by inhibiting future exploration and discovery, and will result in higher prices for consumers.

"An official of the Standard Oil Company of Indiana told a North Dakota audience that the State's oil progress depends largely on whether Congress will free natural-gas producers from Federal regulation. He said: 'How can you regulate the gas without regulating oil that comes out of the same hole? If you can justify the regulation of one commodity that goes into interstate comerce, you can justify the regulation of all of them. You can control coal—and you can control wheat and corn and cattle and every other commodity.' He pointed out that the Farm Bureau Federation and the National Grange, realizing this, have passed resolutions asking for an end to Federal controls over independent gas producers.

"Chairman Kuykendall, of the Federal Power Commission, appeared before a House committee and urged that the controls be abolished. A majority of the Commission agreed.

"No one is trying to end State regulation of sales of natural gas to the consumer by utility companies, or Federal regulation of the interstate pipelines. The sole purpose is to free the producers from controls in the interest of the industry's progress and very existence. These producers are independent businessmen, and theirs is a highly competitive and risky enterprise. Most holes turn out dry and worthless. And when gas is found, it must be marketed in competition with all the other producers in the area.

"Most authorities also feel that it was never the intention of Congress to authorize regulation of gas at the wellhead. A number of leading Senators and Representatives have said as much. The solution is passage of a bill making Congress' position clear and final."

Union Shop Is as American as Apple Pie

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following very interesting article from the May 1955 issue of the American Federationist, by Kenneth J. Kelley, secretary-treasurer and legislative agent, Massachusetts Federation of Labor. Mr. Kelley has established an enviable record in the field of labor legislation, and due to his exceptional experience in this subject matter, he has become one of the outstanding leaders and advisers.

The article follows:

VICTORY IN MASSACHUSETTS

(By Kenneth J. Kelley, secretary-treasurer and legislative agent, Massachusetts Federation of Labor)

The labor movement of the old Bay State has had many distinctions. Its most recent claim to fame is the defeat in a most decisive manner of a so-called "right to work" bill at the 1955 session of the legislature.

House bill 860 was introduced by Representative Charles S. Marston III, Republican, a nonunion shoe manufacturer from Haverhill. The measure was loaded with legal doubletalk. Its purpose was to outlaw all forms of union security.

The legislature convened on January 5. Shortly thereafter it was discovered that House bill 860 had been filed without any fanfare. Immediately the officers of the Massachusetts Federation of Labor went into action. At the helm was the president of the federation, Henry J. Brides, a seasoned and respected leader.

Letters were dispatched to all 750 affiliates of the State Federation of Labor. The evils of the proposed legislation were set forth. It was pointed out that the bill, if enacted, would give the scab and the free rider legal sanction and protection. We also called attention to the fact that some business interests in Massachusetts were secretly backing the "right to wreck" movement. These employers, we pointed out, hope to be able to slash wages and thereby meet cutthroat competition "by dragging our workers down to the level of certain backward States."

Subsequently the officers and members of all local unions in the State were kept informed by legislative bulletins from the State Federation of Labor. The demand for printed copies of the bill at the document room of the statehouse was enormous. The supply was exhausted in a short time. The State Federation of Labor had 10,000 reprints made of the bill. These were distributed, together with an exposé of the bill, to all local unions, unaffiliated as well as affiliated, to business and civic leaders, to daily and weekly newspapers, and to the general public.

A. F. of L. President George Meany was promptly advised of the introduction of the bill and received periodic reports of the developments in the campaign. In addition to rendering every assistance to the officers of the State Federation of Labor, President Meany made available 5,000 copies of the valuable Right to Wreck pamphlet as soon as it was printed. These were sent to members of the legislature, the press, local unions, and other organizations. Subsequently, copies of the International Association of Machinists' pamphlet about the moral aspects of "right to work" laws were sent to the members of the legislature. Two of the three authors of the machinists' articles happen to be from Massachusetts. The Reverend William J. Kelley, O. M. I., is a Bostonian by birth and a frequent visitor to Quincy. The Reverend Dr. Walter G. Muelder is dean and professor of social ethics at Boston University's School of Theology.

The present writer, as secretary and legislative agent of the Massachusetts Federation of Labor, communicated with every international union affiliated with the American Federation of Labor. The internationals were told about house bill 860. They were asked to write their local unions in Massachusetts.

About 200 locals are not affiliated with the State Federation of Labor. That was one of our reasons for approaching the international unions. Our second reason was that locals sometimes respond more readily to a request from their international than to similar requests from other organizations. About half of the international unions replied and signified their intention of urging their locals in Massachusetts to assist the State Federation of Labor in defeating the "wreck" bill.

Once the hearing date was set, a new slogan appeared on all correspondence sent out from the federation's office. The slogan was: "Labor has a date—February 28." For weeks there were feverish preparations for D-day. From Cape Cod to the Berkshires locals were arranging to charter buses to transport their representatives to Boston, the State capital. The crowd that actually showed up at the State House on February 28 exceeded our fondest expectations. An hour before the hearing opened every one of the 1,200 seats in Gardner Auditorium was filled. By the time the 15 members of the joint committee on labor and industries arrived, the aisles, the stairways, and the corridors were jammed with an additional 1,000 trade unionists, including many women. Hundreds of others, unable to get into the building, clustered around the windows outside where they were able to see the proceedings, although unable to hear what was being said. Some longshoremen declared a holiday and showed up in their working clothes to give color to the demonstration. Attachés who have been observing legislative hearings for many years said it was the largest crowd that had ever attended any hearing at the State House.

Presiding over the hearing were the cochairmen, Senator C. Henry Glovsky and Representative Michael J. Carroll. They managed to keep things orderly and pretty well under control during the day-long hearing that lasted until 6 p. m.

As the sponsor of House bill No. 860, Representative Charles S. Marston III read a prepared statement in which he attempted to justify the legislation with specious arguments about "compulsory unionism," interspersed with frequent patriotic references to "individual freedom" and the "inalienable right to work of all Americans." Representative Marston had some difficulty in putting his points across in a hall bursting with grimly determined union members. Significantly, no other person appeared to support Marston's bill until some 5 hours later, when Joseph Lee, a member of the Boston school committee, spoke in favor of the bill, delivering a speech that was a masterpiece of tortured reasoning.

Opposition to the bill was overwhelming as well as bipartisan. Gov. Christian A. Herter, a Republican, in a strongly worded statement delivered by Commissioner of Labor and Industries Ernest A. Johnson, opposed the bill, calling it ill-advised and warning that it "would create industrial strife and jeopardize relations between employer and employe organizations." Following this, 138 members of the legislature—Republicans and Democrats—publicly recorded themselves as opposed. Both parties recognized the political implications of the bill and the impact that its introduction had upon union members throughout the State.

After the views of Governor Herter and the legislators had been recorded, the first labor spokesman recognized was the present writer. I introduced the Reverend Francis J. McDonnell, chaplain of the Catholic Labor Guild of Boston. Father McDonnell presented the Catholic social teachings and principles on "right to work" laws in a dispassionate and yet persuasive manner.

The trade union opposition to the bill was then presented by this writer. "Right to work" was described as what is really is—"a cleverly designed huckster's slogan that attempts to hide the real intent of this vicious legislation which is to reduce unions to mere social organizations and thereby break down wages and working conditions they have established." In defense of union security I said:

"The union shop is as American as apple pie. It is predicated upon the democratic principle of majority rule. Those participating in the fruits of industrial government share in the costs of maintaining the union responsible for them. This vicious bill would glorify the free rider, the industrial tax dodger who refuses to accept or discharge his social responsibilities."

Urging the legislature to defeat House bill 860, I said:

"It is union-busting legislation that is bad for business. It would breed bitterness and industrial strife and adversely affect the economy of Massachusetts."

Albert G. Clifton, legislative agent for the State CIO, summarized that organization's opposition and introduced J. William Belanger, president of the Massachusetts State Industrial Council, CIO. Then President Brides, of the State Federation of Labor, spoke. He described the Marston bill as "a fraudulent hoax upon the public and the jobless workers of the Sate and Nation." He urged the legislature to defeat it speedily.

Five A. F. of L. leaders expressed the opposition of their particular trade groups. For the building trades the speaker was Samuel Donnelly, president of the Worcester Building Trades Council; for the printing trades, Anthony J. DeAndrade, international vice-president of the Printing Pressmen's Union; for the transportation unions, Nicholas P. Morrissey, New England organizer of the Teamsters' Union. Mr. Morrissey introduced Francis J. Thompson, general counsel of an employers' group of motor freight carriers, who delivered a strong condemnation of the bill fom management's viewpoint.

Spokesmen for many other unions expressed strong opposition. John J. Kearney, executive secretary of the Hotel and Restaurant Employees and Bartenders, Local 34, emphasized that not a single worker or employer had appeared in support of House Bill 860. This demonstrated that there was no need for such legislation, he said. Using an enlarged map, Mr. Kearney showed the blackout of progress that has taken place in the States which have adopted "wreck" laws. Vice-President Philip Salem of the United Textile Workers attacked the bill. He said that the problem of North-South textile competition was not going to be solved by trying to get down to the economic level of "right to wreck" southern States.

As the afternoon progressed, officers and members of other unions vigorously condemned the bill. These speakers included Francis E. Lavigne, director of education for the Massachusetts A. F. of L.; James P. Meehan, secretary of the State Building Trades Council, and officials of the railroad brotherhoods. Civic and political leaders registered their opposition. More than 3,000 signature cards and signed petitions opposing the bill were submitted to the committee by the State Federation of Labor. Many of the signers remained in the auditorium throughout the long hearing in order to record their views publicly.

One of the highlights of labor's case against the bill was a satirical poem entitled "House Bill No. 860 (Opus III)" composed by Peter A. Reilly, poet laureate of the Massachusetts labor movement and secretary of the Carpenters' District Council of Boston.

Shortly after the impressive demonstration of labor's strength at the hearing the committee on labor and industries voted to reject house bill 860. The report rejecting the bill was then filed in the house of representatives. On March 7, a rollcall vote was taken on the question of rejecting the bill. By a lopsided vote of 190 to 2, the bill was killed for this year.

One of the two votes for the bill was cast by its author, Representative Marston. The other vote came from Representative Isaac A. Hodgen, a stationer from the farming community of Belchertown.

While the trade unionists of Massachusetts are pleased, we are not operating under any illusions that the size of the vote is an accurate barometer of labor's strength with the current legislature. A number of the representatives who voted against house bill 860 did so in order to acquire a "good" vote on the official labor record prepared every 2 years by the Massachusetts Federation of Labor.

Massachusetts labor is far from complacent about its impressive victory. Similar attempts to weaken unions have been seen before. In 1948 a "right to wreck" measure similar to house bill 860 appeared as referendum No. 5 on the State ballot. Also appearing were two other antilabor referenda, No. 6 and No. 7.

In 1948, we recognized the danger and we organized ourselves to overcome it. The 1948 version of "right to wreck" was defeated, 1,077,642 to 443,368.

Thus, twice within a decade the trade-union movement of Massachusetts has responded magnificently to attempts to shackle it, bearing out the adage that freedom must be a fresh conquest with each generation.

Birth of a Basin

EXTENSION OF REMARKS
OF

HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1955

Mr. HILL. Mr. Speaker, in recent weeks many of the Members have been privileged to see a color movie film setting forth in detail the contemplated improvements to be established on the Colorado River watershed by the upper Colorado River Basin project legislation now pending in the House Committee on Interior and Insular Affairs.

The film, titled "Birth of a Basin," is one of superior workmanship and outstanding photography made by a film in my district in Colorado. Forney Films, Inc., of Fort Collins, Col., is a local industry that enjoys the finest reputation in the field of photography and the film Birth of a Basin is an example of the excellent work turned out under difficult conditions by this fine organization.

Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD and to include an article reprinted from the April issue of American Cinematographer written by C. M. Howe, president of Forney Films, in which he tells how his company made Birth of a Basin:

A PLEA TO CONGRESS VIA FILM

(By C. M. Howe, president, Forney Films, Inc.)

One of the more unique applications of motion pictures, perhaps, is the factual presentation before Congress of a vital project proposal up for its consideration. This was the purpose behind Birth of a Basin, which our company, Forney Films, produced for the Upper Colorado River Basin Commission. In addition to the showing in Washington, D. C., the film is scheduled to be screened throughout the Nation and is also to be televised.

The upper Colorado River Basin covers roughly 110,000 square miles and encompasses parts of the States of Wyoming, Utah, Colorado, New Mexico, and Arizona. The proposed basin project includes plans for 6 major dams and involves 15 subsidiary or participating projects. It is a billion-and-a-half dollar undertaking that will make TVA and the Hoover and Bonneville Dams look small by comparison. The commission is composed of representatives from the upper Colorado River Basin States appointed by their respective State governors; they are devoted to the task of getting the project passed by the 84th session of Congress. At stake is the development of the West—rich in undeveloped resources, and badly in need of water and power.

When our company's representative brought us the production contract on November 1, 1954, the foregoing facts plus 20,000 pages of 6-point type consisting of the transcript of the House and Senate hearings of the 83d Congress were all we had to start with. When we asked about the date set for delivery of the finished film, our man said simply, "The 14th of January."

"1956?" our production man asked. When he was told "January 14, 1955," tops were blown all over the place and everybody went to man their stations. The 8-hour working day was discarded; wives of staff members were informed there would be a late Christmas, and away we went.

Six days and nights later a script was ready for presentation to the sponsoring commission. Meantime, our camera crews already were scouting location sites and shooting footage that could be used in the production. The author and sound man Jerry Tunnell set out in the company's Chevy station wagon with the following production equipment: a motor-driven Auricon 16-mm. sound camera; a Cine Special plus extra magazines; a Bolex H-16 for use in hard-to-get-at location sites; and a Magnafilm portable synchronous 16-mm. tape recorder plus necessary accessories.

Camera accessories included 1-, 2-, and 6-inch Wollensak lenses, a 1-inch and a wide-angle Ektar, and a Pan Cinor zoom lens; 3 tripods; a camera dolly; 1 reflector; and a Norwood and a GE exposure meter.

First day out, we photographed the Seedskadee Dam site, also core drilling operations, grazing sheep, and the land itself. We were shooting scenes for a picture of dams and water that existed only in the minds of a few men who were dedicated to the development of the West. We had as a guide only a brief outline of script that had not yet been approved. We were gathering footage for a film that didn't even have a tentative title.

Testimonials of native westerners could have a terrific impact in a picture of this kind, so using the sound camera and tape recorder, we secured lip-sync shots of farmers and men in western industry as they stated their views on the need for development of the basin project.

Leaving Wyoming, we moved into Utah. To understand some of the problems that were encountered, consider that the proposed dam sites in the basin project are all practically inaccessible at the present time except by boat. Steep canyon walls, rising in some places to 3,000 feet above the river, make it almost impossible to find a place where long stretches of the river can be viewed from above. This meant that shots of these sites had to be done by aerial photography.

Harold Doll took to the air in Forney Films' Beech "Bonanza" plane. Arriving at the location he shot the required footage from the air, using a Bell & Howell 16 mm. camera. Doll's aerial camera coverage included all the dams in the lower Colorado basin, from Hoover Dam on down to the Gulf of California. Included also was a pictorial record of the canal and aqueduct system which brings water to Los Angeles and San Diego, and a comprehensive pictorial account of the agricultural development that has resulted from utilization of Colorado River water in the lower basin area. In all, Cameraman Doll covered 27,000 miles by air, while we covered a mere 2,700 miles in our station wagon.

While Forney cameramen were at work in the field, another important phase of the production was receiving attention at our studio in Fort Collins. Here Production Manager Ed Hawkins was doing by animation process, what was impractical or impossible to do in conventional cinematography. Artists' conceptions of the various dams were

obtained from the regional Bureau of Reclamation in Salt Lake City. These were photographed on our title board with the Cine Special camera. Color slides which had been made of various areas in the basin were likewise reproduced on 16 mm. film in order to show the appearance of the areas in the summertime. This, briefly, is the story of the footage shot by Forney Films for the basin film.

In addition to our own material, we utilized films and stock shots obtained from a number of sources and integrated them with our footage in the editing of the picture. An almost unlimited source for such shots was Glenn Turner, a Utah ciné amateur of note—an amateur, incidentally, only because he likes to make movies for fun instead of money.

Meantime, tempus was fugiting, as the saying goes, and we had no sound track for the picture—usually an essential item when preparing a workprint. The answer? A blind sound track; we would then edit to the track.

Using seven different narrators, and intercutting the lip-sync tracks we had secured on location, a track was recorded and an optical made as a work track. This enabled our editors to get right to work in cutting the master print. In the meantime, background music and sound effects were recorded in sync with the voice track, and we had our sound track completed even before picture editing was finished.

Working far into the night, night after night, our editors put in 2 full 70-hour weeks on the production. A problem was keeping track of the borrowed footage, which had to be accounted for and returned to its owners upon completion of the editing phase of the production.

As editing progressed, the editors decided that superimposed overlays and underlays were needed in spots. So cameramen got into action promptly and filmed rushing water, and scenes of power installations, etc., for the purpose.

Finally animation and titles were shot. The opening title description called for a live action background of a world globe suspended in midair and rotating slowly, with title text superimposed on it. This was accomplished by suspending a 12-inch globe on a string and placing before it a panel of glass with the title text lettered upon it. Shooting through the glass, the text and globe were effectively photographed. An added feature was the effect of clouds drifting over the earth—obtained with the aid of dry-ice vapors.

In time the master was ready and the first answer print was delivered to us from the processing laboratory on the 14th day of January—right on deadline. But the story of this film production did not end here. The premier of the picture was scheduled to be held in Gallup, N. Mex., in conjunction with a tribal council meeting of the Navaho Indians and members of the upper Colorado River Commission. A feature of this meet was to be an enactment of the Navaho going on the warpath—the first time the colorful ritual had been performed in 100 years. Forney Films was called upon to record this event on both 16-millimeter and 35-millimeter film—the latter for the newsreels. On the site we had an Auricon-Pro, a Cine Special, two Bolex H-16's, and a 35-millimeter Eyemo.

An interesting fact about this production, incidentally, was revealed by our accounting department when it set about figuring the billing for pickup footage. Birth of a Basin is 972 feet in length. Of this, only 218 feet was pickup or purchased footage; the other 754 feet had been shot either by our location crews or on our sound stage in Fort Collins, Colo.

Oil for the Fires of New England

EXTENSION OF REMARKS
OF
HON. ALBERT W. CRETELLA
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1955

Mr. CRETELLA. Mr. Speaker, during the debate on the Reciprocal Trade bill which this House passed sometime ago, there was considerable debate on the subject of the limitation of oil imports and from time to time speeches have been made by my colleagues from the coal-mining districts in support of their position that oil imports should be limited. I have always opposed the limitation, and shall continue to do so in the future. Our New England industries have been hard hit from time to time by a variety of causes, the greatest of which is the pirating of our industry by southern States.

We, of Connecticut, contribute heavily to Federal taxation and thereby contribute to the continuation of particular projects of the South, mainly Tennessee Valley Authority. Consequently, we are paying for the support of these activities and at the same time are having our industries taken from us.

The statement which I herewith attach states quite clearly why New England objects to the limitation of importation, and I subscribe wholeheartedly to the claims made and the reasons for such action:

OIL FOR THE FIRES OF NEW ENGLAND

In the debate now under way on America's reciprocal trade policy, one of the questions at issue is the proposal made by a number of Senators to limit imports of Venezuelan oil into the United States.

Any such legislation would have direct economic effects upon New England and all other sections of the Nation.

It would affect New England consumers, who depend upon imported oil for a large share of their fuel supplies. It would affect New England businessmen, who sell an important volume of goods and services to Venezuela annually.

The largest producer of oil in Venezuela, the Creole Petroleum Corporation, believes that oil import quotas would be damaging to the security and prosperity of the United States. Adoption of such quotas would lead to repercussions throughout Latin America, and would jeopardize the employment of thousands of American workers engaged in producing goods sold in Latin American markets.

New England would be particularly damaged by oil import quotas, as the Governors of the six New England States have recognized in a resolution adopted March 15, 1955. The resolution called for united action by New England residents to protect New England commerce and industry from this threatened injury.

To bring the dangers involved in this legislative proposal to the attention of New England people, it is important to keep in mind the following facts:

1. New England produces no significant amount of fuel. All oil and coal it obtains from beyond its borders. New England needs the most ample supplies of all fuels at the lowest fair prices and it is to the advantage of New England to have the greatest possible competition among domestic and foreign fuels and fuel sources.

2. Some of the lighter grades of fuel oil, and over 58 percent of the approximately 65 million barrels of heavy industrial fuel oil (sometimes called bunker C or residual oil) used annually in New England is of foreign origin. These supplies are important in meeting New England's total fuel requirements.

3. Bunker C heavy fuel oil is extensively used by New England industry and public utilities and for heating large apartment and office buildings. Oil is convenient to use and has proved to be economical. New England, for its own advantage, must have continued access to adequate supplies of this type of oil.

4. If New England were to be deprived (by quota restrictions) of any substantial part of the over 58 percent of its yearly supplies of heavy oil which is of overseas origin, serious shortages would be almost certain to develop. Present prices of heavy oil are not high enough to lead domestic producers to provide adequate supplies of this heavy oil without price increases. Domestic production of fuel oil is very directly tied to the production of more valuable components. (See appendix 1, below.)

5. New England has reason to fear oil shortages. In 1947 prices of bunker C oil went up rapidly (over $1 a barrel, or about 50 percent, in less than 12 months) in a period when only a moderate shortage existed. If quotas on foreign oil imports are imposed and if a serious shortage ensues, for each 1 cent per barrel of rise in price, New England's annual heavy oil fuel bills would increase by at least $650,000. Credible estimates are that the increase in price of bunker C oil, delivered in Boston, would be about $1 per barrel, an aggregate increase in New England's yearly oil costs of not less than $65 million.

6. Quota restrictions (followed by substantial shortages and oil price increases) could force New England users of heavy fuel oil to reconvert (at great expense) their oil burning heaters and plants to less convenient coal-burning equipment. This, of course, is precisely what some proponents of quotas are trying to accomplish.

7. Price increases for bunker C oil inevitably will be borne by the general public in New England and by New England industry. Such price increases would constitute a further obstacle to successful competition by New England industry with industry in other parts of the Nation.

8. New England, directly and indirectly, exports large quantities of goods to Venezuela amounted to over $525 million. Venegreat bulk of its foreign produced heavy oil. In 1953, United States exports to Venezuela amounted to over $25 million. Venezuela obtains the dollars to pay for these exports principally from th sale of its fuel oil in the United States. To curtail these oil sales will reduce the dollars which Venezuela has to spend in the United States and the exports which it can absorb, for 90 percent of Venezuela's foreign exchange is obtained from sales of Venezuelan oil.

9. Proper long-range policies of conservation of national natural resources make the use of overseas oil desirable to conserve irreplaceable domestic sources of supply. The United States needs a domestic oil industry, but in peacetime it should take full advantage of access to foreign sources of supply, which may be less readily available in times of emergency.

APPENDIX 1

WHAT IS HEAVY FUEL OIL? ITS PRICE

1. Heavy fuel oil is the heavy, nonvolatile, relatively low-priced remainder left after the extraction from crude oil of the more valuable components, such as gasoline, kerosene, light fuel oils, diesel oil, and other higher priced items. For domestic crude oil there

remains only about 20 percent of heavy oil after the removal of these high-priced products by refineries which are constantly and successfully trying to minimize that heavy oil yield. (The heavy Venezuelan crude oil, on the other hand, at the Antilles refineries produces only about 35 percent of the more costly items, leaving a 65-percent yield of heavy fuel oil.)

2. The production of domestic fuel oil is naturally greatly influenced by the extent of demand for the more valuable components. The low price of such oil gives no incentive to domestic refiners to produce it when a good market exists for the 80 percent of more valuable elements of the crude oil. On March 24, 1955, the refinery prices (f. o. b. gulf coast) per barrel of the principal refined products were (low for the day):

	Per gallon
Gasoline (87 octane)	$0.105
Kerosene	.095
No. 2 fuel oil	.0875
Heavy fuel oil (bunker C)	.0464

($1.95 per barrel.)

Domestic producers will probably be unwilling to treat as heavy fuel oil crude oil (from which high-priced components can easily be extracted), unless there is an increase of at least $1 per barrel in the price paid for domestic heavy oil. The tank-car price in Boston (March 30, 1955) for such oil is $2.42. A dollar increase would raise it to $3.42, about a 40-percent increase.

H. R. 4560

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. ADDONIZIO. Mr. Speaker, the Honorable Leo P. Carlin, mayor of the city of Newark, has submitted an excellent statement to the House Interstate and Foreign Commerce Committee on H. R. 4560, the Harris bill, which I should like to commend to the attention of my colleagues. Mayor Carlin ably sets forth the reasons for his opposition to the bill, and I think the entire Membership of the Congress will be interested in reading his complete statement, which follows:

STATEMENT ON THE HARRIS BILL BY LEO P. CARLIN, MAYOR, CITY OF NEWARK, N. J., BEFORE THE INTERSTATE AND FOREIGN COMMERCE COMMITTEE OF HOUSE OF REPRESENTATIVES

My name is Leo P. Carlin. I am mayor of the city of Newark, N. J. The principal offices of the city of Newark, N. J., including the office of the mayor, are in city hall, 920 Broad Street, Newark, N. J. The term of office of the present administration of the city of Newark is from July 1, 1954, to July 1, 1958, the form of government having been changed from the commission form to the mayor and municipal council form by popular vote. I was mayor for the year preceding July 1, 1954, under the former commission form of government and also served as commissioner and director, department of public works, for the preceding 4-year term.

According to the 1950 census figures the population of the city of Newark was 438,776. I am informed that there are 122,170 gas customers in the city of Newark and that approximately 8,000 use gas for heating purposes. Many of the Newark industries depend upon gas in their industrial processes. Gas for cooking and heating within the city of Newark is supplied only by Public Service Electric & Gas Co. We are informed that approximately 80 percent of the thermal send-out of that company is derived from natural gas purchased from various natural gas pipeline companies.

The families of the city of Newark who use gas for the various purposes have no benefit of competing suppliers but must take gas from the one and only supplier at its price. These families, furthermore, do not actually have the benefit of the choice of competing fuels, such as coal, oil, or electricity. The gas ranges for cooking and burners for heating cannot be transformed to the use of other fuels and the cost of new equipment would be an additional burden on our citizens, especially when a heating unit is involved. It has been recognized and has become a national policy that consumers in such circumstances must be protected by laws and regulations.

It is my understanding that the Supreme Court of the United States has recognized that the prime aim of the Natural Gas Act of 1938 is to protect consumers against exploitation at the hands of the natural gas companies. The act presently provides for regulation of prices charged by the producer to the transmission pipeline companies and the prices charged by those companies to the distribution company whose rates to the ultimate consumer are also regulated by the Public Utility Commission of our State. In regulating these prices the act presently provides for just and reasonable rates.

I am informed that Public Service Electric & Gas Co. agreed to pay 25 cents per thousand cubic feet when the company signed its first contract for delivery of natural gas some time in 1947, and that before the first cubic foot of gas was received under this contract in 1950, the price had been increased to 27.9 cents per thousand cubic feet. Since that time the price has been increased to 34.1 cents per thousand cubic feet at the present time, showing an increase of 36.4 percent, which was permitted under the present act. The major portion of these increases, I am informed, were permitted to become effective because the Federal Power Commission was of the opinion that it had no right to control the prices charged by the producers. If the Harris bill is passed by the Congress, the control which that Commission now has, as a result of the Supreme Court decision in the Philip case, will be eliminated. There would then be no control whatever over the prices that the producers can charge in existing contracts.

It seems quite evident that the Congress was fully aware of the position of the consumer when it provided that the Federal Power Commission should regulate all sales in interstate commerce for resale. Under the act, properly administered, each party, producer to distributor, would receive the cost to him plus a fair profit, and costs to the consumer would rise only in proportion to general commodity cost increases. Under the proposed legislation the pipeline operators and distributors are subject to control, the basis for this control being the prevailing market price in the field where produced. The producer, however, under the proposed amendment would be free from control as regards his selling price and, therefore, could raise the market price at will. As a chain is only as strong as its weakest link, so also control is only as strong as the weakest point of control. The result under the proposed amendment would therefore be lack of control and the vitiating of the intent of the act. For the consumers, some 122,000 families of the city of Newark, there would result the spiraling of the cost of gas until it would be more economical to reconvert to the use of another type of fuel.

I will leave to experts the expounding of the theories and reasons to prove that the Harris bill is detrimental to the interests of the consumer and the public and is only beneficial to the few producers at the expense of the public. I am submitting this plea on behalf of the thousands of residents of my city so that this honorable committee will reject this bill and any other bill which would remove from price control any of the producers or transporters or distributors of natural gas from the wells to the ultimate consumer.

Respectfully submitted.

LEO P. CARLIN, *Mayor.*

Bank Holding Legislation

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. MULTER. Mr. Speaker, the following are a few typical communications which I have received urging enactment of the bank holding company bill, H. R. 2674, which I hope the House Banking and Currency Committee will shortly report. That bill sponsored by our distinguished chairman, Mr. SPENCE, of Kentucky, is substantially the same as my own bill, H. R. 685.

WASHINGTON, D. C., *April 21, 1955.*
Congressman ABRAHAM J. MULTER,
House Office Building,
Washington, D. C.:

As representative of small business, we urge that you approve without substantial change H. R. 2674 pending in House Banking Committee. We believe this legislation necessary for survival and proper functioning of independent local banks and their patrons, the independent local merchants.

UNITED STATES WHOLESALE GROCERS' ASSOCIATION,
HAROLD O. SMITH, Jr.
Executive Vice President.

WASHINGTON, D. C., *April 21, 1955.*
Hon. ABRAHAM J. MULTER,
House Office Building,
Washington, D. C.:

It is our hope that in the interests of independent banks of this country and their future that you will report out H. R. 2674 now before your Committee of Banking and Currency. We have just completed a national poll of our membership, all independent business and professional men, the poll reaching approximately 100,000. The vote on the bill was 74 percent for, 16 percent against, and 10 percent no vote. We trust that we may look forward to your support.

GEORGE J. BURGER,
Vice President, National Federation of Independent Business.

THE FIRST NATIONAL BANK,
Willows, Calif., April 22, 1955.
Hon. ABRAHAM J. MULTER,
Congressman From New York,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN MULTER: The United States has grown to be the greatest country in the world by reason of its traditional system of free enterprise and independent banking.

Unless the pending bank holding-company legislation (H. R. 2674) is enacted at this session, it may be too late to protect and perpetuate this traditional system. The large bank holding companies are "power mad" and are on the march.

If the bank holding companies are permitted to continue to expand, without proper supervision and regulation, it will mean the ultimate elimination of the independent banking system and ultimate socialization of banking in the United States.

I am sure you do not wish this country to follow in the footsteps of Germany, France, England, and most of the other countries in the world that have nationalized and socialized banking, which will be the ultimate result of permitting the "bank holding companies" to continue to run wild.

For the past 15 years, the bank holding companies have been successful in their strategy of "delay and investigate further."

The independent bankers, and the majority of people in this country who believe in competition and free enterprise, are relying upon your committee (and thereafter the House) to enact H. R. 2674.

Very respectfully yours,

CARROLL F. BYRD.

WASHINGTON, D. C., *May 2, 1955.*

Hon. ABRAHAM MULTER,
House Banking and Currency Committee,
House Office Building,
Washington, D. C.:

Thirty-six thousand small independent retail druggists as represented by the National Association of Retail Druggists respectfully urge your support of H. R. 2674. Seventy-three percent of holding companies' income is derived from nonbanking institutions. Independent bankers know local conditions better than holding companies in New York, Chicago, or San Francisco; hence service are flexible and accommodate financial needs of small businessmen at local levels.

GEORGE FRATES,
Washington Representative, National Association of Retail Druggists.

Avoid Hasty Action

EXTENSION OF REMARKS
OF

HON. J. PERCY PRIEST

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1955

Mr. PRIEST. Mr. Speaker, yesterday the New York Herald Tribune carried a front-page editorial entitled "Washington Must Act." I understand that copies of this issue of the Herald Tribune were distributed to Members' offices. The editorial calls for immediate enactment of legislation giving the Federal Government the authority to follow the Salk vaccine from the producer to the person receiving the injection, fixing the price, imposing strict regulations as to records, setting firm allocations to various regions, and absolute priorities according to need. The editorial also calls for severe penalties for violators, both users and the sellers.

Mr. Speaker, as chairman of the Committee on Interstate and Foreign Commerce, which has general jurisdiction with regard to public health, I and the committee have, of course, been concerned over the problems created by the initial scarcity of available Salk polio vaccine.

Several weeks before the Frances report and the licensing of the vaccine by the Department of Health, Education, and Welfare, I contacted Dr. Scheele and Dr. Keefer with regard to any plans which the Department might have to provide for allocation of scarce vaccine so that the vaccine would go to those classes of persons where it would do the most good. At that time I was advised by Dr. Scheele and Dr. Keefer that no legislative action was required.

Mr. Speaker, I have here a copy of a letter dated April 14, 1955, addressed to Hon. Oveta Culp Hobby, Secretary of the Department of Health, Education, and Welfare, which summarizes briefly the views expressed by Dr. Scheele and Dr. Keefer. The letter also requests the Secretary to review the situation and to advise me whether the Department might feel the need for additional legislation granting the Department power to allocate the vaccine.

This letter will be made a part of my remarks.

I have talked again to Dr. Scheele to inquire whether the Department had reached any conclusion on the question of the need for legislation. Dr. Scheele informs me that the Expert Advisory Committee on the Polio Vaccine is meeting. Dr. Scheele feels that no decision with regard to legislation should be reached until the committee has been in a position to review the situation which has developed. Dr. Scheele expects to report the results of the Advisory Committee's deliberations to Mrs. Hobby, and he promised to keep in touch with me with regard to the situation.

I am making this somewhat lengthy explanation in order to show that this committee has been following closely the stiuation with regard to the Salk vaccine. I believe it would be a mistake for the Congress to rush into action before those in the executive branch who have a great responsibility in this field have had an opportunity to reevaluate the situation and to determine whether in the public interest efforts at voluntary allocation should be abandoned and mandatory controls based on new legislation should be substituted.

I agree that the American public is entitled to an early decision, but I feel that the American public will best be served if the Public Health Service and its advisors are given an opportunity to collect their thoughts and to make appropriate recommendations to the Congress.

The letter previously referred follows:

APRIL 14, 1955.

Hon. OVETA CULP HOBBY,
Secretary, Department of Health, Education, and Welfare,
Washington, D. C.

DEAR MRS. SECRETARY: Several weeks ago reports began to appear in the press concerning an impending shortage of Salk polio vaccine following the generally anticipated positive report on the effectiveness of the vaccine. My attention was called particularly to a resolution adopted by the New York County Medical Society urging the members of the society to cooperate toward the prevention of a black market in the Salk vaccine.

At that time I directed a member of the committee staff to consult with Dr. Scheele and Dr. Keefer with regard to any plans your Department might have (and for which it might need additional powers) to prevent such a black market and to assure that the vaccine would go to those classes of persons where, in the opinion of the medical profession, it would do the most good. Dr. Scheele and Dr. Keefer at that time expressed their personal views that a Federal allocation program would be undesirable. The arguments advanced by them were to the effect that (1) the time element was too short between the anticipated release of the vaccine and the oncoming of the polio season; (2) the supply held by drug houses was likely to be greater than had been stated in the press; (3) the production of the vaccine could be stepped up greatly following a positive report on its potency, and (4) an allocation program for the Salk vaccine would constitute an undesirable precedent.

Following the release of the Francis report and publication of Dr. Salk's views that the vaccine should be allocated so that it will reach the groups where it will do the most good, I personally contacted Dr. Scheele yesterday and requested his views with regard to the desirability of enacting legislation empowering the Department of Health, Education, and Welfare to allocate the vaccine. Dr. Scheele again counseled against such step. In view of his advice, I have decided to refrain from introducing appropriate legislation.

I assume, of course, that Dr. Scheele's and Dr. Keefer's thinking is representative of the Department's thinking in this matter and I am grateful to have the benefit of the Department's advice on this highly complex and emotional issue.

Should you or your associates feel at any time that the situation has changed and that legislation should be introduced granting the Department additional power to allocate the Salk vaccine, I shall be glad to hear further from you.

In the meantime, I shall appreciate receiving information whether the President, your Department, or any other department or agency of the Federal Government at the present time has the power to allocate, if necessary, the Salk vaccine in an appropriate manner.

Sincerely yours,

J. PERCY PRIEST,
Chairman.

The following editorial appeared today in the New York Times:

THE SALK VACCINE

Fortunately, medicine is not practiced statistically. If it were, we would have paid more attention to the common cold and some other infectious diseases than we have paid to poliomyelitis. Yet we cannot ignore statistics when we consider the success of Dr. Salk's vaccine. In fact, it was decided to vaccinate millions of school children this year largely on the basis of a thorough statistical analysis of last year's mass experiment. As a result of that analysis the Salk vaccine is considered effective in from 60 to 90 percent of the cases in which it will be used.

Thus considered, it seems that too much has been made of the 29 cases of paralytic poliomyelitis that have appeared in some 300,000 children who have received the Cutter vaccine, temporarily withdrawn. The vaccine was prepared in accordance with the specifications of the National Health Institute and of Dr. Salk. It has been tested before distribution by the pharmaceutical house that prepared it, as well as by the National Health Institute. Nevertheless Surgeon General Leonard A. Scheele is justified in withdrawing it for closer investigation. Paralytic poliomyelitis is so terrifying an affliction that parents throughout the country will approve the withdrawal. All told, several million children have been vaccinated thus far. It is remarkable that out of these millions so few have been stricken. In fact, the few fall well within the 60- to 90-percent figure of efficacy that Dr. Thomas Francis, Jr., gave out a few weeks ago in his report. A board of experts, on which Dr. Salk sat, has decided that it is safe to pro-

ceed with nationwide vaccination. As for the Cutter preparation, judgment must be withheld. So far there is no evidence of contamination.

All this raises the question of a shortage of vaccine. The drug houses that have been making the vaccine can hardly be charged with negligence. Even before Dr. Francis presented his report some were beginning to enlarge their production facilities, so confident were they of the vaccine's acceptance. By July there will be enough to treat 30 million children—about half the number that ought to be vaccinated. Long before the advent of autumn there should be enough vaccine to meet at least the needs of all children. Tightening controls over distribution will not increase the supply. If there is a black market in the distribution of the vaccine it has not come to light. The physicians who have departed from the "children first" principle and vaccinated those older than the prescribed age are so few that they are negligible. In a word, this is not a time for hysteria but a time to trust public health authorities and permit them to direct the work of vaccination.

This is the editorial previously referred to from the New York Herald Tribune:

WASHINGTON MUST ACT

The Salk vaccine against poliomyelitis is a national blessing which has created a national emergency. Experts have confirmed the vaccine's general efficacy. The demand is far greater than the supply. Every child in America has a right to its protection.

The serum can only be, and must be, controlled nationally.

Prior to the publication of the Francis report on the success of Dr. Salk's discovery, no agency, public or private, had thought through all the problems involved in the production and distribution of this great boon.

The National Foundation for Infantile Paralysis, which deserves great credit for initiative, efficiency and determination, had made contracts for the purchase of vaccine for free administration to children. It is delivering the serum to communities, but has no authority over private distribution of quantities produced in excess of its own contracts, nor can it effectively control community action after the vaccine is in the hands of local health authorities.

State, and localities have improvised their own distribution systems. For the most part, these are based on voluntary allocations and priorities, and are concerned more with the acquisition of and payment for the vaccine than with seeing to it that priorities are absolutely observed. Only on Friday, after it was clear that the voluntary system was breaking down, did New York City place penalties on the unauthorized sale or possession of the Salk serum. This was a purely local move; the penalities, moreover, are light in view of the great temptation offered by the short supply of the vaccine: $500 fine, a year in jail or both.

The Federal Government, the only authority capable of exercising national controls, made no serious effort, before the release of the report, to anticipate its responsibilities. The Public Health Service licenses and supervises the manufacture of the Salk vaccine under the National Biologics Control Act. Powers under this act have been exercised in withdrawing the product of the Cutter Laboratories from distribution.

But the law applies only to the source, only to quality. It gives the Federal Government no authority over allocation, over price, over violators of agreements. The administration has relied on voluntary cooperation and on advisory committees.

The fear of polio has haunted parents for generations. It is too much to expect of human nature that when the promise of release from that fear appears, voluntary arrangements will hold against a mother's insistence on the protection of her children or the greed of those who want to make money out of that emotion. New Yorkers remember the near riots that were produced by the distribution of gamma globulin, far less effective than the Salk vaccine. They are aware that already supplies of the new serum have disappeared into unauthorized channels and been diverted to adults when the moral right of children to priority is unchallenged.

To bring order out of this explosive situation, a national law is essential. There are five requirements for such a law:

1. It must be simple and sweeping, giving the Federal Government the authority to follow the Salk vaccine from the producing laboratory to the person receiving the injection, fixing the price, imposing strict regulations as to records, setting firm allocations to various regions, and absolute priorities according to need.

2. It must provide for the prompt dissemination of fully evaluated information on all medical aspects of the program. Doubts have arisen across the Nation over such matters as "provocation" and the timing of shots in relation to the incidence of polio. Parents are entitled to know what disinterested experts think of these questions as they arise. Their children's lives are at stake.

3. It must be clearly limited in time and subject, so that there will be no doubt that this is an emergency answer to an emergency situation, not a step toward socialized medicine. A year, or at most two, will probably bring supply and demand into balance.

4. It must have teeth. Penalties for violators—both users and sellers—should be harsh, several years in jail, some thousands of dollars in fines, so that there will be no prospect of profit in flouting the law.

5. Finally, and of the utmost importance, the act must be passed immediately and administered vigorously. The emergency is now—not tomorrow or next month. Congress can pass a law through both Houses in a single day, if the need is great enough. It should pass this legislation forthwith. The Government should be prepared to put its execution in the hands of the country's top administrators, experienced in allocations and priorities.

Given such leadership, working in harmony with all interested parties, redtape could be cut, the machinery set in motion, and speedy enforcement assured.

The parents and children of the Nation demand it. The whole world is waiting to see whether the United States will use this great new weapon against polio swiftly, efficiently, and—above all—equitably.

Speaking of a Price-Support Farm Program—Land Restoration

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. MACK of Illinois. Mr. Speaker, the Izaak Walton League of America, long interested in protecting our natural resources, has contacted me concerning their program of land restoration to replace the present farm-support program. I have been particularly impressed by their suggestions and feel it has considerable merit. There are many details which need to be worked out, but the overall plan appears to me to be an excellent one. The chairman of this organization, George L. Hockenyos, is a constituent of mine residing in Springfield, Ill., and I am proud to have this opportunity to introduce this plan to the House of Representatives.

Mr. Speaker, under leave to extend my remarks, I would like to include the following statement concerning the price-support program to remove from 50 to 70 million acres of marginal soil out of production, thereby eliminating the surplus:

A LAND RESTORATION—PRICE-SUPPORT FARM PROGRAM

(Presented for consideration by the land-use committee, Izaak Walton League of America)

Our present use of our agricultural land presents a painful paradox. On the one hand we have a picture of overproduction. Steady technical advances have increased and probably will continue to increase per acre productivity. The full utilization of the possibilities inherent in synthetic nitrogen fertilizer may eventually increase per acre production by another 15 or even 20 percent.

Meanwhile our foreign markets for foodstuffs have dwindled and the immediate outlook is not good in this direction. It is true that our population is increasing at the rate of some 2 million per year and eventually we will almost certainly need all of our potential agricultural resources.

At the present time, however, we have enormous and growing surpluses of our basic commodities purchased as part of a price-support program. Clearly, in the race between population growth and food production the American farmer is far in the lead.

On the other side of the picture, we are using our land resources as if we were faced with imminent starvation. We are cultivating some 360 to 400 million acres per year, and it is estimated that some 70 million acres of this is not suited to cultivation.

Briefly stated, we have 70 million acres of class 1 land that is not subject to erosion by wind or water, 170 million acres of class 2 land that can be protected by simple measures, and 232 million acres of class 3 land that requires careful handling if in continuous cultivation.

In addition, we have 95 million acres that is capable of only intermittent cultivation, and some 30 million acres of class 5 and 194 million acres of class 6 that ought to be kept in permanent vegetative cover.

Unfortunately, we are farming substantial amounts of class 4 land, and even considerable amounts of class 5 and 6 land.

The Secretary of Agriculture recently estimated that our surplus production represented the output of 40 million acres. Assuming that he refers to acreage of average productivity, we can infer that this is equivalent to some 50 to 70 million acres of classes 3 to 6 land.

Putting the 2 sides of the pictures together, we see that we are using 10 percent too much of our potential productivity and misusing and deteriorating a substantial amount of our land resources.

If a workable method could be found to remove 50–70 million acres of class 3–6 land from cultivation and place it in a self-restoring land reserve, we could accomplish two major purposes, both of which would be in the public interest.

1. We would restore a balance between production and demand.

2. We would have one of the most effective soil-conservation programs imaginable.

Admittedly, such a program would be costly, rather difficult to administer, and would not solve all the economic, social, and con-

servation problems that face agriculture. It would, however, strike at the roots of these problems in a way that would benefit all of the people, and at a cost in keeping with the benefits.

PROPOSAL

The proposal is that the USDA lease from the owners and remove from all agricultural production a sufficient acreage of cultivated land to bring production back in line with current demand.

The term of the leases to be a minimum of 5 years in humid areas where the land is devoted to annual crops; leases to be a minimum of 10 years in semiarid or cyclically arid areas, and 20 years where reforestation would be the required land use.

All leases might be terminated at any time by mutual agreement of both parties.

A term of the lease would be that the land be immediately conditioned and planted in accordance with specifications that would assure the highest practical degree of fertility stabilization and restoration.

Payment would not start until the initial conditioning and planting had been completed.

The cost of soil amendments, fertilizers and seeds would be borne by the Department of Agriculture. All conditioning and seeding operations would be performed by the landowner.

To be eligible for leasing, the land must have been in cultivation for at least 2 years and owned by the applicant for 2 years, except where the land had been acquired by inheritance, foreclosure or other means which did not anticipate the opportunity of leasing under this program.

The protective and restorative plant cover could not be harvested or grazed except in case of disaster such as prolonged drought. In such cases the Secretary of Agriculture may authorize such use as an emergency measure.

All or part of any farm would be eligible for leasing but due to administrative costs not less than 10 acres from any 1 farm could be leased.

Applications for leases would be accompanied by a fee, which may be set at $10, to defray part of the cost of appraisal and processing the lease.

The rental paid would be on a sliding scale, based on two factors. The first would be a fair-cash rental price, based on the past productivity of the land, and assuming full parity prices for the products. The second would be a percentage factor of the above, based on the need which the particular plot of land shows for stabilization and restoration.

The following is a suggested percentage table:

	Percent
Class 1	60
Class 2	70
Class 3	80
Class 4	90
Class 5–8	100

The basic rental appraisal to be made by the local USDA with the aid of a professional appraiser.

The capability classification and the specifications for conditioning and planting to be done by the USDA.

If, due to adverse weather or other causes a seeding failed, it would be repeated until successful, the cost to be divided as in the original attempt. The failure of either party to the lease to carry out this provision would terminate the lease.

This program would first supplement and then supplant the present system of price supports. In the first year that this program was placed in effect support prices would be reduced to not over 75 percent of parity, in the second year to not over 70 percent, and in the third year to 65 percent. After this, price supports should not be needed since this program is in itself a price-support program of an indirect nature.

PROCEDURE

To illustrate the working of the proposed program, let us assume the situation of a central Illinois farmer operating 200 acres of land, some of which would fall into class 2, some class 3, and some class 4, under the USDA system of classification.

Knowing that direct price supports are going to be gradually withdrawn, and further that one 40-acre field is eroding badly, he applies for participation in the restoration program. The $10 dollar fee accompanies the application.

The administrative committee, accompanied by an experienced land appraiser, evaluates the field. The land has been producing corn, wheat, soybeans, and occasionally clover. The committee estimates what a fair cash rental would be assuming that corn was selling for $1.82, beans $2.82, and wheat $2.50 per bushel. They might arrive at a figure in the range of $12 to $16 per acre. For convenience, let us assume they set the figure at $14 per acre.

Meanwhile the USDA fieldman classifies the land as class 4 and, therefore, eligible to 90 percent of parity rental. The rental offered the farmer is set at $12.60 per acre per year. This happens to be very close to the average cash rental of all Illinois farmland the last 3 years.

The USDA fieldman also determines what is needed to place this field in proper condition for restoration. He prescribes 3 tons per acre of limestone followed by seeding to a mixture of sweet clover, lespedeza, and redtop. He further prescribes that 1½ pounds per acre of DDT be applied to the field when the sweet clover has formed its first leaves, to prevent loss due to sweet clover weevil.

The application with attendant data is examined by a central USDA office. No evidence of local favoritism or other error is found; and the application is approved. The field is limed, prepared, and seeded by the farmer, with the USDA paying for the lime and seed as well as the DDT.

Since this was the least productive field on this farm, it cuts the farmer's production only 15 percent, even though it removes 20 percent of his land from cultivation. The first seeding is successful; and the farmer draws a check for $504 each year for the 5 years of the lease.

During 1 of the years of the lease a disastrous drought strikes the area in which our hypothetical farmer lives. The hay crop is short and pastures are burned. The Secretary of Agriculture declares an emergency; and the farmer may cut some of the hay as poor quality feed or may pasture the accumulated growth until the emergency is past.

The farmer now has no acreage controls, no compliance or cross compliances, but he does have price supports because if prices are too low for satisfactory returns, he can place additional land in the program until enough land nationwide has been taken out of cultivation to balance supply and demand. Meanwhile all of his land is producing income, most of it by producing needed and not surplus food; and he is being paid to rebuild and restore the remainder of his land against the time when it will be needed. Also, the creek near the farm is just a bit clearer, and the Mississippi just a bit less muddy.

At the end of 5 years the farmer decides that it is better to leave the land in the restoration program and continue to draw his annual payments. One reason is that his oldest son has moved to the city and he himself is getting a bit older. In the eighth year of the lease the terrible tragedy of a major war occurs. The Secretary of Agriculture calls for all out production and consents to termination of the lease. The soil has undergone a buildup of major proportions in nitrogen content and in particle aggregation. The dense sod is plowed and the field is both greatly improved in productivity and the soil less erodable than it had been 8 years before.

The Nation's soil fertility had been banked when not needed and withdrawn with generous interest when it was badly needed. Meanwhile, the farmer had been returned to complete freedom of choice in managing his land.

A second example may be taken from the growing dust bowl of southeast Colorado. Here a bondafide farmer and not a suitcase farmer was involved. He operated 2 sections of wheat land. The dry cycle had hit him hard. He applied for a lease. The land was classified as 800 acres of class 3 and 480 acres of class 5, due to the high sand content. The average wheat production was around 12 bushels per acre when it rained; and the fair cash rental on the class 3 land set at $5 per acre and on the class 5 land at $3 per acre. The rental was therefore set at 80 percent of $5 or $4 per acre for the class 3 land and 100 percent or $3 per acre for the class 5 land.

The United States Department of Agriculture field man prescribed a seeding of the best holding cover known at the time. The farmer decided that a sure return of $4,640 per year was better than gambling on the weather. He moved off the farm as soon as the seeding was permanently established.

There was less wheat to glut the market for the next 10 years; and there was less dust in the air in the Midwest. Of course, when wheat rose to $2.20 on the open market and the rain cycle returned, the farmer wanted to resume wheat growing. His 10 year lease was not terminated, as the wheat was not needed and there was no justification for renewing the hazard of blowing soil.

One can visualize many individual situations. Not all would be entirely desirable. Some land owners would place their land entirely in the restoration program and their tenants would be forced to leave the land for the crowded cities. This is regrettable, but it has been going on steadily for years. In just the last 10 years the farm population has dropped from 18 percent to 14 percent of the total population. With mechanization and industrialization of our farms, this trend seemingly is inevitable.

The cost of such a program is not easily estimated but a few basic figures from Illinois data may give an approximation. In 1952 the average value of all Illinois farm land was $222 per acre. In the years 1952, 1953, and 1954 the farmers reporting from the nine cooperating districts in Illinois gave the following weighted average values for land and the cash rental value thereof:

	Cash rental
1952 farmland value $241 per acre	$11.90
1953 farmland value $231 per acre	12.00
1954 farmland value $249 per acre	13.00

The average value for the 3 years was $240, and the average cash rental was $12.30. This is a little over 5 percent of the value of the land. It is probable that nationwide cash rental does not usually exceed 6 percent of the value of the land.

This program is directed at rental and restoration of less-than-average land. Now, we may assume that during the period 1952–54, the Illinois farmers received approximately 80 percent of parity price for their important cash crops. Thus we may assume that the cash rentals for the reporting Illinois farms would have been one-quarter higher had full parity prices prevailed. Thus, the $12.30 average cash rental would have been $15.37 per acre. Since this program is directed at the rental of land having for the most part a productivity of less than average and less than parity is paid as rental on all save class 5–8, it is a reasonable estimate that the land rental for

this program in Illinois would be less than $10 per acre.

If the rental were $10 per acre in Illinois, it is probable that it would average much less in the Nation. Thus, land in the vast Dust Bowl of the Southwest is currently worth little more than $40 per acre. Rental at 6 percent of value would mean $2.40 per acre. There are at present 12 million acres in the Dust Bowl that definitely should be removed from cultivation in the interest of conservation. Even at the improbably high figure of $4 per acre, it would cost only $48 million to remove this 12 million acres from wheat production and back to stabilizing grass cover. This reduced production would go far toward correcting our most annoying surplus problem.

It seems probable that 60 million acres could be transferred from production to restoration at a cost of not more than $7.50 per acre, or a total rental cost of $450 million per year. This should approximately place production back in balance with demand. The conservation benefits would be inestimable.

It is difficult to estimate the cost of the present price-support program. Part of the difficulty is due to the fact that some of the costs are involved with other parts of the Department's activities.

It is stated that the total losses of the Commodity Credit Corporation are only $130 million, of which $100 million were incurred in 1953. It was estimated, in Newsweek magazine for September 1954 "that the loss on the 1954 crop would be $450 million and that by the time the 1954 harvest was completed the Corporation would have almost $10 billion invested in surplus commodities."

Assuming that the figure is $8 billion, it is probable that the combined interest, storage, and deterioration losses would reach some $500 to $600 million a year, just to hold the surplus.

A positive program that would eliminate the surplus problem and at the same time give soil-conserving benefits to some 50 to 70 million acres most badly in need of conservation should be considered a bargain at $1 billion per year. The proposed program should cost little, if any, more than half this figure.

Since this is a conservation program for the land most badly in need of stabilization, and since the stabilization would be the most complete possible, it would be entirely appropriate to reduce the ACP program to help provide funds for this combined conservation and price-support program.

Existing governmental agencies could be adjusted to carry out this program. This program could be superimposed on the present price-support program with a reduction in the price-support level as the effects of this program were felt.

In October 1954, Mr. D. Howard Doane, head of the Doane Agricultural Service, St. Louis, Mo., wrote the following comment, which we believe of sufficient importance to be added at this point for discussion purposes:

"In reading the outline of this proposed plan I note the absence of proposals affecting the human relationships between landlord and tenant. It would seem important to me to give consideration to those relationships which might result in displacing tenants or seriously upsetting landlord-tenant relationship. I hesitate to make a suggestion for meeting the problem but rules and regulations should be given consideration and then perhaps propose setting up a board of reviews to hear both landlord and tenant when either party or both parties felt that an undue hardship was being created."

Comment with regard to this proposal is solicited and will be welcomed. If requested, comment will be considered confidential. Unless otherwise specified in covering correspondence, comment should be sent to the national offices of the Izaak Walton League of America at 31 North State Street, Chicago 2, Ill.

This Nation Under God

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. RABAUT. Mr. Speaker, this past Sunday, May 1, I was the privileged guest of the Washington Pilgrimage at their fifth annual pilgrimage to our Nation's Capital. Before entering into the RECORD the welcoming address of Dr. Wayne C. Grover, Archivist of the United States, I should like to give a short history of this patriotic organization.

The Washington Pilgrimage was organized in 1950 as a nonsectarian program designed to emphasize the spiritual heritage of our country. By bringing to Washington each spring in ever larger numbers men and women from all parts of the United States, the pilgrimage seeks to focus attention on the visible expressions in Washington of the faith that has made America great. This is done by visiting patriotic and historic shrines, museums, centers of culture, and institutions of government as well as by affording an opportunity for pilgrims to meet with the political and religious leaders of the Nation's Capital.

The theme of the 1955 pilgrimage was, "This Nation Under God." The final session of this year's pilgrimage was held on May 1 at the National Archives where the 1954 joint resolution of the Congress inserting the words "under God," in the pledge of allegiance to the flag of the United States was displayed for the first time in the presence of the assembly. Their tribute to me, as author of the bill, made me humbly appreciative of their testimony in my behalf.

Dr. Grover's address welcoming the pilgrims follows:

FIFTH ANNUAL WASHINGTON PILGRIMAGE

It is a pleasure once more to welcome you to the National Archives on the occasion of the fifth annual Washington pilgrimage. We are proud that your dedicated group again has chosen our building as a meeting place in which to reaffirm your faith in the foundations of freedom.

No force has given more sustenance to the growth of freedom than has Christianity. One of the most penetrating commentators on democracy, De Tocqueville, observed that "Christianity is the companion of liberty in all its conflicts—the cradle of its infancy, and the divine source of its claims." In the Christian religion the importance of man in relation to the state, to his fellow men, and to God is recognized. This recognition of man's importance is the basis of the concepts of freedom that are contained in the three great charters of our Nation—the Declaration of Independence, the Constitution of the United States, and the Bill of Rights.

The Christian ethic attaches supreme value to the individual as distinguished from the state. In Christianity we have the idea that every person has his own immortal soul, that each bears a direct relation to God, that each is separately responsible for his own conduct and is, apart from his nation, a matter of individual concern to God. This idea is diametrically opposed to the view of totalitarian regimes, in which the state—an abstraction, without mind or soul—is assumed to have a purpose transcending the welfare and happiness of its citizens.

The principles found in the great charters that are exhibited in the National Archives have a quality of permanence that attaches to the eternal precepts of the Christian faith. These principles are universal in their moral application, and it is my belief that they are indestructible. The human individual, wherever he may be—oppressed by tyranny, manipulated by intrigue and deceit—will somehow assert his God-given right to dignity, to self-esteem, and to freedom.

The Washington Pilgrimage was organized in recognition of the need in these critical times to arouse the spiritual strength of men and women everywhere. It is a recognition of this need that brings you to Washington each year in ever-increasing numbers. We of the National Archives, therefore, welcome you not merely as visitors, for we share with you your faith in the heritage of this Nation under God. We hope that the 1955 pilgrimage has proven even more fruitful than those of previous years, and we extend to you our most cordial invitation to visit us many times in the years to come.

Spend as much time as you can in our main exhibition hall. You will find it not only a source of inspiration, as one of the Nation's great shrine, but truly a hall of learning and public education.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Appendix

The Importance of Balancing the Budget

EXTENSION OF REMARKS
OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 4, 1955

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a speech I made today before the annual meeting of the United States Chamber of Commerce, at the Statler Hotel, Washington, D. C.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am pleased to have this opportunity to speak on the subject: Is it important to balance the budget?

As I see it, balancing the budget without resorting to legerdemain or unsound bookkeeping methods is certainly in the category of our No. 1 problems.

Beginning with 1792, the first fiscal year of our Federal Government, and through 1916, Federal deficits were casual and usually paid off in succeeding years. In this 124-year period there were 43 deficit years and 81 surplus years. As late as July 1, 1914, the interest-bearing debt was less than $1 billion.

In Andrew Jackson's administration the public debt was paid off in toto, an achievement in which President Jackson expressed great pride.

It can be said for this first 124 years in the life of our Republic we were on a pay-as-you-go basis. In that period I think it can be accurately said that we laid the foundation for our strength today as the greatest nation in all the world.

Then, in 1917, 1918, and 1919, World War I deficits aggregated $13 billion. Heavy current taxation in those years paid much of the war cost.

The next 11 years, from 1919 to 1931, were surplus years, and the war debt was reduced.

In 1932 Mr. Roosevelt came into office, and the most outstanding plank in his platform was to reduce Federal expenditures by 25 percent and to keep the budget in balance. He accused Mr. Hoover of "throwing discretion to the winds and indulging in an orgy of waste and extravagance." Mr. Hoover spent $4 billion in his last year, and the record shows that this spendthrift Hoover was the only President to leave office with fewer Federal employees than when he came in.

Mr. Roosevelt added more than $200 billion to the public debt during his administrations.

I took my oath as a Senator the same day Mr. Roosevelt took his as President—March 4, 1933. The first bill I voted on was the legislation recommended by President Roosevelt to redeem his economy pledge by reducing all expenditures 15 percent—a difference of 10 percent less than his original promise, it is true—but I thought this was a substantial redemption of a campaign pledge, as such things go, and I enthusiastically supported him.

The title of the bill was "A bill to preserve the credit of the United States Government." Our debt was then about $16 billion. This economy program was shortlived—about 6 months—and the spending then began to steadily and rapidly increase.

Mr. Roosevelt presented 13 budgets and in every peacetime budget he promised a balance between income and outgo for the next year, but it turned out that next year never came. He was in the red all the way, and in every year of his administration a substantial deficit was added to the public debt.

There were eight Truman budgets. Three were in the black—those for fiscal years 1947, 1948, and 1951. Two resulted from war contract cancellations following the end of World War II and the third resulted from increased taxes for the Korean war before the war bills started coming due. Five Truman budgets were in the red.

Mr. Eisenhower has presented two budgets—both in the red but on a declining ratio. The Eisenhower deficit estimates for fiscal years 1955 and 1956 aggregate $7 billion as compared to the last Truman budget which alone contemplated a $9 billion deficit.

The cold facts are that for 21 years out of the last 24 years we have spent more than we have collected. In these 24 years we have balanced the budget in only 3; and these were more by accident than by design.

We must recognize that we have abandoned the sound fiscal policies strictly adhered to by all political parties and all Presidents for considerably more than a century of our existence. It is true that during these 21 deficit years we were engaged in World War II for 4 years and in the Korean war for 2 years. Yet, in the years when the pay-as-you-go system prevailed we also had quite a few wars.

It is the quarter of a century of deficit spending which now makes balancing the budget so imperative. Young men and women, born in 1930, have lived in the red virtually all their lives. Our acceptance of deficit spending for so long a period has weakened public resistance to the evils of this practice. Bad habits are hard to change.

Will the deficits become permanent and continue to pile debt upon debt until real disaster comes? If we cannot balance the budget in this day of our greatest dollar income, when taxes are near their peak, and when we are at peace, I ask, when can we?

It is disturbing these days to hear some economists argue the budget should not be balanced and that we should not begin to pay on the debt because, they allege, it will adversely affect business conditions. Have we yielded so far to the blandishments of Federal subsidies and Government support that we have forgotten our Nation is great because of individual effort as contrasted to state paternalism?

Today the direct debt of the Federal Government is $280 billion. Our debt is equivalent to the full value of all the land, all the buildings, all the mines, all the machinery, all the livestock—everything of tangible value in the United States.

I think no one can deny we are mortgaged to the hilt. If we add to this Federal debt the debts of the States and localities, we have an amount in excess of $300 billion in direct public obligations.

This is 5 times as much as the total public debts in 1939. While public debt has increased fivefold since 1939 the gross national product—the output of our factories, farms, etc.—increased less than fourfold. When debt increases at a pace faster than the increase in the value of all goods and services, the currency is diluted with consequent shrinkage in the purchasing power of the dollar.

But the direct debts I have mentioned are not all of our obligations. In addition, we have contingent liabilities totaling $250 billion which the Federal Government has guaranteed, insured, and otherwise assumed on a contingent basis. No one can predict to what extent this contingent liability will result in losses which must be paid by the Federal Government.

For example, $40 billion of this contingent liability is in some 40 Federal housing programs, and from recent disclosures of graft and windfall profits in the various public-housing programs, it is evident that a substantial percentage of these contingent liabilities eventually may become a draft on the Treasury.

In addition to the $280 billion in direct Federal debt, and the $250 billion in contingent liabilities, we have on our hands a social-security system guaranteed by the Federal Government involving many millions of our citizens, which is no longer actuarily sound.

The ultimate cost of this system to the Treasury is still unestimated, but the fact remains that when the income from premiums imposed upon those who are covered in the system is no longer sufficient or available to pay the benefits, then regular tax revenue collected from those in and out of the system will be used to finance the deficiency.

EVILS OF DEFICIT SPENDING

Here are some of the evils of deficit spending:

The debt today is the debt incurred by this generation, but tomorrow it will be debt on our children and grandchildren, and it will be for them to pay, both the interest and the principal.

It is possible and in fact probable that before this astronomical debt is paid off, if it ever is, the interest charge will exceed the principal.

Protracted deficit spending means cheapening the dollar. Secretary Humphrey testified before the Finance Committee that the greatest single factor in cheapening the American dollar has been deficit spending.

Since I have been in the Senate, interest alone on the Federal debt has cost the taxpayers of this country more than $75 billion. At present rates, on the Federal debt at its present level, interest on it in the next 20 years will cost taxpayers upwards of $150 billion.

Since 1940 the Federal Government has borrowed and spent a quarter of a trillion dollars more than we have collected in taxes.

Year by year, nearly in direct ratio to deficit spending, the purchasing value of the dollar has declined. Beginning with a 100-cent dollar in 1940, the value of the dollar had declined to 52 cents in 1954.

As proof of the fact that deficit spending is directly responsible for cheapening the dollar, let me mention that in 1942, when we spent $19 billion in excess of revenue, the dollar in that 1 year declined 10 cents in value.

In 1943, another big deficit year, the dollar lost 5 cents more in value, and another 9 cents in 1946. From 1940 through 1952, an era of heavy deficit spending the dollar lost 48 cents in value, or nearly 4 cents each year, and it is still slipping but in much lesser degree.

Some may regard these facts and figures lightly, but the loss of half the purchasing power of its money in 13 years should be a serious warning to any nation.

Cheapened money is inflation. Inflation is a dangerous game. It robs creditors, it steals pensions, wages, and fixed income. Once started, it is exceedingly difficult to control. This inflation has been partially checked but the value of the dollar dropped slightly again in the past year. It would not take much to start up this dangerous inflation again.

Public debt is not like private debt. If private debt is not paid off, it can be ended by liquidation, but if public debt is not paid off with taxes, liquidation takes the form of disastrous inflation or national repudiation. Either is destructive of our form of government.

Today the interest on the Federal debt takes more than 10 percent of our total Federal tax revenue. Without the tremendous cost of this debt our annual tax bill could be reduced 10 percent across the board.

The interest charge would be greater if much of the debt was not short-termed with lower interest rates. Should this debt be long-termed at the 3¼ percent paid on recent 30-year bonds, the interest would be nearly 15 percent of the Federal income. No business enterprise could survive such heavy interest out of its gross income.

FEDERAL GRANTS TO STATES

Since 1934 Federal grants to States have expanded enormously in both cost and functions. They slip in like mice and soon grow to the size of elephants. Every Federal grant elevates the control of the Federal Government and subordinates the control and authority of the States.

Nothing is more true than the rule that power follows the purse. When the Federal Government makes a grant it directs exactly the manner in which the funds are expended, even though the States partially contribute to the project. Time and time again I have seen the iron hand of the Federal bureaucracy with grants compel the States to do things they did not want to do.

Growth in Federal grants is indicated by the fact that in 1934, 21 years ago, the total of such grants was $126 million covering 18 programs. Now Federal grants total $3 billion for 50 programs. This is an increase of 300 percent in programs and 2,300 percent in cost.

These are the figures to date. As to additional grants for the future, President Eisenhower, in his address on the state of the Union, proposed to open up three Pandora's boxes of new Federal "handouts" to the States.

The proposals by the President, if adopted by Congress, would be the greatest increase in grants to States yet undertaken and the longest step yet to Federal paternalism.

Under the administration's road proposal a "dummy" corporation, without assets and without income, would issue bonds for $21 billion, and Washington would take control of 40,000 miles of the best roads in the 48 States.

By legerdemain this $21 billion in Federal agency bonds would be declared as not Federal debt and would be excluded from the debt limitation fixed by Congress.

The interest would be $11.5 billion, or 55 percent of the funds borrowed.

It was proposed to pay the principal of these bonds and the interest on them with permanent indefinite appropriations, which would remove the corporation from annual appropriation control by Congress.

The proposal would abolish the policy established in 1916—39 years ago—requiring States to match Federal funds for roads.

The scheme was predicated upon pledging federally imposed gasoline taxes over a period of 30 years for the repayment of the bonds and the interest.

The Comptroller General of the United States, Mr. Joseph Campbell, recently appointed by President Eisenhower, said of this proposal:

"We (the General Accounting Office) feel that the proposed method of financing is objectionable, because * * * the borrowing would not be included in the public debt obligations of the United States. * * * It is our opinion that the Government should not enter into financial arrangements which might have the effect of obscuring financial facts of the Government's debt position."

Comptroller General Campbell also questioned the legality of the proposal.

We all want good roads. The people are willing to pay for good roads, but it is certainly not necessary practically to destroy the fiscal bookkeeping of our country in order to finance our road system.

These bonds would, of course, be a general obligation of the Government. There is no banker in this audience who would buy bonds of such a dummy Federal corporation without the guaranty of the Federal Government.

Should the gasoline tax be dedicated 30 years in advance for the payment of bonds issued to build roads, then, by the same line of reasoning, other taxes could be dedicated for other specific purposes. If this were carried far enough there would be no funds for the more unglamorous but essential functions.

The second of the three administration State-aid proposals involved about $8 billion in direct appropriations and contingent liabilities for payments, grants, loans, and guaranties to States for school construction. The last bastion of States rights and individual liberty lies in the education of our children.

Federal appropriations to public schools followed by the inevitable Federal control will strike a fatal blow at the grassroots of our democracy.

I do not believe that there is a State or locality in the Union that cannot provide for the cost of its public school system if there is the will to do so.

It is impossible to estimate the cost of the President's third proposal. It was for a so-called Federal health payment program. It would be certain to cost millions of dollars annually and it could easily be the beginning of socialized medicine.

NO SUCH THING AS A FEDERAL GRANT

It is well for everyone to understand that there is no such thing as a Federal grant. All of the money comes from citizens in the States. The money goes to Washington and there it is subject to deductions for Federal administration. This money then goes back to the States less deductions, and the Federal Government tells us how to spend our own money.

Proposals have been advocated changing our budgetary system. The Secretary of the Treasury has not approved these proposals and I am certain he will not. But there are two budgetary proposals which recur with persistency, and I want to warn you of them.

First, there is the proposal for a cash budget. Those who advocate the cash budget are suggesting that the Government pay its routine bills with savings of the citizens who have entrusted protection of their old age and unemployment to the guardianship of the Federal Government. These trust funds were established from premiums paid by participants in social security, unemployment insurance, bank deposit insurance programs, etc. Not a cent of these funds belongs to the Government.

Second, some are advocating a capital budget which means that so-called capital expenditures should not be considered as current expenditures in the budget.

Those who advocate the so-called capital budget must start out with the fallacious assumption that the Government is in business to make a profit on its citizens. To my knowledge the Federal Government has never made a bona fide profit on any Government operation.

They must assume that debt contracted by a Federal agency is not a debt of the Federal Government and a burden on all of the taxpayers.

I am an old-fashioned person who believes that a debt is a debt just as much in the atomic age as it was in the horse and buggy days.

A capital budget must assume that Government manufacturing plants, such as atomic energy installations, are in commercial production for a profit, and that Government stockpiles are longtime investments for profit instead of precautions against emergencies when they would be completely expendable with no financial return.

Likewise, it must assume that the agriculture surplus program is primarily a long range investment deal instead of a prop for annual farm income to be used when needed on a year-by-year basis.

While the vastness and complexity of the Federal Government of the United States necessarily makes budgeting difficult, the so-called conventional budget currently in use offers the best approach to orderly financing with fullest disclosure.

What is needed for a better fiscal system is fuller disclosure of Federal expenditures and responsibility for them—not less, as inevitably would be the case with so-called cash and capital budgets.

With full disclosure of the Federal expenditure situation, the American people then would have an opportunity to decide whether they wanted to recapture control and bring the rate of spending into balance with the rate of taxing and thus reduce the tremendous Federal debt burden we are now bearing.

To recapture control we must first reduce unexpended balances in appropriations already made and rescind those which are nonessential. When we started this fiscal year unexpended balances in appopriations already made totaled about $100 billion, including $78 billion in appropriations enacted in prior years and $20 billion in authority to spend directly out of the public debt.

The situation is made even worse by the procedure under which Congress acts on appropriation bills. Not only has Congress lost control over the annual rate of expenditure, but once the President's budget is submitted in January, Congress never again sees it as a whole until after the appropriations are enacted. The first thing Congress does is to split the appropriation requests of the President into a dozen or more bills. Then it proceeds to consider them separately over a period of 6 months or more. In the consideration of these bills attention is given only to appropriations, and these may be spent over a period of years. An appropriation enacted in a year when revenue is high may actually be spent in a year when revenue is low. There is never an opportunity in Congress, in action on appropriation bills, to consider them in terms of annual expenditures in view of estimated revenue.

To correct such an intolerable situation, along with 48 other Senators, I have introduced legislation providing for a single appropriation bill which would set forth not only requested appropriations for the future but also unexpended balances available in prior appropriations. This resolution has three times passed the Senate but has not yet been acted on by the House.

It provides further that Congress write into the consolidated appropriation bill limitations on expenditures in the ensuing year

from each appropriation. And beyond this it provides that in determining the expenditure limitations all proper consideration should be given the anticipated revenue, the cash position of the Treasury and the level of our Federal debt.

By this process, the Congress and the public would have the means of knowing our fiscal position and the facilities would be provided for balancing the budget with reduction in taxes and debt.

Along with this, I have introduced legislation giving the President the authority to veto items within appropriation bills, thus according him a double check on log-rolling which most of the governors in this country have used for years without abuse.

In short, I advocate one budget with full disclosure as to our expenditures, which fixes responsibility not only for the expenditures but also the administration of expenditure programs; I advocate a single appropriation bill in which Congress not only authorizes expenditures but controls them in a manner that can be considered in view of revenue. A budget is not a budget unless it has two sides, expenditure and income. And finally, I advocate an item veto for the President, who is elected to his office by all of the people.

With these provisions, I believe the budget can be balanced, the debt can be reduced and taxes can be lowered.

If, by budgetary and legislative procedure, we could recapture control of expenditures from the bureaucratic agencies, there are obvious places where they could be substantially reduced and eliminated without impairment of any essential function.

President Eisenhower has made a good start. The Truman budget for fiscal year 1953 totaled $74.3 billion. Estimates of the Eisenhower budget currently under consideration total $62.4 billion—a reduction of nearly $12 billion. Our tax income is $60 billion. Our deficits are decreasing, but we are not yet on a pay-as-you-go basis.

Most of the reduction has been in the military, and this is largely incident to the end of the Korean war.

The Secretary of the Treasury, Mr. Humphrey, for whom I have great admiration, and the able Budget Director, Mr. Hughes, are working diligently and making substantial progress toward sounder budgetary procedure and the elimination of waste in expenditures.

We are still practically at the peak of expenditures for domestic-civilian programs and proposals for more are coming forth in a steady stream.

In fact, expenditures for strictly domestic-civilian programs now total $24 billion, and this is more than 3 times the total cost of these programs in 1940, when we started the World War II buildup.

Even this is not the whole story on domestic-civilian expenditures, because these figures do not reflect the liabilities of the tremendous loan insurance and guarantee programs.

Nonessentials in these programs must be eliminated and this clearly can be done, as Mr. Hoover and his two fine Commissions on Government Organization have demonstrated in nearly 500 recommendations to date—some of which have been adopted, while others still await action.

With the pressure for more and more Government which seems to characterize our times, I am convinced that such constant examination of Government as the Hoover Commission surveys has become a continuing necessity.

With budgetary disclosures and congressional control, under current circumstances and conditions, we should reject all new proposals for Federal spending innovations.

In fact, the budget for fiscal year 1956, beginning next July 1, could be reduced $5 billion by eliminating expenditures contemplated under new legislation and by eliminating increases in items under existing legislation. I would oppose all new proposals to invade the responsibilities of States, localities, and individuals and start immediately to liquidate many of the programs already in existence.

Beyond this, I would eliminate as rapidly as possible all foreign economic aid, and I would get military expenditures quickly in hand through control of unexpended balances.

So far we have spent nearly $40 billion for foreign economic assistance. And at this late date, after 10 years of post-war foreign aid, the President has proposed to increase foreign-aid expenditures in the coming year by nearly 10 percent, and he has asked Congress for new foreign-aid appropriations in amounts nearly 25 percent higher than were enacted during the past year.

We are still employing 562,158 civilians overseas. These people are employed all over the world, including 64 in Cambodia.

This foreign aid has got to stop sometime, and so far as I am concerned the time to stop so-called economic aid is past due.

No one favors a reduction of our present burdensome taxes more than I do. I sit on both sides of the table. As an individual, I pay tubstantial taxes on my business operations. As a member of the Senate Finance Committee I have the opportunity to hear testimony of those who protest exorbitant taxation.

But as anxious as I am as an individual for tax reduction, I am opposed patriotically to tax reduction which requires us to borrow and add to the public debt. It seems to me to be a certain road to financial suicide to continue to reduce taxes and then to borrow the money to make good this loss in revenue.

As things are now shaping up, there will be keen competition between the two political parties for tax reduction in the political year of 1956. If we reduce expenditures this is all well and good but, under political pressure, we should not yield to reducing taxes and still further unbalance the budget. Tax reduction should never be made a political football.

As chairman of the Senate Finance Committee, I opposed the $20-tax reduction to each individual as passed by the House of Representatives this year. This would have occasioned a loss of $2.3 billion to the Treasury, all of which would be added to the debt. It would have given a tax relief of only about 7 cents a day to each taxpayer and would have removed 5 million taxpayers completely from the tax rolls.

To borrow money to reduce taxes is not, in fact, a tax reduction. It is merely a postponement of the collection of taxes as, sooner or later, the taxes thus reduced will have to be paid with interest. There is only one sound way to reduce taxes and that is to reduce spending first.

At home we can get along without Federal usurpation of individual, local, and State responsibilities, and we can get along without Federal competition in business whether it be hotels, furs, rum, clothing, fertilizer, or other things.

The Bible says if thine eye offend they pluck it out. I say if the Federal Government should not engage in such activities, we should first stop new invasions and then gradually, if not abruptly, eliminate the old intrusions. When we do these things we shall balance the budget, for lower taxes and reduced debt. There will be no further need for trick budgets and debt-ceiling evasions and hiding taxes. The Government will be honest in itself, and honest with the people.

A balanced budget could be in sight if (a) we do not increase spending, and (b) we do not reduce taxes. Assuming no further cut in taxes, only a 4-percent reduction in spending, in terms of the President's budget, would bring us to that highly desirable goal.

Is This Age of Fear Our Destiny?

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1955

Mr. UTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I respectfully submit an editorial by Mr. Fred Speers, editor and publisher of the Daily Times Advocate, Escondido, Calif., which appeared in that paper on April 28, 1955, under the title of "Is This Age of Fear Our Destiny?"

It is most concise and descriptive of the fears that have gripped our Nation for the past 2 decades. In reading the editorial I am sure you will agree that if we would only supplant these fears with more faith and positive thinking, no doubt there would be unharnessed a force that offers unlimited possibilities to improve our world of today.

The editorial follows:

IS THIS AGE OF FEAR OUR DESTINY?

One cannot help but wonder if we Americans may not have entered an "age of fear" which is conditioning almost every act of our lives. Maybe it started with the depression of the 1930's and efforts to minimize the haunting fears it touched off. The fear of loss of home, the fear of savings being wiped out, the fear of penniless old age, the fear of losing a job, the fear of crop failures, the ever-present fear of illness—all these and others, too, were played upon with more or less success once currency was given the amazing phrase, "the only thing we have to fear is fear itself." (Think that over sometime; just what does it mean, anyhow?)

Came then the outbreak of the war in Europe in September 1939. Came then a host of new developments, each with its new array of fears: fears that England would go under (and we would be left alone), individuals' fear of being drafted, fear that the United States would be dragged into war, fear of families that their sons would be sent abroad, fear of enemy bombardment and countless, nameless fears that times of great world tensions bring. Came then Pearl Harbor—and the fear on the west coast about being left defenseless. Came then the submarine warfare of 1943 in the Atlantic—and the fear on the east coast that war was coming right to the beaches.

Came then the peace—and are fear of widespread unemployment during the changeover to peacetime activities. Came then the cold war—and the fear of Russian might turning a cold war into a hot war without warning. Came then the Korean war—and fear if we fought it to victory rather than stalemate that we would goad the Russians into a full-fledged world war III. Came then the armistice in the Korean war (that's all it is, you know) and the old fear of widespread unemployment was revived and the same discredited prophets of doom went up and down the land again to play upon fears for political purposes. And in these years, too, there was born the fear that followed the breaking of the United States monopoly in atom weapons—the fear that the Russians might unleash atomic weapons. It gave way to the even greater fear that the Russians might unleash H-bombs.

And now, near Las Vegas, they're testing American-style buildings to see how they stand up under nuclear weapons' effects. The general thought, according to civil defense "releases," is that you're not in any position to feel cocky about an atomic attack

unless you've got at least 3 feet of earth between you and the blue sky.

Is this the measure of our fear? Three feet?

If this, then, be our destiny as Americans, we might just as well make it 6 feet of earth and let it go at that. Have we, the descendants of pioneers who braved Indian arrows, scalping knives, and tomahawks, frightened ourselves into this "age of fear"? Let us pray that this spell will pass.

High Level Garrison Reservoir Gains Widespread Support

EXTENSION OF REMARKS
OF
HON. OTTO KRUEGER
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1955

Mr. KRUEGER. Mr. Speaker, under leave to extend my remarks, I would like to call attention to the widespread support for a 1,850-foot operating level for Garrison Dam Reservoir in North Dakota.

The dam is built, the project is more than 80 percent complete. But because of the opposition of a few people in a limited area the final stages are being held up. These people feel that their fears and their personal wishes are superior to the authority that Congress gave the Bureau of Reclamation and Army Engineers when the dam was designed and built.

This objection has not been important until now when the reservoir is filling; when the first power will come off the generators. The upstream land must be acquired; the protective works must be built. Orderly progress calls for this work in fiscal 1956.

Congress has been asked by the majority of the people of the State not to further restrict this construction. The rural electric cooperatives—all of them in the State, have sent resolutions protesting this curtailment of hydropower; the Upper Midwest Power Forum, with 400 co-ops represented are against any curtailment of the reservoir capacity. The president of the Mississippi Valley Association, Wilbur Jones, of Omaha, says:

> Congressional approval of this restriction would be a clear-cut example of the welfare of millions being sacrificed to the desires of a few.

The county commissioners of all counties east of the Missouri River by resolution are in favor of the full operating capacity of the dam. Likewise 43 cities in the State; the State legislature; the Farmers Union; 43 civic organizations and groups have publicly declared their support of the high operating level.

Other States along the river have an interest in the increased hydropower, the flood control, and irrigation benefits that a high pool level will mean.

Following are the organizations; counties, and city governmental groups that have sent resolutions to me:

REA Co-op Resolutions Favoring 1,850-Foot Level on Garrison Pool

1. North Dakota Association of Rural Electric Cooperatives, Bismarck, N. Dak.
2. Capital Electric Cooperative, Inc., Bismarck, N. Dak.
3. Central Power Electric Cooperative, Inc., Minot (representing eight co-ops).
4. Kem Electric Cooperative, Inc., Linton.
5. Nodak Rural Electric Cooperative, Grand Forks.
6. Slope Electric Cooperative, Inc., New England.
7. South Dakota Rural Electric Association, Leola, S. Dak.
8. Minnkota Power Cooperative, Grand Forks (representing 10 co-ops).

List of Civic and Other Organizations Supporting 1,850-Foot Level for Garrison Dam

1. Anamoose Civic Club, Anamoose.
2. Bismarck Chamber of Commerce, Bismarck.
3. Cando Commercial Club, Cando.
4. Carrington Kiwanis Club, Carrington.
5. Cooperstown Commercial Club, Cooperstown.
6. Devils Lake Chamber of Commerce, Devils Lake.
7. Drake Commercial Club, Drake.
8. Drake Volunteer Fire Dept., Drake.

43. Wahpeton, N. Dak.

H. R. 12

EXTENSION OF REMARKS
OF
HON. HARRIS B. McDOWELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1955

Mr. McDOWELL. Mr. Speaker, in reaching my decision to support H. R. 12, I have given serious consideration to all aspects of the farm problem. I do not claim that the passage of this legislation will result in solving the difficult

problem of overproduction of food, nor that it will result in higher prices for farm products. My criticism of the present policies of Secretary of Agriculture Ezra Taft Benson are based upon information compiled by his own Department of Agriculture as they affect our farm families today in the State of Delaware.

It appears that the Republican administration is leading the Delaware farmer down the road to lower income even faster than the farmers of the country as a whole.

For 20 years we heard from the Republican Party stories of how the Democrats were destroying the economy of the country and how they were particularly bringing "socialistic" ruin to the farmers. Yet under the years of Democratic administration cash income of the American farmer rose to heights that never before had been reached. There was a real increase in the farmer's purchasing power that made him a prosperous consumer for the production of our factories.

I am severely disturbed by the latest figures on the cash income of farmers in the State of Delaware released by Secretary of Agriculture Benson. It seems to me that farm income is dropping in my State and in the Nation as a whole at a rate that gives genuine cause for alarm.

Secretary Benson reports that in the first 2 months of 1955 cash income of Delaware farmers had further declined $2,226,000—a quarter of a million dollars a week. If this disastrous decline in Delaware farm income is not halted, it will mean a cash loss of a million dollars a month, or $12 million for the calendar year ending January 1, 1956.

Figures recently released by the Department of Agriculture show that in 1954 Delaware farm income fell from $103,411,000 in 1953 to $93,708,000—a loss of $9,703,000. These figures indicate that a continuation of the present policies of the Republican Administration will cost Delaware farmers $21 million by January 1, 1956, representing the last two calendar years.

Secretary Benson's farm income report shows that farm income as a whole throughout our Nation was $4,452,000,000 the first 2 months of this year, a drop of $251 million from the same 2-month period of last year. That is a quarter of a billion dollars out of the pockets of America's farmers in just 2 months. There has been no corresponding reduction in their costs of operation in this period. The Department itself admits that most of this drop has had to come out of the farmers' earnings.

But in 1953 when the so-called friends of the farmers were in power, the "friends" who had been telling them how bad the alleged policies of the Democratic Party were, the farmers' income immediately began to decline. It dropped to $31,413,000,000. Last year's farm receipts were down to $29,954,000,000. This year, according to the early indications, the drop will be even further.

It is interesting to note that the Department of Agriculture this week issued a report called The Agricultural Outlook Digest.

I quote from this report:

> With prices a little lower, and marketings nearly as large, cash receipts from farm marketings are expected to be lower in 1954. The net income realized by farm operators will be down in 1955, perhaps by as much as 5 percent.

Why should this be if the economy is prosperous, if income in the country as a whole will be about the level of last year? Why should the farmer's income be cut still further than it already has?

Secretary Benson's Department supplies the answer. I quote from the Outlook Digest:

> Consumer income after taxes so far this year has been running about 3 percent above the same period of 1954. About one-fourth continues to be spent for food. But a little less of the consumer's food dollar is going to the farmer—42 cents in the first quarter compared with 45 cents a year earlier.

And, they might have added, compared with a high of 56 cents that was reached under Democratic administration.

So there is your answer as to why the farmer is going to take another 5 percent cut in his income this year—under the most optimistic circumstances—and as to why the farmers in Delaware may take a cut much deeper than that. The farmer is getting only 42 cents out of the consumer's food dollar. The middleman is getting 58 cents. A year ago it was a 45–55 split. The farmer gets only 42 cents for all the work of planting the crop, raising it, harvesting it, and hauling it to market. The middleman, who takes his crops at that point and puts them on the consumer's table, gets 58 cents out of the dollar.

To make these statistics specific let me cite just one more recent report by Secretary Benson. In his annual report on the production of chickens and eggs, he informs us that Delaware broilermen raised 69,620,000 birds last year, an increase of more than 1 million over the previous year. Weight of these birds was 216 million pounds, a gain of 4 million pounds. But the income received from sale of these birds was $48,816,000 compared with $55,803,000 in 1953.

One million more birds, 4 million more pounds of succulent Delaware broiler meat, and $7 million less income. Most of that drop had to come out of Delaware broilermen's net income. Their costs of production were down a little, but not that much.

So there is the picture in Delaware as in the country as a whole, farm income dropping further every month from an already discouraging level that has been reached under the Republican administration. Farmers will have at least 5 percent less income this year than last. Other people's incomes will be up 3 percent, if we may believe the administration's forecast. The farmer's share is a little less than it was, just 42 cents out of the consumer's food dollar. We see no signs of distress on the part of Secretary Benson or his associates about this situation. They raise no cry of alarm.

A bulletin compiled by the Agriculture Committee of the House of Representatives, dated March 26, 1955, states that—

> Farm prices have declined 7 percent from 1949 to 1954, and in this same period retail food prices have increased 13 percent.

This unprecedented change in producer-consumer prices has taken place under what was promised as an administration pledge to 100 percent parity for the farmers and more food at cheaper prices for the housewife. What a farce these promises have turned out to be. An expensive lesson for the farmers and housewives but perhaps it will be one well learned.

The present policies of the Republican administration with respect to farm prices must be changed by act of Congress. I shall vote for a return to the policies which under 20 years of Democratic administration brought the greatest era of prosperity to not only the American farmer, but to all segments of our economy—farmer, industrialist, businessman and laborer—thus resulting in the greatest consumer buying power the world has ever known. Yes, Mr. Speaker, I shall cast my vote for 90 percent of parity and in so doing exercise my responsibility to safeguard the economic well-being of my constituents.

The Effect of Spiritual Guidance in the World Today

EXTENSION OF REMARKS
OF
HON. CLARENCE J. BROWN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1955

Mr. BROWN of Ohio. Mr. Speaker, under unanimous consent to extend my own remarks in the Appendix of the RECORD, I include therein the following essay by Gene Swartz, of Richwood, Ohio, which recently won the American Legion of Ohio statewide essay contest:

THE EFFECT OF SPIRITUAL GUIDANCE IN THE WORLD TODAY

(By Gene Swartz, Richwood, Ohio)

Church bells ringing, people hurrying, organ music softy playing; this the beginning of a typical Sunday morning in the lives of many Americans. Now, more than ever before, the church is playing a greater part in the lives of more and more people.

What is behind this increasing interest in spiritual activities? Why have so many people in our county become so involved in weekly religious worship?

Perhaps the answer can best be found by looking back into the history of our own country's origin. American was founded and first settled by a group of pilgrims from Europe seeking freedom to worship as they believed. As more and more refugees from the Old World arrived, new churches and religious groups were started along our eastern coast.

When the leaders and officials of our Nation met to construct a Constitution after the Revolutionary War, religious freedom was established as a permanent fact in our Government. Now freedom of religion is found in democracies all over the world.

As our country grew, ministers and missionaries spread rapidly across the face of our land. Now these original churches have grown into what is now one of the greatest systems of organized religious instruction known.

Our Government mirrors the effect of religion in national politics. Each session of the United States Congress is opened with prayer, and President Eisenhower and many

other Government leaders are faithful church members.

Even our type of warfare reflects the spiritual influence in America. Our armies are not trained to kill mercilessly, and by fighting only to preserve peace, we are not disloyal to the commandment "Thou shalt not kill."

Perhaps one of the most noted advances in spiritual guidance is the instruction of religious education in some of our public schools. This is done on a voluntary basis, compelling no one to enroll. By training and educating the youthful minds of the future citizens of our country, we are establishing the trend toward a more religion-conscious world.

The potentiality of religion in the world in the future years is unlimited. New, bigger, and better churches are being constructed continuously. The Word of God and Bible teachings are reaching more people today than ever before through the facilities of radio and television, evangelism, and home missions. If religion in our land continues to grow as it has in the past, the effect of this spiritual growth wil someday overshadow communism and many of the other evils which now exist uncurbed.

Misgivings of the Washington Post

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. HOFFMAN of Michigan. Mr. Speaker, at least one thing can be consistently said of the Washington Post, now named the Washington Post and Times Herald; it is consistent and unceasing in its efforts to avoid supporting any thought or program which those who wrote the Declaration of Independence, the Constitution, or the Bill of Rights would have logically thought helpful toward either the establishment or the continuance of the independence, the Republic, and the opportunities which they gave us. Unceasingly, at least since it has been my misfortune to see and read it, the Washington Post has advocated policies which are more suitable to bring about the advance of other nations than that of the United States of America.

Almost without exception, in the slant of its news stories and the trend of its editorials, it has been against practically everything which those living in the Midwest at least have deemed vital and necessary toward the preservation of our constitutional form of government, the prosperity, the happiness and contentment of our people.

Over the same period, it has vigorously and without regard for the truth, at practically every conceivable opportunity attacked and opposed those in public office who have expressed themselves in opposition to the surrender of our sovereignty and independence of our Government.

The Post seldom, if ever, while speaking out against what it construes to be a denial of civil rights, while appearing to combat prejudice and hatred, has condemned lawlessness, violence, or reprehensible conduct on the part of politically powerful groups which support its own—the Post's—pet ideas.

Those who direct the policy of the Washington Post, whatever may be the individual personal beliefs or policies, seem to be more deeply concerned with the welfare of people in other lands, with the well-being and the security of other nations than they are with the people of the United States of America or of the Republic itself.

Typical of the methods of the Communist Party and of its socialistic doctrine is an editorial in this morning's Post, captioned "Curious Choice," and which reads as follows:

CURIOUS CHOICE

John B. Hollister, of Cincinnati, whom President Eisenhower has designated head of the new International Cooperation Administration to be set up in the State Department, is an able lawyer and administrator who has been executive director of the Hoover Commission. In his new capacity, if he is confirmed by the Senate, he will be in charge of all foreign-aid operations, including the technical assistance programs. The post demands unusual energy and special organizational gifts, both of which Mr. Hollister has. But it may be asked whether he wholeheartedly believes in the program he is picked to administer and whether he will bring to it the zeal which is required if the Asian part of it is to strike fire. If rumors concerning a preliminary Hoover Commission report on foreign aid can be relied on, Mr. Hollister's chief interest would seem to be to liquidate it as soon as possible.

Mr. Hollister is a former law partner of Senator Taft and a member of the Taft wing of the Republican Party. His choice for this significant post may have been influenced in part by a desire to keep the Taft wing of the party under the Eisenhower banner. If such is the case, it may prove to be as unfortunate as the appointment of Clarence B. Manion, former Chairman of the Commission on Intergovernmental Relations, whose resignation the White House requested when he criticized many Eisenhower programs. Mr. Hollister would make an excellent director of the General Services Administration or some other agency chiefly concerned with economy and efficiency. But the foreign-aid chief should be concerned with social and economic development programs as well as with economy and efficiency. He must be interested in bold experiments designed to raise living standards in the underdeveloped countries. These require the Government to take risks with its money in the interest of long-term and sometimes intangible returns.

We hope that our misgivings about Mr. Hollister, who is a man of ability, experience and patriotism, are ill-founded. But the Senate ought to satisfy itself on these questions before it approves him for a task that is of such importance in our foreign relations. The vigorous continuance of some form of foreign aid to the underdeveloped areas is an investment in world stability of vital concern to the American people.

Mr. Speaker, being compelled to admit that Mr. Hollister is a qualified, energetic, industrious, sound-thinking American, it views his appointment as head of the International Cooperation Administration with misgivings.

Apparently the appointment of any loyal American with sound business experience and undeviating devotion to the principles enunciated in the Constitution to any job carrying either the authority to determine policy or direct the expenditure of tax dollars is abhorrent to the Post.

Tiger and the Veterans

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1955

Mr. ROGERS of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Dallas Morning News of Sunday, April 3, 1955:

TIGER AND THE VETERANS

(By Walter C. Hornaday)

Representative OLIN E. (TIGER) TEAGUE doesn't like to see veterans shoved around. But neither will he stand for the men and women who fought the Nation's battles taking advantage of Uncle Sam.

Because of his interest in fair play, the Texas Congressman has been charged by some veterans' organizations with being "anti-veteran."

Nothing could be further from the truth.

Right now TEAGUE is up in arms against a proposal of a Hoover Commission task force to close 19 veterans hospitals, including 3 in Texas—at Bonham, Amarillo, and Marlin.

TEAGUE pointed out that most of these hospitals are practically new. He also said that it would the loss of 175 beds for mental patients at a time when the need for psychiatric care is growing. He protested against the long distances many veterans would have to travel to obtain treatment if the closing program were carried out.

"There is some obligation to provide an opportunity for medical care to all veterans of the Nation, regardless of their location," TEAGUE asserted.

TEAGUE also objected to a Hoover Commission task force recommendation to halt construction of any more veterans hospitals. He said it would prevent replacement of 16 hospitals scheduled for long-range replacement. They include temporary structures, converted hotels and other hastily arranged installations.

He feared the proposal also would prevent major renovation projects covering some 55 hospitals.

TEAGUE's fight on the hospital issue already has brought some success. The House Appropriations Committee raised an administration request of $13,815,000 for modernization to $30 million.

Its action showed Congress is not going to close hospitals, but rather is ready to spend large sums fixing up the existing ones. The Appropriations Committee members knew the position of TEAGUE and his Veterans' Affairs Committee when they acted.

Ever since TEAGUE came to Congress and was assigned to the veterans affairs group he has fought against the exorbitant demands of some veterans groups who have been encouraged by politicians seeking votes.

He had many tussles with former Representative John E. Rankin, Democrat, of Mississippi, while Rankin was committee chairman, and later with Mrs. EDITH NOURSE ROGERS, Republican of Massachusetts, when she became chairman under the Republicans.

Veterans' bonus bills kept popping up, and TEAGUE, aided by House Democratic leaders, did his best to stop them in committee. One did get through and failed of passage by only one vote on the House floor.

TEAGUE takes the stand that the veterans are not a select group but are responsible citizens. He feels they must consider the cost to their Government of any special consideration they receive and keep their demands within reasonable limits.

The Texan has always been ready to go the limit to take care of the men and women disabled through military service. He's just as determined to bar the chiselers from dipping into the Treasury.

TEAGUE doesn't favor drawing too strict a line between service-connected and non-service-connected cases when it comes to the veteran receiving hospitalization.

"There is no way to establish a direct relationship between service and disease where no actual disease was incurred in service," said TEAGUE. "But where the veteran rendered strenuous service under extremely adverse weather conditions, lost weight, and deteriorated generally in physical condition, it is reasonable to assume his service contributed to later illnesses."

On the average day in 1954 65,000 out of a total of 109,000 occupied beds in veterans hospitals were used by non-service-connected cases.

TEAGUE'S answer to that is that a substantial part of the 65,000 patients are hospitalized for mental disabilities, tuberculosis, and other serious chronic diseases, such as cancer, polio, paralysis, and heart disease. He's particularly concerned over failure of the Government to keep up with the need for care for mental cases.

No Member of Congress has a more distinguished war record than TEAGUE. He took part in the Battle of the Bulge, had part of his foot shot off, and left the service with the rank of colonel.

He has been awarded the Silver Star three times for bravery in action. He can wear six Purple Hearts, but claims only three. He also has the French Croix de Guerre with palm.

His disability doesn't prevent him from being extremely active not only in carrying on his duties as Congressman but in athletics. He's the unofficial paddle ball champion of the House. He plays every year in the Democrat-Republican baseball game and gets around far better than his unhandicapped colleagues.

This Texas Congressman's first love is Texas A. & M. He's a graduate of that school and his Texas address is College Station.

Congressman TEAGUE will be 45 this month. He was elected in 1946 to succeed Luther Johnson, who resigned to go on the tax court.

He's had the nickname of Tiger since high-school days. Says he doesn't know how or why he picked it up.

Polish Constitution Day

EXTENSION OF REMARKS
OF
HON. HARRIS B. McDOWELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1955

Mr. McDOWELL. Mr. Speaker, on May 3, 1955, the people of Poland, long oppressed by the Nazis and now enslaved by the Communists, cry out for freedom. Poland's Constitution Day and free Poland's national holiday is a symbol and rallying point of her people. A day that signifies an unrelenting search for independence—an independence lost when the Russian Army under the pretext of freeing Poland in reality destroyed her independence.

The Polish people oppose the Communists at every turn and in every way they can. Such opposition is certainly to be encouraged and the people supported in their efforts to be free. The Poles cannot, of course, object in an organized way on a national level, but they can be given the comfort and assistance of the free world. The Polish-Americans of our great country are their greatest source of encouragement and by their example may do much eventually to assist them in their quest for liberation.

The need for a free and independent Poland was recognized by former President Woodrow Wilson when he made it one of his famous 14 points announced in January 1917. Our present Government recognizes this goal and should do everything it can to attain it. The warm friendship of the Polish people for Americans is evident and this mutual admiration is the strongest link in the chain of freedom that will some day replace the yoke of communism.

Upon the occasion of the celebration of this important day in the lives of the Polish people, I wish to add my congratulations and my sincere desire to assist in achieving their complete independence.

Senate Haste Makes Waste

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1955

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the following editorial which appeared in the Los Angeles Times on Friday, April 22, 1955, entitled "Senate Haste Makes Waste":

SENATE HASTE MAKES WASTE

Approval by a 58–23 vote in the United States Senate of an upper Colorado River project initially calling for an appropriation of $1.6 billion and threatening the country's taxpayers eventually with a cost of $4 billion was obtained by logrolling methods and in such haste as to prevent serious consideration of its merits and demerits.

MORE TIME IN HOUSE

Fortunately consideration by the House of Representatives not only will allow more time in which to receive competent testimony on the project but will afford opportunity for opponents of the wasteful adventure to alert the country to its dangers.

In view of known engineering doubts concerning certain aspects of the project, including the unlikelihood of a safe foundation for a proposed dam in Echo Park in the Dinosaur National Monument, the inclusion of this questionable feature of the project was an affront both to conservationists who oppose it as a needless destruction of natural beauty and to those who object to it on sound engineering and economic grounds.

MEASURE OPPOSED

The haste with which the bill was rushed through the Senate undoubtedly is explained by the project backers' determination to get it as far along as possible before a pending report on the entire undertaking by the Hoover Commission can be completed and submitted to Congress.

The Commission's tentative findings are understood to be strongly unfavorable to the reclamation program as set forth in the Senate-approved measure. Inasmuch as the Hoover group is an official instrument of Congress duly authorized to study the problem and submit recommendations, only a successful stampede of the House membership can prevent consideration of the experts' conclusions before the House acts.

Both of California's Senators opposed the measure, viewing it in its present scope as a definite menace to California's rights in the waters of the Colorado, and also presenting their objections to its costly and wasteful potentials.

Senator KUCHEL gave a particularly sound and detailed analysis of the measure in his discussion of its numerous ambiguities and inconsistencies. He made plain that his attitude was not based on any selfish California standpoint but arose solely from opposition to what he considered an unworkable and indefensible experiment.

Senator KNOWLAND took direct cognizance of the propaganda line by some upper-basin spokesmen in which they would have it appear that California is against any development of the Colorado River which does not represent specific benefits for this State.

"It is a gross libel or slander," said KNOWLAND, "to say that the people of California want what does not belong to them." He stressed California's desire to receive only a share of the river's water guaranteed under the Colorado compact.

FANTASTIC COSTS

A more deliberate assessment of the overall objectionable features of the project will bring into focus, among other factors, that a general endorsement given by President Eisenhower to upper basin development does not apply to the measure hurried through the Senate.

Further enlightenment—denied in the Senate—on the ultimate cost of the project also will be possible, including the fantastic fact that the cost of providing water to irrigate acreage not required for productive use in the foreseeable future will be more than 10 times the cost of the land.

It may be unfortunate that California's vital interest in sound development of the Colorado River and in equitable distribution of its waters may give rise to some doubts as to the State's disinterested motives in this instance, but valid objections to the project under discussion are so closely attached to questions of national welfare as to make unnecessary any approach from a purely local viewpoint.

Furthermore, regardless of legislation which Congress may immediately enact, the basic water rights of the upper and lower basin States are now in process of determination by the United States Supreme Court.

Until the court acts, the pro and con arguments of all concerned are largely in the category of preliminary discussion.

The Effect of Spiritual Guidance in the World Today

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1955

Mr. HENDERSON. Mr. Speaker, the American Legion of Ohio is the annual sponsor of an essay project throughout Ohio on vital subjects. The title in 1955 is "The Effect of Spiritual Guidance in the World Today." One of the 12 winners is Jane Cash, a senior of Cambridge High School, in Cambridge, Ohio. I recommend her fine essay as a thoughtful, studious treatment of a most important subject:

THE EFFECT OF SPIRITUAL GUIDANCE IN THE WORLD TODAY

(By Jane Cash, Cambridge, Ohio.)

I am spiritual guidance.

My influence has been felt ever since the world began, when God said "Let there be light."

My influence was felt—

When Moses was led by God to the top of Mount Sinai there to receive the commandments which his people were to follow.

When One Great Man gave His disciples the Sermon on the Mount as a pattern of living and commanded, "Go ye therefore and teach all nations."

When such great men as Martin Luther, John Wesley, and John Calvin dared to defy the established church of their day to worship God in the way their conscience guided them.

When our courageous forefathers crossed the stormy Atlantic to found this great Nation of America upon religious freedom and based our Constitution upon religious principles.

When a ragged group of soldiers knelt together in the bitter cold at Valley Forge to fight for the independence of their new country.

When such men as David Livingstone and Albert Sweitzer and countless other missionaries gave up lives of ease and security to help the people of distant lands.

When a Japanese Christian name Kagawa went to live with the poorest of his people in the slums, giving them all that he had and all he could earn and exposed himself to infectious diseases until he nearly lost his life.

When 4 Army chaplains, a Jewish rabbi, a Catholic priest, and 2 Protestant ministers went down with the ship *Dorchester* giving up their place on the life boats that others might be saved.

When our marines landed on a south sea isle during World War II they expected to find cannibals, instead they found a welcome from the natives whose ancestors had been Christianized by missionaries many years before.

When people are concerned for the care of orphans, the aged, and the destitute of this and other countries and give help through such agencies as Red Cross, CARE, and CROP.

When churches are built to meet man's spiritual needs, hospitals are built to care for his physical needs and schools and colleges are built to meet his mental needs.

When the great leaders of our country forget their differences and pray together for guidance.

When the various religious faiths combine their efforts and work together for the good of all humanity in the great number of character-building organizations established for this very purpose.

I am spiritual guidance.

Although my light has at time grown dim, throughout the ages, I have continued to burn in the hearts of those who follow the One who declared, "I am the light of the world." As long as men seek this light, I will live and grow and burn more brightly than before.

Polish Constitution Day

EXTENSION OF REMARKS

OF

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1955

Mr. FORAND. Mr. Speaker, yesterday was the 164th anniversary of the adoption of Poland's Constitution, and on this occasion I want to pay a justly deserved tribute to the great people of Poland. It is most fitting that we, here in the United States House of Representatives, pause for a moment to contemplate the plight of the brave men and women of Poland now held prisoners behind communism's curtain of repression and brutality.

The constitution adopted 164 years ago demonstrated the faith in democracy and the basic freedoms which characterizes the people of Poland. Their faith has never wavered, despite the continuing ordeals they have undergone throughout the years.

Tragedy begets tragedy. The significance of this statement is readily seen when one recalls the suppression, the dismemberment and the partition of Poland throughout the centuries. In their long history, the people of Poland have had little opportunity to enjoy their inalienable right of freedom. Yet, their devotion to that cause remains paramount.

Today, from behind the iron curtain, we hear reports of heroic action on the part of these people who refuse to bend to the oppressors' demands, and who refuse to accept slavery as a normal state of mankind. The process of freedom is very slow, and although today we do not hear of any violent revolutions, there are definite actions on the part of the people and the Government of this country which are small tokens of assurance to the Polish people, and people of other nations, that are now being denied their God-given right of freedom. These tributes today, I sincerely hope will reach the hungry ears of all freedom loving people everywhere, for it is often said that the fires of freedom burn hottest among the oppressed. Lip service is not enough, however. We, who enjoy full freedom should redouble our efforts to restore Poland to its rightful place among the free nations of the world.

Acts of impunity and incidents of disdain are everincreasing. These incidents will grow and multiply until the Polish people will once again shake themselves loose of these parasitic aggressors and regain their rights and the fredom to which all God-fearing people are entitled. Such incidents will become more frequent until atheistic communism is a thing of the past, and once again the Polish people are free to worship their own God—a consummation devoutly to be wished.

It is not within the order of things that wrong shall triumph over that which is right. The day of freedom for that brave country will soon be at hand. The day that every Pole has visualized since the proclamation of their now dormant constitution will return.

Mr. Speaker, in this world beset with atomic hypertension, and with the imminent threat of global warfare let us take heart as we look to the courageousness of our Polish brethren. Let us redouble our efforts for peace in the world and the restoration of liberty and self-government to Poland and other freedom loving nations now under Communist rule.

The Effect of Spiritual Guidance in the World Today

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1955

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I am including two essays on the subject the Effect of Spiritual Guidance in the World Today, one written by Miss Jaqueline Scheorer, of Mansfield, Ohio; and one written by Miss Nancy Jones, of Newark, Ohio. These two young people of my district are the winners of an essay contest given by the American Legion and the Ladies Auxiliary of Ohio. There were approximately 80,000 essays written and 12 winners, including the Misses Scheorer and Jones of my district. I want to congratulate the Legion and the Auxiliary for putting this program into effect and I am indeed very proud of Jaqueline Scheorer and Nancy Jones. I recommend the reading of these essays to all my colleagues:

THE EFFECT OF SPIRITUAL GUIDANCE IN THE WORLD TODAY

(By Nancy Jones, of Newark, Ohio)

The effect of spiritual guidance in the world today is felt in many fields; in education, medicine, science, literature, art, music, and government. To understand this far-reaching and powerful influence, we first must know what spiritual guidance is, where it began, and how it grew.

Spiritual guidance is that leadership which is based on the religious beliefs of an individual or of a nation. It started with the teachings of Jesus Christ, who founded Christianity. This faith was nurtured by several employers of Europe, spread by the crusades, and strengthened by the rebellion of the masses under Martin Luther. It led to movements of people from one country to another. The Pilgrims and Puritans came to America in search of religious freedom.

Missionaries also went from one country to another helping the native people in many different ways. One result of the guidance of these missionaries is the development of education. Schools and colleges were founded by churches and today's splendid educational opportunities are the result.

These missionaries were also interested in health problems, and through their efforts, hospitals were built. Scientific research made great progress under the influence of Christian leaders such as Dr. Walter Reed, who risked his life for humanitarian purposes. Many others made similar sacrifices. Today science works toward the same goal. Doctors and scientists are still led by spiritual motives to improve conditions.

The cultural influence of spiritual guidance became evident in such religious paintings as The Last Supper, by da Vinci, and The Madonna, by Raphael. These masterpieces today exert a strong spiritual influence toward all who see them.

Agriculture, too, showed religious influence. The greatest Christian church in the world, St. Peter's Cathedral in Rome, stands on what is said to be the site of St. Peter's tomb. This cathedral today draws Christian worshipers from the entire world and exerts a great feeling of nearness to God upon everyone.

Christian beliefs led to magnificent oratorios. Handel's Messiah concerns the

prophecies and coming of Jesus. It is said that Handel set the Bible to music. Mendelssohn's Elijah is also great religious music. We can safely say that this kind of music always guides us to do and be our best.

Literature always has reflected spiritual guidance. The Bible still is our most beloved book and best seller. It is being translated into every language and every day is becoming a greater guide to life.

The most far-reaching effect of spiritual guidance is felt in the political word today. Various doctrines, facism, nazism, and communism, have sought to rule the world. These doctrines are completely contrary to Christian ideas, and therefore Christians are trying to destroy these isms. Among those who are making their influence felt are Winston Churchill, of England; Madame Pandit, of India; Chiang Kai-shek, of China; and President Dwight Eisenhower, of the United States. One of the most important factors of religious influence in government today is the United Nations. It is here that the doctrines of Christianity are upheld for all peoples to see and follow.

The final goal of this guidance is peace among the peoples of the world. Dr. Albert Schweitzer, who recently accepted the Nobel Prize for Peace asserted, "Neither the League of Nations nor the United Nations has brought us to a state of peace. The spirit alone has the power to bring peace." In other words, world peace will come when we accept the spiritual guidance of One who said, "I am come that they might have life, and that they might have it more abundantly."

THE EFFECT OF SPIRITUAL GUIDANCE IN THE WORLD TODAY

(By Jaqueline Scheorer, of Mansfield, Ohio)

Spiritual guidance. What does it mean? First, you must understand its meaning to become acquainted with its effect on the world. Spiritual guidance is the power of God and religious training in our lives. If all the world had complete faith in spiritual guidance, what a wonderful world this would be.

Have you ever watched a carpenter build a house? A house has so many small things in it that are very important. Without these things the house would deteriorate and fall. The carpenter or the builder watches over the house to eliminate the mistakes that would cause later deterioration and tries to see that all the small things are in good condition. When something is missing, the house isn't going to be as sound as it should be. This principle can be applied to our situation by seeing our house with all the small parts as people and countries. This house needs cooperation, understanding, friendliness, endurance, godliness, faith in God and man, love and affection. The builder is God, who will see the missing parts and defective parts and try to correct them.

For instance, let us compare Russia to a house of faulty construction. Something is missing. Do you feel as I do that spiritual guidance in Russia is the foundation that has deteriorated? They seem to have lost all fear of God and lack faith in His power. The same things have occurred in Germany, Japan, and other countries whose leaders didn't have constant spiritual guidance. They also wanted to rule the world, not with the spirit of God, or with integrity, but with force and ungodliness. They taught their children to spy upon and even to disobey their parents, to worship a man, Hitler. Could they have had spiritual guidance?

Now, today's world is faced with the problem of communism, a proposed plan where every man will have the worth of property equal to every other man. The Bible says that all men are created equal, but that does not mean our lives are to follow the identical pattern, for some must be leaders while others must be followers. Even the followers, though, are guided by God's power. You and I can't understand for what purpose spiritual guidance has seemingly been lost by so many others. But my faith in God tells me that there is a reason. It is evident in the United States that there is less misfortune than in other countries where spiritual guidance has been forgotten. Were we born to be the leaders? Let us hope and pray that we can live the lives of leaders, teaching spiritual guidance as we are being taught.

Panama Canal Needs Attention

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. DORN of New York. Mr. Speaker, an instructive and timely editorial on the Panama Canal was published in the March 1955 issue of National Republic, a magazine with offices in Washington, D. C.

The legislative measures mentioned in the editorial are S. 766 and H. R. 3335, 84th Congress, introduced in the present session by Hon. THOMAS E. MARTIN, of Iowa, and Hon. CLARK W. THOMPSON, of Texas, respectively, both of whom are recognized congressional leaders on interoceanic canals.

I include its text:

PANAMA CANAL NEEDS ATTENTION

Congress could well afford to take a little time off from politics to provide for perpetuation of the Panama Canal. The waterway needs the attention of a commission of experts to examine and report what should be done toward modernization, expansion, and permanent choice of type, whether lock or sealevel, for it is a fact, although little known, that agitation for construction of a substitute sea-level type is still active in circles which would profit greatly by the expenditure of the $3 billion to $5 billion which that type would cost.

Time and trial have demonstrated that the lock type is superior to the sea-level type, particularly at Panama where the earth is gravelly and where cuts like Culebra are subject to heavy and unexpected slides. But time also has shown that the canal needs a lake system on the Pacific side, similar to the Gatun system which serves the Atlantic side. When French engineers were studying Panama to determine the type of waterway which DeLesseps hoped to build, one of the experts, M. de Lepinay, urged that the terminals be served by lakes, which would not only take care of water supply for the locks, but also, if kept at a high level, would make it unnecessary to dig more earth from the sides and bottom of the cuts.

"Don't keep digging earth," said de Lepinay. "Keep your water level high and let more water serve you, and you will not be compelled to keep digging earth." So it was agreed by many that lakes should be provided at each end of the canal. But DeLesseps disagreed and undertook construction of a sea-level type. He failed, and some years later the lock type was adopted, with the Pacific terminal lake plan kept in suspense. This was the plan which Chief Engineer John F. Stevens had before him when it became his duty to recommend the type to be chosen. There was a strong movement, however, in favor of a sea-level type, and it became necessary for Mr. Stevens to act quickly in order to induce the President and Congress to adopt the lock type. He therefore recommended the lock type and suspended work on plans for the projected lake or lakes on the Pacific end, substituting the locks which are still operating.

The canal needs at least one additional lock of extraordinary length and width with which to transfer airplane carriers and such vessels as the Queen Elizabeth and Queen Mary, and battleships of extra width. If it is the intention of Congress to maintain the Panama Canal, now is the time to make plans to that end. Senator MARTIN, Republican, of Iowa, and Representative THOMPSON, Democrat, of Texas, who have had experience in canal matters as members of House committees, have introduced identical bills calling for creation of a commission of experts to study the Panama Canal and recommended a permanent canal policy and such further work as may be needed. These measures will deserve immediate consideration by the administration and Congress.

Rhode Island Independence Day

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1955

Mr. FORAND. Mr. Speaker, May 4 is a great day in the history of Rhode Island. It is independence day.

Under leave already granted me, I include as a part of my remarks an article on Rhode Island Independence Day which was written by a member of my staff. It follows:

RHODE ISLAND INDEPENDENCE DAY

(By Edward W. Heroux)

Rhode Island, the southern gateway of New England and the land of Roger Williams, is great in name and historic achievements, in wealth, and in people.

At the session of the general assembly, 1776, an act was passed which reads in part as follows:

"Be it enacted by this general assembly, and by the authority thereof it is enacted, That for the future the stile and title of this government, in all acts and instruments, whether of a public or private nature, shall be the State of Rhode Island and Providence Plantations."

It was on the 4th of May 1776 that the Rhode Island Assembly proved that it was truly representative of the people, and the members of the legislature that adopted the resolution renouncing allegiance to the British King proved themselves faithful followers of Roger Williams. Like him, they were not afraid to take the initiative in leading the way to freedom by declaring the independence of Rhode Island from England 2 months before Congress took similar action.

Roger Williams was a believer in democratic government and rule by the people. He beckoned the spirit of freedom of thought in all things, religious and civil, and out of his ideas there developed a proud sovereign State. The stern puritanic spirit of New England never penetrated the State of Rhode Island. Rather, the dominating spirit is one of congeniality and resourcefulness. The beliefs and hopes of Roger Williams that "no person shall be in any way molested for any difference in matters of religion and every person may have and enjoy his own judgment and conveniences in matters of personal concernments" are still alive in our hearts.

Rhode Island still maintains the original principles of its founder, Roger Williams, in faith, in freedom of speech, in religious liberties, and in a democratic form of government.

In all the educational institutions of our country today there are evidences of the principles and rules that Roger Williams entertained and introduced to his followers.

The land of Roger Williams—where the spirit of freedom of thought in all things, religious and civil, still prevails—has developed into a proud sovereign State—Rhode Island.

This Is Your Country

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1955

Mr. McGREGOR. Mr. Speaker, anyone who has ever visited the great State of Ohio is familiar with its beauties and advantages. We who are from that great State are of the same convictions that it is a symbol of American life as we believe it to be.

One of my constituents, and a very personal friend, known to thousands and thousands of people throughout the entire world, has written a short brief on Ohio entitled "This Is Your Country." I am referring to that great American and author Louis Bromfield, known to us as Louie.

Mr. Speaker, under leave to extend my remarks, I am enclosing this brief article and I recommend its reading to all:

THIS IS YOUR COUNTRY

It would seem, to judge from various magazines and publications that this is Ohio Week so far as the Nation is concerned. At least three major magazines have this month paid tributes to a State which is perhaps the most typical and symbolic of American life at its best. Holiday, the Saturday Evening Post, and National Geographic magazine have all featured Ohio during the month. Quite naturally, this attention is not displeasing to a native Ohioan who, after knowing virtually the whole of the world, still finds the State of Ohio probably the most satisfactory spot to live.

Again and again somewhere in the world I have been asked by foreigners, "Just where is Ohio?" My answer has always been the same: "It is the farthest east of the West, the farthest west of the East, the farthest north of the South, and it is the North." As the article in the Holiday magazine points out, it was never the last refuge of the migrating unfortunate. It was settled solidly by the most solid of peoples from New England, from Maryland and Virginia and from Germany. Within the past 75 years it has also had heavy migrations from Central Europe which have become rapidly assimilated, while guarding at the same time many of their best racial and national traditions to the benefit of the State itself.

Having just returned from visits to all the western European countries outside the Iron Curtain, I have been impressed as always by the standard of living and the good fortune of the American people and in particular of the Ohio people. It is quite probable that the State of Ohio is the richest area of its size anywhere in the world. Not only is it a rich agricultural State, but between Pittsburgh and Detroit (which means largely northern Ohio) is the largest productive industrial area in the world. Industry in Ohio is not segregated; it exists side by side with agriculture. There are no impossible, unwieldly, half-bankrupt great cities from which it is impossible to escape short of a 2-hour journey by train or car. Within the borders of Ohio, with rich productive fields extending right up to the city limits, lie such great industrial communities as Cleveland, Columbus, Cincinnati, Akron, Youngstown, Dayton, Toledo, and dozens of slightly smaller communities, equally industrialized and rich, such as Warren, Canton, Massillon, Mansfield, and Springfield. The city of Mansfield has the highest average family income of any town or city in the world.

None of the workers in these cities is imprisoned by the size of the city and nearly half of them have houses and small holdings in the open countryside or in friendly suburbs. Available to all of them are some of the finest lakes, streams, forests, parks, and general recreational areas in the world. Most important is the now world-famous Muskingum Conservancy District which provides recreation in the form of fishing, hunting, bathing, boating, camping, and summer cabins for a population which is never much more than an hour at the most from one of its areas. The conservancy also is a model of conservation watershed development and flood control in all its forms. And perhaps the most interesting feature of its development and functioning is that it is a public corporation which is under neither Federal nor State control and costs the taxpayer nothing. At the same time it pays taxes on every acre of its widespread holdings and is wholly self-sufficient and self-supporting.

The most recent development affecting the future of Ohio is, of course, the development of the St. Lawrence Waterway which will make possible the entrance of ocean-going ships of every kind from every part of the world to the Great Lakes and especially to Lake Erie which borders Ohio on the North. It is certain to increase enormously the industrial and commercial potential of all Ohio and to make even the smaller ore and fishing ports seaports of considerable importance.

Ohio is indeed a fortunate area for it is at the same time, and particularly at this time of year, one of the most beautiful areas on earth, as beautiful as the loveliest parts of England, France or Austria.

Behind all this, of course, lie other factors, both political and economic, of great significance to our national life. Chief among these is the fact that the centers of population, industry and general influence no longer lie in the East and Northeast but have been moving rapidly westward for a long time. Beyond Ohio, of course, lies the great and growing importance of rich California and of the magnificent Pacific Northwest. And this drift toward the West affects more and more the whole of our national and foreign policy. But if there is one thing Americans should never forget, it is their good fortune to live in a country so enormous, so rich, so developed that the standards of living and general welfare resembles that of no other country in the world with the possible exception of Canada. Too many of us take this great country for granted.

U. N. Cites Egypt for 30 Border Violations in 7 Months

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1955

Mr. MULTER. Mr. Speaker, the following calendar which appeared in the March 1955 issue of Background is deserving of our attention:

United Nations cites Egypt for 30 border violations in 7 months

Date of incident	Incident	Decision
	1954	
Sept. 5, 1954	Murder of Israeli tractor driver, Ruhama	Sept. 13, 1954.—Flagrant violation of armistice agreement by Egypt.
Sept. 13, 1954	Bedouin camp attacked at Beer Malka	Nov. 16, 1954.—Egypt condemned.
Sept. 14, 1954	Bedouin camp attacked near Beersheba	Do.
Sept. 7, 1954	Blowing up of pipeline near Niram	Sept. 13, 1954.—Egypt condemned.
Sept. 20, 1954	Wounding of Israeli tractorist in fields of Givati; blowing up of home by armed infiltrators in Hatzav.	Egypt condemned.
Sept. 22, 1954	Egyptian attack southwest of Nirim	Nov. 16, 1954.—Egypt condemned.
Do	Attack on Abasan	Do.
Sept. 28, 1954	Egyptian soldiers attack an Israel patrol	Dec. 12, 1954.—Egypt condemned.
Sept. 5, 1954	Various infiltrations	Dec. 14, 1954.—Egypt condemned 5 times.
Aug. 13-15, 1954	Infiltration of Arabs from Gaza	Oct. 6, 1954.—Egypt condemned twice.
2 incidents in August	Infiltration into demilitarized zone	Nov. 10, 1954.—Egypt condemned twice.
Sept. 25, 1954	2 Israelis killed and 2 wounded at Beit Shikma	Egypt condemned.
Oct. 25, 1954	Pipeline blown up at Mefalsim	Oct. 28, 1954.—Egypt condemned.
Oct. 29, 1954	Bedouin tribe attacked, 3 wounded at Shifta	Egypt condemned.
Oct. 30, 1954	Automatic fire on Nirim	Do.
Sept. 20-28, 1954	Attack at El Mogazit Sheikh Nab-Hahn	Do.
Nov. 1, 1954	2 houses blown up at Patish	Nov. 5, 1954.—Egypt condemned.
Do	Water tower attacked at Abasan	Do.
Dec. 24, 1954	Egyptian platoon entrenched in demilitarized zone of Nitzana.	Jan. 3, 1955.—Egypt condemned.
	1955	
Jan. 21, 1955	Egyptian soldiers attacked Nir Yitzhak, 1 Israeli soldier killed, 2 wounded.	Jan. 24, 1955.—Egypt condemned.
Jan. 25, 1955	Egyptian attack at Ein Hashlosha, 1 Israeli tractorist killed, 1 wounded.	Jan. 27, 1955.—Egypt condemned.
Feb. 1, 1955	Egyptian attack at Nahal Oz, 1 Israeli soldier wounded.	Feb. 3, 1955.—Egypt condemned.
Feb. 22, 1955	Egyptian Army position fired on Israeli patrol, which was approaching a large group of infiltrators who were harvesting illegally near Nir Yitzhak. Automatic rifle fire and 3-inch mortars used by Egyptians.	Mar. 7, 1955.—Egypt condemned.
Feb. 25, 1955	Rehovot: A bicycle rider, from El Kubeiba, was killed 2 kilometers west of Rehovot; tracks of 3 infiltrators were found by U. N. investigators.	Do.

Capitol Stuff

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1955

Mr. VURSELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column by Jack O'Donnell:

CAPITOL STUFF

WASHINGTON, May 2.—To make any political sense out of the battle on Capitol Hill over repealing the administration's farm legislation (which won't be fully effective until next year) you have to take a long look down the political road—as far as the White House battle in 1960.

Some of the shrewd old boys who've been watching our political world wag for a half century have been taking that long look and have come up with this interesting observation:

"The present attempt by the radical Farmers' Union and the CIO Political Action Committee to join ranks on the House fight to restore rigid price supports for farm commodities is the first step toward the formation of a Farm-Labor party which will put a ticket in the field in the 1960 elections, with CIO's Walter Reuther its White House candidate."

"This is merely the first step," the old boys continue.

"Walter Reuther has now promised the anti-administration farm bloc that he will deliver the votes of big city Democratic Congressmen, regardless of what the housewives scream about increased costs of food. In return, he's been pledged the support of the farm lobby in his demand for a $1.25-an-hour wage minimum. Eisenhower wants a 90 cents an hour minimum.

"But that's only the first step in the big political parade. With the CIO and the A. F. of L. forming a united political front and then entering into a marriage of political convenience with the farmers, you've got the setting for a political picture which duplicates the present scene in Great Britain. That means a pseudo-socialist lineup of labor and agriculture on one side, the conservatives of the GOP and southern Democrats on the other and the so-called liberals lost in the political shuffle as they are today in Britain.

"It can happen here—come party explosions in next year's campaign—and it probably will."

The unrealistic battle being staged at the moment is the effort directed by Truman's former Secretary of Agriculture Charles F. (Baldy) Brannan and Truman's double-dome economic adviser Leon Keyserling to restore the fixed price supports at 90 percent of parity for such basic farm products as wheat and corn.

FEWER PIGS WENT TO MARKET

Also included in the Government benefits—paid out of income tax, natch—are farmers who raise cotton, tobacco, peanuts, and rice. Getting the money from the Treasury naturally was a safer bet for the farmers than feeding the corn to hogs and steers for the market. Fewer hogs and steers were fattened up. Hence the high cost of pork and beefsteak at the butcher shops and the fantastic mountains of farm surplus which the Government had to buy with public funds and store at Government expense.

The Eisenhower plan, brought forward by farm-trained Secretary of Agriculture Ezra Taft Benson, substitutes a sliding scale for Government support instead of the fixed and mandatory 90 percent.

Next fall, for example, the wheat farmer will get Government support for his crop up to 82.5 percent of parity, parity meaning a Federal standard designed to assure farmers a fair return on their crops in relation to farm costs.

Nobody can tell until the wheat now growing on the Kansas prairies is harvested how the Benson plan is going to work out. It will be a year from next fall when the 1956 crops are harvested, about the time of the big political conventions, before it can be determined how the plan will work out overall. It's already worked out satisfactorily so far as dairy products are concerned, at least we're not adding every month to the millions of pounds of butter, cheese, and powdered milk that we've been stashing away in air-conditioned caves and huge refrigeration plants.

But the leftist farmers who make up the Farmers Union and their allies in CIO and the Americans for Democratic Action don't want to wait and give the plan a trial. They want to kill it now, and strangely enough it is just possible that the votes of Democratic Congressmen from the big cities—Pittsburgh, Detroit, and Chicago, for example—may turn the trick. At all events, the vote will be mightly close. What will happen to the Congressmen who will have to explain their vote to the city housewife is another story.

MINIMUM WAGE AND HIGH COSTS

But a lot of the boys are insisting that the CIO pressure is too hard to resist when you come from a district where the organized labor vote calls the turn. They figure that their vote for Reuther's $1.25 an hour minimum wage will make the constituents forget the increased food prices, and cynically observe that few will realize that a healthy slice of the wages withheld for income tax goes to pay for the mandatory support of farm prices.

The distant gleam of a possible victorious realinement of political forces into a dominant farm-labor group seems to have blinded some of the boys to a few pertinent facts in the immediate hassle.

In the first place, it is the six farm commodities which have received the highest level of tax support which soared to the highest price levels in the consumer market and—this is interesting—created at the same time the biggest storage problems for the surpluses.

Point No. 2 is that in relation to parity, nonsupported farm commodities brought the farmers higher average prices than did the supported commodities.

Speaking politically, it is interesting to note that the flexible support plan now under attack was approved by both the Democrats and Republicans, endorsed by Truman while President, and backed by every Secretary of Agriculture in the last 20 years for peacetime regulation of agriculture.

Austrian-Russian Treaty

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1955

Mr. ROOSEVELT. Mr. Speaker, in the past few days there has been considerable publicity given to the four-power Austrian treaty negotiations. It appears that our State Department in its overly zealous desire to secure any type of peace treaty is altering the time honored position of the United States of the protection of oppressed peoples. The United States is about to allow the repatriation of thousands of Russian Nationals who have found asylum from Communist terror in the free zones of Austria. The American people are entitled to an explanation and to a statement of the position of our Department of State concerning article 16 of the Austrian Treaty. They are entitled to know, whether before the United States approves this treaty, the more than 30,000 Russian refugees now living in Austria will be protected, and will not be forced to return to Russia to face the hangman's noose.

Article 16 of the Austrian Treaty provides for the repatriation of all displaced persons now living in Austria; for free visitation to displaced person camps or centers by Soviet representatives for the purpose of coercing such persons into returning to Russia; it prohibits in such camps or centers any propaganda hostile to the interests of the U. S. S. R. and any activities designed to induce such persons not to return to Russia; it dissolves any organizations existing in such camps which may be engaged in activities opposed to the interests of Soviet Russia; and it refuses relief or aid to those persons who refuse to return to Russia.

If article 16 is allowed to remain in this treaty, the United States will be a party to the massacre of thousands of persons whose only crime is a love of freedom. Our State Department must assure the American people of its firm stand against article 16.

I include the following editorial from the Washington Daily News of Tuesday, May 3, 1955, which I believe clearly summarizes the effect of article 16 of the Austrian Treaty:

THIRTY THOUSAND LIVES

"The Austrian treaty negotiations are a case study for the free world. They can be a lesson for those who still trust the Soviet word. * * *

"They are a story of broken pledges on one hand and frustrated hopes on the other * * * an illustration of the methods employed by the Soviet Union to exploit other people and other nations."

Until a month ago that was the State Department's description of 10 years' futile efforts to negotiate an Austrian treaty with the Soviets.

Those 10 years of Soviet duplicity should not be forgotten unless the Soviets at the current negotiations in Vienna give startling and positive proof of genuine change.

An early test of Soviet intentions—Whether they want an honest, decent treaty or have only another propaganda gimmick up their sleeves—could be made on Article 16 of the draft treaty. It may affect the lives of 30,000 refugees in Austria—refugees from communism—and other thousands who may in the future get through the Iron Curtain.

Article 16 compels Austria "to take all necessary measure to complete voluntary repatriation of displaced persons within its territory"; to enter bilateral negotiations with Iron Curtain countries for their repatriation; to permit Soviet officials to "visit freely" refugee camps; to prohibit propaganda against the allies, meaning Russia. It also prohibits Austria from giving any relief "to persons who refuse to return to their native countries."

There are many legal arguments claiming this article is obsolete and would not apply to refugees now in Austria. They seem to

forget the Soviet ability to twist agreements to their own diabolical uses. There is one certain way to protect these refugees—delete the article from the treaty.

Some argue that it is a harmless article because it refers only to "voluntary repatriation" and therefore, could not be used to force people to return home. But they overlook the tricks the Soviets play on words.

We have signed many agreements and treaties with the Soviets calling for "free elections." But we learned, too late, that in Communist language "free elections" mean rigged elections. Likewise with "democratic" governments, which turned out to mean Communist governments, and "independent" states, by which the Soviets meant satellite states.

What is the Soviet definition of "voluntary repatriation"? Experience should have taught us that it is forced repatriation.

The United States and other Western allies engaged at the close of the war with the Soviets in forced deportation, forced expulsion, and forced repatriation of people. It was a shameful practice then. It would be even more shameful now to be hoodwinked into loosely written treaty articles which would raise any doubts about our opposition to such practices.

Article 16 in the draft treaty must go.

For 10 years the Soviets have ruthlessly exploited the Austrian Nation and people. We understand Austria's overwhelming desire to get rid of the Red army. But a treaty which includes articles like No. 16, which deny Austria full sovereignty, would merely legalize the Soviet right to continue exploitation she has been carrying on illegally for 10 years.

Trans World Airlines

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1955

Mr. BOLLING. Mr. Speaker, during the Easter recess of Congress it was my good fortune to go on the "press flight" which Trans World Airlines scheduled to introduce to the public its great new airplanes, the super-G Constellations. On this 10-day trip we visited 3 countries—Ireland, Egypt, and Spain. Of course, we saw many interesting places and people. But the most interesting and encouraging experience that I had was to come to understand what an outstanding job of building international goodwill this great corporation, TWA, was doing in the three countries we visited. I found that not only was the company respected and admired for its efficient operations, but that by its employment and other policies as well as the attitude of its American employees, TWA was doing much to build goodwill for the United States of America.

At a time when there are so many reasons to be concerned by difficult problems in the field of foreign policy, it is truly a pleasure to be able to report that an American enterprise on its own initiative and following a policy of intelligent and enlightened self-interest is doing a real job of improving international understanding.

Sam Hadden

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1955

Mr. McGREGOR. Mr. Speaker, during this period when many of us are trying to work out an equitable road solution we realize that one of the experts on highway legislation because of conditions beyond his control is resting at his home in Indianapolis. I am referring to one who is well known to anyone associated with the highway problem, namely, Sam Hadden, who but a few short years ago attended most of the highway meetings, at least those on the national level, and served us with his excellent counsel and advice.

A few days ago I had given to me an article appearing in the Indianapolis Times, which, under leave to extend my remarks, I would like to include herein. May I say that I join with his many friends in this Congress in saying, "Sam, we miss you even though you are not here with us. We trust you will continue to give us your usual good counsel and advice."

The article from the Times follows:

SAM HADDEN KEEPS UP HIS LETTER OUTPUT—FORMER HIGHWAY CHAIRMAN, RECOVERING FROM STROKE, WILL BE OUT OF HOUSE SOON

(By Ed Sovola)

Sam Hadden hasn't been out of the house since Thanksgiving. He's going to be out, though, soon. Sam's feeling better every day.

Even though the former State highway department chairman (two terms) is pushing 73, and was laid very low by a stroke a couple of years ago, his hair is as black as ever, his sense of humor is as sharp as ever, and the fire in his coal-black eyes is returning.

Sam Hadden, always a conscientious letter writer, now often writes as many as eight letters a day. And his letters aren't the hi-thanks-'by type. A letter from Sam Hadden is packed with information.

A batch of mail the other day included letters from Representative J. Harry McGregor, Republican, Ohio; Attorney Will M. Whittington, Greenwood, Miss.; Russell E. Singer, executive vice president, American Automobile Association; Robert H. Baldock, Oregon State Highway Department engineer; C. D. Curtiss, Commissioner of the Bureau of Public Roads, Washington; Hal H. Hale, Association of American Railroads, Washington; Representative Brady Gentury, Democrat, of Texas; Robert H. Harrison, division engineer, Bureau of Public Roads, Chicago; and Mrs. Thelma G. Patterson, executive secretary of the Indiana Society of Professional Engineers.

Subject matter ranges from "third structure tax on heavy freight trucks" to President Eisenhower's billion-dollar road program. Sam Hadden's keen interest in highways is undiminished. Keeping abreast of the developments taking place in the field has high priority in his daily schedule.

There was a time when the voice of Sam Hadden was heard at all important highway meetings on local, State, and national levels. He was one of the earliest advocates of the gasoline tax. Sam Hadden was the first man to tell Congress it was off base by diverting gas tax funds. He told the lawmakers either to abolish the Federal tax on gasoline or return the money collected to the States.

"I hope to resume part of my activities in the not-too-distant future," said Mr. Hadden.

The former teacher of mathematics, history, and civil engineering at Michigan State College used his "company English" to describe how well he is eating and sleeping. He got through it without quoting Shakespeare. It was a fine job of rhetoric.

"In other words," added Mr. Hadden, "I'm eating and sleeping like a horse."

He has a schedule of daily exercises, daily physical therapy treatments and a more extensive session lasting almost all day Tuesday. Tuesday is no day to call on Sam Hadden. Every afternoon he takes a nap for an hour.

On his living room front wall hang two mementos of recognition he received for his contribution to highway development. One is the coveted George S. Bartlett award plaque awarded annually by the American Road Builders Association, American Association of State Highway Officials, and the Highway Research Board to the man who contributed most to highway progress.

Below the Bartlett plaque hangs a framed testimonial from American Association of State Highway Officials to Mr. Hadden upon completion of his term as its president in 1944.

It is significant no other Indiana State Highway Department employee ever received one of the other awards, let alone both.

Mr. Hadden lives alone in his big ol' house at 322 East 47th. He has grass troubles in the front yard. His visitor, an advocate of myrtle for ground cover, advised him how to get it in.

"Sounds fine," laughed Mr. Hadden, "but I can't tramp through the woods gathering it and I know my housekeeper wouldn't."

When a man writes an average of eight letters a day and starts worrying about the condition of his grass, he's getting along fine.

Samuel C. Hadden, consulting highway engineer, is going to be heard from on the subject of highways, toll roads, and gasoline tax again. From coast to coast. Just keep your guard rails up.

Priorities for Salk Vaccine

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1955

Mr. ADDONIZIO. Mr. Speaker, on April 20, 1955, I introduced H. R. 5696, to amend the Defense Production Act of 1950, as amended, in order to provide authority to allocate and establish priorities for Salk vaccine. I believe that there is no subject before this Congress of more vital importance than making sure that the existing supply of Salk vaccine is distributed and used in an equitable manner. It is imperative that the Congress act immediately before this situation gets any further out of hand. As the able Governor of New Jersey wired me yesterday, no one State can hope to tackle what is essentially a national job. It can only be met effectively by Federal action.

Governor Meyner's telegram reads as follows:

May I respectfully urge your support of a program for Federal control of Salk vaccine to assure safeguarding of the supply equitable distribution to the children of the Nation on the basis of greatest need according to age group, severe penalties for black marketeers and other violators, and the dissemination of vital information concerning this preventive measure no one State can hope to tackle what is essentially a national job.

Extension of the Renegotiation Act of 1951

EXTENSION OF REMARKS
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1955

Mr. WIDNALL. Mr. Speaker, the extension of the Renegotiation Act of 1951 has passed the House. Subsequent to its passage I received a letter from the president of an electrical-equipment business who has had considerable experience in the performance of Government defense contracts.

In view of the fact that he has made several recommendations of a constructive nature, I feel that the contents of his letter should be made available to all the Members of Congress.

Under unanimous consent, his letter follows:

HEYER PRODUCTS CO., INC.,
Belleville, N. J., April 27, 1955.
Hon. WILLIAM B. WIDNALL,
House Office Building,
Washington, D. C.

DEAR BILL: The House now has pending before it, H. R. 4904, which is a bill to extend the Renegotiation Act of 1951 (50 U. S. C. Appendix 1211–1233) from December 31, 1954 to December 31, 1956.

This act provides for elimination of so-called excessive profits from contracts made with agencies of the Federal Government having a connection with national defense. All amounts in excess of $250,000 received by contractors are subject to renegotiation.

Certainly it is true that sound execution of the national defense program requires the elimination of excessive profits from contracts made with the United States," as stated in section 101 of the act. However, the standards for defining excessive profits in the present act are unreasonable and inequitable as applied to small business. Therefore, I suggest to you the following amendments to the act which should be included in H. R. 4904, if it is extended:

1. Advertised bid contracts should be exempt. Section 106 of the act contains numerous exemptions, but none for small business. Large companies usually obtain military contracts on a negotiated basis, far above normal profit and cost of operation, and then renegotiate down to a reasonable profit. Small business, on the other hand, must depend on highly competitive advertised bids, far below normal markup, in order to participate in defense work.

If a bidder guesses too low, he is not reimbursed for his loss by the Government. On the other hand, if he is ingenious enough in design and manufacture to make something extra, the Government takes it away. This destroys any incentive to improve methods and deprives small business of a fair return on risk and opportunity to accumulate capital for expansion. The Federal income tax furnishes all of the protection against excess profits that is needed.

2. The act should be amended to make renegotiation a two-way street. Any contract, to be subject to renegotiation, should be required to provide for negotiation upward for relief from loss as well as downward for excess profits.

3. The act should provide for carryforward and carryback of losses on renegotiable business, as a setoff against excess profits. Small business could then make a reasonable profit on Government contracts without the risk of going broke, as so often happens as a result of trying to de business with the Government.

4. A small business with less than 500 employees should be exempt from the act altogether, and the $250,000 minimum should be raised to $1 million.

Small business cannot obtain equity financing for expansion, but must look to surplus accumulated from earnings. The present minimum discourages small business from bidding on Government contracts. There is little hope of reasonable profit as against high risk.

In Senate Report No. 92, February 14, 1951, to accompany the original act, it was stated with respect to a proposed low minimum:

"To make the limitation as low as under the House bill would create a considerable hardship on small business."

The same reasoning applies today with redoubled force because of increased competition among bidders. I trust you will consider carefully these suggestions.

With good wishes, I am,
Very truly yours,
B. F. W. HEYER,
President.

A Reasoned Budget

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1955

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert an editorial which appeared in the Harvard Crimson of Friday, April 29, 1955, entitled "A Reasoned Budget":

The United States budget system, recognized as inefficient since the time of Alexander Hamilton, has become a mere patchwork of uncoordinated committees. Blind budget hacking is no longer adequate for an intricate economic situation. The congressional budgetary system needs integration, therefore, for appropriations and revenues are handled by separate committees, making a budget tailored to American resources almost impossible. Not only are finances and expenditures not matched coherently, but few of the members of the involved committees are aware of any sort of legislative budgetary policy. Slashes are made in budgets with little regard to the importance of items in any positive economic program, since Congressmen only attempt to avoid rocking the economic boat with overly heavy taxes. Representative G. P. LIPSCOMB has suggested a remedy with his proposed Joint Committee on the Budget, which would join representatives of both Senate and House Appropriations and Finance Committees in a body devoted to the consideration of fiscal policy.

Critics of the Lipscomb bill cite the failure of the now-defunct Committee of the Legislative Budget, set up in 1946. That group, however, wrote its own budget, arbitrarily setting a ceiling on expenditures without even investigating the needs which the Bureau of the Budget had carefully calculated. After having to pass supplementary bills amounting to $6 billion over the ceiling, Congress dropped the committee. Lipscomb's proposed committee, however, would not aim at writing an a priori budget. It would simply determine the best fiscal policy by correlating the reports of the various committees on revenue, appropriations, and the economy. Once having established a policy, it would advise the other committees about the propriety of specific appropriations in a planned economy.

Because the Committee on the Budget would only serve as a policy adviser, there need be no duplication of investigations done by other committees; nor should it threaten members of the four powerful congressional finance and revenue committees who fear loss of their present leviathan power. The danger, on the contrary, is that the group would be too weak because of its diverse membership. The Joint Committee on the Economic Report has been virtually ignored for this reason.

To cut down on the diffusion of membership, bills supported by Representatives COLMER and FRELINGHUYSEN advocate the use of reports on revenue, without including Ways and Means Committee members in the policy committee. If the House passed this plan, resulting friction from jealous "revenooers" would nullify the whole purpose.

Another of the myriad proposals for integration is that of the National Planning Association, which proposes that the Committee on the Economic Report assume the function of a fiscal policymaker. The plan is impractical, however, because this committee has always concerned itself with investigations of specific economic details. Traditional procedure would inevitably force questions of policy aside. By including members of several committee—finance, expenditures, and economy—in one joint committee, perhaps the dissimilarity of methods and practices might restrain the legislative instinct for the insignificant. Of all these proposals, Lipscomb's is most likely to unite the various participants in budget planning in a group which can keep its mind on policy.

Justice for Cyprus

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement concerning justice for the island of Cyprus:

JUSTICE FOR CYPRUS

Last December the United Nations General Assembly voted to postpone indefinitely any further consideration of the Cyprus question. The United States delegation supported the move. Unfortunately, this indefinite postponement has not made the problem melt away, and while it exists, the ill feeling it generates between the NATO partners, Greece and Great Britain, will continue to complicate western unity and give comfort to the Communists.

House Concurrent Resolution 26, introduced on January 6, puts us squarely on the side of justice; it declares that Congress favors the United States delegation to the United Nations taking "all possible steps ex-

peditiously to bring about consideration by the United Nations of the question of self-determination of the population of Cyprus." I wholeheartedly support this positive stand. Cypriots ask only their God-given right to determine for themselves under which flag they wish to live. They should not be denied the rights that many of them, as well as Americans, defended on the battlefield.

For many years residents of Cyprus have been pleading for reunion with Greece. They have good reason: The great majority, or about 80 percent of citizens of Cyprus, are Greek, that is, Greek in language, Greek in church, Greek in culture. Although the island has been governed throughout the ages by a succession of foreign powers, Cypriots have clung to their Hellenic ties. Centuries of domination by Egyptians, Assyrians, Persions, Romans, and Turks could not eradicate the Hellenic inclinations of the people of Cyprus. The present occupying power, Great Britain, first got a foothold on the island in 1878 under an agreement with Turkey to defend the Ottoman Empire against Russia, but Cyprus remained a Turkish possession. Great Britain formally annexed Cyprus in 1914 when at war with Turkey. The ensuing 4 decades of British rule no more erased Cypriot yearning for reunion with Greece than had previous occupations. Over the years various appeals made to England to permit union with Greece were to no avail. As late as 1950 in a plebiscite organized by the Archbishop of Cyprus, the vote showed that 95.7 percent of the 215,000 voters favored union with Greece.

The British have sought our support in denying self-determination to Cyprus on the grounds that the island is vital to safeguarding Mediterranean bases. The strategic value of the island is undeniable. But Western defense will not be affected by a transfer of sovereignty. Greece is a vital partner of the North Atlantic Treaty Alliance and has already demonstrated how valiant it can be against the Communist threat. It seems to me, also, that the base could be better maintained if the surrounding population were friendly citizens of Greece rather than hostile subjects of Britain.

It behooves the United States to boldly uphold those principles of freedom and independence for which Cypriots cry out. Although the island is small and the population only a little more than 500,000, it is unworthy of our traditions to turn a deaf ear to Cypriot pleas. To continue to ignore Cypriot aspirations would be a mockery of the ideals we cherish. Let us, then, support House Concurrent Resolution 26 so that we may hasten the day when justice is done in Cyprus.

The Effect of Spiritual Guidance in the World Today

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1955

Mr. HENDERSON. Mr. Speaker, the American Legion of Ohio is the annual sponsor of an essay project throughout Ohio on vital subjects. The title in 1955 is "The Effect of Spiritual Guidance in the World Today." One of the 12 winners is Bertram Sippola, a junior of Marietta High School in Marietta, Ohio. I recommend his fine essay as a thoughtful, studious treatment of a most important subject:

THE EFFECT OF SPIRITUAL GUIDANCE IN THE WORLD TODAY

Not long ago a friend of mine emphatically asserted that the effect of spiritual guidance in the world today is practically nil, and he went on to prove it. He gave as examples such things as the apparent lack of morals in Government officials, the tremendous rise in crime and juvenile delinquency, and the terrible dog-eat-dog state of affairs in the entire world. However, I believe that today many people are turning to spiritual guidance for help for themselves and others.

But first of all just what do we mean when we speak of spiritual guidance? Our western civilization is built on certain moral virtues, some of which, according to Arnold Toynbee, are "outward visible signs of inward spiritual graces; a devotion to truth that is prepared to follow an argument honestly, wherever it may lead; an ideal of integrity in workmanship; and, perhaps above all, a feeling of respect and charity for one's momentary opponent." Then how do we express these spiritual graces as individuals, since most improvements start with the individual? There are different definitions of spiritual guidance, but to me it means making God my partner in everything I do. By this I mean not just on Sunday, as is usually the case, but every day, in everything—school, work, and play.

To show its effect in the world today, spiritual guidance should first start with the individual. With the individual, there must be prayer power—affirmative prayers. To accomplish something, prayers must be accompanied by faith—faith that God can do anything through us—upon which all spiritual guidance depends.

In our families and homes we are bound together by Christian principles, such as cooperation, love, respect, honesty, responsibility, and dependability.

In the community we have several examples of the effect of spiritual guidance. One of the most important is the church and its influence. In addition to the church are our schools and hospitals, our YW and YMCA's, and our welfare agencies, often grouped under the Community Chest, in which are embodied our Christian ideals and principles.

In industry we have evidences of spiritual guidance at work. Many firms have chaplains and chapels to aid their personnel in seeking spiritual help. Many of our industrial leaders are men who call on God for spiritual guidance. As an example, LeTourneau, maker of giant earthmoving equipment, is a prominent Christian lay leader.

In our Nation we can also see the effects of spiritual guidance. We are fortunate in having a President and Secretary of State who are religious men and who believe in the power of prayer. For instance, our Secretary of State, John Foster Dulles, stopped an important business discussion to take time to pray with his pastor, for whom he had sent. Our public welfare and pension programs are based on the Christian belief of helping one another; we have them through the work of men who were spiritually guided.

In the world we have the United Nations with all its various branches, founded on the belief that nations could live and work together in peace. The United States has contributed much in the way of aid to other countries, both materials and technical skills, to help them help themselves.

Again I say that I believe that the world of today is influenced by spiritual guidance. Its effect may not be highly publicized, or even readily seen, but from a few, it spreads out, changing the lives of others. If our Nation and world are guided by leaders who conscientiously seek spiritual guidance from God, then we have nothing to fear, for "If God is for us, who is against us?" (Romans 8: 31).

Gen. Milan Rastislav Stefanik

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following eulogy on the anniversary, May 4, of the death of Gen. Milan Rastislav Stefanik, outstanding Slovak scientist, statesman and soldier, who met an untimely death in an airplane accident on May 4, 1919:

MILAN RASTISLAV STEFANIK, SLOVAK SCIENTIST, STATEMAN, AND SOLDIER

For all the misery and suffering that war visits upon the world, it does, nonetheless, have some compensatory effects, not least of which is that it often brings out some of the best qualities in men and makes them heroes. Undoubtedly, the friends, neighbors, and relatives of Milan Rastislav Stefanik would never been dreamed that this young Slovak, slight of build, scholarly, personally attractive, with a quiet disposition, who had left home to prepare for his doctor of philosophy degree at Charles University in Prague and later was to win fame as an astronomer in France, would have emerged from World War I as a war hero, liberator, and a cofounder of the new state of Czechoslovakia.

As a young man Milan Stefanik loved his native Slovakia as much as, if not more than, any Slovak. But, in his country which was then under foreign domination, success in science, as in anything else, required abandonment of one's loyalty to Slovak traditions. This Stefanik would not do, and so, in 1902, Milan left the land he loved for France. After many trials and personal disappointments, the young Slovak scientist at last gained recognition, and by 1914 he was in fact regarded by continental learned societies as "one of the brilliant young astronmers of Europe." In science, Stefanik had made notable progress, and not only did his scientic expeditions take him throughout Europe and Africa, but to North and South America and the South Sea Islands as well.

When war came in 1914, Stefanik, who was then only 34 and a naturalized citizen of France, volunteered immediately for the French Air Service. Throughout the war, the young Slovak airman distinguished himself for his skill and courage and rose from a humble private to the rank of major general, and later, minister of war in the new state of Czechoslovakia. Wounded many times—sometimes severely, Stefanik fought heroically on many fronts and for his tireless efforts received many military decorations. Outstanding was Stefanik's work in organizing the Czechoslovak military forces in Italy and Russia which played so effective a role in the war against the Central Powers. Outstanding also was his work in organizing, together with Thomas G. Masaryk, his former teacher at Prague, Eduard Benes, and Stefan Osusky, the Czechoslovak National Council from which the independent state of Czechoslovakia was to evolve. And as minister of war in the new state General Ste-

fanik dedicated himself selflessly to the task of reorganizing the Czechslovak army.

Only 38 years of age when the great war came to a close, Milan Stefanik had indeed a brilliant career before him both in the service of science and in the service of his country. But unfortunately this Slovak hero, termed by a British friend and admirer "the most romantic" of all "the great figures of the war," met an untimely death. Returning to Slovakia from Italy on May 4, 1919, General Stefanik and three Italian officers were killed when the plane in which they were flying crashed as it was about to land in Bratislava. Tragic it was for a grateful nation to lose a hero of such great brilliance at the height of his career. Tragic it was, too, for the aged mother of this son of Slovakia, who while awaiting at the airfield for her returning son, witnessed the ill-fated crash.

On this anniversary of the death of Milan Rastislav Stefanik, scientist, statesman, and war hero, I wish to join with all my Slovak friends and mourn the loss of a great national hero; for that is what Milan Rastislav Stefanik was, a great national hero. And I wish further to repeat what was said of Milan Stefanik at the time of his death:

"By his death the Czechoslovak cause sustains an irreparable loss. He was in every respect a gentle knight, whose record and example will be an inspiration to future generations of his fellow-countrymen."

Loyalty Day Address by Hon. Alexander Wiley, of Wisconsin

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, May 4, 1955

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an address delivered by me at the Veterans of Foreign Wars Loyalty Day program in Oshkosh, Wis., on Saturday, April 30, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE DANGER OF "SUBVERSIVE INACTIVITY"

I am pleased to address this great patriotic occasion.

This is the climax of a great and unforgettable day here in Oshkosh.

Today, the people of this industrious area have participated in and have themselves been thrilled by an inspiring demonstration of Americanism.

You have seen in the musical units, the impressive floats, the marching uniformed heroes—a living symbol of the real strength of America.

TRIBUTE TO VFW

It is particularly a delight to appear here under the auspices of the Veterans of Foreign Wars, among other outstanding groups.

Certainly, there is no group in our Nation which is more entitled to hold aloft the banner of American patriotism today and any other day—than is that group of men who served this Nation on the field of battle—in foreign lands, on foreign seas and in foreign skies.

You gentlemen of the VFW and your wives and children and other loved ones know directly what it is to give your all for your country.

Today you are reaffirming your own fervent dedication to America. And everyone here, taking inspiration from what you have personally achieved previously on the battlefield, and what you are doing today joins in this rededication.

In Washington, it has been a pleasure to cooperate with the Veterans of Foreign Wars national office in securing observance throughout the Nation of May Day—Loyalty Day.

This day is but one of a great many achievements which are well-credited to the outstanding record of the VFW. That record is part and parcel of the overall American saga—a saga which dates from Lexington and Concord onward through Belleau Wood and the Argonne Forest and Normandy and Inchon. It is the saga of sacrifice which has helped make America the strongest, the freest, soundest nation in the world today.

LOYALTY FROM WITHIN

Now, although we here today have concentrated on the outward evidences of patriotism—with the Star Spangled Banner flying before us, we know that the real meaning of loyalty is the meaning from within.

Loyalty is a quality of mind, an attitude of heart. Loyalty is the unseen flag which waves silently within us. It is the national anthem on our lips, even though it is not being sung at that very moment.

Loyalty is gratitude for the most priceless blessings that any people have ever enjoyed. Loyalty is the determination that this magnificent heritage which is ours, shall not be bartered away or dissipated, but rather that it shall pass on—in fact—to succeeding generations.

Loyalty is something that you cannot force; it either exists spontaneously or it does not exist. Either men and women really believe in their country; either they would honorably live and, if necessary, die for it; or they have doubts about their country and a feeling that there is some superior system—some totalitarian system.

Fortunately, the number of individuals with such doubts is relatively few, and yet I shall speak to you today on those in our land who are loyal but do not live their loyalty. They sincerely love their country, but they do not lift their hands and their hearts for it, and so their loyalty becomes an idle thing which lacks real meaning because it is not applied.

LOYALTY WEAKENED BY INDIFFERENCE

It is a loyalty weakened by ignorance and indifference.

Ignorance of what?

Indifference to what?

Ignorance of the problems and the dangers and the challenges of our time.

Now, let us turn to the dangers, first of all.

THREE DANGERS TO US

There are, as I see it, three great dangers to us today. They are:

1. The foreign threat of international communism — the menace of aggressive Soviet imperialism;

2. The menace of subversive activity right here at home; and, finally,

3. There is a menace which I shall call the threat of subversive inactivity.

THE MENACE OF RED IMPERIALISM

Now, you are all familiar with the first phase of the threat—the danger of Soviet imperialism—which already controls one-third of the world's people and one-fourth of the world's land surface.

You are aware that the Soviet Union has the largest ground forces in the world at its command: The 175-division Red army; the massed millions of Red China; the half-million men of the Soviet satellites in eastern Europe.

You are aware that the Soviet Union has the second largest navy in the world, including the largest of all U-boat fleets and the largest air force in the world.

You are aware that the Soviet Union is proceeding at full speed for the development of a program of intercontinental guided and ballistic missiles.

The ballistic missiles in particular may be able, in a matter of years, to reach the city of Oshkosh at a speed of 10,000 miles per hour. Thus, possibly in half an hour, after being fired from a Red launching site, they could explode with nuclear warheads right in our midst.

Against intercontinental ballistic missiles, flying at supersonic speed, there is today no known defense. Not even the Nike guided missiles, which today ring Milwaukee and other major cities, are defense against the ballistic missiles which may be produced in a matter of years. Why? Because the intercontinental ballistic missile is like a bullet.

It would not be guided by electronics and so it probably could not be jammed by electronics. It would simply be fired like a bullet or an artillery shell and once it were to start, it might not be stopped except by hitting something.

This, then, is an example of danger of Soviet imperialism.

But there is a danger more immediately confronting us.

BEWARE OF RED CHINA'S WORDS

Today, our eyes are principally directed against the menace of aggressive Red China. For weeks and months, the Peking radio has been shouting boastfully of its intention to use force to capture the key island of Formosa.

The United States, in solemn treaty and by near unanimous resolution of its Congress, is soundly determined to defend Formosa, the Pescadores, and related areas. Why? Because they are bulwarks of our chain of defense.

Then, at the Bandung Conference in Indonesia came the indication from Chinese Red Premier, Chou En-lai, that he was willing to talk over the attainment of peace in the Formosa Straits.

Because we want peace, we hope that he means what he said. However, the past Communist record is full of such chronic treachery, such double-crossing, so many repeated reversals that we must remain wary and vigilant. The Reds blow hot, and the Reds blow cold. They talk peace one day and war the next day, and peace the third day. Obviously, we can never place real confidence in their words. The only thing which speaks is their deeds.

Let them therefore agree to an immediate cease-fire in the Formosa Straits. Let them release the unjustly imprisoned United States airmen, and other American prisoners. Let them prove their words. Let them not try to use Formosa peace talks as a cover for aggression elsewhere—as in Southeast Asia.

And let us not be gullible. Let us not be naive.

Let us not of course assume that peace in the Formosa Straits is impossible and that nothing can be done to prevent a United States-Red Chinese collision. But at the same time, let us not go to the opposite extreme of assuming that the Chinese Red dragon is overnight going to change its fundamental, imperialistic character.

Vigilance requires us to be as wise as serpents and as gentle as doves.

The loyal American is the vigilant American. He is loyal in support of the President of the United States, the Commander in Chief of our Armed Forces, in whose hands lie one of the heaviest responsibilities which has ever been conferred on an American President.

THE DANGER OF SUBVERSIVE ACTIVITY

But, now, I want to turn to the second danger to which I earlier referred. It is the danger of Soviet-directed subversive activity here at home. It is the danger of the Alger Hisses, the Judith Coplons, the Klaus Fuchs, the Julius and Ethel Rosenbergs, and other traitors in the midst of the free world.

John Edgar Hoover, able Director of the Federal Bureau of Investigation, has estimated that there are 22,000 members of the United States Communist Party today.

This means 22,000 agents of Soviet imperialism, 22,000 individuals whose loyalty is first to the Soviet Union—first, last, and always to the Soviet Union.

Moreover, the estimate has been that for every member of the Communist Party, there are up to 10 fellow travelers.

They are ready, willing, and eager to do the Communist Party work, but they are not willing to be identified outright with the Red conspiracy.

They are, however, just as much a menace, if not more so, than the active Reds.

And let me point out that there are uncounted numbers in what might be called the Communist reserve. They have never been identified directly or indirectly with the Communist conspiracy, even as fellow travelers.

These are really the top servants of the party. They have been instructed absolutely to avoid all contact with Communist publications, individuals, or groups. They are entirely held in reserve for top-secret work and for the most critical future occasions. These are the sort of secret agents who might even slip through a security-screening system, because their record might show no subversive affiliation in the past.

Against the domestic menace of Communists, fellow travelers, and secret Red reservists, I, for one, have introduced numerous anti-Communist bills in this Congress, as in previous Congresses.

One of my bills is to increase the penalties for seditious conspiracy. Still another bill is to strengthen the statute for immediate registration of foreign agents who have been trained in espionage, sabotage, and similar efforts.

I hope these bills will be enacted in the 84th Congress.

THE MENACE OF SUBVERSIVE INACTIVITY

But finally now, my friends, I want to refer to a third threat, and this is one which may not have occurred to some people.

I refer to the threat of subversive inactivity.

What do I mean by that?

I refer to the type of do-nothing, think-nothing, sense-nothing American citizen who nonetheless feels he is loyal to our country. He says he loves America and everything it stands for. He does despise communism and all things totalitarian.

But this type of American is unwittingly subversive, because of his sheer inactivity.

Unlike active Americans such as you in this fine audience, the type of person I am describing just doesn't bother about his civic responsibilities. He won't stir himself except for his own selfish needs.

He probably doesn't vote. He doesn't have an interest in government. He never shows up at public meetings. He doesn't inform himself. He doesn't take any interest in his neighborhood or in his community or in his church.

He doesn't know the names of his public officials. He doesn't work in his Parent-Teacher Association. He doesn't look after proper thinking and behavior by his youngsters. He doesn't know much about the world.

He is only interested in making a living for himself, but not in make a real life.

Now, preoccupation with one's personal problems may be understandable because, after all, each of us gets tied up now and then in personal affairs.

Let us be frank and admit that all of us at times may be somewhat remiss in doing our share as active citizens. No one is perfect. All of us can achieve still more in service of our country. But I am not talking about occasional oversights or missing a few responsibilities now and then. I'm talking about the man who chronically doesn't care at all. This type of care-nothing, do-nothing individual does his country no good, does himself no good, because he is unwilling to take active steps to protect his country.

By his inactivity, he unwittingly weakens America, weakens its fiber, its vigilance, leaves it and its institution unprotected.

And so, I say, my friends, let us reduce the ranks of this man I have described as unwittingly subversive. Let us all recognize that we can become even better Americans like the heroes whom you and I have seen with pride today—the heroes of our battlefields.

The man who is truly loyal to America is the man who fights as well on the battlefield of peace. He tries to take an active role in government, to the extent that he can. He is a constructive citizen. He is a churchgoer and religion really is a force in his life. He tries to do his part to make his community the finest possible community in which he and his family can grow and thrive. He encourages good influences in his neighborhood—wholesome sports and recreation.

He keeps himself informed about what is going on in his country and in his world. He casts an intelligent ballot. He listens to public speeches. He reads and listens to the news carefully. He doesn't accept anybody's synthetic thinking. He thinks for himself. He is not afraid to trace ideas down to their lair, instead of merely thinking superficially.

This is the sort of patriot we need—the man who fulfills his American role in the finest sense of the term.

CONCLUSION

We can all strive to be like this man. We can all improve. And seeing this wonderful audience today assures me that Oshkosh will never be found lagging in doing its part.

It has been a great pleasure to be with you today. It is a pleasure to join with you in this rededication to all that we hold dear. Rededication is the loyalty from within.

It is thanks to efforts such as your own that we will keep our country strong and free. Thus, forever more, freemen everywhere can look to this land for that standard to which, in the words of the father of our country: "The wise and the honest may repair."

Dillon Dam

EXTENSION OF REMARKS
OF

HON. JOHN E. HENDERSON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1955

Mr. HENDERSON. Mr. Speaker, yesterday I appeared before the Civil Works Subcommittee of the Committee on Appropriations to urge that the committee amend the pending appropriations to include funds for the Dillon Dam. At this time, I should like to call the attention to the Members of this House to the situation which exists with respect to this worthy flood-control project. I believe those Members whose congressional districts are periodically visited by flood disasters in the Ohio and lower Mississippi Valleys may be particularly interested in this issue. My remarks are as follows:

Mr. Chairman, the occasion for my appearing before this committee this morning is to appraise the membership of the status of one of the important flood-control projects of the Corps of Engineers, which is a part of the comprehensive flood-control plan for the Ohio and lower Mississippi Rivers.

The particular project to which I refer is known as the Dillon Dam or Reservoir, located on the Licking River, in the 15th District of Ohio, at a point 5.8 miles above the confluence of the Licking and Muskingum Rivers near Zanesville. The project was authorized in section 4 of Public Law 761 of the 75th Congress, enacted on June 28, 1938.

Work was commenced on this project in 1946, and after an expenditure of $9,189,800 it now stands at about one-third of completion. Approximately $17,900,000 is yet required to complete the project. Active construction work on the project was suspended several years ago, and since the suspension the area has been permitted to erode and deteriorate.

The purpose of my appearance here this morning is to recommend to the committee that the appropriation bill under consideration at this time be amended to include provision for this project—at least to the extent of the $2 million figure last sought by the Corps of Engineers to provide for continued construction for the ensuing fiscal year.

In support of my urgent recommendation, I would prefer to direct the committee's attention to the need for the project, rather than to the dimensions and detail of the dam and reservoir. The plans have been in existence for a great number of years and are contained in the planning report, Dillon Reservoir project, Licking River, Ohio, Ohio River Basin, prepared by the Huntington, W. Va., district office of the Corps of Engineers, Department of the Army, in January 1954. The project and its jurisdiction have already received the approval of the Congress many years ago. This approval was endorsed in succeeding years through the provision of funds aggregating $9 million in authorizations for construction.

Those questions having been disposed of in the past, my purpose today is to point out the compelling need which lies behind the project. If any of the members here have witnessed the devastating effects of a flood along the Ohio or Mississippi River, they are aware of the waste, the death, and the destruction which are regularly visited upon this area. It is not difficult to understand that the waters which create those flood conditions do not originate with the major rivers, but come from the waters of smaller streams many miles away. The floods cannot be controlled by dikes or dams along these major streams. Control must come from upstream along the tributaries draining the area where the floods originate.

In 1938 the Flood Control Act was passed to provide a comprehensive flood-control plan for the Ohio and lower Mississippi Rivers. An integral part of this plan included safeguards for the people and property of Zanesville, McConnelsville, Marietta and the other communities along the Muskingum River. Through the control of the rampaging Muskingum, a large measure of protection could be achieved for those who live in the major river valleys below. Congress then saw the validity and need for the plans contained in the legislation and authorized sufficient funds to build the dams and reservoirs to help hold back the floods and relieve the burden of the Ohio River at peak times. Fourteen dams were constructed on other tributaries of the Muskingum River. Dillon is 15th and the last link to complete the control program. It was designed to hold the Licking River, a major tributary of the Muskingum. The Licking River forms 29 percent of the uncontrolled watershed area. Until it is finished, the Muskingum is still rambunctious. The floods continue to have

their devastating effect along the 77.6 miles from the city of Zanesville to the mouth of the Muskingum at Marietta, inundating, destroying, killing, and wasting. Industries and homes in the communities feel the periodic effect of the floods. Had the Dillon Dam been completed this last link in the control pattern would prevent this regular and unnecessary visitation of disaster and havoc in the river valley.

I readily understand that it is indeed difficult for this committee and the Corps of Engineers to make a decision as to the relative merits of the projects to be considered. In a plan so widespread in its effect as this one for the flood control of the Ohio and lower Mississippi Rivers, each individual reservoir is doubtlessly a worthy one. But I must respectfully point out that with Dillon, it is not a question now of making a decision. That decision was made by Congress in 1946 when construction was begun and by succeeding Congresses which voted approval of the more than $9 million that has been expended. After that great sum of money had been expended, after approximately 800 landowners have been faced with the prospect of displacement and have abandoned any long-range plans with respect to the use of their properties, the Congress has failed to authorize additional funds to complete the project. The temporary halt occasioned by the Korean conflict has begun a permanent deferment of Dillon. As a result, $9 million of the taxpayers' money has been spent with no benefit realized. No benefit will be realized from the investment until the project is completed. Instead of sorely needed flood control, costly confusion on a broad scale has resulted. Eight hundred landowners along the Licking River do not know whether to plant corn, fertilize, build fences, improve their buildings or to await the condemnation proceedings they have expected for so long. Meanwhile, work costing $9 million is deteriorating and depreciating by erosion and rust and the destruction of periodic floods continues inexorably. The expenditures have had the same futile effect as though we had flung them into the raging, muddy floodwaters of the Muskingum.

Mr. Chairman, I know you will be the first to raise your voice against such a glaring waste of Federal funds—the tax money of your constituents and mine. The Corps of Engineers has justified the expenditure, but there is no benefit from an uncompleted project.

Here are cold facts with regard to the Dillon project, in addition to the compelling ones of the previous approval by the Corps of Engineers and of the Congress. Dillon would reduce the crest of the 1913 flood by 4 feet at Zanesville, a city of more than 40,000 people, and would have reduced the peak flow into the Ohio River by 32,000 cubic feet per second. Control of those 32,000 cubic feet per second, now, one-third completed at Dillon, would play an important part in controlling the flood level at Ironton, Portsmouth, Cincinnati, and Cairo. Dillon would raise the controlled drainage area of the Muskingum watershed from 62 to 73 percent. The present completed reservoirs have reduced the frequency of damaging floods, but Dillon would reduce this frequency to once in 50 years. No flood of record subsequent to 1913 would have inundated, even the low-lying areas, had Dillon been completed.

The reasons of 1938 when the plan was authorized and the reasons in 1946 when the first money was spent are still valid and compelling reasons for the completion of the dam today. The need was imperative then. It is imperative now. In fact, there are new and additional reasons along the banks of the Muskingum and Ohio Rivers. These valleys have assumed new importance industrially with the completion of the new $40 million power project at Beverly which, combined with the Philo powerplant, provide a tremendous source of electric power. These installations have, in turn, spurred industrial interest from all over the Nation and new industries are going up all along the rivers to use the electric power generated there. The coal and chemicals to supply and supplement the huge atomic-energy project in southern Ohio and to carry into effect America's new program for the decentralization of industry are a significant segment of our national defense planning in which the Dillon Dam is a valuable key.

Mr. Chairman, with these as my reasons, I urge and earnestly request that this subcommittee recommend the amendment of the present appropriation bill to include a sufficient amount for the Dillon Reservoir project to permit construction to be carried out in the ensuing fiscal year.

Supplying Salk Vaccine

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 4, 1955

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial which appeared in the Washington Evening Star of May 3, 1955, headed "Supplying Salk's Vaccine." The editorial is an excellent one.

Serving, as I do, as a member of the Subcommittee on Health, Education, and Welfare Funds of the Committee on Appropriations, I have the utmost confidence in the Surgeon General, Leonard A. Scheele. I know he is sincerely concerned about the various aspects of this new medical discovery. He was before the committee on the afternoon when question was raised as to the possibility of the polio vaccine containing live virus. I know that the Public Health Service is working with its utmost ability to try to control the vaccine and make certain that it will be made available to all areas of the United States in such a manner that all the younger children and those most susceptible to the disease will have vaccinations in due time, as soon as the vaccine can be made available to them.

Mr. President, I ask unanimous consent that the editorial to which I have referred be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SUPPLYING SALK'S VACCINE

Dr. Leonard A. Scheele, Surgeon General of the United States Public Health Service, has done a good and timely thing in calling upon the American people to display their usual patience and commonsense in connection with the problem of distributing the Salk vaccine against poliomyelitis. During the past few days there has been a great deal of inexpert and extravagant talk on this subject, but all such talk—as Dr. Scheele has indicated—seems clearly to do violence to the facts of the situation.

Thus, by way of example, there have been rumors to the effect that many doctors have been giving the vaccine to adults in violation of priorities voluntarily agreed upon for the present temporary period of limited supply—priorities under which children in the most susceptible age groups are supposed to receive it first. And so, acting on the basis of these rumors, and accepting them as evidence of widespread black marketing operations, more than a few people—including Democratic Representative CELLER, of New York—have demanded the immediate enactment of a stringent Federal policing law to control the flow of the great new antipolio agent and to crack down severely on all violators.

But Dr. Scheele, with the support of other health authorities here in the District and elsewhere throughout the country, has kept the situation in perspective by declaring that there is nothing to justify the fear that a significant black market may be built up in this field. True, a tiny minority of unethical doctors and mean and selfish adult coconspirators may break the voluntary rules, but that is a possibility that can and should be dealt with effectively by medical societies and similar local and State agencies. A new Federal law could hardly be of much help in that respect. On the contrary, it could easily do more harm than good. Further, as rightly emphasized by Republican Representative BROWNSON, of Indiana, in a debate with Mr. CELLER, such a law would not produce a single additional cubic centimeter of the vaccine.

Actually, as Dr. Scheele has declared, the Salk vaccine is now being turned out at a rate that should make enough of it available to take care of all American children, aged between 1 and 9, by August 1. And by November 1, or December 1 at the latest, there will be a sufficient amount of it for everybody in the older groups, up to 19 years. Thereafter, within a relatively short time, its supply will be as abundant as needed. Certainly, despite the alarmists, such a situation adds up to something less than an emergency or crisis requiring extraordinary Federal action.

Guaranteed Annual Wage and the Right To Work

EXTENSION OF REMARKS
OF
HON. BARRY M. GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 4, 1955

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by F. G. Gurley, president of the Santa Fe System Lines, before the annual meeting of the Chamber of Commerce of the United States, in Washington, D. C., on May 3, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY F. G. GURLEY, PRESIDENT, SANTA FE SYSTEM LINES, BEFORE ANNUAL MEETING, CHAMBER OF COMMERCE OF THE UNITED STATES, WASHINGTON, D. C., MAY 3, 1955

The two outstanding issues on the national labor front today are described as the guaranteed annual wage and the right to work. I have been asked to direct my attentions to the latter.

Few subjects have become as beclouded by misinformation and misunderstanding, as the right-to-work question. I hope we may make a contribution to clearing the issues.

There are two Federal acts which govern labor relations. These are (1) the Railway Labor Act, which applies to the railways and some other transportation companies, and

(2) the Taft-Hartley Act, which applies to other industries.

Section 14 (b) of the Taft-Hartley Act provides that nothing in the National Labor Relations Act shall be construed to authorize the execution or enforcement of collective bargaining agreements requiring compulsory union membership in any State where such agreements are prohibited by State law.

Now, there is nothing complicated about a right-to-work law. Although all those currently in force in a number of our States differ in minor details, the net of each is the same. They simply provide that no individual can be required to belong to and support a labor union in order to hold a job. They mean that no man can be made to join a union in order to get a job and no man can be forced to join a union to keep his job. There are now 18 States prohibiting compulsory unionism. The number has been growing in recent years and there are certain to be more in the future. This alone indicates a widespread and growing public opposition to the notion that any man should have to join a union in order to exercise his right to earn a living.

The Opinion Research Corporation of Princeton, N. J., in April 1955 reported upon a general public survey on the question and the great majority believes that a man should hold a job whether or not he is a union member. The survey included 645 respondents in a group classified as "strongly socialistic." The vote from this group was 47 percent in favor of the proposition, and it was the only group where the majority voted against the proposition that a man should hold a job whether or not he is a union member.

The unions and certain political people try to show that these right-to-work laws are a grave threat to organized labor. Nothing could be further from the truth.

Those who seek to overthrow right-to-work laws assiduously avoid their paramount feature, which is the fact that they accord statutory protection to basic and fundamental human rights protected by the Bill of Rights of the Federal Constitution. The proponents of compulsory unionism, in fact, have done everything in their power to obscure this facet of right-to-work laws in a cloud of propaganda. But when pressed to it, they go so far as to deny that the Constitution of the United States protects a right-to-work.

In this denial these people come into square conflict with the Supreme Court of the United States. The Court has repeatedly held that the Bill of Rights protects a right to work and a freedom of association as well. These have also been given express universal recognition in the declaration of human rights of the United Nations. It is abundantly clear that these fundamental rights are abridged by compulsory unionism. A right or freedom exists in name only when it can be subjected to unreasonable and arbitrary conditions. The Supreme Court has flatly ruled that the right to work, like other constitutional liberties, cannot be subjected to such conditions. The same perforce applies to freedom of association.

We are told that elections have shown that the union shop is desired by the majority of union members and that the wishes of these majorities should be respected. Let us assume, as it is claimed, that the majority in favor of the union shop is ordinarly overwhelming. The principal point demonstrated by that is that a compulsory membership requirement is not required for a strong union membership, and the coercion and infringement of liberty of the objecting minority serves no really useful purpose. If nearly everybody belongs to the union anyway, no substantial purpose is served by forcing a handful of objectors to conform.

A union is not, as many people suppose, purely an agency for collective bargaining with the employer. It is partly that, of course, but it is also more. Sometimes it is partly a social club, partly a secret society, partly an insurance company, and of course it has definite relations with political organization. To join it a man has to give up some of his freedoms, and some people just don't like to do that. Their reason, good, bad, or indifferent, is entitled to respect.

You will find that as a unionman the employee is expected to contribute to an associated political organization, and otherwise toe the line politically. This means an assertion of control by the union over matters without direct bearing on the union's role of collective-bargaining representative, and as to which the leaders assume to know better than the individual himself what is good and what is bad for him.

However appropriate this might be where membership in the union is on a voluntary basis, it becomes intolerable when it applies to one who is forced into the organization against his will. It is bad enough to force a man into a good union. But what about forcing fine American citizens into a union dominated by Communists, or one dominated by racketeers?

That to our disgrace is being done in this country today, and the doing of it is being facilitated by the laws and the institutions established during the thirties and forties. To the credit of the CIO it has expelled a number of large and important unions because of Communist domination, but that has not ended their power or the power of other Communist-dominated unions under union-shop agreements to force workers into their ranks. In the last 10 years we have spent untold billions to protect the people of the free world from Communist domination, and yet we ourselves follow a labor policy that forces our own people into organizations ruled by Communist leaders. We would never think of doing it in any other field, yet we persist here, largely I think, because of the timidity of politicians in consideration of these policies.

In New York and elsewhere public attention has been focused in recent years on unions controlled by racketeers and criminals, where honest men because of union-shop agreements have to bow the knee to these criminals and racketeers to earn their living.

One of the arguments advanced by those who oppose right-to-work laws is that management and labor should have the freedom to engage in collective bargaining on the question of compulsory union membership.

Let us examine this freedom of contract. There are three parties whose interests are affected by compulsory union membership—management, unions, and employees. The management and the union have no right to make an agreement which serves to deprive the employees of their basic constitutional rights, such as the right to work and the freedom of association.

Many years ago freedom of contract was thought to protect the right of management to include in a contract of employment a provision under which the employee bound himself not to join a labor union. A great many people who classified themselves as liberals objected to this. They called it a "yellow dog" contract. They said that it enabled the employer to use his freedom of contract to destroy the freedom of choice of the employee in joining an organization. They said it violated his right of association. I think they were quite right and I am glad they succeeded in securing the passage of statutes which outlawed the practice.

The Norris-LaGuardia Act contained a ringing declaration of policy to the effect that every man should have the right to freedom of choice in joining or staying out of a labor union.

But today those who were against the freedom of contract which produced the "yellow dog" contract are dissatisfied with what they have done. They want to restore the supremacy of freedom of contract, or at least so long as it moves along the other side of the street and permits interference with freedom of association by means of compulsory union membership. What they are trying to do is to turn the clock back.

Actually there is no such thing in this country as freedom of contract with respect to the union shop. The majority of employers in the country are opposed to any form of compulsory union membership. many of them have nevertheless agreed to the union shop. It is a matter of common knowledge that they have done so not of their own free will but because of coercion—by strikes or threats of strikes. In any field where the ruling influence is coercion of contract is a misnomer.

While the Taft-Hartley Act clearly recognizes the right of individual States to pass right-to-work laws, the Railway Labor Act is different. From 1934 to 1951 the Railway Labor Act specifically forbade a closed shop or a union shop. Under an amendment of 1951 the union shop was sanctioned under certain conditions, any other law, State or Federal, to the contrary notwithstanding.

Under this amendment the nonoperating unions on the Santa Fe sought an agreement for a union shop. Similar action was taken on other railroads. Such an agreement would require the Santa Fe to serve notice on all present employees who are not union members that they must join the union representing their craft within 60 days or be fired from their jobs. The agreement would require that new employees join the union within the 60-day period.

It is clear that the proposed agreement contemplates we would use the power of an employer to deprive individual men and women of a freedom which is theirs as an unalienable right. We are asked to fire people for exercising their rights. A right to pursue happiness—a right to get the means of sustaining life—a right of property—a right to work. It is a freedom of individual men and women which it is not our right to bargain away.

The Santa Fe has several thousand nonunion employees who, for reasons good or bad or indifferent, but at least satisfactory to them, do not belong to a labor organization.

When the unions pressed their demands for a union-shop agreement, a class action was instituted as a test suit by 13 Santa Fe employees at Amarillo, Tex., against both the unions and the railroad. Santa Fe subsequently alined itself with its employees and against the unions. The district court at Amarillo found that the proposed union-shop agreement would deprive the individual employees and the Santa Fe of rights guaranteed to them under the Constitution. The court granted a permanent injunction enjoining the signing of a union-shop agreement. Also, the order of the court restrains the union from demanding such agreement through use of a strike or through other economic sanctions.

The court of civil appeals reversed the findings of the district court and the case has been appealed to the Supreme Court of Texas and it will be argued on May 11.

Now, I do not propose to talk too much about this specific case. It is an important case because it raises a question that has never, so far as I have been able to learn, been squarely presented to or decided by the Supreme Court of the United States, namely, whether compulsory union membership is compatible with the fundamental liberties guaranteed by the Bill of Rights.

There have been State court decisions, some one way, some another, but none by the Supreme Court of the United States. What is important is the principle of liberty that so thoroughly permeates the case. The

very fundamental liberty which is involved is the right to work without complying, as a condition of employment, with any requirement of membership or nonmembership in a labor union.

We are not opposed to unions on the Santa Fe. We have recognized railroad unions beginning in the 1880's, and we think that they have a useful and legitimate place among American institutions.

These railroad labor unions are among the very best of the labor organizations in the country. I know most of their executives, and they are good people. I have no quarrel with them personally. My difference with them relates to the question of principle on this specific issue.

We are resisting the demands for a union shop because we think they are contrary to the principles under which this country has been founded, because we do not wish to be a party to depriving our employes of their rights, and because we believe that the subjugation of the individual is contrary to the best interest of all concerned. We think that yielding to the demands would work injury, tangible and intangible, to the company and to the employes, both those who are presently union members and those who are not.

It is an obvious infringement on the liberty of a man to force him against his will to belong to any private organization. This is scarcely denied, but an attempt is made to justify the deprivation of liberty in the case of a labor union on a number of special grounds.

Earlier I mentioned the principle of majority rule. It is said that if the majority of employees unite in organizing a union on democratic principles their decision is binding on all. But this is no more true in a labor union than in any other type of private association.

There is nothing absolute about the principle of majority rule. It is not unlimited. Under free institutions the majority may not encroach upon the fundamental liberties of the minority. The very purpose of our Constitution and of the Bill of Rights is the protection of minorities. Tyranny and oppression are as bad at the hands of a majority as at the hands of George III or a dictator heading a modern police state.

There is reason for believing that in America today the danger to liberty from outside our borders is not the only one we face. There is also the inside danger which has its origin in the impulses and emotions which impel the crowd to infringe on individual rights.

Compulsory union membership is also supported by an appeal to the equitable theory that since the union confers benefits on all employees by acting as their collective-bargaining representative and otherwise, each of them should be compelled to bear a share of the burden of supporting the organization.

Those who stay out, it is said, are free riders who get unjust enrichment at the expense of the members. Drawing an analogy between union dues and taxes, those who take this view say that democratic principles require nonunion men to contribute financial support to the union which represents them. They go so far as expressly to classify union dues as taxes.

These reasons no more support compulsory membership in a labor union than in any other type of association.

The payment of dues to the union cannot properly be likened to taxes. Taxation is a sovereign power and may be exercised by the Government alone. There is not the slightest basis for the levying of taxes by a labor union or by any other private association.

Every chamber of commerce, every board of trade, every trade association, every taxpayers' league, many fraternal organizations, and many service clubs provide benefits for a group of persons. Quite a few people think one political party or the other provides inestimable benefits to all of the people of the country. Yet, would that justify making membership compulsory in these associations, including the political parties?

The theory of the free-rider argument is that when an organization is protective or promotive of the interests of a class or group, every member of that class or group should be compelled to join and support the organization. This idea is opposed to the fundamental theory of private organization. A group of people associate themselves to advance their common interests. They try to persuade as many others as they can to join with them but since the undertaking is wholly private and voluntary they can use nothing but persuasion to obtain or retain members. According to the compulsory union-membership theory, however, whenever an organization becomes representative of a large number of persons having a common interest, everyone having the same interest should be compelled to join the organization.

For the sake of testing the free-rider theory, let us look for a moment at the benefit bestowed upon workers as a class by the investors who raise the capital to build the plant and provide the management whereby workers are given employment. Suppose a law were passed providing that management could require as a condition of employment that all employees must belong to an industry protective association, formed to advance the welfare of the industry as a whole. A strong argument could be made that the corporate employer, by financing, organizing, and managing the business, is providing the opportunity for employment which is so vital to the employees, furnishing them as it does with the means of earning a livelihood. It could be argued that the employer is not only investing money and taking risks for the benefit of the employees or the corporation, but is supporting the industrial association to look out for the welfare of all of those engaged in the industry, and therefore, the employees should not be free riders in the organization which likewise functions for their benefit. One could argue that they should be compelled to join the association, to pay their dues and to submit to the charter, bylaws, and rules governing the other members of the industry association, which some might argue confers greater material benefits on employees than any labor organizations. Despite the apparent absurdity of this illustration, it has fully as much logic as the case for compulsory unionism.

The final ground that is urged for supporting compulsory union membership is one I touched upon eralier, i. e., that it is necessary for union security. Labor leaders have frequently placed their demands for security on the basis of need. They have said in effect: "We must have the closed or union shop to guarantee our existence and thereby insure protection of the gains of organized labor." Where this idea has been accepted, the acceptance has generally been uncritical and without question. But now that the union shop form of compulsory union membership has spread beyond mere local situations, it is time to evaluate the theory of the need for the union shop as essential to the survival of the union, or to its prosperity and well-being, or its successful operation. It is time to test it and reappraise its role as an instrument of union security.

Fortunately, the yardstick of ample experience in the railroad industry is at hand to test the validity of the assumption that the need for compulsory union membership continues under modern conditions. From 1934 to 1951, the Railway Labor Act specifically forbade closed or union shop contracts in the railroad industry. If the old assumptions about need were sound, one would expect to find that railroad labor organizations fared rather badly in that 17-year period. We all know, at least in a general way, that railroad labor unions have made considerable progress in recent years, and have enjoyed marked success. But we need not speculate—let us see what the record shows.

It is interesting indeed to examine membership figures of the 3 largest nonoperating railroad unions during the period when the union shop was forbidden by legislation. They show a threefold gain during this very time. The other rail unions expanded in a comparable fashion during the same period.

Membership is not the only area in which these unions have enjoyed outstanding success. By 1952 each had collective bargaining contracts covering substantially all—between 94 and 99 percent—of the railroad mileage in the country.

This experience in the railroad industry does not stand alone. It has its parallel in the growth in the ranks of organized labor in industry after industry without the coercive influence of the union shop or any other form of compulsory union membership.

Dr. Frederick Meyers of the University of Texas, testified for the unions in the Texas case I have mentioned. Later, in 2 addresses, Dr. Meyers described a study he had made which revealed that labor unions have experienced a remarkable growth in Texas in recent years, including 1947–1953, when the union-shop statute in that State was in effect.

The statute not only did not wreck the unions but did not so much as impede the rapid rate of their growth. There is good reason for believing that compulsory union membership harms rather than helps the union cause. Louis D. Brandeis, a great liberal, said many years ago that, "The objections, legal, economic, and social, against the closed shop are so strong, and the ideas of the closed shop so antagonistic to the American spirit, that the insistence upon it has been a serious obstacle to union progress."

We hope that we have made a contribution to an understanding of the issues and have made clear the reasons why we feel that compulsory unionism runs counter to the basic institutions of our form of society.

Voting and Attendance Record of Hon. Gerald R. Ford, Jr., of Michigan

EXTENSION OF REMARKS

OF

HON. GERALD R. FORD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1955

Mr. FORD. Mr. Speaker, under leave to extend my remarks, I include a report of my voting and attendance record during the 1st session of the 83d Congress.

The record includes all rollcall votes and all quorum calls. The description of bills is for the purpose of identification only; no attempt has been made to describe the bills completely or to elaborate upon the issues involved.

The purpose of this report is to collect in one place information which is scattered through thousands of pages of the RECORD. I want to be able to provide any interested constituent with a simple compilation of my voting and attendance record.

Voting and attendance record, Representative GERALD R. FORD, JR., 5th District, Michigan, 83d Cong., 1st sess.

Roll call No.	Date	Measure, question, and result	Vote
1	Jan. 3	Call of the House	Present.
2	...do	Election of Speaker, (MARTIN, 220; RAYBURN, 201)	MARTIN.
3	Feb. 3	H. R. 1979, amending the Reorganization Act of 1949 so that such act will apply to reorganization plans transmitted to the Congress at any time before Apr. 1, 1955. (Passed, 389 to 5.)	Yea.
4	...do	S. 243, providing for an Under Secretary of State for Administration. (Passed, 341 to 18.)	Yea.
5	Feb. 19	H. R. 3053, making supplemental appropriations for fiscal year ending June 30, 1953: On motion to recommit with instructions to increase funds for VA medical, hospital, and domiciliary services from $10 million to $20 million. (Rejected, 180 to 201.)	Nay.
6	...do	On passage. (Passed, 369 to 2.)	Yea.
7	Feb. 24	H. Res. 119, providing $300,000 for expenses of House Un-American Activities Committee. (Adopted, 315 to 2.)	Yea.
8	Feb. 25	H. R. 2332, requiring an annual review of military personnel requirements: On suspension of rules and passage. (Passed, 370 to 0.)	Yea.
9	...do	H. J. Res. 160, amending the National Housing Act by increasing FHA's title I loan insurance authorization by $500,000,000 and providing for repayment of the $8,300,000 Government investment in this fund to Treasury on or after July 1, 1953: On motion to recommit with instructions to fix interest rate at not to exceed 6 percent per annum on unpaid balance. (Rejected, 70 to 290.)	Nay.
10	Mar. 10	Quorum call	Present.
11	...do	H. R. 3575, admitting Hawaii to statehood: On motion to recommit. (Rejected, 182 to 227.)	Nay.
12	...do	On passage. (Passed, 274 to 138.)	Yea.
13	Mar. 17	Quorum call	Present.
14	...do	...do	Present.
15	...do	...do	Present.
16	Mar. 18	...do	Present.
17	...do	H. J. Res. 223, providing that Reorganization Plan No. 1, creating Department of Health, Education, and Welfare, shall take effect 10 days after date of enactment of this joint resolution. (Adopted, 291 to 85.)	Yea.
18	Mar. 19	H. R. 3053, the 2d supplemental appropriation bill for 1953 (conference report): On motion to agree to an amendment decreasing borrowing authority for rural electrification program from $50,000,000 to $35,000,000 and increasing borrowing authority for rural telephone program from $25,000,000 to $35,000,000 (instead of to $40,000,000 as proposed by Senate). (Rejected, 165 to 191.)	Yea.
19	...do	On motion to agree to amendment increasing borrowing authority for rural telephone program from $25,000,000 to $35,000,000. (Rejected, 171 to 174.)	Nay.
20	Mar. 25	Quorum call	Present.
21	Apr. 1	H. R. 4198, confirming and establishing the titles of the States to lands and resources within their historic boundaries: On motion to recommit. (Rejected, 106 to 283.)	Nay.
22	...do	On passage. (Passed, 285 to 108.)	Yea.
23	Apr. 15	H. R. 3480, extending for 3 years the period during which Mexican agricultural workers may be made available for employment in this country. (Passed, 259 to 87.)	Yea.
24	...do	H. R. 4004, providing for national banks to furnish lists of stockholders to the Comptroller of Currency upon request in lieu of annual filing: On motion to recommit. (Rejected, 79 to 239.)	Nay.
25	Apr. 21	Quorum call	Present.
26	Apr. 22	...do	Present.
27	...do	H. R. 4663, making appropriations for Executive Office and sundry independent offices for fiscal year 1954 (1st independent offices): On motion to recommit with instructions to authorize the start of 35,000 units of public housing in the fiscal year ending June 30, 1954. (Rejected, 157 to 245.)	Nay.
28	Apr. 24	Quorum call	Present.
29	...do	H. R. 1432, providing price support at 90 percent of parity for 1952 crop of Maryland tobacco. (Defeated, 110 to 212.)	Nay.
30	Apr. 27	S. 1419, authorizing the Board of Commissioners of the District of Columbia to establish daylight saving time in the District: On amendment allowing the Commissioners to institute daylight saving time each year. (Adopted, 250 to 99.)	Yea.
31	Apr. 28	Quorum call	Present.
32	...do	H. R. 4828, making appropriations for the Department of Interior for the fiscal year ending June 30, 1954: On amendments: To provide an additional $50,000 for expenses of planning in connection with the Southeastern Power area. (Adopted.)	Nay.
		On motion to recommit with instructions to increase by $3,786,000 the continuing fund of the Southwestern Power Administration and to increase from $38,300,000 to $42,728,000 funds for Bonneville Power Administration. (Rejected, 167 to 212.)	Nay.
33	May 5	H. R. 4974, making appropriations for Departments of State, Justice, and Commerce for fiscal year ending June 30, 1954: On motion to recommit with instructions to delete the sections authorizing the Secretarys of the 3 departments to terminate the employment of any employee whenever they deem such termination necessary in the interests of the United States. (Adopted, 181 to 168.)	Nay.
34	...do	On passage. (Passed, 344 to 5.)	Yea.
35	May 13	Quorum call	Present.
36	...do	H. R. 5134, amending the Submerged Lands Act and establishing title of Federal Government and its right to develop resources in submerged lands in the Continental Shelf. (Passed, 309 to 91.)	Yea.
37	...do	H. Res. 242, providing for House agreement to Senate amendments to H. R. 4198, confirming and establishing the titles of the States to lands and resources within their historic boundaries. (Adopted, 278 to 116.)	Yea.
38	May 14	Quorum call	Present.
39	May 19	...do	Present.
40	May 20	...do	Present.
41	...do	H. R. 5227, making appropriations for the Department of Agriculture for fiscal year ending June 30, 1954: On amendment reducing from $195,000,000 to $140,000,000 the funds provided for soil conservation payments. (Rejected, 196 to 201.)	Yea.
42	...do	On passage. (Passed, 384 to 12.)	Nay.
43	May 25	Quorum call	Absent.
44	May 26	H. R. 5246, making appropriations for the Departments of Labor, and Health, Education, and Welfare and related independent agencies for fiscal year 1954: On amendment increasing from $60,500,000 to $66,500,000 the funds allocated for payments to school districts in federally impacted areas. (Adopted, 237 to 156.)	Nay.
45	...do	On motion to recommit with instructions designed to increase by $25,000,000 the amount allocated for construction of hospitals. (Rejected, 197 to 203.)	Nay.
46	...do	On passage. (Passed, 395 to 2.)	Yea.
47	May 27	Quorum call	Present.
48	June 3	...do	Present.
49	...do	H. Res. 236, disapproving Reorganization Plan No. 2, simplifying operations of the Department of Agriculture and adapting its administration to regional, State, and local conditions: On motion to discharge the Committee on Government Operations from further consideration of bill (in effect, to force consideration of the unfavorable resolution by the House). (Rejected, 128 to 261.)	Nay.
50	June 4	Quorum call	Present.
51	June 5	Quorum call	Present.
52	...do	On motion to recommit with instructions not to increase membership of the U. S. Tariff Commission from 6 to 7. (Rejected, 185 to 215.)	Nay.
53	...do	On passage. (Passed, 363 to 35.)	Yea.
54	June 16	Quorum call	Present.
55	June 18	H. R. 5660, 2d independent offices appropriation for fiscal 1954: On motion to agree to amendment deleting language authorizing the VA to investigate non-service-connected veterans statements of inability to pay for treatment or hospitalization. (Adopted, 217 to 180.)	Nay.
56	...do	On passage. (Passed, 394 to 2.)	Yea.
57	...do	H. Res. 292, providing for consideration of H. R. 5710, extending the Mutual Security Act for 1 year. (Adopted, 340 to 35.)	Yea.
58	...do	Quorum call	Present.
59	June 19	...do	Present.
60	...do	H. R. 5710, providing 1 year extension of the Mutual Security Act: On passage. (Passed, 280 to 41.)	Yea.
61	June 22	Quorum call	Present.
62	June 23	...do	Present.
63	...do	H. R. 5659, providing price-support wheat for Pakistan. (Passed, 310 to 75.)	Yea.
64	June 24	Quorum call	Present.
65	June 25	...do	Present.
66	...do	H. R. 5728, authorizing disposal of Government-owned rubber-producing facilities: On motion to recommit. (Rejected, 58 to 317.)	Nay.
67	June 26	Quorum call	Present.
68	June 27	...do	Present.
69	...do	H. Res. 295, disapproving of Reorganization Plan No. 6 relating to Department of Defense. (Rejected, 108 to 235.)	Nay.

Voting and attendance record, Representative GERALD R. FORD, JR., 5th District, Michigan, 83d Cong., 1st sess.—Continued

Roll call No.	Date	Measure, question, and result	Vote
70	June 27	H. R. 4654, excluding top department and agency officials from provisions of law permitting lump-sum payments for annual leave. On adoption of conference report (which, in addition, repealed requirement that employees use annual earned leave by Jan. 30 of next calendar year). (Adopted, 269 to 65.)	Nay.
71	June 29	Quorum call	Present.
72	June 30	do	Present.
73	July 1	do	Present.
74	July 2	do	Present.
		H. R. 5969, Department of Defense Appropriation for 1954:	
75	do	On motion to recommit with instructions to increase Air Force funds by $1,175,000,000. (Requested, 161 to 230.)	Nay.
76	do	On passage. (Passed, 386 to 0)	Yea.
77	July 7	Quorum call	Present.
78	do	do	Present.
79	July 8	Quorum call	Present.
		H. R. 5173, providing for return to States of all Federal unemployment tax collections in excess of amount sufficient to pay administrative costs and to maintain $200 million reserve in Federal unemployment account:	
80	do	On motion to recommit with instructions to limit use of excess taxes to payment of unemployment compensation and to provide for delaying repayment of advances to States. (Defeated, 93 to 292.)	Nay.
81	July 9	Quorum call	Present.
82	do	H. R. 6054, amending act of Apr. 6, 1949, to provide for additional emergency assistance to farmers and stockmen in drought areas. (Passed, 387 to 4.)	Yea.
		H. R. 4351, providing for the development of private power facilities on Niagara River:	
83	do	On motion to recommit. (Rejected, 130 to 254.)	Nay.
84	do	On passage. (Passed, 262 to 120.)	Yea.
85	July 10	Quorum call	Present.
		H. R. 5898, extending until Dec. 31, 1953, the period with respect to which the excess profits tax shall be effective:	
86	do	On motion to recommit with instructions designed to substitute the provisions of H. R. 6100, permitting companies formed after 1947 to choose any 3 years as the "base" years in figuring the tax. (Rejected, 127 to 275.)	Nay.
87	do	On passage. (Passed, 325 to 77.)	Yea.
88	July 13	Quorum call	Present.
89	do	H. R. 5710, extending the mutual security program for fiscal year 1954: On adoption of conference report. (Adopted, 221 to 109.)	Yea.
90	July 15	Quorum call	Present.
		H. R. 6200, making supplemental appropriations for fiscal year ending June 30, 1954.	
91	do	On motion to recommit with instructions to increase funds for international information and educational activities (Voice of America) from $60,000,000 to $80,000,000 and to remove language providing for reduction of employees. (Rejected, 154 to 244.)	Nay.
92	July 16	Quorum call	Present.
93	July 17	H. Res. 262, disapproving Reorganization Plan No. 8, providing for reorganization of foreign information functions and the creation of a new agency to be known as the U. S. Information Agency: On adoption. (Rejected, 11 to 310.)	Nay.
94	July 20	Quorum call	Present.
		H. R. 4974, making appropriations for the Departments of State, Justice, and Commerce for fiscal year 1954:	
95	July 21	On motion to agree to amendment stating it to be the sense of Congress that the Communist Chinese Government should not be admitted to the U. N. as the representative of China. (Passed, 379 to 0.)	Yea.
96	do	On motion to agree to amendment providing additional $12,500,000 for Federal aid to airports. (Rejected, 160 to 230.)	Yea.
		H. R. 4663, making appropriations for the Executive Office and sundry independent offices for fiscal year 1954:	
97	do	On motion to agree to an amendment limiting to 20,000 the number of public housing units to be started in 1954 and barring any future commitments for such housing. (Passed, 239 to 161.)	Yea.
		H. R. 5376, making appropriations for civil functions administered by the Department of the Army for fiscal year 1954:	
98	do	On motion to recommit with instructions to agree to Senate amendment adding $2,200,000 to the $278,670,000 recommended by the conferees for flood-control construction projects. (Rejected, 137 to 252.)	Nay.
99	July 22	Quorum call	Present.
		H. R. 6391, making appropriations for Mutual Security for fiscal year 1954:	
100	do	On passage. (Passed, 288 to 115.)	Yea.
101	July 23	Quorum call	Present.
102	do	H. Res. 347, providing for the consideration of H. R. 5894, amending the Trade Agreements Extension Act: On adoption. (Adopted, 219 to 183.)	Nay.
103	do	H. R. 5894, amending the Trade Agreements Extension Act and certain other provisions of law to provide adequate protection for American workers, miners, farmers, and producers: On motion to recommit. (Adopted, 242 to 161.)	Yea.
104	July 24	Quorum call	Present.
		H. R. 5141, creating Small Business Administration to take over lending functions of RFC in this field and to consolidate other activities in behalf of small business:	
105	July 27	On motion to recommit. (Rejected, 161 to 226.)	Nay.
106	do	H. Res. 217, creating a special committee to conduct investigation and study of educational and philanthropic foundations and other comparable organizations which are exempt from Federal income taxation. (Adopted, 209 to 163.)	Nay.
107	July 28	Quorum call	Present.
108	do	do	Present.
109	do	H. Res. 353, providing for the consideration of H. R. 6481, authorizing admittance of 240,000 special-quota immigrants: On adoption. (Adopted, 250 to 152.)	Yea.
110	do	Quorum call	Present.
		H. R. 6481, authorizing the admittance of 217,000 special quota immigrants:	
111	do	On motion to recommit. (Rejected, 186 to 222.)	Nay.
112	do	On passage. (Passed 221 to 185.)	Yea.
113	July 29	Quorum call	Present.
		H. R. 6016, authorizing the Commodity Credit Corporation to make agricultural commodities owned by it available to the President for the purpose of enabling the President to assist in meeting famine or other urgent relief requirements of peoples friendly to the United States:	
114	do	On motion to recommit. (Rejected, 114 to 321.)	Nay.
115	July 31	Quorum call	Present.
		H. R. 6391, making appropriations for the Mutual Security Administration for fiscal year 1954:	
116	do	On motion to recommit with instructions to insist on disagreement with Senate amendment which added $211,000,000 aid for Europe. (Rejected, 192 to 200.)	Nay.
117	do	On adoption of conference report. (Adopted, 237 to 156.)	Yea.
118	do	Quorum call	Present.
		H. R. 6672, increasing the statutory debt limit of the United States from $275,000,000,000 to $290,000,000,000:	
119	do	On motion to recommit with instructions to limit the increase to the period of Aug. 1, 1953 to Dec. 31, 1954. (Rejected, 173 to 225.)	Nay.
120	do	On passage. (Passed, 239 to 158.)	Yea.
121	Aug. 1	Quorum call	Present.
122	do	H. Res. 361, providing for the consideration of H. R. 6413, permitting withholding by the Federal Government from wages of Federal employees certain taxes imposed by municipalities: On adoption. (Adopted, 192 to 161.)	Yea.
		H. R. 6200, making supplemental appropriations for fiscal year 1954:	
123	Aug. 3	On amendment authorizing dismissal of certain employees of U. S. Information Agency. (Adopted, 147 to 139.)	N. V.

Six Good Reasons Why There Is Danger in Colorado River Projects

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1955

Mr. McDONOUGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Milo E. Rowell, president of the California Taxpayers' Association, listing "Six Good Reasons Why There Is Danger in Colorado River Projects," which I thoroughly agree with. These are the most costly and fantastic irrigation and reclamation projects which the Congress has ever been called upon to consider:

SIX GOOD REASONS WHY THERE IS DANGER IN COLORADO RIVER PROJECTS

(By Milo E. Rowell, president, California Taxpayers' Association)

Because the bills now pending in Congress seeking to authorize the upper Colorado River Basin projects (S. 500 and H. R. 270) and the Fryingpan-Arkansas project (S. 300 and H. R. 412) are economically unjustifiable and financially infeasible, and because they would, if enacted, be wasteful of water, the lifeblood of California, the executive committee of California Taxpayers' Association has acted to oppose these measures.

Information in minority reports of California Congressmen shows that:

1. Current upper basin bills are not the same as originally approved by the President. There are 4 additional major dams, bringing the total to 6, and 16 additional irrigation projects, bringing the total to 30, raising the cost from $920 million to $1.6 billion, as a starter.

2. The Interior Department would be permitted to bypass the Agriculture Department in the reappraisal of some of the projects. Considering the vast investment in the land involved, it would seem essential for the Congress to have the best sort of soil appraisal by that Department.

3. Under the proposed plan of financing, the construction costs and concealed subsidies to be paid by the Nation's taxpayers would be more than $4 billion. This would be to supply 730,000 acres of land, of which 450,000 acres would receive only a supplemental water supply. The subsidy would cost $5,000 an acre. The cost to taxpayers for each 150-acre farm would be $750,000.

4. The lands in all of the participating projects would be in high elevations with a limited growing season. With water, their average value would be about $150 an acre. They would be suitable for crops already in great surplus in this country.

5. The same method of financing is proposed for the Fryingpan-Arkansas project as above described for the upper Colorado River Basin projects, except that repayment of costs allocated to irrigation would be permitted for a 70-year period instead of the 50-year period provided for the upper Colorado projects. This extension of the repayment period to 70 years more than doubles the interest subsidy under the 40-year repayment permitted by existing law.

6. Congress created the Hoover Commission for the purpose, among others, of investigating and making recommendations as to all water and power policies. The Commission is expected to make its report on water and power policies within the next 4 months. No legislation should be adopted by the Congress establishing new policies as sweeping as these, at least until it has received and considered the report of the Hoover Commission.

The threat of $4 billion in further entirely unnecessary Federal expenditures is of concern to every citizen. For Californians, such expenditures are of more than ordinary concern, for while we are 7.7 percent of the American people, we pay 9.4 percent of the Federal tax bill. A $4 billion expenditure by Uncle Sam means a tax cost of $372,800,000 for the people of California.

We hope California Congressmen will be able to protect the people of our State and the Nation from these dangerous and costly enterprises.

The Weekly Newspaper Editor

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. GATHINGS. Mr. Speaker, in the April 15 issue of the Piggott, Ark., Banner, my good friend, Mr. Laud Payne, in referring to the fact that with the publication of that issue his newspaper would be entering on its 63d year of continuous business in Clay County, Ark., makes some cogent statements in connection with the business of the weekly newspaper.

Writing in his column, Picked Up Here and There, Mr. Payne says:

With the publication of this issue, the Banner enters its 63d year of continuous business in Piggott. This gives this paper one of the longest records in this area of being continuously in business under the same firm name. A lot of people have thought the paper has been continuously owned by the Payne family, but that is not the case. My father, the late Charles Payne, came to work for the Banner when he was a boy, not over 16 years of age. He started as a printer's devil, working for 50 cents a week and board and sleeping on a cot in the back of the office. This was around 1900. He worked almost continuously for the paper until his death in 1940. The only time he was out for any time was during the 8 years he served the county as a public official—county court clerk and sheriff and collector.

During the very bottom of the depression, the early thirties, he purchased the paper, took over as editor. Not too many years later he purchased the present building and we moved over here.

I came to work here in May of 1925—30 years ago.

After my father's death, the Banner became a partnership concern, with my mother, Mrs. Amanda Payne, and I coowners.

During the past 14-plus years, while I have been serving as editor, the only time I have been off duty here for extended times was the 60-day term of the legislature on four occasions.

The history related by Mr. Payne can be matched throughout the Nation, for our so-called country newspaper editors have always been noted for their endeavor and their public service. In addition to the publication of news and the chronicle of life in the community, these fine men and women have given generously of their time in civic affairs.

I would like to call to the attention of the House Mr. Payne's comments regarding the glamour of the newspaper profession. He states:

Unfortunately, operating a country weekly is not at all like is pictured in the movies or on television. Their stories would leave you to believe that all papers have a large outside staff of reporters, that are on call for any and every event. These stories do not depict the story behind the scene. The backshop activity, where the mechanical work is done is not so glamorous to depict. But it is the workshop and where the money must be made. All of us in the Banner work in the front and back. Not one (and that includes the gals, Mrs. Robbins, and my mother), are excluded from getting "ink in the hair."

So if you don't see us out on the streets too often; don't see us at every accident scene; at every fire; at every social function; it isn't our lack of interest—but lack of time. We try to get the stories in, and have various sources from which we get information.

This is true, the business of operating a weekly newspaper is not the wild and discordant hustle and bustle as pictured in popular print, but the everyday operation of the paper—recording the loss of the community's citizenship, the birth of its future leaders, and the happy news of weddings and anniversaries, the location of new business, and the everyday events that make America—this is the life of our newspapermen on the small weeklies. The editor usually writes most of the news, being the confidant of the civic officials, and he is to be seen up and down the streets of the city with his blunt pencil and fold of copy paper. He may have the help of the pony wire from the wire service and, at best, he may be opulent enough to have a teletype machine—but, primarily, his news is of the community. He edits the newsletters from the various rural communities surrounding his town, and he thinks it right to leave in the copy local news of a litter of pigs and the visit of a relative from just across the county.

The local newspaper retains the flavor of our historic past for stories in the newspaper reflect the character of the editor and modern objectivity in news is not permitted to make the items impersonal. If they like a man they say so.

The greatest gems of journalism are not found in the large metropolitan papers. The true essence of life in these United States is found in the columns of the weekly newspapers.

The news is gathered and many times set up in type by the same editor. Or, in a pinch, he can still pick up a stick and handset the type and measure out the heads without worrying about a layout man. He is as familiar with the stone in the composing room as he is with his desk in the editor's cubbyhole.

He is the voice of his community. He is the conscience of his community. And he is a bulwark in the Nation.

To the Laud Paynes of this Nation—the editors of our weekly newspapers, I pay tribute, and I congratulate the Piggott Banner on its successful history of service to Clay County. May our Nation remain a free and democratic country where the voice of such editors will continue to be heard and the news of our communities be recorded without censorship or restraint.

Poland Crucified

SPEECH
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. SMITH of Wisconsin. Mr. Speaker, I am pleased to have an opportunity to join with many of my colleagues in observing Poland's Constitution Day.

This is no new subject for me. Well do I recall March 2, 1945, the day after President Roosevelt addressed both Houses of Congress and reported the results of the so-called Yalta Conference. We know, today, that there were many secret agreements made at the several conferences, Yalta, Teheran, and Potsdam, notwithstanding Mr. Roosevelt's denial that secret agreements had been made. And so it was on the very next day after his appearance that I was privileged to address this House on the subject Yalta—A Moral Retreat—Poland and Small Nations Crucified.

Mr. Speaker, I do not intend to repeat what I said on that occasion, I would, however, take the opportunity to point out some statements I made regarding the treatment accorded Poland and other small nations by Roosevelt, Churchill, and Stalin.

I said:

The determination by the conferees—

Roosevelt, Stalin, and Churchill—

to settle the boundary lines of Poland before the question was submitted to the people of Poland constitutes a retreat from high moral ground that we have steadily maintained throughout the war. To say now that free elections are to be held and that Poland will receive a long shore line carved out of Germany is to rob Peter to pay Paul and is a feeble effort to fool the people.

Mr. Speaker, I was referring, of course, to a very important article in the so-called North Atlantic Treaty whereby the great powers pledged that all peoples would have the right of self-determination. This principle was denied the people of Poland and the other small captive nations. I further pointed out that a great mistake had been made at Yalta and one which, if not rectified, would lead to world war III. We know how close to another war we are today. Poland and these small nations had no representation, no spokesman for them at the conferences to which I have referred.

Again, I repeat what I said on that occasion, that there were three cardinal provisions of the Atlantic Charter violated:

First. Their countries seek no aggrandizement, territorial or otherwise.

Second. They desire to see no territorial changes that do not accord with the freely expressed wishes of the people concerned.

Third. They respect the rights of all peoples to choose the form of government under which they live; and they wish to see sovereign rights and self-government restored to those who have been forcibly deprived of them.

Mr. Speaker, at Yalta it seems quite clear today that we acquiesced in every demand made by Russia for concessions in Europe and in Asia. We agreed to the establishment of the Curzon Line as the easternmost boundary line of Poland which was contrary to an agreement made between Poland and Russia subsequent to World War II and which violated the rights of millions of Polish people. We knew that, by that agreement, Russia was to continue to dominate and control Poland, Latvia, Lithuania, and Estonia, all of which was an unlawful grab of those countries in 1940.

We were parties to the unholy crime, notwithstanding the noble pronouncements of our State Department in 1940 to the contrary. Britain and the United States acquiesced foolishly in the demands of Stalin in his selected sphere of influence. This, I repeat again, constitutes the retreat from the high moral ground upon which we had pledged ourselves in the war.

There was little doubt that Poland was crucified at Yalta, and with that crucifixion American idealism was also defeated. Our leaders scorned our American constitutional system and the pledges made in the North Atlantic Charter that no nation, neither Russia, Britain, nor any other country would seek territorial aggrandizement, were flagrantly violated at Yalta.

Mr. Speaker, on this sacred occasion those of us who live today can only pledge that we will exert every influence and every power available to repudiate the moral retreat of our nation at Yalta, where Poland and the other small nations were crucified.

Low Strike Record in California

EXTENSION OF REMARKS
OF
HON. JOHN F. SHELLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1955

Mr. SHELLEY. Mr. Speaker, I have just received a release from the Department of Industrial Relations of the State of California calling attention to the State's outstanding 1954 labor-management relations record. In actual man-days lost on account of strikes, the 1954 record was the lowest in 10 years. The time lost in 1954 represented a 64 percent decrease from the 1953 figures. This splendid record is even more remarkable than it seems at first glance when we take a look at some of the other factors involved.

In the 10 years since the war California has had a tremendous influx of people finding new jobs in the State. There has been a corresponding increase in new industries and plants, and a terrific expansion in size of existing industries in California. Nonagricultural employment in the State varied between 3,800,000 and 3,900,000 wage and salary workers in 1954. The corresponding figure in January 1946, following the war's end, was 2,787,000—so we have over 1 million more nonfarm workers at this time. Normally, with such conditions industrial unrest could be expected to follow. This is well demonstrated in other sections of the country right now, where an expanding industrial economy is plagued with serious labor-management difficulties and where such difficulties can be expected to multiply unless a way is found to promote harmonious relationships.

It might be well to look for a moment at the reasons for California's stable labor-management picture. Let us remember that the tabulations in the release accompanying these remarks do not tell the whole story. While the numerical decline in strike situations shown is encouraging in itself, when we consider the great expansion of industrial activity and total employment in the State at the same time it is truly remarkable. California is one of the most highly organized States in the country, unionwise. Through a long period of years, during which I played an active part, labor organizations and management groups in the State have worked out a highly effective technique for composing their differences and negotiating issues with a minimum of strain and violent reaction. The methods used require that each of the groups recognize and respect the rights and position of the other. The statistics in the accompanying release show how this mutual respect has paid off in dollars and cents for both sides, to say nothing of the avoidance of tension and physical violence now widespread elsewhere.

Mr. Speaker, I believe there is a lesson in this from which other areas in the country might well profit. As a tribute to a successful labor-management cooperation in my own State, and for the benefit it may have for others, I ask that the release to which I have referred be printed at this point in the RECORD.

TEN-YEAR LOW OF STRIKE ACTIVITY IN CALIFORNIA

Idleness in California due to labor-management disputes was lower in 1954 than in any of the last 10 years, Ernest B. Webb, California director of industrial relations, announced today. Work stoppages during the last year caused 1,070,000 man-days of idleness. This represents a 64-percent drop from 2,960,000 man-days idle in 1953.

The number of workers involved in California work stoppages beginning in 1954 was 88,100, well under half of the 1953 figure of 210,000. In only 1 of the last 10 years did fewer workers participate in strikes. That year was 1949.

Altogether last year there were 206 stoppages compared with 269 which began in 1953. In only 2 of the last 10 years, 1945 and 1948, California had fewer strikes than were counted in 1954.

The largest work stoppages in 1954 in terms of man-days idle resulted from 3 disputes, 1 in the lumber and 2 in the rubber industry. These were 3 multi-State disputes affecting California; they accounted for more than 40 percent of all man-days idle in the State in 1954.

Major issues: Nearly 90 percent of California's strike idleness in 1954 resulted from disputes over wages, hours, and wage supplements, such as welfare and pension plans. Inter- and intraunion disputes (sympathy, jurisdictional strikes, etc.) played a very small role in the strike picture of last year, resulting in less than 1 percent of all man-days idle.

Los Angeles metropolitan area: Strike idleness in the Los Angeles metropolitan area decreased sharply last year. Man-days of idleness dropped by 61 percent between 1953 and 1954—from 957,000 to 373,000.

The number of workers involved in Los Angeles strikes in 1954 was 44,700, about 22 percent less than the 57,000 workers idled in 1953.

Last year 88 work stoppages occurred in the Los Angeles metropolitan area. This was nearly one-third less than the 122 stoppages counted in 1953.

San Francisco-Oakland metropolitan area: A similar sharp reduction of strike idleness occurred in the San Francisco-Oakland metropolitan area where 186,000 man-days idle were reported in 1954. This was 75 percent below the 731,000 man-days idle in 1953.

The number of workers involved in strikes decreased even more sharply, about 80 percent. In the past year 11,100 workers, contrasted with 58,900 workers in 1953, participated in strikes.

Work stoppages beginning in 1954 numbered 70 compared with 81 in 1953.

Area	Stoppages beginning in year				Man-days idle during year	
	Number		Workers involved			
	1954	1953	1954	1953	1954	1953
California	206	269	88,100	210,000	1,070,000	2,960,000
Los Angeles metropolitan area	88	122	44,700	57,000	373,000	957,000
San Francisco metropolitan area	70	81	11,100	58,900	186,000	731,000

Federal Aid No Bargain

EXTENSION OF REMARKS
OF
HON. STUYVESANT WAINWRIGHT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1955

Mr. WAINWRIGHT. Mr. Speaker, a most enlightening editorial appeared recently in a very fine Long Island weekly newspaper. The editor of the Suffolk County News, Joseph Jahn, has presented a very clear and interesting analysis on what the proposed plan for Federal aid to education would mean to the State of New York and its taxpayers. It follows:

[From the Suffolk County News of April 22, 1955]

FEDERAL AID NO BARGAIN

We believe the Federal Government has a responsibility toward relieving the crisis that exists in the system of public school education but the present plan is not a sound one as far as New York State taxpayers are concerned.

Congress is being urged to pass a Federal aid plan to provide $20-a-child now and $80-a-child in 1965. The author of the plan is Beardsley Ruml, whom most of us remember as the "father" of pay-as-you-go Federal income taxes.

According to Mr. Ruml, his plan would cost the Nation's taxpayers $764 million in 1957. By 1965 it would cost $3,500,000,000. What does that mean to New Yorkers? How much would we give and how much would we get back?

To begin with, we had 2,246,967 children enrolled in all the State's public schools at the beginning of this school year. That's 7¼ percent of the Nation's total public-school enrollment. Assuming this proportion stays constant, we'll have 22,500,000 schoolchildren in 1957 and 3,200,000 in 1965.

In 1957, under the Ruml plan, we'd get $20 a child, or $50 million. By 1965, at $80 a child, we'd get $256 million a year. That sounds pretty good, so far. But when we check into the matter of cost, we get an entirely different picture.

New York taxpayers provide an estimated 12.44 percent of all the tax revenue collected by the Federal Government. If Congress appropriates $764 million in 1957, we'd have to pay more than $95 million. Since all we'd get that year would be $50 million, New Yorkers would have to take a net loss of over $45 million. By 1965, when we'd be getting $256 million we'd be paying $435 million. Our loss would be $179 million a year. If the Federal subsidy per child goes up after 1965, our annual loss would be even greater.

Before joining the Federal aid bandwagon, Empire State parents and taxpayers should ask themselves this question: "Do we want our school tax money sent to Washington, which will return only a fraction of it to us, or would we rather see all our school tax money spent right here in New York for our own children?" The answer should be obvious.

Max Abelman

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mrs. KELLY of New York. Mr. Speaker, Max Abelman has been called Brooklyn's ambassador of good will. On the occasion of his retirement as secretary to the president of the Jewish Hospital of Brooklyn and director of public relations, many tributes extolling his years of service were paid to him.

Under leave to extend my remarks in the RECORD, I include the following letters of additional commendation which have been sent Mr. Abelman in recognition of his services to our community:

MALACANANG, MANILA,
February 14, 1955.

MY DEAR MR. ABELMAN: It appears from your letter of January 29 that you are a good friend of my esteemed colleague, Ambassador Carlos P. Romulo. Since you are yourself Brooklyn's ambassador of good will, your acquaintance with him is not in the least surprising. I have also noted with great interest the excerpts from the CONGRESSIONAL RECORD paying tribute to your accomplishments upon your retirement from your post at the Brooklyn Jewish Hospital and I therefore join your many friends in conveying congratulations for your splendid record.

My cordial good wishes.

Sincerely yours,

R. MAGSAYSAY.

HEADQUARTERS OF THE
COMMANDANT THIRD NAVAL DISTRICT,
FEDERAL OFFICE BUILDING,
NEW YORK, N. Y. *April 20, 1955.*

Mr. MAX ABELMAN,
Brooklyn, N. Y.

DEAR MAX: I am sorry that I had to miss the ceremony in which Rear Adm. Roscoe H. Hillenkoetter, our beloved commandant, presented to you a Certificate of Merit on behalf of the Navy.

An arrangement had been made for me, several months ago, to speak at the same time, before the combined women's auxiliaries of several churches, in the Union Presbyterian Church, Upper Montclair, N. J. I asked the admiral's aide to convey to you my regrets verbally.

Permit me to join your host of friends in congratulating you on the new honor that has come to you. You have given matchless service for many years to the Jewish Community and the American Community at large. We are all grateful to you.

Mrs. Goldberg joins me in wishing you many years of good health and spiritual joy that you may continue to serve as heretofore with that consecrated devotion and effective performance for which you have been known to all who had the privilege to come in contact with you.

Very sincerely yours,

JOSHUA L. GOLDBERG,
Captain, CHC, USN, District Chaplain.

FARVUE FARM,
SOUTH SALEM, N. Y., *April 16, 1955.*

DEAR MANNY: It was kind of you to include me in the guest list of the party you are giving for Max. He has been a true friend of so many people in so many different walks of life. It is good that Max should be honored in this way.

Unfortunately I have a speaking engagement at the Agricultural College at Storr's Conn., the evening of April 18 and it appears altogether unlikely that I shall be able to get back to Farvue in time to set out for New York.

Please give my warmest greetings to Max and our good friends.

Sincerely yours,

HENRY A. WALLACE.

Deputy United States Marshal Jobs Should Be Under Civil Service

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. ANFUSO. Mr. Speaker, I am today introducing a bill to place the position of deputy United States marshal in the classified—competitive—civil-service system.

During the 82d and 83d Congresses bills were introduced in both Houses to exclude deputy United States marshals from the competitive civil-service system, but in each instance the Congress refused to act upon these bills because they were without merit. In November 1954, however, the United States Civil Service Commission, contrary to the intent of Congress, removed the deputy marshal positions from the competitive civil-service system. In taking this action, the Commission made these jobs subject to political patronage.

In my opinion, it is essential that law-enforcement positions of this type should remain under the regular civil service merit system. Applicants for such positions should be required to qualify in a competitive examination, instead of having to depend on political patronage. In this way, we shall insure continuity of service in a most important adjunct of our judicial system.

My bill provides that those marshals who have acquired competitive civil-service status prior to November 30, 1954, will retain their status under the measure. Deputy marshals appointed to such positions after that date without having taken a qualifying examination will be required to compete within 90 days following the enactment of the bill.

By enactment of my bill, all deputy marshal jobs will be filled through regular civil-service examinations in the future. In this way, we shall be able to restore these positions to the civil service merit system, instead of subjecting them to the inequities of the spoils system.

I trust we can have early committee action on the bill so that it can be brought before the House for consideration and approval.

Chicago Daily News Commends a Statesman From Illinois

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1955

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include the lead editorial in the Chicago Daily News, Thursday, April 21, 1955, as follows:

GOP SQUANDERBILL

In all of Senator PAUL DOUGLAS' record of fighting governmental waste, no chapter does him more credit than his valiant efforts against the upper Colorado River project on the floor of the Senate Monday and Tuesday.

With 8 of the arid States represented by 2 Senators apiece, the $2 billion squanderbill passed the Senate despite DOUGLAS' efforts. These Senators were joined by most of the supporters of public power.

Senator DOUGLAS himself is a strong supporter of TVA, but he deplored the doctrinaire attitude of those colleagues who favored the upper Colorado project just because it includes vast sums for public power as well as irrigation. He urged them to discriminate on the basis of return.

No other public power project, existing or contemplated, is so expensive per unit of power to be produced. The current will cost 4½ times as much as current produced on the Columbia; 3 or 4 times as much as current produced by the single unit dams in the Tennessee Valley, and 4½ to 6 times the cost at the TVA multiple-purpose dams.

The irrigation costs are even more fantastic. The average, he estimated, will be $2,142 an acre to bring irrigation to land which cannot possibly exceed a value, when irrigated, of $150 an acre. In Utah, the cost will reach $3,953 an acre.

This is high-altitude land with a short growing season and the principal crop it can produce is hay. As DOUGLAS pointed out, the top price for the richest agricultural land in the world (Illinois and Iowa) does not exceed $650 an acre.

Senator DOUGLAS made the most of the curious fact that the administration pushes this monstrously high-cost project while complaining about "creeping socialism" in the TVA and other public-power areas.

When the Government first got into the reclamation business, the beneficiaries of irrigation projects were expected to pay interest on what the Government spent. Then the interest was deferred, for short periods, and for a longer time with every new project.

The Colorado project sets a new record for deferring interest. There will be a 10-year development period in which nothing will be paid on either interest or principal. Then there will be a 50-year period in which the beneficiaries will (theoretically) pay back principal but not interest.

Interest, in other words, is deferred for 60 years. If you assume a 10-year construction period, it would actually be deferred 70 years. Yet the Government will be paying interest on its obligations all the time.

It is hardly conceivable that fiscal irresponsibility could be pushed further.

The New York Mirror Youth Program

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. ANFUSO. Mr. Speaker, one of the finest character-building programs of activities for our citizens of tomorrow is the youth program conducted by the New York Mirror, one of the great newspapers of this country. Through this program of 20 different activities, the youth of New York City is learning to assume greater responsibilities of citizenship and sportsmanship.

The youth program was first launched by the Mirror in 1942 and has since then been expanded into a series of year-round activities and events aimed at the spiritual, intellectual, and physical development of our youth. Each year this program is enhanced by the addition of new events and larger numbers of participants. In 1954 these events attracted some 84,000 participants and about 1,100,000 spectators.

The importance of this program is now recognized by many character-building organizations and authorities in the field who also appreciate its value in combating juvenile delinquency. New York City's park department and its board of education are cooperating with the Mirror in sponsoring many of the activities.

A brief listing of the Mirror youth program of events will indicate how much this program has been expanded and the many ways in which youth can be interested in healthy and constructive activities. The program includes:

First. A youth forum, in which hundreds of teenagers from school and youth groups discuss national and international affairs.

Second. A citywide basketball tournament in which teams from the elementary and high schools participate in a series of elimination matches. The championship finals are played in Madison Square Garden. In 1954, 1,872 teams made up of 18,651 players took part.

Third. A marbles tournament for boys and girls attracted 12,360 youthful participants last year.

Fourth. The all-city high-school chorus and symphony orchestra presented its fifth annual concert at Carnegie Hall, sponsored jointly by the Mirror and the board of education.

Fifth. A citywide softball tournament is conducted annually with championships decided in the men's and women's divisions.

Sixth. A handball tourney attracted 6,150 entrants in all 5 boroughs of the city. Awards were made for individual and doubles championships.

Seventh. A little fellas baseball league included 183 teams and 2,562 players last year. A little "world series" decided the city champs.

Eighth. A folk-dance festival was staged on the mall in Central Park, in which 3,500 gaily dressed children from all parts of the city presented a program of the folk dances of many lands.

Ninth. A sports-editors forum is held annually, attracting some 100 young writers from the high schools who discuss problems of mutual interest.

Tenth. A model flying boat is held each year. The 1954 fair attracted 150,000 spectators and 1,000 entrants.

Eleventh. Swimming classes are conducted in 17 park department pools. Last year 7,126 learners took swimming lessons.

Twelfth. A citywide swim tournament is held annually. In 1954 there were 2,225 entrants in the tournament and some 200,000 spectators.

Thirteenth. Horseshoe pitching tournament attracted 2,725 entrants in the city's parks and throngs of spectators.

Fourteenth. Boy Scout awards are presented to First-Class and Eagle Scouts in recognition of their achievement in citizenship training.

Fifteenth. Junior olympics, an annual event, pits contenders of various age groups in a program track and field sports. In 1954, 2,800 youngsters participated in the junior olympics.

Sixteenth. A golf tournament is conducted all summer long at a dozen city golf courses. Last year, 2,888 participated in this tournament.

Seventeenth. A tennis tournament attracted 3,103 contestants who competed for titles and awards.

Eighteenth. The annual youth festival was held in September in Central Park in the presence of an audience of 50,000. Boys and girls who emerged victorious in the various events sponsored by the youth program were honored publicly by civic and political leaders. Honors were handed out to the winners by stage, screen, radio, television, and sports personalities.

Nineteenth. Annual Christmas Carols Festival was held on the Mall in Central Park in December.

Twentieth. A Winter Carnival is held annually in Central Park for winter sports. Hundreds participate and thousands come to watch.

Mr. Speaker, such is the long list of activities sponsored by the Mirror youth program. Much of the credit for the success of this program is due to two individuals who take a personal interest in the program, Charles B. McCabe, publisher of the New York Mirror and Hinson Stiles, its managing editor. Mr. McCabe is chairman of the youth program executive committee and Mr. Stiles is the administrator. Other members of the committee are William Detlef, W. N. Thomas, and Glenn Neville. The committee has just published a fine brochure, entitled "citizens in the Making," which describes the youth program in detail.

In sending me a copy of the booklet, Mr. Stiles wrote me as follows:

NEW YORK MIRROR,
New York, N. Y., April 22, 1955.

DEAR JUDGE ANFUSO: Another year has slipped by and I am pleased to send you our new brochure of the Mirror's youth program, largest character-building enterprise in the Nation conducted by a newspaper.

The Mirror is particularly happy to have participated with the department of parks, the board of education, and approximately 35 youth organizations in cosponsoring the various events.

This expanded program now embraces 20 separate activities, and during the past year more than 500,000 New York City school children either actively took part in or were spectators at the various projects, which ranged from a youth forum through the field of sports to a high-school concert in Carnegie Hall.

Funds to support this elaborate program were provided by the Mirror and more events and an expansion of present facilities are contemplated.

I hope that the little book will give you a dramatic picture of our investment in "citizens in the making."

Mr. Charles B. McCabe, publisher of the Mirror, joins me in thanking you for your support of the program.

Cordially yours,

HINSON STILES,
Managing Editor.

Mr. Speaker, many of our large and medium-sized cities throughout the country would benefit a great deal by adapting the Mirror youth program to their local needs, and thus help to shape the lives and thoughts of American youth, building muscle and character, and giving them the opportunity to absorb lessons in citizenship which would be of inestimable value in later life.

Resolution Urges Federal Control of Daylight Time

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 31, 1955

Mr. MACK of Illinois. Mr. Speaker, much confusion has arisen throughout the length and breadth of our country as a result of local option for daylight-saving time. I have been contacted by many of my constituents urging a Federal study to be made of this problem in an effort to alleviate the confusion in various small communities throughout our country. Under leave to extend my remarks, I would like to include the following resolution on this subject from the Arthur J. Quick Post No. 278, the American Legion, of Divernon, Ill.:

"Whereas at the present time and under the present two time setup, people of adjoining communities are living under a time difference of 1 hour; and

"Whereas this condition has resulted in confusion, causing a double standard of time for schools, mail, trains, working and social conditions which are not necessary; and

"Whereas this condition would not exist should our Government take a step to put the whole country on one time, either standard or daylight savings, so that all may be on one time thereby doing away with all the time confusion: Therefore be it

"*Resolved* That we, the members of the Arthur J. Quick Post, 278, of the American Legion, Divernon, Ill., on the 11th day of April 1955, do petition our Government to make a ruling, or enact such necessary legislation that will put our cities, trains, mails, schools, industry and our social activities on one time, either daylight or standard, so as to end this friction of two standards of time in our lives, and that copies of this resolution be sent to our Senators and Congressmen and to our State and national headquarters."

Passed this 11th day of April 1955 in a regular meeting of the Arthur J. Quick Post, 278, the American Legion, of Divernon, Ill.

LOUIS F. BOLOSH,
Commander.
JOHN M. PARKER,
Adjutant.

Finance Officer.

Who Really Wants Peace in the Middle East?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1955

Mr. MULTER. Mr. Speaker, I direct the attention of our colleagues to the following article which appeared in the March 1955 issue of Background:

WHO REALLY WANTS PEACE IN THE MIDDLE EAST?

EGYPT

Saut El-Arab, the official radio station, on November 16, 1954:

"Egypt sees Israel as a cancer endangering the Arab people. Egypt is the physician who can uproot this cancer. Egypt does not forget that it is its obligation to take revenge, and it is mobilizing all its forces in anticipation of the hoped-for-day."

Premier Abdul Gamal Nasser, on October 27, 1954:

"When the Suez issue has been disposed of, Egypt will be concerned with one problem only, the problem of Palestine.

"* * * The Palestine problem will not be solved and there will be no peace between us and the Jews as long as a single grain of your soil [i. e., the Palestine Arabs'] remains in enemy hands."

Al Gomhouria, official mouthpiece of the Egyptian regime, October 15, 1954:

"Egypt and the Arabs must turn in the name of humanity and its culture to all nations of the world who will aid in wiping Israel off the face of the map because of its barbarism."

Mohammed Naguib, former President of Egypt, on June 1953:

"Peace with Israel will only increase this danger, since she will be able to crush the Arab countries en masse. The only solution is Israel's disappearance."

Major Salah Salem, Egyptian Minister of Propaganda, on January 28, 1955:

"Egypt will strive to erase the shame of the Palestinian War, even if Israel should fulfill the United Nations resolutions."

ISRAEL

Abba Eban, Israel Ambassador to the United States, May 11, 1954:

"We affirm our willingness to enter into positive and constructive relationships of peace. A Middle East at peace within itself and resting upon the contentments of honorable reward could be a citadel of strength amidst the turmoil of a darkened world."

David Ben-Gurion, then Premier of Israel, October 19, 1953:

"We are a small and young state, and although we knew how to defend ourselves when we were attacked 5 years ago by the Arab States, we do not wish to base our relations with our neighbors on force and * * * arms.

"Like all past Jewish generations we have faith in the vision of peace of Israel's prophets."

Abba Eban, Ambassador of Israel, November 29, 1953:

"My government continues to uphold the vision of a Middle East at peace within itself, uniting the efforts of its two kindred peoples to heal the wounds of aggressive violence and reawaken economic and cultural progress."

Yitzhak Ben-Zvi, President of Israel, May 21, 1953:

"Lasting peace in the Middle East, security and economic development of this region, as well as social and cultural developments of its peoples are of real concern to * * * Israel."

Premier Moshe Sharett, December 15, 1954:

"Israel belongs spiritually to the West, but territorially to the Middle East and peace with the Arabs is our paramount aim."

Benson Chalks Up Another Landmark

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 8, 1955

Mr. BUDGE. Mr. Speaker, it is gratifying to me and I know it must be a welcome change to the American taxpayer to read the following editorial from the April 13 issue of the Knoxville Journal. The example set by Secretary Benson could well be followed by all public servants. It is a necessity if Congress is to achieve a balanced budget and adopt needed tax reductions.

The editorial follows:

BENSON CHALKS UP ANOTHER LANDMARK—HE PROTESTS INCREASING HIS BUDGET

The country has known almost from the time of his appointment that it had an unusual public servant in the person of Secretary of Agriculture Ezra Taft Benson. Almost overnight he established himself as a man of moral courage which surpassed that of ordinary men. His convictions, once embraced, are never forsaken.

When certain farm groups were 2 years ago crying for his dismissal by the President,

Mr. Benson stood as firm as a rock. There is no doubt in the mind of anybody who knows him that he would quickly have resigned had the President put any pressure on him to yield to the devotees of political expediency who found fault with his farm program.

Now Secretary Benson is in the news again, and for a reason which will be considered remarkable by most. He is complaining that Congress is about to appropriate more money to run his Department of Agriculture programs than he has asked for or needs.

Yesterday in hearings before the Senate Appropriations Subcommittee studying the Department's $880 million budget, Benson noted that the House had hiked the Department's requests by $27,500,000. He didn't like that, and suggested that the Senate whack off the overage.

"In preparing our budget," he told the committee, "we did our very best to arrive at a well-balanced program in the light of all our responsibilities to the farmers and the Nation."

What a difference there would be in Government at all levels if more public servants objected to having more money dished out to them than they originally requested.

Many City Parents Favor United States Control of Vaccine

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1955

Mr. MULTER. Mr. Speaker, I am pleased to direct the attention of our colleagues to the following article which appeared in the May 1, 1955, edition of the New York Herald Tribune.

My bill, H. R. 5969, which I introduced in the House yesterday would accomplish this purpose:

WANT PRIORITIES MAINTAINED—MANY CITY PARENTS FAVOR UNITED STATES CONTROL OF VACCINE

A survey of parents in the metropolitan area revealed yesterday that a majority would favor Federal control and allocation of the Salk antipolio vaccine to insure that children are vaccinated first.

Many of the parents questioned referred critically to the revelation, through the Cutter vaccine roundup, that a small number of doctors had disregarded the medical profession's voluntary system of priorities for children and had given the vaccine to some adults.

In general, most of the parents agreed with Mayor Wagner, who, on April 12 when the Salk vaccine was reported a success and again on Friday, had urged President Eisenhower to see that the Federal Government take on the job of "making the vaccine available to those in greatest need."

SOME OPPOSE CURBS

A few parents came out strongly against Federal controls. One expressed the opinion that government red tape would delay the vaccination program, create a shortage of vaccine and lead to a black market.

Mrs. George Damashek, of 523 East 14th Street, the mother of 2 children, said her feeling is that the vaccine should be controlled by the Government. "There is evidence that it is going to adults and people without any priority," she said. Mrs. Damashek added that Secretary of Welfare Oveta Culp Hobby was "evading" her responsibility because "the word 'control' is not socially acceptable."

"The more central control on the vaccine, the better chance for the proper use of it," replied Mrs. George Forman, of 422 East 20th Street. "That's happened in the city with the Cutter vaccine."

"I have 1 child, under a year old and not eligible for the vaccine if a system of priorities were used," Mrs. Forman said. "I haven't tried to have my child vaccinated and I'm in favor of Federal controls and priorities."

A strongly dissenting opinion came from Bernard Eisenstein, an automobile dealer, of 188 Ocean Terrace, Dongan Hills, Staten Island. "Personally I think if the Federal Government got control, there would be more of a black market than if the vacicne were controlled by cities," he said.

"If you tie this thing up in red tape," he said, "you will create a shortage. There will be enough for all if the Government stays out. The vaccine should go right to the doctors and be controlled by them."

DRUGGIST'S OPINION

Albert Friedrichs, a druggist, of 392 William Street, East Orange, N. J., said, "I feel the supply is limited and where you have a problem of a limited supply, the Federal Government is the best agency to handle it. After a while, when the supply becomes more plentiful, this problem will disappear and it can be handled like any other serum."

Fred Brown, a State liquor inspector of New Hyde Park, Long Island, said, "I know from experience that the Federal and State governments have the machinery to exert controls. Some grown-ups got the vaccine, which is unfair. That shot might have saved the life of a child. That couldn't happen under Federal control."

A Scarsdale mother of three children, Mrs. Stuart N. Updike, of 407 Fort Hill Road, said: "The Federal Government should control, since the distribution would then be fairer all around."

In Garden City, Long Island, James McGowan, a hotel owner, also favored Federal controls "for the basic reason that we would have equal distribution; that the age groups involved—those 5-to-9 kids—would get it. I believe that these doctors who have given the vaccine to adults should be prosecuted."

James G. Blake, a Baldwin, Long Island, attorney with two children, expressed the opinion that there are too many Government controls now.

"It is already the responsibility of the Government to establish standards," he said. "It is the continuing responsibility of the Government to see that those standards are met. But governmental control of distribution, in my opinion, would be an error. Private industry could better see to distribution, having the experience. Because a man is in Government does not make him smarter or more honest."

William C. Reilly, of 12 Pen Bryn Road, West Orange, N. J., said: "I think the Federal Government should handle it because they are in a position to know what areas are in most need of the vaccine. For that reason they should set up a system of priorities and allocations."

A Glen Ridge, N. J., lawyer, James E. Fagan, said the National Foundation for Infantile Paralysis should have the confidence of the people because without its effort there would be no vaccine.

"By allowing the foundation to distribute the vaccine," he said, "it would avoid any political juggling. Under Federal controls, every Senator would want the vaccine for his State even if it were needed in another State where polio strikes first."

Albert J. Defemio, of 600 Tuckahoe Road, Yonkers, said: "The Federal Government should control because there would be more equality in the distribution to the people and any possibility of black markets would be eliminated."

William J. Keyes, of Valley Stream, secretary of the Nassau County Real Estate Board, came out for Federal control because "the Government has machinery set up now, such as the Public Health Service, that could swing into this at once. It would be for the good of everybody."

Louis Schwartz, of 663 Forest Avenue, Larchmont, expressed the opinion that the Federal Government should exercise control of the vaccine through State and county health authorities. "The Government would have better control of the distribution than any other agency," he said.

Social Responsibilities of the Businessman

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 4, 1955

Mr. THYE. Mr. President, our American businessmen are becoming more and more conscious not only of their direct responsibilities in our free enterprise system, but of their obligations in the broader aspects of our problems as a people.

We have had in Minnesota a highly successful businessman, whose vision and understanding in many other fields of our Nation's life have been an inspiration. He is Harry A. Bullis, chairman of the board of General Mills, Inc.

One of the finest addresses at the 43d annual meeting of the Chamber of Commerce of the United States, which has been conducted this week in Washington, was Mr. Bullis' address on Social Responsibilities of the Businessman. It is an approach to extending business horizons that merits wide attention.

I ask unanimous consent that the address of Mr. Bullis be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SOCIAL RESPONSIBILITIES OF THE BUSINESSMAN

(By Harry A. Bullis, chairman of the board, General Mills, Inc., Minneapolis, Minn.)

Basically, the social responsibilities of a business are no different from those of an individual—except perhaps in degree. The individual's primary social responsibilities are to the family group and to his community; those of the modern business are to its employees, its stockholders, its customers, its suppliers, and to the cities in which it operates, which may stretch across the Nation from coast to coast.

SOCIETY EXPECTS MORE OF BUSINESS

Society expects more and more of the individual, as he benefits from the fruits of our dynamic economy and the group living made possible by the combined social units of many families. In a similar manner, society expects more and more of business, almost in direct ratio to the economic climate made possible by the specialized and mass markets of the Nation.

Business operates by permission of the people. Government may issue a charter, but the charter does not guarantee the success of the enterprise. It can prosper only

as it gains the confidence of the public and performs an economic function.

Business in this country still operates, for the most part, under a free market. Some will say it is a seriously abridged free market. Others will call it a free market only in name, and cite various Government controls. But the overpowering fact seems to be that in almost every instance in which the free market has been modified by Government, it has been done to compel business to accept added social responsibilities. Consider our social welfare legislation, our antitrust laws, or our minimum wage laws. All of these are attempts to legislate social responsibility.

And so we must ask ourselves—if business had shouldered voluntarily more social responsibility several decades ago, would we have had these controls? I do not know. But we can all think of businesses which have taken the lead in adopting themselves to social changes and which have been cited by social reformers as examples of what should have been achieved by all business on a voluntary basis. And in almost every case, these businesses have continued to accept additional social responsibilities of their own free will—and most of them still continue to be ahead of Government's compulsory legislation.

FORMALIZED PUBLIC RELATIONS

The question that is now suggested concerns formalized public relations, and its place in the recognition and the acceptance of social responsibility by business. I do not believe that a formalized department by the name of public relations has any concrete value unless it both activates and reflects the thinking of the management. If it does not—if it is merely a "Jiminy Cricket" type of thinking like the conscience of the little wooden puppet Pinochio—then it has no value. Plainly, it is a hypocrisy, and the sooner it is dispensed with, the better.

What I am trying to say is that the recognition of social responsibility and doing something about it, does not depend on a public-relations department. At this point, I am reminded about the proprietor of a small plant in a midwestern city. The man had 30 or 40 employees and a few trucks. His business volume was perhaps not over $100,000 a year. He did not have a public-relations department—but he had wonderful public relations. It was he who organized a drive to cover up the scar left by an abandoned gravel pit near a residential section of the city. He endeared himself to schools and parents alike by conducting economic educational tours of his little factory. He did that because he wanted teachers to understand the need for his trucks rumbling by the schools, and students to eventually buy from and work for him. He contributed of his time and effort to his community. He knew where he was going, and he usually got there. His acceptance of social responsibilities was as much a part of his way of doing business as his need for 3 or 4 salesmen. He regarded both operations equally essential.

What I am endeavoring to emphasize is that there is no magic power in the idea of a program of public relations itself, even though great sums of money are poured into it. We have all seen too many programs fail because they were based on an almost cynical attitude toward the public, an attitude which assumed that noise, intellectual sleight of hand, fancy advertising, and big headlines could stampede the man in the street. We all know that the public cannot be fooled.

We have learned, as these distinguished public-relations spokesmen here today have helped us learn, that only when a company has perfected its product in terms of consumer needs, when it has established sound labor, research, and plant expansion policies, and when it affords a fair and steady return to its stockholders, is it ready to start thinking about the broader aspects of public relations.

WHAT'S IT TO ME?

There are other achievements a company must have to its credit, too. The public is asking many questions about industry, questions that must be answered clearly and intelligently and in a manner to advance the general public's understanding of the basic economic principles of our competitive capitalism. Every question that consumers and the men and the women who make up the public ask is based on that strongest of all motivations—"What's it to me?"

Here are some of the "What's it to me?" questions we in industry must be, and in most cases are, prepared to answer forthrightly and with pride: Is industry planning well ahead to be able to absorb future job hunters in our rapidly increasing population? Is it giving equal opportunity to everyone who is willing to pay the price in intelligent hard work, regardless of color, race, or creed? Is it providing opportunities for our handicapped citizens who are capable of limited employment? How much of its profits is industry turning back into research, so that the public can have better products and better services in our constantly improving way of life? We face the threat of war today. Is industry just striving for profits, or is it really thinking of helping in the overall defense effort? What about funds and scholarships from industry to help deserving youth secure a better education?

These are difficult questions to answer, and in attempting to answer them, we in industry should let the public see our problems. We should show not only processes of manufacture, through "open houses" and otherwise, but we should also acquaint the public with decisions that must be made. We in General Mills have been fortunate to witness positive results through our informal regional stockholders' meetings conducted every other year in 10 or 12 cities where we have a goodly number of stockholders. I believe that if the informal regional stockholders' meeting idea were universally adopted, it would have a tremendous impact on the thinking of the country. I say this not only from a stockholders' standpoint, but from the standpoint of informing the public about the company's efforts and projects.

BUSINESS SHOULD EXPLAIN ITS OBJECTIVES

Business should be presented to the public in the role it really occupies so that its importance to the Nation may be thoroughly understood.

Business should play its cards face up. If it has a difficult problem which affects the people, such as a chemical exhaust at a plant, it should tell the public what it is doing to correct the condition. It is a major responsibility of business to create new jobs at satisfactory wages with good working conditions. It is also a major responsibility of business to do everything possible to reduce the costs of production and distribution so as to lower the price of its products to the consumer and at the same time help to increase the productivity of its employees. While business drives forward in such an environment of self-respect and self-confidence, it should not neglect to explain its motives, its aims and its policies to its many large and varied audiences and publics.

It is axiomatic that the most progressive companies are those that take the public into their confidence and let their customers and stockholders "see the wheels go 'round." I think that we must carry to the people, to our employees, to our stockholders, the story of industrial progress and achievement as it affects them.

We know that public good will cannot be written on the books overnight. And it can never be written on the books so that it can stay there without subsequent entries. All ink tends to fade in the great ledger of public opinion; we must make our entries each and every day if we are to create and hold the good will which we must have.

Business cannot stow this ledger of public opinion away on a shelf and assume that all the balances are in its favor. If we are so proud of what we have accomplished that we assume we have gained a secure and favored place in the public mind for all time, we shall be sadly disillusioned.

While business is now doing a good job of selling itself and our industrial system to the public, we all know that the task has just started. The goal toward which each man and woman is working is a simple one—a better standard of living. The goal of business is identical with that of the average man, a better standard of living, not just for a chosen few, but for everybody. The job is to convince the public that this simple statement is the truth.

BUSINESS MUST KEEP ITS HOUSE IN ORDER

But in our zeal to tell the story of business to the public, we shall not overlook one fact. Business must keep its own house in order. No amount of money or effort spent in a campaign will accomplish lasting results if we condone practices within our own ranks which we know are wrong. In any selling campaign, the product and the service must be right.

We know that the profit motive is not purely a mercenary force, since profits are the reward which come to those who furnish the public with what it wants in the most efficient and economical manner. Business renders genuine service—good service. There is no need to allow the public to learn this truth for itself, when we can make the facts known and keep them constantly in the public mind. Business must speak, and continue to speak.

We all know that man cannot live by bread alone—though we in General Mills sometimes wish he did. Businessmen are learning that industry cannot live by simply operating its plants and selling its products. It must sell itself—its aims, its achievements, and an understanding of its problems.

IMPORTANCE OF MOTIVATION

Wherever public-relations campaigns have been unsuccessful, you will find that they had not been carefully thought out in advance. Motivation had not been considered. What was the purpose of the campaign? What results were hoped for? What motives did the campaign endeavor to arouse in the stockholder, the employee, the consumer or the public that would be to the company's benefit?

The Advertising Research Foundation has launched a penetrating study of motivation, that may ultimately shed some light on the relationship between the ability and willingness of business to accept and honor social responsibilities, and the result of these business attitudes upon the public's opinion of industry generally. The preliminary research indicates that for the most part we have aimed quite wide of the mark in all of this effort. We have not struck within those concentric rings of self-interest girdling every human being. We have failed, somehow, to relate the social consciousness of business to the interest of the individual, be it selfish or otherwise.

OPPORTUNITIES FOR SOCIAL SERVICE

The social responsibilities of business, large or small, are existent because the public says they are. Now the question is—what can we do about them? How can we so focus our efforts, whether our business be modest or extensive, so that we will get credit in the public ledger for doing something for society above and beyond the

sale of a product? How can we cement and reinforce the franchise of quasi-free market operation with which we are endowed by society? In other words, how can we motivate people to further condone and accept us?

The answer is for every business, large or small, to get out its broom. The next step is to take that broom and sweep the walk clear of inertia and do-nothing philosophy in front of its own front door. In short, every business should do something to discharge its social responsibility. And the amazing fact is that with everyone doing something, there is no doubt that the effect will be magnificent and compelling. Such combined effort will register with great impact, and the motivation for increased public support and approval of our enterprises is bound to grow.

But how, you say, can I develop a project with social consciousness? I am taking the liberty of suggesting a few opportunities that are before the door of everyone.

1. Education: This is the No. 1 social problem of our day. Inadequate school plants. Lack of trained teachers. Unsatisfactory teaching curricula. Lack of funds for liberal arts colleges. The need for scholarships. No candidates for school board jobs. There are innumerable opportunities here.

2. Employee self-improvement: Is the paycheck the end-all of your employee plan? How about night study courses, subsidized? How about credits for ideas, communication seminars, and promotion meetings? Is stabilized employment a factor in your planning? Do you schedule orders to maintain level job rolls? Do you tell employees of your problems, and take them into your confidence on matters affecting job fluctuations?

3. Community service projects: Are you willing to volunteer your company's services to augment your local community fund agencies where necessary? Do you cooperate with service clubs on special projects? Are you interested in creating more jobs in your community and in working with other groups to achieve this?

4. Contact your chamber of commerce office: Have you ever considered that your local chamber of commerce office needs help on a number of worthy projects involving social responsibility? Have you ever considered writing the national office for suggestions? There are innumerable opportunities here, if you show a willingness to shoulder them.

CONCLUSION

Yes, the opportunities for social service are legion before the businesses of America today. Truly they are numbered in proportion to the opportunity enjoyed by the enterprises themselves. It behooves us, therefore, to move confidently and enthusiastically forward, and each to do his part. It matters not that the role we play may be a minor one; it isn't necessary to set the world on fire, so to speak. But it is essential that every business yoke itself to the implement of social responsibilities and then pull forward down the furrow of public appreciation and understanding. And it is time for every businessman to speak up and report on the way he fulfills his responsibilities to society.

Only thus, with a public believing that we understand the problem, can we hope to motivate people to act in their enlightened self-interest and ours, at the polls and elsewhere. Only then can we lead aggressively on voluntary social amenities, instead of staggering blindly as we are driven by compulsory legislation.

It has been said that the future belongs to them that prepare for it. Just so, as business faces up to its social responsibilities, will society stand up for business. In this combination rests the destiny of our expanding economy, and an America with increasing opportunity and happiness for all.

Historic National Policy Requires Improvement of the Delaware Estuarial Harbor as a Full Federal Responsibility

EXTENSION OF REMARKS
OF
HON. JAMES A. BYRNE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1955

Mr. BYRNE of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report on the Delaware port area:

THE DELAWARE PORT AREA: ITS ECONOMY AND THE CONGRESSIONALLY AUTHORIZED IMPROVEMENT OF ITS SHIPPING CHANNEL

The Delaware is one of the world's great estuarial harbors. Already it is the leading port of the United States in the handling of import tonnage. And it stands second only to New York in total waterborne commerce.

As a harbor, the Delaware reaches from the open sea at Cape May, N. J.-Cape Henlopen, Del., north to Morrisville, Pa.-Trenton, N. J.—a distance of 132 protected miles. But, as a first-class international seaport capable of handling all types of cargo vessels, the harbor's vast potential has been only partly realized, because its 40-foot channel ends abruptly at the southern edge of Philadelphia.

This leaves 37 miles at the upper end of the harbor in urgent need of modernization and improvement. (Seventeen of these miles pass through Philadelphia.)

The Congress of the United States, in August 1954, recognized the urgency of this need when it passed legislation authorizing the deepening of the upper Delaware. And it further recognized that this harbor improvement should be the full responsibility of the Federal Government in the national interest and in keeping with long-prevailing national policy. The bill carrying the authorization was signed into law on September 3, 1954.

Legislation is now before the 84th Congress to appropriate funds to begin the channel deepening. The ratio of benefits from this project to the cost of it will be almost 2 to 1 (1.93 to 1).

STRONGLY RECOMMENDED BY THE CORPS OF ENGINEERS

The deepening of the upper Delaware has been strongly recommended by the Corps of Engineers and has been endorsed at every level of the Federal Government concerned with responsibility for such an improvement.

The present Chief of Engineers, Maj. Gen. S. D. Sturgis, Jr., has officially appraised the improvement of the Delaware estuarial harbor this way:

"The present impetus of the national defense program, the accelerated demands of defense and civilian needs, and the strategic location of the Trenton-Philadelphia-Camden area with respect to sources of materials and labor and markets for processed goods, together with the definite possibility of increasing the national wealth in this highly industrialized area, now combine to require further modernization of the waterway."

The United States Bureau of the Budget has described the projected 40-foot channel as "the only satisfactory solution" and has advocated that the project be carried out as a single undertaking in the interest of construction and transportation economies.

Similar endorsements have come from the immediate past Chief of Engineers, the Board of Engineers for Rivers and Harbors, the North Atlantic division engineer, three successive Philadelphia district engineers, State and local officials, civic groups, labor unions, newspapers, and the citizenry of the Delaware port area.

DETAILS OF THE AUTHORIZED IMPROVEMENT

As recommended by the Corps of Engineers and authorized by the 84th Congress, the Delaware shipping channel would be dredged to 40 feet for 32 miles upstream from the southern limits of Philadelphia to Newbold Island and to a depth of 35 feet from there to Trenton Marine Terminal, a distance of 5.5 miles. (Depths of 25 to 37 feet were provided by past authorizations.)

In authorizing this channel improvement, the last session of Congress debated and rejected an unprecedented administrative proposal that local interests make a large cash contribution (of at least $18 million) to the cost of improving a seaport of established and long-proven national and international importance.

That same proposal, however, has been advanced again by the Executive Branch of the Federal Government, contrary to the clearly expressed wishes of Congress. Again, the Joint Executive Committee is asking Congress to uphold the historical congressional position that the development and maintenance of our waterways of demonstrable economic and military importance is, and should remain, a Federal responsibility.

A BULWARK OF NATIONAL SECURITY

The diversified industrial power of the Delaware port area—and the highly visible potential for greater industrial and maritime activity—constitute an important bulwark of the Nation's security. That is so because much of this well-balanced industrial capacity is equipped for military production.

The Delaware harbor is protected by a bastion of land extending for as much as 60 miles back from the coast line. It is a natural fortress for protected loading of supplies and embarkation of military personnel in the event of a national emergency. The Delaware breakwater where the bay meets the Atlantic Ocean, plus almost 100 miles of deep water to Philadelphia, and the projected deep channel to Trenton are impediments against penetration by enemy warships and underseas craft. During World War II, the port facilities of Greater Philadelphia alone handled 15 to 20 percent of all the goods shipped in and out of the United States.

The Delaware offers, in fact, a higher guaranty of security than any other port in the Nation.

Another great advantage to national security offered by the Delaware port area is the dispersed industrial construction that has taken place—and will take place to an even greater extent when the channel is deepened to 40 feet over the upper reaches of tidewater.

In a report on the bill that became part of the Rivers and Harbors Act of 1946, the House Committee on Rivers and Harbors of the 79th Congress wrote: "We should prepare now for the probable trend of the port-war era to decentralize major national activities by making available innumerable sites for the dispersal of industrial expansion along the banks of our important waterways and ship channels."

In keeping with this policy, one of the larger steel works in the United States has been built on the upper reaches of the harbor—away from the traditional areas of concentration of steel production. Other industries, attracted by the easy availability of steel, will be installed along the upper harbor in sections reserved for industrial usage. Others will be drawn by deepwater shipping just as soon as the 40-foot channel is assured.

The deepening of the Delaware Channel to facilitate efficient, low-cost transportation of imported raw materials for industry is in accordance with national defense policy calling for the conservation of those materials against time of emergency. The President's Materials Policy Committee put it this way in mid-1952: "The overall objective of a national materials policy for the United States should be to insure an adequate and dependable flow of materials at the lowest cost consistent with national security and with the welfare of friendly nations."

THE ECONOMIC PICTURE IN BROAD STROKES

The Delaware has constituted an important seaport for domestic and foreign commerce for more than 300 years. Along its shores have grown dozens of important cities—such as Philadelphia, Wilmington, Camden, Trenton, and Chester—and hundreds of thriving enterprises representing 87 percent of all the official categories of American business and industry.

The 14 counties in 3 States (Pennsylvania, New Jersey, and Delaware) that form the Delaware port area will yield the Federal Government in taxes during the next fiscal year more than any of 40 whole States. Federal tax revenus from those 14 counties for fiscal 1956 will total an estimated $2.1 billion. That supplies a new and graphic measure of the economic importance and potency of the area flanking the harbor.

In this same compact area, 88,000 business and industrial establishments are situated. And business is growing in the area faster than in almost any other section of the country. This is attested by the fact that industrial construction in Philadelphia and 7 adjacent counties of Pennsylvania and New Jersey ran 12 percent above the nationwide average in 1954.

Three-quarters of the way through 1954, the Delaware port area surpassed New York in tonnage of imports—22.4 million tons for this port area in the first 9 months of last year to 21.01 million tons for New York.

The value of imports and exports handled in the Greater Philadelphia port area was recently calculated at more than $1 billion a year. It was estimated that more than 14,000 workers in just Philadelphia and 4 peripheral counties of Pennsylvania were directly dependent on export sales for their livelihoods. And a total of 341,000 workers were found to be employed in firms engaged wholly or partly in import-export trade.

Customs collections in this area (totaling over $2 billion since 1874) have averaged $45.75 million annually for the last 5 years. While it has never been suggested, nor will it be, that customs revenues be committed to waterway improvements within the port area where they are collected, the plain fact is that the total estimated cost of deepening the Delaware (approximately $91.4 million) is the equivalent of less than 2 years' customs collections in the Philadelphia district.

In all the growth that has taken place along the Delaware Harbor, there is a striking contrast which is directly tied to channel depth. Below Philadelphia, where a 40-foot channel project has existed for many years, industries of all types and sizes have located at the water's edge. Desirable sites for further expansion are steadily diminishing.

To the north of Philadelphia, however, where the previously authorized channel depth has been only 25 feet, the economy has remained predominantly agricultural. Yet this section of the Delaware Harbor offers as fine an area of opportunity as the Nation possesses for creating more commerce, more industry, more jobs—more production of goods and services to help carry the American people to the goal of healthy economic expansion—and higher standard of living—envisioned by the President of the United States.

HISTORIC NATIONAL POLICY REQUIRES IMPROVEMENT OF THE DELAWARE ESTUARIAL HARBOR AS A FULL FEDERAL RESPONSIBILITY

American history provides the answer to the question of a local contribution toward improvement of the Delaware Estuarial Harbor. There can be no such contribution unless we are to revert to the conditions of the early 1800's. Congress recognized this fact in the act of September 3, 1954, which authorized the expansion of the Delaware Estuarial Harbor. Congress then prescribed that the expansion is to be a full Federal responsibility.

Our country has grown and prospered until it is now the leader of the world. This was not always the case. We grew from small beginnings.

The Constitution was adopted in Philadelphia by men of tremendous acumen and foresight. That document stands out in the history of governments as the most perfect political instrument ever devised by the minds of men. The strongest factor that impelled the forging of the central Government was the vital need for free and uninterrupted commerce in our ports and harbors and on our rivers. The attention of our Founding Fathers to the pressing needs of waterborne commerce was paramount, because it was then, and it is today, the economic lifeblood of the United States.

The Constitution vested in the central Government the responsibility for commerce and navigation. This responsibility must be exercised today by the Federal Government in the manner shown by our historical development. That is, the Federal Government must, in order to discharge its historic duty, expand the Delaware Estuarial Harbor as a full Federal responsibility.

Over the spread of years from 1787 to 1955, the prosperity of this country has been directly related to waterborne commerce—with foreign nations and among the States. Today's export commerce accounts for $15 billion a year of the national wealth. It must be promoted and fostered by the Federal Government in the same way that has brought its growth to this substantial proportion. Lacking this, our country will take an irreparable step backward.

Any suggestion that the Federal Government require any money contribution by local interests to the expansion of the Delaware Estuarial Harbor is wholly inconsistent with the Federal Government's own historic assumption of responsibility for waterborne commerce. It was through the influence of Washington, Hamilton, Jefferson, Gallatin, Madison, Monroe, Clay, Calhoun, and John Quincy Adams that the United States began the improvement of its ports, harbors, and waterways.

In the very early days of the growth of the Republic two means were employed to bring about the improvement of ports, harbors, and rivers and the building of canals:

1. The States themselves were encouraged by Congress to levy tonnage duties to pay for port improvements. Such laws were adopted by Massachusetts, Rhode Island, Pennsylvania, Maryland, Virginia, North Carolina, South Carolina, and Georgia. The State exactions of tonnage duties, which created chaos in commerce among the States, ceased when the Federal Government properly undertook its responsibilities for commerce and navigation.

2. Congress made extensive grants of Federal lands to the States and private investors to develop the navigation of rivers and the building of canals. These occurred in Alabama, Wisconsin, Iowa, Michigan, Illinois, Minnesota, Indiana, and Ohio. This system resulted in the charging of tolls on our waterways. And tolls were forever and finally abolished by the Congress in 1884 because of their suppressive effect on waterborne commerce.

These two methods of bringing about river and harbor improvements were of necessity discarded by the Federal Government well before 1900.

In 1822 Congress was impelled by sheer force of economic necessity to appropriate substantial sums for river and harbor improvement. This policy has continued annually almost without interruption to the present day. It did not come about, however, without a protracted constitutional debate which was resolved and finally put to rest by Abraham Lincoln in 1848 and by the United States Supreme Court in 1876. The policy then affirmed has always continued in full vigor—and that policy is the full Federal responsibility for our ports, harbors, and waterways.

In the early 20th century, Congress became concerned with the lack of public marine-terminal facilities in our ports and harbors and gave attention to the need for provision by local interests of these necessary land adjuncts. It was then that Congress adopted the concept of local cooperation and embodied into our organic laws positive requirements for such forms of local cooperation as: suitable public marine-terminal facilities; berths, wharves, and piers; necessary land for spoil disposal; rights-of-way and easements; access channels; relocation or rebuilding of bridges; rail, highway, and street connections; assumption of damage claims; and, occasionally, cash contributions. The cash contributions by local interests were limited to those situations where there was a direct, purely local benefit, as, for example, that local land values would be enhanced.

Local cooperation then and today means the same thing. Congress in 1925 authorized a deepening of the Delaware Estuarial Harbor from Philadelphia to Trenton—and required in the form of local cooperation that local interests provide public terminals at Trenton, satisfactory rail and highway connections therewith, and suitable areas for the disposal of dredged materials. This is precisely the type of local cooperation that Congress prescribed in 1954 for further deepening of the Delaware Estuarial Harbor.

As the basis for a suggested departure from the Federal Government's primary responsibility for improvement of our ports, seven so-called precedents have been officially reported. These all have been carefully examined. They are totally inapplicable and should not be considered. In five cases the local cooperation is no more than is required of any port; in the other two cases, there was no port to start with and local interests helped the Federal Government build artificial channels in order to bring deep water inland. (A factual analysis of each of these so-called precedents is available upon request to the joint executive committee.)

The Delaware Estuarial Harbor since early colonial times has been a natural asset of this country. It belongs not just to the people in Delaware Valley but to the whole United States, as a natural outlet to the ocean highways. In thinking of this great harbor and the other natural ports of the country, recognition should be given to the facts that every third bushel of wheat raised by American farmers goes to sea, that 102,000 farm machinery workers in Illinois, Missouri, and Wisconsin owe their jobs to exported machinery, and that more than 75,000 men and women in auto assembly plants of those 3 States earn $30 million a year through the shipment overseas of 1 out of every 20 cars they produce.

The Federal Government already has borne the whole cost of navigation on the Ohio River and its tributaries at a cost approaching $400 million. Navigation on the Mississippi always has been recognized as a full Federal responsibility. How, then, can the Federal Government fail to shoulder its full responsibility for the Delaware seaport?

The harbors and rivers of this country are national and not local. If we are to retrogress to the 1800's, it would be appropriate to revive the tonnage duties levied by the Commonwealth of Pennsylvania under its law of 1805. Thus, every ship which enters or clears the Nation's second to the largest seaport would help pay for the expansion of the Delaware Harbor. History has overtaken such lack of perspective—and our historic national policy has long since established the full Federal responsibility for the Delaware Estuary.

LOCAL INTERESTS HAVE ALREADY CONTRIBUTED GENEROUSLY TO THE DEVELOPMENT OF THE DELAWARE PORT AREA

Local interests in the Delaware port area—the cities of Philadelphia, Camden, Trenton, and Wilmington, and the States of Pennsylvania, New Jersey, and Delaware—have provided more than one-half billion dollars to the development and usefulness of the Delaware Estuarial Harbor.

The half-billion-dollar investment by local interests in marine-related facilities, which have given the Delaware channel its great national economic value, is in addition to investments by private enterprise that are described by the Corps of Engineers as "an unprecedented industrial expansion" in a section of the country "that obviously is of great importance to the economy of the Nation."

Along the estuarial harbor that is the Delaware, there are 282 piers and wharves. Of these, 224 were built by private enterprise. They are in addition to such facilities as the Philadelphia municipal piers, in which upward of $50 million have already been invested, and for which a capital improvement program of $8 million is set. They are in addition to such facilities as the $1.5 million Trenton Marine Terminal; the Camden Marine Terminal, worth some $3.5 million; and the Wilmington Marine Terminal, valued at an estimated $7.7 million. Also, the Philadelphia City Bureau of Port Operations has invested close to $2 million in a fleet of watercraft to help maintain the harbor in good operating condition. And dredging to maintain adequate depths in the various docks is carried out by the city at a cost running to $263,000 a year.

The recommendations of the Corps of Engineers for the improvement of the Delaware Harbor left with local interests the obligation to provide a new Tacony-Palmyra Bridge. This aspect of local cooperation is already being developed, and the cost of this new facility is estimated at approximately $25 million.

Another form of cooperation by Delaware port area interests was the creation of a committee for study of the Delaware River. The committee was composed of representatives of the American Water Works Service Corp., the Campbell Soup Co., and United States Steel Corp., and Mayors G. T. Becton, of Riverton, N. J., G. E. Brunner, of Camden, N. J., and H. W. Peterson, of Woodbury, N. J.

This committee financed an exhaustive inquiry to determine scientifically whether the deepening of the harbor channel to Trenton would have any adverse effect on water supplies. That inquiry, conducted by Leggette and Brashears, consulting groundwater geologists, and Sheppard T. Powell, consulting engineer, confirmed the conclusion of the Corps of Engineers that the quality of the ground water would not be damaged by the enlargement of the channel and that the salt content of the water at Philadelphia and above would be reduced, in fact.

An elaborate scale model of the Delaware, reproducing conditions as they will exist when a 40-foot channel has been completed, was constructed at the United States Waterways Station in Vicksburg, Miss., the world's finest center of hydrographic research. The scale-model studies yielded the same conclusions as the other investigations; and these findings were further confirmed by an eminent geologist retained by the Corps of Engineers—Dr. Arthur B. Cleaves, consulting geologist of the Department of Geology and Geological Engineering, Washington University, St. Louis, Mo., who reported that the channel program will not change the condition that already exists.

The Corps of Engineers also conducted intensive studies which demonstrated that the possibility of any damage to the shoreline or riverfront structure is remote. However, recognizing even an insignificant possibility of such damage at Bristol and Florence Heights, the corps, as a matter of policy, has assumed any such damages to be a Federal responsibility—and has earmarked more than $1.1 million in the estimated total cost of the channel deepening for any necessary remedial work or shoreline stabilization.

COOPERATION ALREADY COMPLIED WITH

When the Board of Engineers for Rivers and Harbors recommended the 40-foot channed, it imposed the condition that the existing steel plant provide, at its own expense, "suitable terminal and transfer facilities," including a turning basin, at Morrisville, in Bucks County, Pa., opposite Newbold Island.

Such terminal and transfer facilities and turning basin have been provided, at a cost greater than the combined total of cash contributions by local interests to the seven navigation projects officially listed as the "precedents" for requiring such a contribution to the authorized improvement of the Delaware Harbor Channel.

THERE WILL BE NUMEROUS BENEFICIARIES OF THIS PROJECT

The proposal that local interests in one seaport, as against others, make a heavy cash contribution to the improvement of a shipping channel of long-established national and international importance is discriminatory and contrary to the best interests of the American economy.

To impose over one port area the threat that local interests may be required to contribute, in addition to their heavy Federal-tax requirements, uncertain amounts in public or private funds toward the cost of improving a main shipping channel tends to discourage employment creating industrial investment in that area.

The retarding influence of such a threat is illustrated by a public statement made on March 28, 1955, by an outstanding industrial realtor of southern New Jersey. He reported that title to some 850 acres of land north of Burlington, N. J., had been assembled by his firm to make it available for a new plant when the improved channel permits movement of large, deep-draft cargo ships. He further stated that an industry interested in a site on the Delaware had informed his office that plans for a new plant will be drawn when Congress approves the initial appropriation for the 40-foot channel.

The certainty of industrial expansion and increased usage of the Delaware Harbor when the channel is deepened is attested by these words of Col. B. B. Talley, North Atlantic Division Engineer of the Corps of Engineers, in a paper[1] prepared for the American Society of Civil Engineers:

"Private industry has already invested its resources in an unprecedented expansion in the region, and there is substantial evidence that the expansion is only in its initial stages. In the course of the investigation, existing and prospective private industries in the area were open and frank in the disclosure of confidential future plans to a degree unequaled on any other project with which the author has been associated. Such information was furnished in writing over the signatures of responsible heads of large industries."

Footnote at end of speech.

Foreign ores from many sources will come to Morrisville in increasing volume. A substantial tonnage of these imported ores will move by rail from Morrisville to various inland steel centers for use by different steel producers. The same ships bringing these materials to Morrisville will seek to carry cargo from the Delaware estuary back to the scores of ports throughout the world from which they came.

Thus, the marine terminal facilities already constructed by private capital toward the northerly end of the Delaware Harbor will become an important port for the receipt and distribution of strategic raw materials and will be the nucleus from which important trade relationships will develop toward the east into New Jersey and toward the west into Pennsylvania.

All the foregoing conclusively removes the whole basis on which the recommendation was made for a cash contribution of at least $18 million by local interests toward the cost of the 40-foot channel. The facts make insupportable the premise on which that recommendation was based. As is so often the case in the dynamic expansion of the American economy, the facts have overtaken a conjecture and make it obsolete and invalid.

To require a cash contribution to the improvement of a navigable waterway open on equal terms to all users means that the contributors would be required to pay a levy over and above their taxes. This is the same as requiring a special contribution by homeowners or storeowners whose properties are so situated that they receive a greater measure of police or fire protection than other nearby property owners. It is like requiring establishments whose business attracts an especially large number of customers arriving and departing by automobile to shoulder an uncertain extra payment for street maintenance.

This is contrary to a fundamental democratic principle of meeting the cost of Governmental functions by taxation levied according to uniform laws and regulations.

Moreover, the proposed requirement of a cash contribution to a public improvement like the authorized Delaware channel deepening is indefensible, because the contributors, while assigned the financial obligation of "paying partners," are not permitted any voice whatever in the construction, maintenance, or operation of the project to which they have been required to give funds.

Impressive and expert testimony that a cash contribution to the 40-foot channel is unjustified and unjustifiable is supplied by the district engineer of the Corps of Engineers who made the detailed, grass-roots study resulting in the recommendation that the project be carried out as a full Federal responsibility:

"The importance of increased steel production to the national economy and the widespread use of the finished products resulting from the operations at the steel plant result in the conclusion that benefits to be derived from the proposed improvements have national application rather than local. The resulting benefits to the locality directly will be of a secondary nature, such as increased land values, larger tax revenues, and higher level of business in general.

"Ordinarily a finding that the benefits are primarily general rather than local warrants the conclusion that a cash contribution toward the first cost of the project should not be required. In this instance further consideration has been given to the issue. Although it is clear that the benefits which would accrue to the steel company are large in relation to total benefits, it was concluded that a cash contribution by that company should not be required."

In listing his reasons why a cash contribution should not be required, the district engineer said:

"The channel improvement that has been presented for consideration will not be for the exclusive use of the company, nor will the company have any jurisdiction over the waterway, nor can it be considered a capital asset of the company obtained through a subsidy. Instead, it will be a waterway open to all on equal terms, and it cannot be doubted that its existence, along with the impetus generated by the presence of the steel works, will cause an industrial development of much of the 58 miles of deepwater frontage between Philadelphia and the Trenton Marine Terminal. This development will result in a more general use of the deeper channel for the transportation of commodities in foreign and widespread interstate commerce, as evidenced by the potential benefits. On the lower river a somewhat analagous development took place. The rapid expansion of the oil industry would not have occurred without the prior existence of the 40-foot channel. There is considerable evidence from credible sources that a number of large concerns are planning to move or establish plants on the Delaware River in this reach if and when the deeper channel is available but who are unwilling for business reasons to reveal their plans at this time."

THE COMPELLING CASE FOR A 40-FOOT CHANNEL

In one of the most broadly based movements of its kind the Nation has ever seen, labor and industries, public officials of three States, civic organizations, and newspapers have united in urging that the Philadelphia-Trenton segment of the Delaware Harbor be improved and modernized.

They are asking for a necessary, logical, and economically justified modernization of the remaining small fraction of the harbor, which imperatively needs a 40-foot channel.

The other great seaports of the United States, such as Boston, New York, Norfolk, New Orleans, and San Francisco, owe a great deal of their economic well-being to 40-foot main channels, which were provided by Federal funds.

The Delaware Port area constitutes a great international seaport. We must, therefore, look beyond our own shores to see what foreign ports have. There we find that more than 50 ports in foreign countries carrying on ocean commerce with the Delaware Port area have minimum harbor depths of 40 feet.

It is a demonstrable fact that the area adjacent to the upper fraction of the Delaware estuarial harbor has everything that is needed—except the channel for modern deep-water commerce—for the economic growth required by a steadily expanding population. It has excellent rail and highway connections; a goodly supply of skilled, responsible labor; economical building sites; proximity to large markets; sources of power for industrial production; and an unlimited supply of fresh water that is so necessary to industry.

When the upper section of the harbor obtains a 40-foot channel, industry will expand there. Proof of that is found in the concentrated utilization of waterfront lands along the lower stretches of the harbor by reason of the 40-foot channel.

From Philadelphia down to the sea there are 244 piers and wharves. But from Philadelphia on up to the head of tidewater, there are only 38 such facilities. This comparison graphically illustrates the concentration of waterfront establishments where the 40-foot channel prevails, and the lack of it where shallower depths exist.

Actual development that followed the deepening of the Delaware shipping channel from Philadelphia to the sea will be repeated when the deeper channel is provided from Philadelphia to Trenton. In the case of the lower part of the harbor, commerce has increased by 135 percent since the 40-foot channel in that section was authorized. Commerce on the lower reach is 7 to 8 times greater than that on the upper; but the Corps of Engineers confidently estimates that commerce along the upper portion will triple in volume as soon as deep water is provided. This same pattern also has been expericnced by such harbors as Albany, N. Y., where the port cargo more than tripled since the provision of a deep-water channel reestablished Albany as an estuarial seaport, and by Lake Charles, La., where port commerce has increased 15 times since 1929, thanks to a deep-water connection with the Gulf of Mexico.

THE YARDSTICK MEASURING THE ECONOMIC JUSTIFICATION

Congress has provided a standard to measure benefits from an improvement such as the 40-foot channel for the upper three-tenths of the Delaware Harbor. This yardstick is called the benefit/cost ratio.

In the case of the authorized modernization of the upper part of the Delaware Channel, the benefit/cost ratio is 1.93 to 1.00. That is extremely favorable, for it means that the benefits will surpass the cost almost 2 to 1.

In terms of dollars, the benefits are estimated at $8,450,000 (1.93), as against estimated annual charges (including maintenance) for the project of $4,370,000 (1.00).

These figures are predicated on existing industry to be served by the channel deepening; they do not take into account the additional industry certain to follow the deepening and add substantially to the benefits. One of the principal benefits will be to the Federal Government, which will receive in taxes a large part of the savings outlined by the Corps of Engineers.

According to the Corps of Engineers, when the authorized channel improvement is completed, commerce for just the upper section of the harbor will rise to 22 million tons a year. This is virtually triple the present volume—and for the entire Delaware port area will mean a total commerce of almost 100 million tons per year.

The relative importance of the commerce that will be generated by the channel improvement in the upper harbor area can be better appreciated when it is understood that it alone will exceed the tonnage handled by the following important ports and harbors, as shown by the latest report of the Chief of Engineers: Portland, Maine; Providence, R. I.; Albany, N. Y.; Newport News, Va.; Wilmington, N. C.; Charleston, S. C.; Savannah, Ga.; Jacksonville, Fla.; Tampa, Fla.; Mobile, Ala.; Baton Rouge, La.; Lake Charles, La.; Galveston, Tex.; San Diego, Calif.; Stockton, Calif.; Portland, Oreg.; plus all other ports on Columbia and lower Willamette Rivers; and Seattle, Wash.

SHIP DRAFTS ARE GETTING DEEPER AND DEEPER

It would be neither practical nor economical to carry out the urgently required and completely endorsed improvement of the Delaware shipping channel by providing a depth any less than 40 feet.

To believe otherwise is to be unrealistic about the merchant marine tonnage of the United States and the rest of the world that is now in being and certain to be constructed through the foreseeable future.

The JEC made an analysis as to draft of all the major ships, domestic and foreign, launched or delivered in 1952, 1953, and 1954. It showed a total of 258 vessels all of which have drafts of 30 to more than 36 feet.

And of the 13 major merchant vessels listed as still under construction or on order in American shipyards on February 1, 1955, 9 will have a loaded draft of 31½ feet or more.

In an official report related to improvement of the Delaware, the Corps of Engineers stated that at least a 40-foot channel is required for a ship drawing only 30 feet while at rest in salt water. The channel requirements are shown on the next page. However, even a 40-foot channel is inadequate for today's large vessels with a loaded draft in excess of 30 feet. Consequently, these large vessels must reach their berths in the harbor by navigating with the tide or by reducing their pay loads.

"For economic reasons," said the research director of the National Federation of American Shipping, "the trend is definitely to larger and deep-draft vessels."

When the new Lloyd's Registry of all the ships of the world was issued in mid-February of 1955, the authoritative marine columns of the New York Times said the Registry showed that "the trend is toward mammoth vessels."

Or read the statement made recently by Brigadier General Emerson C. Itschner, Assistant Chief of the Corps of Engineers in charge of the Corps' civil works program:

"The move toward deeper-draft, larger deep-sea uspertankers and ore carriers, and the outlook for increased transportation of the commodities they cary, has created a pressing demand for correspondingly deeper and improved channels in our major seaports."

Or witness the recent announcement that the famed Suez Canal must and will be deepened to permit efficient transit "of vessels drawing up to 36 feet."

Or take the report issued in 1953 by the United States Committee of the Permanent International Association of Navigation Congresses—a committee headed by Colonel Talley, the North Atlantic Division Engineer of the Corps of Engineers. That report included these definite conclusions:

For general cargo vessels, the trend is "toward a draft of 30 feet," and the same is true for combination passenger-cargo vessels. (The Mariner-type, which has been adopted as the desirable United States-flag dry-cargo vessel, has a loaded draft of 32 feet.)

As to tankers, the trends is to deeper drafts and increased speed, while bulk ore carriers will have drafts of 37.5 feet in salt water.

When it comes to bulk carriers, the committee held that if there were no limitations as to channel depths the draft of many of these vessels would be designed far in excess of 40 feet.

The general conclusion of the Talley committee was that the requirements of bulk cargo ships will "determine desirable channel depths because of the tremendous and widespread commerce" in the materials and products they transport.

And, finally, look at the specifications listed by the United States Maritime Administration for the seven classes of vessels into which the future merchant navy of the Nnited States will be divided: In 5 of those 7 classes, the design depths will be up to 33 feet in salt water. The only two exceptions are the class of merchant vessels for trade with small islands having shallow harbors and a special type of ship to transport loaded trucks and trailers.

To a greater extent than for any other United States seaport, the Delaware Harbor is a port of call for supersized cargo vessels. The vastly increased use of the Delaware Port area by the titans of ocean commerce is illustrated by the fact that, while the number of vessels arriving in and sailing from this port area rose only 21 percent betwen 1938 and 1954, the gross registered tonnage (size) of those vessels was 95 percent greater last year than it was in 1938.

IMPOSITION OF TOLLS ON SHIPPING IS UNTHINKABLE

The imposition of tolls on shipping has been suggested as a possible means of financ-

ing the improvement of the Delaware Harbor. This is contrary to the expressed policy of Congress, which decided that the improvement should be carried out in the traditional, historic way—by the Federal Government, with Federal funds.

Among the powers denied to the Federal Government by the Constitution is the right to permit any preference in the regulation of commerce or revenue to the ports of one State over those of another. American history scholars say: "The purpose of this clause is to establish uniformity for all ports." That uniformity would manifestly be destroyed by a requirement of tolls as a means of supplying money toward the improvement of a given port.

The idea of tolls is emphatically opposed by the Corps of Engineers. The Assistant Chief, in-charge of civil works, expressed the policy of the corps, in no evasive language, in an address to the American Association of Port Authorities, in San Francisco, on October 25, 1954.

"I can tell you," said General Itschner, "that our opposition to tolls is not based on mere preference, or stubborn insistence on blind tradition, but upon acute, detailed, and up-to-date realization of some of the staggering problems that would be involved in any attempt to impose such charges.

"The economic factors involved are complex," he continued. "There are places where the investment cost of an improvement for the benefit of navigation is so low and traffic is so heavy that it would require an insignificant charge indeed to repay the Government's expenditures. In the same general vicinity there may be other communities whose navigational improvement works cost more, and whose traffic is not as heavy, and whose businessmen, shippers, and carriers consequently would have to pay perhaps many times as great a charge. This would make a mockery of free competition between the two areas."

Summing up the policy of the corps, General Itschner said it believed that the results of charging tolls on shipping "would not be worth the immense adjustments and the costs that would be involved"; that "whatever theoretical defects there may be in our present policy of no tolls, we believe they are less than the defects which could be found in an attempt to impose tolls."

SPECIAL AND DIFFERENT

On two waterways within the province of the United States Government—one of them in existence for half a century, the other only now beginning to take form—tolls are, or will be, charged.

They are very special international cases, different from all other navigation facilities under United States jurisdiction. They are, of course, the Panama Canal, which was opened 40 years ago last August, and the St. Lawrence seaway, which is scheduled for completion in the late summer of 1958.

In order to obtain clear rights for the building and operation of the canal across the Isthmus of Panama that links the Atlantic and Pacific Oceans, the United States Government had to pay out some $75 million. And for a lease in perpetuity of the canal right of way and a 5-mile strip of land on each side that forms the Panama Canal Zone, our Government pays the Republic of Panama an annual rental of $430,000. It was raised to that figure, as of 1934, from $250,000, so that by the end of last year the rental payments had amounted to some $16 million.

Those outlays are in addition to the canal's first cost of $337 million. In order to operate and protect the canal, the United States must maintain business management and civil government administrations employing more than 2,000 persons, to say nothing of the military safeguards that are prudent and necessary.

On March 19, 1955, the chairman of the United States Maritime Board disclosed that the Board was working toward the complete elimination of reduction of Panama Canal tolls—by the end of this year.

The St. Lawrence seaway, on which tolls will be collected in order to cover as nearly as practicable the amortization of $105 million in revenue bonds, plus operating costs, is in no way analogous to any other United States waterway. It is an international, or intergovernmental, undertaking by the United States and Canada, jointly.

One of the principal reasons advanced for Congressional approval of United States participation in the seaway that came last year was that Canada had officially determined to construct the seaway alone and would, if that took place, have sole determination of toll rates. The corporation created by Congress to direct construction of the United States portion of the seaway is required to negotiate with Canada on determination of a toll schedule and equitable division of revenues.

In the light of all the facts presented in this brochure, the Joint Executive Committee for the Improvement and Development of the Philadelphia Port Area urgently recommends:

Reaffirmation by the Congress of the United States of the traditional and historic responsibility of the Federal Government for the improvement of the shipping channels in the established seaports of the Nation, by:

Enactment in the present Congress (84th, 1st sess.) of the legislation to appropriate funds ($25 million of the total estimated cost of approximately $91 million) for the first year of work on the authorized improvement of the Delaware Estuarial Harbor, as a project in the interests of the Nation's economy and its military defense. The amount provided in the pending legislation is the amount that the Corps of Engineers believes could be most efficiently expended during the first year of work on the project.

WHAT IT IS

For almost 70 years—since 1888—the Joint Executive Committee for the Improvement and Development of the Philadelphia Port Area has been devoted to the upbuilding and expansion of the Delaware Estuarial Harbor.

The JEC has striven through all those years to encourage continual Federal improvement of the Delaware shipping channel and locally sponsored improvement of the marine-related facilities that give the channel its high degree of usefulness—to the people of this region and the people of the United States.

The member organizations of the JEC broadly represent local government agencies, business, and industry of the area.

The membership of the JEC is Atlantic Deeper Waterways Association, Board of Harbor Commissioners, Wilmington, Del.; Bureau of Port Operations, City of Philadelphia; Chamber of Commerce of Greater Philadelphia; City Business Club of Philadelphia; Commercial Exchange of Philadelphia; Commercial Museum of Philadelphia; Foreign Traders Association of Philadelphia; Lumbermen's Exchange of the City of Philadelphia; Northeast Philadelphia Chamber of Commerce; Philadelphia Bourse; Philadelphia Marine Trade Association; Philadelphia Maritime Exchange; Philadelphia Port Bureau; Pilots' Association for the Bay & River Delaware; Port of Philadelphia Maritime Society; South Jersey Port Commission; Vessel Owners' & Captains' Association.

Air Power

EXTENSION OF REMARKS
OF

HON. BARRY M. GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 4, 1955

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an interesting article entitled "Air Power," written by Maj. Alexander P. DeSeversky.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AIR POWER

(By Maj. Alexander P. de Severksy)

Air power is the ability of a nation to assert its will via the air medium. The military instrument by which a nation applies its airpower is an air force. In time of peace the very existence of an air force of proper size and capabilities—what is termed an air force in being—can be used by a country to implement its national policy.

In time of hostilities, the primary use of airpower is for the establishment of command of the air, the condition in which one side retains its freedom of air navigation and has the ability to deny that freedom to the enemy. Freedom of air navigation when maintained by one side through successful, sustained combat is known as air superiority.

Because the aim of war is to impose the will of one side upon the other, the enemy must be disarmed; his industrial power to make war and the stockpiles of his Armed Forces must be neutralized. For that reason, the offensive air force must carry the threat of a lethal dose of destruction.

Though the main objective of war is to disarm the adversary, it must be assumed from the outset that the belligerents' industrial vitals and other sinews of war will be properly shielded by a defensive air force and that access to the decisive targets will be challenged. It is for this reason, as well as to deprive the enemy of his retaliatory capacity, that the primary mission of the air force must be the elimination of the opopsing air force, through (1) the destruction of its operational facilities and equipment on the ground and (2) combat in the air. This is termed air battle.

In the past, when the range of aircraft was limited, it was possible to maintain local command of the air. Global command of the air could be achieved only after the establishment of a world-wide complex of air bases so located that, in terms of a given practical range of aircraft, their air peripheries would interlock to form an uninterrupted air canopy over the theaters of operation. This arrangement was not unlike the system maintained in the nineteenth century for seapower, which, for the exercise of its global functions, required the establishment of bastions of naval strength on foreign soil throughout the world.

There are emerging among the major powers, however, aircraft that, for all practical purposes, possess global range. They can rise directly from their respective home bases, strike at any traget in the Northern Hemisphere, and return nonstop. At the current rate of advance in aeronautical science, it is only a matter of a short time before aircraft of a truly global range (25,000 miles) will be a reality. In the meantime, global range is being achieved through the perfection of in-flight refueling.

Because of this global range, air power can be applied directly from the continental base of its industrial origin without intermediary bases and the international complica-

tions attendant upon their establishment and maintenance on foreign soil. In that respect, air power represents, diplomatically, an instrument of national policy that is superior to its predecessor of the last century, sea power, the world-wide deployment of which was often branded as imperialistic and aggressive. With the development of the global range of aircraft and the advent of nuclear weapons, local control of the air anywhere on the face of the earth, except over the continental base of air power containing the source of its industrial origin, can no longer be maintained. Thus, intermediary bases have become not only unnecessary but actually untenable. It follows that the base of air operation should be so located that any attack against it will involve for the attacker the risk of engaging the entire air might of the Nation. (This proposition, incidentally, defines the air power of the British Isles. Although an insular nation, Britain possesses a vast industrial complex and a large, technologically skilled population. She is a source of air power of global significance that is capable of accepting a challenge to her air sovereignty.)

It follows, also, that because local control of the air cannot be maintained, air power can no longer be applied on a sustained basis against a continent from intermediary bases located on its periphery, whether those bases are fixed on land or are floating, as aircraft carriers. If, for example, a floating base ventures beyond the protective canopy of a friendly continental air force, it becomes untenable. It stands to reason that, like an intermediary base, a floating base can never contain enough air power to challenge or ward off the entire air force of a hostile continent. Further, with the development of nuclear weapons of a size conveyable by small supersonic aircraft, the floating base, like any other intermediary base, becomes extremely vulnerable and once destroyed has no powers of recuperation.

From the above assumptions, it becomes clear that command of the air means a global command, exercised directly from the continent of its industrial origin. Either one controls the entire air ocean clear around the globe or one controls nothing.

In defining air power military experts have invariably paraphrased the historic definition of sea power, maintaining that air power includes a nation's air force, the military aviation of its other services, its civil aviation and civil air transportation system, its aircraft industry, and the aeronautical skills of its population. In other words, they have held that air power comprises that entire portion of the national effort that expresses itself in aircraft, their crews, and their operational facilities.

In the strict military sense of differentiating the respective strategic roles of the land, sea, and air forces, such a definition of air power can be challenged. The reason the sea-power formula is not applicable to air power is that the movement of ships is naturally confined to their medium, the water, and cannot directly participate in, or compete in parallel with, overland movement. It is logical, therefore, that the national effort that culminates in ships, their crews, and their operational facilities constitutes strictly sea power. On the other hand, it has never been claimed, for example, that army ordnance facilities and skills, although applicable to the production of naval guns, constituted sea power—the reason being that those facilities were irrevocably committed to the maintenance of the army.

Unlike seacraft, the aircraft is an extremely versatile vehicle, which not only participates in and competes with all methods of transportation on land and sea but, with the development of hovering machines such as helicopters, extends its application to other forms of motion, serving in effect as gigantic elevators, escalators, and hoists. As in the foregoing example of army ordnance facilities in relation to sea power, it can be argued that aircraft designed for and committed to surface forces do not constitute air power. It is quite possible for a nation to have an amorphous mass of aircraft, even in prodigious numbers, and still have no air power.

To put it another way, it is utterly immaterial whether an airplane rises from land or from water or from a catapult. What determines its definition as a land, sea, or air weapon is what it is designed to do after it becomes airborne. If designed to assist and increase the efficiency of land and sea forces in attaining their objectives, it is not an instrument of air power. Only when an aircraft is designed to assist and increase the efficiency of the air force in its task of establishing command of the air is it an instrument of air power.

A strategic force can be defined as a military force capable of assuming the command of its own medium by its own combat resources. Until the advent of the airplane, the army and navy were valid expressions of the nation's ultimate military power on land and sea, respectively. With the development of aircraft, however, that ceases to hold true. No longer the masters of their own mediums, in which air power can at will decisively interfere with their functions, those forces have lost their strategic significance. Conversely, the surface forces cannot on their own initiative interfere decisively with the functions of the air force. Consequently, the air force is the only strategic force, because it is the only force that can attain command of its own medium by its own combat resources. Thus, the air force has become the primary instrument of the nation's military strength.

Because in a major conflict surface forces can no longer successfully fulfill their missions unless the air above them is controlled by a friendly air force, command of the air becomes the crux of war and an end in itself. (This principle, of course, is not applicable in the case of limited, localized conflicts, the conduct of which is often governed by political considerations in defiance of military logic. Thus, in Korea, the United Nations air forces were confined to the support of ground forces and were prohibited from attacking the enemy's air bases or the industrial sources and stockpiles of his military strength.) Only when undisputed command of the air has been established can these other military services carry out their mission of exploitation, on the surface, of a climactic decision won in the air. Until then their efforts must be directed toward supporting and assisting the air force in its primary task.

In order to acquire maximum air power, a nation must adhere to these principles of military art: singleness of purpose, unity of command, and concentration and economy of force. This means that the entire airpower potential of a country must be unified, under a single air command, into a single force—an air force in being that can go anywhere and do the necessary.

Therefore, it can be stated that air power may be considered the supreme expression of military power and rests upon the entire human and material resources of the nation. See Aeronautics; Air Force; Air Force, Canadian; Air Force, United States; Air Warfare.

Bibliography—W. Mitchell, Winged Defense (1925); G. Douhet, The Command of the Air, translated by D. Ferrari (1942); A. P. de Seversky, Victory Through Air Power (1942), Air Power: Key to Survival (1950).

AUTHOR'S NOTES

1. The term "defensive air force" embraces defensive aircraft and their ground operational facilities, together with the Nation's entire detection and warning complex and ground-to-air missile and vehicle systems.

2. An important fact to be kept in mind is that the advent of nuclear weapons does not change the nature of airpower. With atomic warheads becoming common to all military forces, the supremacy of the Air Force as an instrument of war lies not in the nature of the explosive it employs, but in its superior and global combat mobility through the air medium, as contrasted with the inferior and geographically limited combat mobility of land and sea forces in their respective mediums.

The acquisition of aircraft by land and sea forces for logistic purposes does not alter that axiom. The acquisition of aircraft by those forces for air combat is tantamount to creating separate, competitive Air Forces, an act which defies the basic military principles of economy of force and unity of command, with resultant overall weakening of the airpower of the Nation.

What You Should Know About World Government

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1955

Mr. SMITH of Wisconsin. Mr. Speaker, there are people in our country today who would surrender our national sovereignty to a fictitious form of world government.

Under leave to extend my remarks, I am including an article that appears in the current issue of the American Legion magazine by Zane B. Thurston:

WHAT YOU SHOULD KNOW ABOUT WORLD GOVERNMENT

At its 1951 national convention the American Legion adopted a resolution which said in part: "We reiterate our opposition to the participation of the United States in any form of world federation, world government or in any intermediate federative organization • • • which would, in whole or in part, involve the sacrifice of sovereignty of the United States." The Legion again amplified this strong opposition in a resolution at its 1954 national convention.

In so doing the Legion has rendered a great service to our constitutional Republic by calling our attention to the inherent dangers of the world government notion.

It is well to establish at the outset that the world government theory is not merely an idealistic and nebulous abstraction hovering in the minds of intellectual daydreamers; it is a very real, high-powered and liberally-financed movement supported by many groups—here and abroad—dedicated to the task of creating a federal union of the world.

My personal interest in the world government idea (over and above the prompting of my natural religious and patriotic instincts) stems from the fact that one of its main protagonists is a fellow townsman; indeed, much of the spade work which has been done in this country was done less than 2 miles from my home at the so-called "Dublin Conference" in early 1945. The climax of the work at these conferences, and since, will be the attempt by the United World Federalists, Inc., (one of the most powerful groups pressing for world government in this country) to expedite their plan of transforming the United Nations into a world government when its charter comes up for amendment in July of this year.

It is not my purpose to analyze critically the many specifications, requirements, provisions, and restrictions of the various world government schemes which the American Legion obviously considers to be inimical to the continued sovereignty and independence of our constitutional Republic; rather, I shall dwell upon those inherent contradictions, false premises and ridiculous notions that render the theory of world government impracticable in itself.

The avowed supreme goal of world government advocates is the creation of a federal government embracing all the nations of the world; this, they consider to be the only conceivable way to establish and preserve world peace. Extremely vocal prior to and during World War II and in the late forties, they found expression in such organizations as: Federal Union, Inc., the Atlantic Union Committee, Inc., United World Federalists, Inc., and various other lesser groups. Before any valid argument can be made against the theory, the best possible case for the opposition must be fairly and objectively established and can best be accomplished by quoting directly from their literature, speeches, and public pronouncements.

A brochure entitled, "Let's Not Make the Same Mistake Twice" (published by Federal Union, Inc.) very aptly states their reason for existence and can be fairly presented as representing the motivations of all world government agitators even though not all would subscribe to the federal union plan.

The brochure says: "after the war will come something called 'peace.' And, it is equally the duty of every American to bear in mind that the fate of democracy, and our own future, will depend not alone on the outcome of the war but on the outcome of that 'peace' also. We need a peace-aim no less than a war-aim, for victory. We helped to win the last war. We lost the peace. Now we are at the crossroads again! Why? Do we, the free peoples of the earth, know where we expect to go? Have we a plan to attain an orderly, peaceful, prosperous world based on freedom? Up until now the answer has been, no * * * But there is an answer now. Federal union is such a belief. Federal union is a faith in an expanding democracy, and in an expanding, embracing, democratic way of life for the whole world. Federal union proclaims for the free peoples. 'We do know where we want to go and how to get there.'"

The organ outlines "A strong but flexible union" composed of the "English-speaking democracies" to be open to other nations "as they develop or restore democratic rights." It further proposes that "the union would guarantee every citizen the individual rights set forth in our Bill of Rights—the rights of free men." And it graciously suggests that "it be abandoned for something better if something better [can] be found." Not being a "true" world government plan—that is, not including all the nations of the world—this plan has been forced into oblivion by a larger and more aggressive group, the United World Federalists, Inc. (the main contenders in the world government arena in this country today).

Such prominent figures as former Senator Robert C. Hendrickson, of New Jersey, shouted for world government; making an impassioned plea on the floor of the Senate in July 1949, he called for the ratification of the Atlantic Pact, eventual Atlantic federal union and ultimate world government. Owen J. Roberts, retired Justice of the United States Supreme Court; Robert P. Patterson, former Secretary of War; Harold L. Ickes, former Secretary of the Interior; Will L. Clayton, Joseph C. Grew, William Phillips, and Robert Woods Bliss, all former Under-Secretaries of State were all officers of the aforementioned Atlantic Union Committee, Inc.

This committee sponsored Senate Concurrent Resolution 4, House Concurrent Resolution 26 with the active support of 28 Senators and 84 Congressmen. The resolution stated that whereas Federal union in this country had secured prosperity and abundance for Americans, the President be requested to invite the democracies which sponsored the North Atlantic Treaty to a convention to explore the possibilities of forming within the framework of the United Nations, the principles of free federal union, the avowed end result of which was to establish an Atlantic federal union as a necessary first step toward ultimate world government.

From all the foregoing it must be conceded that the world government proponents were keenly aware of the need for a definite and concrete plan to win the peace, and they were predisposed to act. This is all to their credit as the majority of us were either hoping that the war would soon be over so that we could get back to business as usual or that it would never end since we never had it so good.

From the outset the world government schemers have been awed by the greatness and tremendous success of this country but have made the fatal mistake of reasoning that the mere fact that our forefathers joined together in a Federal union was the underlying reason for its unbelievable success and prosperity; that this joining together, in itself, brought law, order, peace, harmony, and abundance to our shores. That it failed completely to prevent one of the bloodiest fratricidal wars in history is a fact they seem to ignore. Confusing cause and effect, they have consistently failed to make the main plank in their platform the real reason why our form of government breeds peace, law, and order; in attempting to give everyone as fine a cornfield as we enjoy they fail to grasp the inviolable rule of law that the same kind of seed corn must be planted.

Before our Founding Fathers wrote the Declaration of Independence, the Constitution, or Bill of Rights, they were in general agreement on one great principle—that God is the source of all law and authority and that His law is supreme in the order of things. They went on from there. Representing many divergent religious views, economic backgrounds, political convictions, customs, traditions, manners, and habits, they found a common ground on which to meet, a mutually acceptable moral standard defined with reasonable clarity, and made it the heart and soul of the new Government. That, and that alone, is the secret of our tremendous growth and success as a Federal union.

Having found an organic unity, an indestructible cohesive element, they founded our constitutional Republic upon solid rock; agreed on the supremacy of God and His law as well as their absolute dependence upon Him, they wrote into our Constitution the inviolable principle that certain institutions and human relations are outside the authority of government.

All world government schemes are notoriously conspicuous not only for their ignorance of God as the highest authority but even for the need of a universally acceptable standard of morals and ethics, if the world is to be held together in one inseparable unit subject to a single government. There are many broad hints and generalizations about "embracing democratic principles," "peace, security, and abundance," "universal brotherhood," etc., but no mention of the creative source of these ideals. Herein lies the greatest weakness of the world government notion; herein lies the breach through which seeps the corrosive elements that dissolve the highest ideals, the best intentions, and most profound achievements.

Keeping in mind that those first plans for world government were designed primarily for the free peoples and left open to other nations "as they develop(ed) or restore(d) democratic rights," let us examine to what extent these essentially sound ideals have become corrupted because their champions have chosen to build on sand.

At the second London Parliamentary Conference on World Government, foreign world government groups in collaboration with the United World Federalists, Inc., drew up plan A and plan B for transforming the United Nations into a world government. Plan A stipulates that membership should be open to all states of the world, and all must be urged to join. This would include all the Communist nations. The UWF would have us join with the enemy in a worldwide socialistic organization to preserve liberties which he is unalterably committed to destroy, even when he has candidly admitted that this is easiest of accomplishment by getting the free nations to join with him in just such a coalition. Once membership has been accepted, continued membership must be compulsory. There must be no right of secession. If our enemies chose to vote our freedoms down the drain we couldn't even shoot our way out as a provision on disarmament precludes the possibility. And what a notorious repudiation of our Declaration of Independence; that great document states that when any government becomes destructive of man's unalienable rights it is the right of the people to alter or to abolish it, and to institute new government. The lower chamber, of the proposed world legislature, should consist of representatives of member states in numbers proportionate to population. The lethal aspects of this provision are obvious when we consider that the United States has a population of roughly 160 million; the combined population of the Communist nations and those disposed to follow the dictates of the Kremlin number well over a billion.

Another provision of plan A is that taxes should be levied proportionately to national income. No comment needed.

Plan A, ostensibly designed to extend democratic ideals throughout the world, also provides that members of the upper chamber, or senate, of the proposed world legislature be appointed rather than elected, as this would tend to secure the representation of some valuable men and women who are not willing to submit themselves to popular suffrages. A sobering thought when we consider that Alger Hiss, Judith Coplon, John Stewart Service, John Carter Vincent, William Remington, Harry Dexter White, and others, were able to convince essentially loyal American administration officials that they were valuable people worthy of sensitive posts, and that only those who were willing to submit themselves to popular suffrages had the courage to bring the facts to light and convince administration officials that those others weren't as they had represented themselves.

That this plan, and plan B (which is only slightly less radical and for which they will press if plan A fails to get the necessary U. N. support) threatens the continued existence of our constitutional Republic goes without saying. For, as the law now stands, a treaty supersedes our Constitution and the U. N. Charter is a treaty. And the United World Federalists plan to put over this blueprint for national suicide in July 1955—this year.

It is perhaps an oversimplification, but it would seem that the world government notion is an attempt to produce godliness (or goodness, peace, harmony, and abundance) without God. Having thus started off on the wrong foot each successive step has led its apostles farther afield.

But world government supporters are not willing to start over. They continue to err by reasoning that goodness (or peace, law,

order, and abundance) must be produced by government. This flagrant error in judgment is well illustrated in the aforementioned brochure published by Federal Union, Inc.:

"Law and order have never been attained by depending on the good will of good people. It requires government to enforce law and order whether in village or nation."

On the contrary, genuine respect for equitable law and the achievement of true order can only be realized by depending upon the good will of good people. The very heart and soul—the underlying principle—of all order, peace, harmony, and cordiality is that good will generated by good people. Granted, when those disposed to ill will outnumber their opposites or are much more aggressive in their designs, the inertia and lethargy of good-willed good people render the maintenance of peace and order much more difficult, but this in no way alters the basic principle involved.

The fallacious tenet that it requires government to enforce law and order is the tar pit which will fossilize all world-government champions. This is the Old World concept which prompted our Founding Fathers to establish a new government. There is peace, harmony, law, and order in Russia; law and order are enforced under total government. There is peace, harmony, law, and order of a truer nature under our free system; but, it is a byproduct of our constitutional Government—it doesn't have to be enforced. Our Government creates not law and order but an atmosphere where law and order can find expression and enforces only the penalty for breaking the law and disturbing the order.

World government advocates, having reasoned that it requires government to enforce law and order, proceed on their dizzy course by reasoning that if worldwide law and order are desired we must have world government.

Force (which is the ultimate of government) will not only defeat the peace and well-ordered lives of the people, but in the end will destroy itself; every appeal, except the appeal to God, the source of all law and authority, will bear evil fruit.

Another inexcusable trait of world-government theorists is to frown upon history. Because no practicable solution to world peace has been expedited in the past they reason that the solution must necessarily be a new, novel one.

If nothing else, an objective study of history should certainly convince us that the world government notion is impracticable: Alexander the Great made a heroic attempt to unify the world under one governmental head; he failed. The great Roman Empire under the Caesars, Caligula, Nero, Domitian, Aurelius, and Atoninus Pius was a world government in the strictest sense; spreading from the great wall of Hadrian in Scotland to the sphynx and the headwaters of the Nile, from the Iberian Peninsula to the Tigris and Euphrates, it embraced most of the then-civilized world. The Roman Government "enforced law and order; it failed to unite the world and create Utopia. Including numerous races, 10 times as many religions and a multitude of cultures, it had no universally acceptable moral code or standard of ethics. It failed; rotted from within. There can be no vital unity without, at least in substance, a unity of religions, morals, customs, and traditions as there was in Colonial America.

Those who champion world government also fall into the great error of our day of making a fetish of "democracy." A democracy is a form of government in which the supreme authority is vested in the will of the majority. Under such a system the interests of the minority groups and the individual are subject to the dictates of the majority. The "majority" favored the rise of Hitler in Germany; the "majority" of the United States Supreme Court decreed that a Negro had no right to American citizenship (*Dred Scott* v. *Sanford*—1857); the "majority" on the front porch of Pilate's house shouted: "Crucify Him. Crucify Him." Rome and Germany have since fallen. But America, unalterably committed to the absolute supremacy of the laws of God, at great sacrifice and unprecedented suffering inscribed in human blood the inviolable rule of natural law that all men, regardless of color, have a right to be free. She stands today infinitely stronger for her sacrifices; man's last best hope of freedom on earth; not a "democracy," but a constitutional Republic.

Another pitfall of the world government advocates is the outrageous notion that security is the birthright of every individual. The only security that government is bound to guarantee its citizens is security in their freedom to provide for their own security. If a person is relieved of the duties, obligations, and anxieties necessary for the maintenance of his material welfare, he is also relieved of his dignity as an individual. Remove the consequences which befall the man who refuses to provide for his own security; remove the rewards for those who diligently labor for themselves and their families and the world would soon be populated by fools.

The motive power of the world government movement—that driving force which impels its adherents to passionate action—is not entirely the updrafts generated by the fluttering wings of the dove of peace. Its supporters are driven primarily by fear; fear that the present-day exalted position of the mind of man which manifests itself in our unbelievable technological accomplishments shall be utterly destroyed. They exult over our mental giants and spiritual pygmies making up what they worship as "modern civilization" and live in constant fear that their golden idol may be destroyed.

A particularly cogent example of this "fear psychosis" is the speech by Cord Meyer, Jr., United World Federalist vice president, delivered to the UWF and Federation of American Scientists at Washington, D. C., in April 1947. Among other things he maintained that, "Whether our fate is to be peace or atomic-biological warfare is the issue." He claimed not to overstate the case in saying that "the lives of more than one-third of humanity and the survival of what we have chosen to call civilization is at stake." Ruling out our preparedness program, the balance of atomic power theory, the abolition of atomic weapons and a preventive war as dependable foundation stones of world peace, he concluded by observing: "While there is still time and room for hope, let us present to the people of this country the real choice, the destruction of civilized society or some measure of world government. When they understand that choice, I have confidence in their decision. Men are sufficiently rational to acquiesce in their own survival."

Mr. Meyer gives us a choice of experiencing a blowout or accepting a slow leak; we end up riding on the rim in either case. He doesn't even allow that there might be a third choice, but there is. We can stop the car, find the root cause of the tire trouble, and repair it. Of course, our trip will be delayed; we'll get our hands dirty; run the risk of being run down by a passing auto; we may even bark a shin or bruise an elbow. But we will be engaging in the only activity that will insure beyond any shadow of a doubt that we will reach our destination. Any other course, prompted by fear, would be a temporary expedient at best and would only prolong the inevitable: ultimate failure. Let us not forget that fear has given us the only military defeat of our glorious history—Korea; fear has resulted in the enslavement of millions in Viet Nam; fear has always been a harbinger of slavery.

The fact that many world government advocates have positive subversive affiliations is a disturbing factor. Many of them, of course, are merely yard birds in that vast army of joiners who are more to be pitied than condemned. The law of averages, however, dictates that some are knowingly subversive and have good reason to espouse the world government cause. A statement of Stalin best explains that good reason.

In his Marxism and the National Colonial Question Stalin called for the "amalgamation of all nations in a single world economic system which is so essential for the final triumph of socialism." The Communist program clearly states: "That dictatorship [of the proletariat] can be established only by a victory of socialism in different countries, after which the proletariat republics would unite on federal lines with those already in existence, and this system of federal unions would expand and embrace colonies emancipated from the yoke of imperialism until, at length, they formed the World Union of Soviet Socialist Republics and united all mankind under the international domination of the proletariat organized as a state."

In conclusion, let us resolve with the world government theorists that there is a definite need for a positive and constructive program of action if enduring peace on earth is to become a reality. But here let us part company; let's not try to produce moisture without the element of water. Permanent peace can never be realized by joining with the devil, hoping, like Faust, that we will outwit him when the showdown comes. Peace—lasting and on a worldwide scale—can be achieved only as it has been achieved here in America: not by merely joining together in a federal union, but by prefacing our actions by subscribing without reservation to the kingship of God and the absolute supremacy of his law in the order of things; by acquiescing to nothing else. Only when the majority of the governments of the world are willing to do this will a world government setup be even remotely practicable.

Here, under the most perfect government in the annals of human history, we must be dedicated to but one aim: the preservation of the way of life given to us at great sacrifice by our Founding Fathers. We must courageously stand by our convictions and contend, as did our forebears, that even death is preferable to a loss of liberty. We must depend upon the good will of good people to bring about the peace which we all so passionately crave, for we have it on better authority than all the world government agitators rolled into one that there will be "peace on earth to men of good will."

Policy Statement of the New England Governors Relative to a Proposed Federal-Aid Highway Program

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

POLICY STATEMENT OF THE NEW ENGLAND GOVERNORS RELATIVE TO A PROPOSED FEDERAL-AID HIGHWAY PROGRAM

The Governors of the six New England States assembled in Boston, Mass., on March

15, 1955, reviewed in detail the highway needs of the New England area and the merits of the bill which are being considered by the Congress of the United States, pertaining to Federal aid for highways, and are in agreement with the following statement of policy:

A survey of these needs indicates conclusively that notwithstanding the fact that all six States have sizable programs in effect, improvements on our highway systems are not keeping pace with the increasing demands of traffic. Bold action is called for, with new concepts and higher aims. The popularity and success of the several throughway-type highways indicates that a development of the Interstate System, as a first step toward an overall highway-improvement program, is timely, logical, and bears promise of being an excellent way to win popular approval for the whole program.

However, inasmuch as the resources of the respective States are limited and it would be several years before the 40,000-mile national system could be completed with the current financing methods, we believe it is the responsibility of the Federal Government to take the initiative in an accelerated interstate program and to bear the major cost for improving this system to the desired standards within a 10-year period. We do believe that the 40,000-mile system as now established should not be increased and that the matching funds of the States should not be less than 5 percent or more than 10 percent of the total costs.

The survey of the Interstate System in New England shows that our needs amounted to 8.20 percent of the needs of the Nation. This relatively high percentage is occasioned by the fact that many of the interstate routes pass through or near large centers of population and industrial areas where land takings and construction costs are well above the average. For this reason, we believe that any funds allotted for the Interstate System should be distributed on the basis of need rather than on arbitrary ratios as provided for under the Federal Highway Act of 1954.

Inasmuch as several States have already constructed portions of the Interstate System to the required standards, it is believed that in order not to discriminate against these States a credit reimbursement should be allowed for any road so constructed whether it is a free road or toll road.

The credit reimbursement so allowed should be 90 percent of a fair depreciation value of the road at the time of its acceptance into the system, minus any Federal funds that entered into its construction. This provision should not extend to toll roads where the financing has not been authorized prior to December 31, 1955.

We believe that the Interstate System should provide safe, fast and economical transportation for a period of at least 20 years after its improvement and should therefore be constructed upon a right-of-way having control of access. Because of the need for expediting the construction through all States simultaneously, provision should be made for the Federal Government, upon petition of the State, to acquire the necessary right-of-way where State laws are inadequate for this purpose.

In order not to impede the improvement on the other Federal systems, namely, the primary, secondary, and urban systems, we believe the funds provided in the 1954 Federal-aid act for these systems should be continued, except that the apportionments should be made for a 6-year period to permit the States to properly plan and staff their programs.

Also, it is believed that it would be advantageous to the States in solving their problems of funds for the primary, secondary, and urban systems if a transfer up to but not exceeding 25 percent of these funds between the systems were permitted. If an accelerated Federal highway program is approved and a national highway corporation commission or authority is created, we believe its activities should be restricted to financing of the program only.

We believe the program should be administered and constructed by the State highway departments with the Bureau of Public Roads acting as the coordinating agency for the approval of final plans. The relationship between these agencies has been highly efficient and outstandingly successful.

The governors of the New England States believe that the completion of an interstate system in 10 years is a necessity in order to maintain the economic growth of our region and the Nation; to reduce the high death and accident toll on our highways, and to provide for our military and civilian defense needs if the occasion arises. It is reasonable to assume that the New England States are prepared to provide the matching funds that will be required.

Israel: Key to Middle East Security—No. 1

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 25, 1955

Mr. HOLIFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the first of a series of 5 articles on Israel: Key to Middle East Security, which appeared in the Los Angeles Herald Express, one of the newspapers published by William Randolph Hearst, Jr. The articles were written by former Congressman Sam Yorty, of California:

ISRAEL: KEY TO MIDDLE EAST SECURITY—YORTY TELLS ROLE TO BE PLAYED BY NEW NATION

(Tension in Asia, in recent months, has obscured another potential volcanic outpouring of international trouble. It is the Middle East where for 7 years Israel and her Arab neighbors have been at gun point. This is the strategic area that Hitler sought to overrun on a trek through North Africa. With its Suez Canal and its vastly rich oil lands, it is now inviting to Soviet Russia. The free world's principal claim to a firm friendship in this area is Israel, the key to security and peace in the Middle East. A report on this trouble spot has been made for the Herald-Express by Samuel W. Yorty, an attorney and former United States Congressman from the 26th District, who recently returned from an extensive Middle East visit. This is the first of several articles.)

(By Samuel W. Yorty)

Israel is an island of democracy surrounded by hostile Arab neighbors in a world of its own. With a circle of guns at its back, it stands firm guard over its small bit of land, and it is determined that those Arab armaments will not carry out the Arab threat to "drive the Israelis into the sea."

The complicated ideological problems of Jew and Arab now look interminable, but those problems which appear to the western world as purely diplomatic relations must be resolved if a war already 7 years old is to end.

We have a stake in the solution, because Israel-Arab peace is the real key to the building of security in the Middle East. And, more than that, we have a stake in the success of Israel's democracy.

Despite the strategic importance of the Middle East, borders of which are common to those of Communist Russia, I feel it is the area least understood in the United States. I am more than ever convinced of this since I have completed a tour of Israel and those Arab enemy countries which bound it on three sides.

The Moslem Arabs, at least most of them, even refuse to recognize the existence of this foundling country, Israel, which proclaimed its existence in 1948. The Arab hate for Israel as a country is unreasonable. It is fanatical. It is dangerous.

The United States, since first recognizing the Government of Israel on May 14, 1948, has had to face Arab resentment. Ordinary diplomacy is out of the question. There can be no friendly sitting down at conference table and working out problems. With the Arabs there can be no unemotional discussion of Israel.

GRAVE CONCERN OVER ARMING

Israel, while favoring economic assistance to raise the standard of living of Arab peoples, is gravely concerned about our supplying of arms to any Arab State. First before arms, say the Israelis, the Arabs must prove they really stand with the United States in defense of freedom and unequivically renounce blockade, boycott, and threats of renewed war against Israel.

I was in the Arab countries of Egypt, Syria, Lebanon, Saudi Arabia, and Jordan. I soon learned that Arab emotions are so volatile where Israel is concerned that even seemingly entrenched Arab political leaders dare not openly make a conciliatory gesture toward their new neighbor.

As far as the Arabs are concerned, Israel is an illigitimate child which should never have been conceived and which would have died in the process of being born if not instantly rescued and adopted by the United States.

The once deep-rooted friendship and admiration Arabs held for Americans now appears to be more superficial and more closely related to their need for the financial and technical assistance we can and do supply to shore up their shaky economies.

Today there is no break in the border between Israel and the Moslem States of the Arab League, which, incidentally, does not include Turkey or Iran, and the Arab door is slammed in the face of any visitor who has either been to Israel or is bound there. An armistice agreement was signed in 1949, but it is a very shaky armistice. The war is still very real.

ARAB LEAGUE HATES ISRAEL

There has been little drifting away of bitterness. It is still almost as fanatical as in 1949 when Arab leaders were murdered in Egypt, Syria, Lebanon, and Jordan, including King Abdullah, of Jordan, for their part in the armistice. Even this act of formal halt to shooting was taken as softness toward Israel.

Among members of the Arab League there is unity on but one thing—hate Israel. It is not strange that this hysterical mob madness is nurtured and exploited, for behind the facade of political sovereignty lies poverty, illiteracy, technical backwardness, and disease. These are the very things that the State of Israel has proved can be overcome within its own borders. It is a Middle East beacon of progress.

Only on the hate of Israel are the Arab States united. On other matters they are split by dynastic feuds, conflicting ambitions, and jealousy. The Moslems are divided into sects. There is heated rivalry between the ruling Hashemites of Iraq and the Saudis of Arabia. All are cross-currents that further muddle the Middle East problem.

I talked with most everyone, from prime ministers and kings to chauffeurs, refugees, and guides. I asked:

"What is the solution? How can we establish peace between the Arabs and the Israelis? What do you want the United States to do?"

There were no identical answers to my questions. But generally the solution revolves about the 1 million Arab refugees who lost their homes as a result of the United Nations decision to partition Palestine and the Arab's effort to prevent partition by resorting to war, a war we dare not consider ended.

But what is right and what is wrong? In Arab countries it matters little, because there is no reason, there is only hate. Quite naturally, Arab bitterness causes a reaction in Israel.

Typical of the thinking of the Moslem refugee is that of a former Haifa businessman, now a Palestine refugee in a camp near Beirut, Lebanon.

This man admitted that the Israelis did not drive him and his family out of Haifa. He admitted that some Moslems remained, but he was convinced that they faced unfair discrimination.

"We heard of a massacre; there was terrorism, bombings, and panic. We fled," this man told me.

He continued:

"Our leaders told us to leave. They said we could return in 2 weeks. The Arab leaders betrayed us, their own people. They said they would drive the Israelis into the sea and we could return. They lied to us."

This man, who sees his future in a dirty, crowded refugee camp without the simplest of comforts and without enough food, volunteered the information that he did not believe the Israelis did the bombing which caused Arabs to flee their homes.

"They didn't have airplanes," he said. I don't know who did it, but there were people who wanted us out of the way besides Israelis. The British and the Americans were for the Israelis."

He is one of a million men, women and their children displaced by a war on the fields of Biblical Palestine, a war that nobody really understood.

To further complicate and confuse the problem, this man and his Moslem brothers in the refugee camp are unacceptable as citizens in the Arab League State of Lebanon. Additional Moslems would upset the delicate 50–50 balance in that country between Moslems and Christians.

Israel: Key to Middle East Security—No. 2

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1955

Mr. HOLIFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the second of a series of articles on Israel: key to Middle East Security, which appeared in the Los Angeles Herald Express, one of the newspapers of which William Randolph Hearst, Jr., is publisher. The articles were written by former Congressman Sam Yorty, of California:

JERUSALEM, LAND OF BIBLE, STANDS DIVIDED AS BATTLEGROUND

(By Samuel W. Yorty)

Jerusalem, the land of the Bible, is holy to three great religions—Christian, Moslem, and Jewish. Today it stands divided. It is a battleground.

On one side stand the Israelis, an ancient people reunited, with a modern concept of living and a new representative government to implement their ideals. In the leading city of Israel, Tel-Aviv, the tempo is fast, dynamic. It might be a city in the United States.

But threatening to crush Israel and all the Israelis with it is the heritage of the Middle East, feudalistic governments primarily based upon despotism, military dictatorships, and ruling cliques exploiting carefully inflamed irrational hatred of Israel.

This threat to western-oriented Israel comes from bordering Arab States which are typified by squalor, wooden plows, beggars, donkeys, ragged people, illiteracy, sluggishness.

It is a pressing threat by force of numbers. Israel's six hostile Arab neighbors—Lebanon, Syria, Saudi Arabia, Jordan, and Egypt, plus Iraq, which is nearby but not contiguous—have a combined population of 40 million and a total area of over 1,500,000 square miles.

Israel has a population of 1,700,000 living in an area of 8,000 square miles. These Arab countries have a population 25 times greater than Israel. They control a land area almost 200 times larger.

To the north of Israel is tiny Lebanon, its 1,320,000 population in delicate balance between Christian and Moslem. It is a land of strange contrasts, neither east nor west, a land of Cadillacs and burros. The full impact of 1,000 static years is not realized, however, until one reaches Syria and its capital, Damascus, the oldest inhabited city of the world.

SYRIA POLITICS IS TURBULENT

All of Syria, with a population of 3,500,000, is a land of turbulent politics and low living standards. There are constant student demonstrations and clever Communist agitation. Hatred of Israel is intense and serves to distract attention from otherwise glaring shortcomings close to home.

Syrian people could benefit greatly from the American technical assistance their government has refused to accept. Syria's attitude is influenced by the claim that the United States has been more friendly to Israel than to the Arab countries. Still, Syria with its 70,500 square miles has a greater economic potential than any of the Arab states except Iraq.

The Soviets have slyly increased their influence in Syria by siding with the Arabs against Israel in disputes before the United Nations. This, too, has influenced Syria's reluctance to accept American aid.

Oil rich Saudi Arabia, in contrast to Syria, is politically stable. The stability comes from King Saud, an absolute ruler, an oil magnate with a royalty income of $200 million a year and protector of Mecca and other holy places of Islam.

Recently King Saud joined in the who hates Israel most competition with some very threatening and belligerent statements concerning his tiny neighbor.

King Saud, who tours in a modern Arabian caravan—of Cadillacs—is a friendly, reasonable appearing man. From my meeting with him I would have no hesitancy in discussing any mutual problem—but if I had possessed a visa to enter Israel, he would not have permitted me to even enter his kingdom.

RAISED FROM RAGS TO RICHES

His personal power over 7 million people is typified in his royal decree establishing prohibition. It is rigidly enforced. The decree against alcohol was issued because one of the royal family got into trouble while drinking.

Saudi Arabia became a rags to riches country in 1933 when the late Ibn Saud granted an oil concession to the California-Arabian American Oil Co., now known as Aramco. It is fortunate that this oil is being controlled by American companies. It has aided in establishing our friendly relations with Saudi Arabia which has allowed the United States military use of the important Dhahran airfield.

It goes without saying that a negotiated settlement between Israel and the Arab nations would make maintenance of goodwill in Arabia much easier for Aramco. This controversy is a disturbing element in all Arab-American relations much to the joy of the Kremlin which delights in helping to keep the pot boiling.

Iraq, stormy petrel of the Arab league with a population of 5 million and an area of 171,000 square miles, does not have a common border with Israel, and partly for this reason, it was the first to receive military supplies from the United States under our program calling for arming of the weak and vulnerable Arab states against the Communists in spite of the Arab-Israel war.

OFFERS KEY TO REFUGEES

Historically known as Mesopotamia, Iraq is one key to solution of the Palestine Arab refugee problem. The fertile Tigris-Euphrates Valley once supported a population many times the present Iraq population. All who have studied the problem agree that properly developed, this area could easily empty the camps of refugees.

Also an oil-rich nation, Iraq is pro-western and recently severed diplomatic relations with Moscow. It has entered into a defense agreement with Great Britain and Turkey, a non-league state, much to the consternation of other Arab League states. While this may still prove to be a "soft spot" of the "hate Israel League," a secret letter exchanged at the time of the treaty has been disclosed which appear to leave the Iraq-Israel dispute unaffected.

Iraq's neighbor to the east, Iran (Persia) is a non-Arab nation, and it has recognized the government of Israel. Ambassadors have not been exchanged, however, probably because of the influence of the tenuous but existent religious bonds with the Arab Moslem states. During my stay in Iran the Israeli question was never mentioned.

Inflammation of the Arab-Israel illness has spread itself throughout the Middle East. But nowhere was it more apparent than in Jordan, where the Arab refugee problem is a tremendous and potentially explosive human and political problem.

Israel: Key to Middle East Security—No. 3

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1955

Mr. HOLIFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the third of a series of articles on Israel: Key to Middle East Security, which appeared in the Los Angeles Herald Express, one of the newspapers of which William Randolph Hearst, Jr., is publisher. The articles were written by former Congressman, Sam Yorty, of California:

PALESTINE CRISIS CENTERS IN JORDAN, DISPLACED ARABS

(By Samuel W. Yorty)

Jordan is in the center of the Middle East muddle. Except for the River Jordan valley, it is a barren and mountainous country not much larger than Indiana.

But it is here that the Israel-Arab crisis centers.

West Jordan, on the Israel side of the Jordan River is a part of Palestine that was still held by the Arabs at the time of the Arab-Israeli armistice agreement in 1949.

If the United Nations decision on the division of Palestine had been accepted by the Arabs, this area would have been an Arab state, but not necessarily part of Jordan. The holy city of Jerusalem would have been under international control.

Arabs say they fear that Israel may use military force to straighten out this Jordan bulge which divides Jerusalem on the west side of the river. The concern with which Jordan views this real or fancied threat to this bulge area can be understood when it is realized that 800,000 of Jordan's 1,400,000 population live in West Jordan, or "Arab Palestine," as it is called.

FOUR HUNDRED AND FIFTY THOUSAND ARAB REFUGEES IN JORDAN

There are 450,000 Arab refugees in Jordan. This is one-third of the country's entire population. This large refugee population is a political force to be considered in any attempt to settle the festering Arab-Israeli controversy.

Once in Jordan, you soon discover that the one central, dominating, irritating, inflammatory theme underlying all activity, whether religious, economic or political, is the Israeli war and the refugees.

On the Jordan side of the armed border is the old city of Jerusalem and most of the holy shrines. There I visited the Church of the Nativity, the Holy Sepulchre, the Mount of Olives and the Garden of Gethsemane.

My guide was an Arab Moslem refugee, a young man who had been an accountant until he left his home during the fighting.

He sounded the cry of all refugees: "The Jews took our property. They have paid us nothing, and they use it while we try to exist. The Jews should be forced to let us return to our homes or pay us for them."

SICK OF FIGHTING FOR THE SHRINES

Another man, white-haired and well dressed, told me here in Jordan, "It is incongruous to have all of this fighting for possession of our Christian shrines. We're sick of this Arab-Israeli war."

He bitterly criticized the British for walking out in 1948 at the end of their 25-year mandate and leaving a "vacuum for violence."

A solution to this war in the Middle East might be found if it were merely a matter of paying the displaced Arabs for their properties, as the guide suggested, and getting Israelis together with those Arabs both Moslem and Christian, who are "sick of this war" in the Holy Land.

Prime Minister Moshe Sharett of Israel told me his country was prepared to pay these Arabs for their properties as part of an overall settlement. Estimates of this cost range upward from $500 million.

FANATICISM BAR TO SETTLEMENT

But it is not as simple as that. The fanaticism of some Arab leaders, many of them refugees, does not allow this solution today.

This was made pointedly and painfully clear in a conference I had at a refugee camp near Jericho. I talked to the Mukhtars.

The Mukhtars are former Arab mayors, village leaders. Some are now refugee camp leaders. They consider the United States to be on Israel's side. I was warned that Communist agitators are helping to inflame them against the Americans. They are getting desperate in their frustrations, for some have been in camps for 6 years. Many of their children were born there.

I told the group that I was interested in a solution to their problem. I asked, "Assuming, and I repeat, assuming you cannot go back, then what solution can you suggest?"

There was a conference, a nodding of heads, and the interpreter said, "They all agree. There is only one solution: Return to their lands."

I put the question again, and the answer was the same—"We must go back."

I asked, "But if you cannot go back, will you accept compensation for your property?" There was the same answer, but the cross-chatter amongst them indicated a difference of opinion.

On the other hand, the Mukhtars declared emphatically they would not go back and live under the Israeli Government. An older, bearded Arab among them said heatedly: "The Jews were our slaves. They worked for us. We will not live under them."

Here again they accused the United States of friendliness toward Israel and declared: "We would drive them (the Israelis) into the sea."

I tried to explain that we are friendly toward Israel, that the United States gave the country early recognition but that we were friendly with the Arabs, too. I told them we were not responsible for the fighting, that we wanted to end the war and that we wished to be fair but that "if you are unreasonable, the American people may lose patience and wash their hands of your problem."

"Then what will you do?" I asked.

One rumbled his reply, "The older ones among us will die. But our sons are taking an oath to carry on the fight.

"Let me end the meager rations. We are humiliated standing in line for little food. We are merchants and farmers We had our own lands. We can die. But we will never give up."

Israel: Key to Middle East Security—No. 4

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 25, 1955

Mr. HOLIFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the fourth of a series of articles on Israel: Key to Middle East Security, which appeared in the Los Angeles Herald Express, one of the newspapers published by William Randolph Hearst, Jr. The articles were written by former Congressman Sam Yorty, of California:

BLOCKADE BY ARABS, MIXED REFUGEES PERIL NEW NATION

(By Samuel W. Yorty)

Israel, which came into being 7 years ago, has left its doors open to all persons of Jewish faith.

It has been swamped with immigrants of divergent customs, culture, color, language and beliefs. This flood of immigrants had to be fed, housed, oriented, taught the Hebrew language and provided with an opportunity to earn a living.

During these years the new state was fighting a shooting war for existence. A tight squeeze was put on Israel by a blockade and boycott carried on by adjacent Arab nations. In fact, the Syrian Army chief of staff made an appeal to all Arab states to tighten the blockade even more as the best way to kill Israel peacefully.

ISRAEL SIZE OF NEW JERSEY

Israel is only about the size of New Jersey, but the Negev Desert in the south constitutes nearly 60 percent of the total area. Of the country's 1,700,000 population, about 175,000 are Arabs of both Moslem and Christian faiths.

More than 700,000 Jews have migrated to Israel since 1948 when it was founded and a republican form of government established. Approximately half of the immigrants to Israel came from the Moslem countries of the Middle East and Africa where they had lived in ghetto slum and squalor.

ISRAEL FIGHTING FOR EXISTENCE

Approximately 200,000 Jews came out of World War II concentration camps, survivors of the 6 million brutally murdered in the horrifying Nazi gas chambers and furnaces.

Now the Israelis are in another war in which they are fighting for their existence. Shooting and violence often flare up along the tense border that is lined with truce markers to separate the belligerents.

A high official in the Israeli Army told me it is well known that many Arabs living in Israel have contacts across this guarded border.

"We can't stop them," he said. "The border is too long. We don't care about family contacts, for some families are divided. Some members stayed here and others left. But of the Arabs who stayed here, we are not sure which ones we can trust. After all, we are still technically at war."

I asked him about the Arab charges that those Moslems who remained in Israel now face discrimination.

He explained, "Those who always lived here are still farming their lands. We do require that Arabs get permits to travel in certain areas, but otherwise there is no discrimination.

ARABS GIVEN RIGHT TO VOTE

"Their children, including girls, are in school, we permitted them to vote as inhabitants at the last election. They could have elected their own people to the Knesset (legislature), but they were so divided amongst themselves that they didn't enter their list (of candidates)."

At the basis of the Arab-Israel problem is the refugee, but in this Middle East muddle nothing is clear cut, nothing black and white.

While I was touring Israel I asked my driver what he was before coming to Israel. He told me that in Iraq he was an Arab, an Iraquian, who spoke Arabic, but of Jewish faith.

"When the fighting started," he told me, "some feeling against us developed in Iraq, and we had to leave. We lost everything. The only place to go was Israel."

RACE MIXUP POSES PROBLEM

An expert on Arab lands defined the term "Arab" as an Arabic-speaking Moslem. But in Nazareth we talked about Christian Arabs. My Jewish driver had said that in Iraq he was an Arab. With this tremendous mixup of races, religions, nationalities, and languages it is understandable that the Middle East and its problems are so little understood.

The Arab refugees charge they were all driven out of Palestine when the Arab-Israel war started in 1948. I asked a highly educated, well informed and forthright Israeli if this were true.

URGE RETURN HOME OF ARABS

"That's a tough question to answer with a flat 'Yes' or 'No'," he said. "Some were, I suppose. There were small bands of terrorists whose acts frightened them. But I, myself, manned a sound truck and begged the Arabs to stay. We felt their presence in cities would prevent our being bombed by the Arab countries. There was a lot of confusion."

The Israelis contend that most of the 1 million Arab refugees, many of them in camps outside the borders of Israel, left their properties either at the behest of Arab leaders because of sympathy with the Arab side, or out of fear. Many Arabs will admit this is true. But the Arabs now declare that these refugees should be returned to their former Palestine homes—and the more fanatical leaders of the Arabs insist that this return can be possible only when the Israelis are driven into the sea.

There is a general agreement among the Israelis and among objective observers that the Arabs cannot come back, except, possibly, for a token return. As one highly respected Israeli told me:

"We can't take all the Arabs back. They would be an unreliable mass. They would constitute a huge fifth column. Then, too, we are crowded. There is room for them in Iraq and Syria. Of course, we will have to pay them something for their properties when there is an overall settlement."

The Arab-Israel war may stifle progress in this new country even if another shot is not fired across the troubled border.

BLOCKADE HITS ISRAEL ECONOMY

Nearly all Israelis agree that the country is badly in need of outside help, that there still is so much to be done.

"Right now German repatriation payments are a favorable factor," I was told. "But in time we'll have to get along on our own. To do that we must expand our economy. The Arab blockade and boycott really hurts. Revenues from the oil pipeline would be a big help, but the flow has been cut off by the Arabs.

"We are surrounded by hostile neighbors who greatly outnumber us, and the Communists, we are convinced, are helping to keep the Arabs stirred up against us. Russia would like to get at Arab oil."

Only settlement of the Arab-Israel dispute can ultimately determine the question of a sound defense system for security in the Middle East, I am firmly convinced as a result of my tour of this strategic area. It also will determine the economic future of this small, independent democracy.

More than anything else, Israel needs peace. It needs relief from military costs. It needs time to consolidate and work out domestic problems. It needs again freedom of trade, including trade with its Arab neighbors.

But before this is possible, the Middle East muddle in which Israel is unwillingly embroiled must be slowly, carefully, and patiently untangled.

Israel: Key to Middle East Security—No. 5

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1955

Mr. HOLIFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the last of a series of five articles on Israel: Key to Middle East Security, which appeared in the Los Angeles Herald-Express, one of the newspapers published by William Randolph Hearst, Jr. The articles were written by former Congressman Sam Yorty, of California:

ARAB NATIONS MUST RECOGNIZE NEW STATE, SAYS SAMUEL W. YORTY

(By Samuel W. Yorty)

The Arab States of the Middle East must face reality before peace in that corner of the world will be possible. Lasting settlement of the Arab-Israel dispute is possible only after the Arabs recognize Israel's existence and the permanent place she holds in the community of Middle East nations.

Most reasonable people will subscribe to this statement, and I am convinced of its truth as a result of my recent tour of Israel and the Arab countries of the Middle East.

My talks in Israel also convinced me that the Israelis have seriously attempted to settle the long-standing dispute with their Arab neighbors.

While the Arabs have clung to fanatical hate, Israel has shown a readiness to meet legitimate claims. The government "unfroze" blocked bank accounts and safe-deposit boxes of displaced Arabs, but the property and money of Jewish refugees who left Arab countries are still frozen.

Israel reunited split families through their return to Israel territory and gave full citizenship status to 19,000 Arab refugees in Israel. In addition, Israel has offered to help large-scale plans for permanent settlement of the million Arab refugees now beyond her borders under plans approved by the United Nations. As part of an overall settlement, Israel is also willing to pay these refugees for the property they left behind.

The Arabs, who refused even to recognize Israel's existence, stubbornly insist that Arab refugees be returned to the area of Palestine which is now part of Israel.

OPEN ARAB BANK ACCOUNTS

When I talked to Moshe Sharett, Israel's Prime Minister, he said:

"They can't come back. We have no place for them. There is room in the Arab countries."

Sharett said:

"We have tried to be fair, and we are willing to make reasonable payments to them for their property as a part of an overall settlement. We recently agreed to unblock Arab accounts in our banks and let them draw out their money."

On this point of Arab bank accounts, I was told in Lebanon that the Arabs who negotiated that agreement did not then dare return home. To some fanatical Arabs any discussion with the Israelis is treasonable.

That is why it is virtually impossible to conduct reasonable round-table discussions leading to an agreement for the conservation of Jordan River waters. With proper conservation of this water resource, from 150,000 to 200,000 Arab refugees could be resettled in the Jordan Valley.

The Israelis also desire to utilize the Jordan River water for irrigation. But Jordanians claim this would violate their water rights. The result has been an American special envoy to try to get these two countries to agree on a plan for conservation despite the fact that they are technically at war.

In the area of the Dead Sea there are minerals which Jordan would like to develop, but a stumbling block is the cost of building an expensive new road entirely within Jordan in order to haul the minerals to the Gulf of Aqaba. But for the Arab blockade Jordan could easily haul them on a good road across a narrow strip of Israel to the excellent Mediterranean port of Haifa in Israel.

ARABS HOLD UP FLOW OF OIL

Also, there is a long oil pipeline running from Dhahran on the Perisan Gulf in Saudi Arabia to Haifa. In spite of the loss of needed revenue to Jordan as well as to Israel, the pipeline is kept empty because the Arabs will not let the oil flow through their lands to Haifa.

In view of such an atmosphere of fanaticism on the part of the Arabs, Israel strenuously objects to American plans to supply arms to Arab nations as part of a security program. The Israelis are afraid that arms would be misused, that the guns would be turned on Israel and not any Communist aggreessor.

Sharett said that giving arms to Arab states which refuse to make peace becomes a premium upon their policy of permanent warfare against Israel and that these arms enhance their capacity for mischief.

The Israeli Prime Minister said it is not a step in the direction of peace but a step away from peace.

Sharett has been strong in his opposition to such a policy of arms, but he does not oppose technical aid which would help develop Arab countries and raise their living standards.

No Arab State has ever taken up arms against an aggressor in modern times, Sharett brought out. The Arabs did little to fight Turkey in World War I, although they achieved independence as a result of the war. During World War II they did nothing to help the Allies.

CANNOT RECONCILE ARMS POLICY

It is his feeling that arms given the Arabs are arms directed against Israel. He said Israel cannot reconcile such an arms policy with America's declared policy and concern to see Israel prosperous and secure.

Prime Minister Sharett firmly believes that the root of the problem is the persistent refusal of Arab States to make peace with Israel and thus reestablish stability within the Middle East.

Here is what some say:

First of all, the Arabs must be made to realize that Israel exists. Like it or not, they must face this fact. Next the killing on the borders must be stopped.

Some observers believe that the border incidents will continue to delay peacemaking unless the United Nations is enabled to effectively stand guard. Once border incidents end, things will quiet down, they believe.

Others feel that Israel should consider permitting a token repatriation in northern Palestine of some Arab refugees and also consent to certain minor border rectifications.

Israel would have to pay for Arab properties the Israelis now hold and the Arabs would have to lift their blockade and boycott of Israel. Arabs would have to pay for properties held by the Arabs of dispossessed persons of Jewish faith.

One thing is hopeful—and helpful. The Israelis were willing to sit down and talk, willing to admit responsibilities and even errors. But at the same time they rightly insist on recognition of the fact that Jewish people now at long last have a national home—and must keep it and protect it.

It is all too plain that the birth of Israel was made a needlessly painful process to the United Nations and to Jews and Arabs alike by the Arabs' rash resort to war against this tiny new state.

Four-Power Fantasy

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 4, 1955

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD the following

editorial by David Lawrence which appeared in the May 6, 1955, issue of the U. S. News & World Report.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FOUR-POWER FANTASY

(By David Lawrence)

The spectacle presented by the governments at Paris, London, and Washington in seeking a conference with the Government of Soviet Russia is that of a hungry suppliant begging for almost any crumbs from the table of the absolute monarch.

This is said not so much in criticism of the sincere men who are trying to formulate the policies of Great Britain, France, and the United States as it is of the many leaders of public opinion in all three countries who have fallen victim to some unfortunate illusions.

For there is no denying the fact that the threats of a political opposition—selfishly seeking in each country to ascend to power by almost any means—are influential in compelling the incumbent administrations of the three Allied Nations to negotiate for peace with the enemies of our civilization.

The governments themselves lack the courage to lead and instead meekly follow the will-of-the-wisps of popular fancy. The line goes something like this: "We cannot refuse to sit down and talk. If nothing comes of it, at least the air will be cleared and we shall know where we are."

We have heard this form of self-deception expressed again and again just before each successive failure of the scores of conferences we have held in the past with representatives of the Soviet Union.

When will the statesmen of today begin to heed the lessons of yesterday?

For it is written in the blood-covered pages of history that in the periods preceding the outbreak of World War I and of World War II, respectively, vacillation and cringing fear on our side encouraged the aggressor and brought on the very conflict in arms that nobody wanted.

A third world war would be horrible, and it is the obligation of free peoples to assert constantly their abhorrence of mass killing. But we must do more. We cannot assume the transformation of evil men into saints.

The simple fact is that gangsters are in control of the Governments at Moscow and Peiping, and they have intensified the cold war throughout north Africa and in the Middle East and in southeast Asia. They have torn to pieces the armistice agreement they signed in Korea. They have stirred up rebellion in the south of Indochina. They are actively fomenting trouble on every continent.

Meanwhile speeches by some of the leaders of the Democratic Party in America, by Socialist Labor Party leaders in Great Britain, and by opposition parties in France tell the Communist strategists that the free world is yielding to their propaganda and is being misled into the belief that a four-power conference is a magic device which will bring peace to the world.

What a terrible example of the craven spirit that has so often preceded the decline and downfall of empires in the past. What a frivolous indifference to the proved crimes of present-day aggressors.

If, to be sure, a four-power conference was to be a real negotiation such a diplomacy has many a time tried with useful results, it would not be conducted amid the fanfare of publicity which surrounds such occasions today. Ambassadors would canvass beforehand the possibilities and indeed lay the basis for mutual agreements. But the Soviets want to show their contempt for the West in public conferences to be reported by the press of the world. What better proof do we need of the insincerity of the Communist rulers?

Why do we shut our eyes to the facts of today? Is it because we prefer not to look at the truth and because we believe the aggressor has really changed? Does the recent resumption of the Berlin blockade and the imprisonment of our fliers in defiance of a written pledge for their release indicate that the leopard has changed his spots?

The big question involved in deciding whether or not to hold a four-power conference is this: Shall we enhance in their own lands the prestige of the temporary rulers of the Soviet Union and China by sitting down with them, and, by so doing, shall we encourage these same rulers to believe that, despite our military strength, we are willing to accept almost any concessions to avoid a war?

The people of Soviet Russia and of China want freedom just as we do. We must not tighten the hold of their oppressors on them. We must open the way for their liberation by refusing to deal with gangster governments. For those governments constantly threaten the peace of the world, and there can be no safety for anybody as long as they remain in power.

There is but one way to force the disintegration of the Communist empire. It is by forgetting four-power conferences and imposing a complete quarantine on the Communist regimes. This means extermination of their agents and conspirators from all free countries.

These enemies must be driven from within our gates. It makes no sense to endeavor to negotiate with the master minds of world conspiracy.

Our Living Constitution

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 4, 1955

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Our Living Constitution." It was delivered by Miss Sylvia McKenzie, of Lake City, recently before the Wilbur Jones Post, No. 73, of the American Legion at Lake City, S. C.

With this address, Miss McKenzie won the post and district Legion declamation contests. I believe it is an original, impressive, and thought-provoking essay on our Constitution which many others will be interested in reading.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

OUR LIVING CONSTITUTION

(By Sylvia McKenzie)

"America—land of the free, home of the brave, the land of opportunity, a land whose government is 'of the people, by the people, and for the people,' a land whose basic principles are freedom of speech, freedom of worship, freedom of the press, and freedom from fear, a land whose people believe that 'all men are created equal.'"

Thus read the caption on the marble plaque outside the exhibition room. The milling crowd viewed with awe the strange and curious sight before them.

"Could they actually be so ignorant," one asked, "as to try to carry on commerce, build national security, and increase military power with such a government?"

"It's a mystery to me how they've existed so long," said another. "How thankful I am that I am not an American."

Inside the large-scale plan of America—its people, its government, its laws, beliefs, and ideals—was attracting and holding more spectators than any other booth at the exhibition. How carefully the skilled scientists and technicians had worked over the past months to perfect minutely this model America. There was land spread out before them. The typical industrial area, the large city, complete with suburbs and shopping centers, the small town with all its simplicity, the farm and dairy sections—all were there, complete in minute detail. With such delicate technical instruments as theirs it was no problem to portray America as it actually is. By means of lights and electrical devices they were able to see an actual demonstration of a session of the House and Senate. They heard the President address Congress and watched the citizens as they voted. The schools, colleges, and universities were given a most important role in this all-important portrayal. The manner of worship in the many different churches brought astonished exclamations from many.

"This God, do they actually believe in a power greater than themselves? How foolish they are to trust and have faith in something or someone they can't even see."

"They even spend hours worshiping Him and in talking to Him."

This remark brought roars of laughter from the crowd. They just couldn't believe their ears. They had heard of some strange land by this name, yet a land and a people this strange were completely beyond their comprehension. Some felt pity; others were amused; yet they all possessed that amazed feeling that bordered on disbelief. So this was the country that was always trying to push its so-called freedom down everyone's throat. These were the people who believed their way was the only way and always the right way. It really was amusing to think how they tried to bring everyone else to their way of thinking.

"It's really unbelievable," said a little old lady who had been jostled and pushed until she was almost at the front of the exhibit. Then, with tears in her eyes, "Oh, if I could only do something to help them see the light. Those poor men, women, and children with their distorted principles and ideals. Oh, how unhappy they must really be."

One by one the people made their comments. Some were too speechless to utter a word. They just shook their heads sadly and walked away. Others had just begun to realize how much they had to be thankful for. On all their faces was clearly seen the fact that they considered themselves most fortunate.

Night was beginning to fall—slowly the crowd began to dwindle and soon the room was empty. But if one looked closely in the gathering dusk, there could be seen a small old gentleman over in the corner near the door. There were traces of tears on his withered old cheeks and he clutched his cane tightly in his hand. He was distinguished looking and his black homburg made him seem taller than he actually was. His suit was of the finest material fashioned by the best tailor within the hundred-mile area. As he stood there, he thought back over the years. Over his years. You could, perhaps, call him successful. You might say he had made his mark in the world. Yes, he was well known, by name and by sight.

He stood there a moment and sighed, then straightened his shoulders, clicked his heels, and gave a brisk salute. He opened the door and stepped into the waiting limousine, scarcely perceptible in the blackness, and vanished into the night.

Let's follow this distinguished gentleman who displayed such emotion while watching our America. What right has he to be so concerned?

The speeding limousine soon reached its destination and with a sad expression the passenger stepped out, once more alone in the darkness of the Square. With a leaden heart he began his climb up the steps toward the huge building. Massive lamps embedded in the concrete lighted the path of the lone figure. At the entrance the military guards saluted and continued their watch. His heels made a clicking noise on the cold marble floors and their echo resounded through the building. Guards were stationed evenly along each hall, and the sickle and hammer flaunted its banner over each doorway.

The gentleman made his way slowly to a door at the end of the hall marked "Office of the Prime Minister." Without turning on the light, he sank into the chair behind his desk, buried his face in his hands, and wept silently.

Form your own opinion as to why our friend is so sad. I think he weeps because he realizes that there is something amiss in his life, his ideals, and his country. Without being conscious of it, perhaps, he has admitted that liberty and happiness are worth far more than power, prestige, or military advancement. He realizes that America is truly the land of the free, the home of the brave, the land of opportunity. He sees the heritage that is ours, the men who have died that they might give life to those of us who would follow. He sees our brave leaders, present, past, and future, who devote their entire lives to guiding America. He sees the Constitution, ordained by free men, sustained by free men, worth having and worth defending. He sees us. He knows that there are those of use who perhaps don't fully understand the technical terms used in its writing but who fully appreciate and love the very name, "Constitution." That name stands for America. It represents us. It represents our past and our future. There it stands, written in the blood, sweat, and tears of those past yet ever-present Americans—the beacon of liberty, the hope of the oppressed, the promise of the free, our Constitution, the framework, the foundation of America—proclaiming the rights of every individual and stating that truly, "all men are created equal." But this is not all our friend sees. He sees that we have a greater love for our country than we realize and that we are truly Americans in the full and glorious sense of the word. He believes that the love of our country has not died, and he knows that as long as we, the Americans of today and tomorrow, shall live that we will keep her what she was meant to be—a "land of the free." It seems to take one on the outside to see what really goes on on the inside, and it doesn't take long for any outsider to see the deep love, appreciation, and admiration that we hold for our America. Our younger generation is not lacking in patriotism. No true American will ever be. May we realize as time passes on that there is truly more than that which meets the eye. Americans of yesterday—Washington, Lincoln, Madison, and Revere; Americans of today—Eisenhower, MacArthur, Rayburn, and Dulles; Americans of tomorrow—Jones, Brown, Smith, you, and I, under the Stars and Stripes we stand united, and with one accord. We, the Americans of today, are just as brave and patriotic as those of yesterday. And whether you realize it or not, you are no exception.

I say as did Josiah Gilbert Holland:

"Give us men!
Men who tread where saints have trod,
Men for country, home, and God!
Give us men!
I say again, again, Give us men!

God grant that as long as America shall live she will have those spirited, freedom-loving, God-fearing sons she so deserves.

An Appeal to Reason

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 4, 1955

Mr. SPARKMAN. Mr. President, recently there appeared in the St. Louis Post-Dispatch a very fine editorial treating with a speech made some time back by Adlai E. Stevenson on foreign relations. The title of the editorial is "An Appeal to Reason." I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AN APPEAL TO REASON

Adlai E. Stevenson's address is a thoughtful, clear, elevated discussion of the hard dilemma that the United States faces in the Far East. This is not to say that Mr. Stevenson's address does not have its political side. The former Illinois Governor carried the Democratic Party banner in 1952. That alone lends some political color to almost everything he says.

But after full allowance is made for this fact of political relationship, the Stevenson address remains an earnest—some doubtless will say brilliant—analysis of what to do about the offshore isands of Quemoy and Matsu and how to proceed generally in world affairs.

Outstanding in Mr. Stevenson's presentation of the Far Eastern problem is his recognition of constitutional responsibility of the President to make the final decision. As he reminds the country, Mr. Eisenhower "asked for and got from Congress the sole responsibility for making this decision" in the Far East.

It is not that this recognition is remarkable in Mr. Stevenson; he knows enough about the power and responsibility of the Executive to understand this fully. What is notable about this part of the address is that Mr. Stevenson's position is in such contrast to that of the KNOWLANDS, BRIDGESES, JENNERS, MCCARTHYS, and WELKERS who, though voting for the Formosa resolution, oppose the President's cautious course.

Mr. Stevenson also properly gives the Eisenhower administration more credit for gains on the international scene than the anti-Eisenhower wing of the Republican Party has been willing to bestow on its own President.

Having done this, Mr. Stevenson goes on to present a potentially hopeful program for extricating the United States from the predicament in which we now find ourselves in the Strait of Formosa. He comes very close to saying that the islands that are as close to the Chinese mainland as Staten Island is to New York should be evacuated to improve not only the position of the United States but also that of Chiang Kai-shek's refugee Nationalist forces.

Mr. Stevenson does this by differentiating sharply between Formosa, where we have a right to be, and the offshore islands, which we have neither the historical nor legal right to occupy. The basic question is the one he puts: Whether it is defensible to risk world war III for these Chinese islands, particularly when we would find ourselves without allies if war came over such a pretext.

On the matter of allies, Mr. Stevenson drives home basic facts. Allies may be, as he says, "irritating," but we need them. We need them because, among other reasons, we have only 6 percent of the world's population; because allies are the source of indispensable materials; because their territories provide us with airbases.

But we need them above all, as he says, because of "the weight of moral opinion" which "can be more penetrating than bullets, more durable than steel." And to support this reliance on something greater than arms, he quotes no less a soldier than Napoleon: "In war, moral considerations are three-quarters of the battle."

Mr. Stevenson performs a particular service in calling for a renunciation of "go-it-aloneism" and in delineating the failures of the sloganeering method of bluff and bluster that has characterized too much of Secretary of State Dulles's conduct of foreign policy. He is also sound when he emphasizes the potential for the United States and the free world in the point 4 program of economic and technical assistance for the peoples of southeast Asia and elsewhere whom we still hope to save from falling to communism.

But most hopeful of all are his specific proposals, first, that the United States and its allies in Europe and Asia sumbit a resolution to the U. N. General Assembly calling for a condemnation of the use of force in altering the status of Formosa, and, second, that the U. N. seek a formula for the future of Formosa, "consistent with the wishes of its people, with international law and with world security." And we see no objection in attempting, as Mr. Stevenson suggests, to recruit Russian participation in this effort to restrain the Chinese Communists in their dangerous course.

One immediate result, we hope, will be to recognize the need for correcting the distorted impression that is growing overseas as to the true character of the American people. For as Adlai Stevenson says, we seek only "a chance for all to live and let live," we are "champions of peace, not harbingers of war."

Mr. Stevenson's address came from the political opposition, but his is the kind of loyal opposition that a democracy requires.

America's Summons to Responsibility

EXTENSION OF REMARKS
OF
HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 4, 1955

Mr. KUCHEL. Mr. President, last Thursday, in the city of Los Angeles I was highly honored to speak to a distinguished group of citizens and award-winning students attending the Southern California Christian College. I ask unanimous consent that my remarks on that occasion be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AMERICA'S SUMMONS TO RESPONSIBILITY

I am highly honored to speak to each of you tonight. I congratulate the Forest Lawn Foundation on the civic service which it performs in this educational undertaking, and I congratulate, too, the award winners in this 1955 journalism awards contest.

The foundation brochure suggests that "good writing is the key to leadership." I agree. Good writing depends upon clear thinking. Each is increasingly indispensable to families and to nations alike in their pursuit of a free and contented life on earth, and both represent laudable goals for all of us.

Your brochure also suggests that if 5,000 words are required to cover a given subject, then 10,000 words devoted to it represent wasted time and effort. I agree again. There are some, however, who disagree. I know, because I've seen them.

Two years ago, as a new Member of the United States Senate, I sat in my seat and listened while a new footnote to current political history was being made. One of my colleagues was establishing a new record in the length of a single Senate speech.

He spoke continuously for upwards of 22 hours, commencing early 1 afternoon, proceeding throughout the night, and concluding the following day. I confess I did not hear all of it. I went home to bed around midnight, but when I returned to the Capitol the next morning, he was still going strong. He broke the existing record. Until a Texan talked for 28 hours several weeks ago in his State legislative assembly, my colleague remained the undisputed world champion, in length at least.

In my judgment, my colleague consumed at least 20 hours more than he should have on that occasion. Time is precous; none of us has too much of it. So the purpose of your contest—to write trenchantly and tersely and clearly—is praiseworthy. And what applies to the written word has equal application to the spoken word.

By the way, I recall the story of the great Winston Churchill during the war. He received a memorandum from a young naval officer that a certain war material was "in short supply." Sir Winston scribbled across the bottom of the memo "What is wrong with the good old anglo-saxon word 'scarce?'" I rather imagine that that awkward phrase was not utilized thereafter in official memoranda emanating from at least one member of His Majesty's Royal Navy.

Tonight, I wish to speak to you about the responsibilities of our country and of our people which the passage of time has placed upon us. Our frontiers of pioneer days have long been gone, and western America is on its way toward overtaking the rest of the Nation both in people and in production. Our population continues to grow, and our people live longer than before, and we produce more abundantly than ever. Fulfilling the needs for air to breathe, water to drink, and food to eat constitutes a different problem than our forebears faced. For example, air contamination—at least, to the extent that it poses a hazard to the health of society—is a modern byproduct of industrial progress and it is not indigenous to this community alone. The artesian wells of my grandfather's days in California are vanished; today, our millions of Southern Californians live only because of a vast importation of water into this area. We face the need of a realistic national policy on these problems. Food is a little different. We produce more than we can eat, a tragic paradox in a world which still knows starvation. Our National Government has begun to accept such modern problems in this 20th century. Air pollution has become a matter of Federal, as well as local, concern. Our national Government is undertaking the study of water supply and water conservation on a national basis, and the Congress is grappling with that subject. On the problem of food, we've made progress. Part of our food surplus goes into the schools of this country to assist the underprivileged and the undernourished. Part of it will be channeled into foreign trade, and some of it has been used to prevent starvation abroad. Our Nation's gift of surplus wheat to Pakistan averted a tragic human disaster and helped to cement an international friendship. And our new agricultural legislation is designed to protect the farmer, without bankrupting the taxpayer or putting the Government in the food business.

I need only cite the great change in our Nation's fiscal situation to demonstrate how, in this field, our responsibility is far greater than ever before. Deficit spending has been a modern curse. It never plagued past generations. In 1915 we owed a little over $1 billion, and today we owe more than $271 billion. In 1915, we spent less than three-quarters of a billion dollars, and last year over $67 billion. Forty years ago, just before our involvement in World War I, the public debt amounted to $10 for every man, woman, and child in the Nation. Today, the comparable figure is just under $1,650. Thus Government spending has an increasingly greater effect on our people. Our fiscal policies have a direct impact on the value of our money. They affect private credit and private business. Our Government has attempted—I think with creditable success—properly to discharge this highly sensitive responsibility. We've taken steps towards a balanced budget without attempting to turn back the clock. Federal spending is subject to additional control, and where practicable, has been reduced. Some tax reduction has been adopted to provide an additional stimulus for an expanding economy. If you will let me say so, there is a general aversion, or at any rate a considerable aversion, in Washington, against fiscal irresponsibility, and that, in itself, is real achievement.

Without question, it is in the field of foreign relations that America's summons to responsibility is of greatest concern. The summons has not been thrust suddenly upon us. As in matters of domestic concern, so too in international affairs, the passage of time has altered our country's responsibilities in the world.

We have been placed into a position of leadership among nations whether we like it or not. Prior to the World Wars in which this country has engaged, our people, through their Government, abstained from the role of a great world power. Our Federal Government was responsible for laws and administration of national problems and internal rights of our people, and very little else. We insulated ourselves in our early days with the Monroe Doctrine, and we saw our interests as a free people confined pretty much to the Western Hemisphere and the North Pacific Ocean. That was what Americans desired. That is what they received from their Government. We held ourselves understandably aloof from international quarrels abroad. Our two oceans afforded us the luxury of separation from European and Asiatic strife. And then we were drawn into a world conflict. Our Government broke off diplomatic relations with Germany by reason of her unrestricted submarine war which caused American ships to be torpedoed and American lives to be lost. American sovereignty had been assaulted and the Congress of our country, at the request of the President, took the Nation into a war and thus we were embarked on a whole new era for our people.

When victory came, the American people, quite understandably, wanted to return to their old way of living. We still enjoyed the barriers of two great oceans. Why muddle and meddle in European affairs? was the question asked in those days. No one offered a satisfactory answer. The United States refused to join the League of Nations. In the decade which followed, "isolation" and "economy" were our national watchwords.

After World War I, our Government made repeated attempts at cooperative international disarmament. But with no great success. While we began to evince some interest in European affairs, our people did not believe that our own security and prosperity depended very much on them. We followed a policy of neutrality with respect to all the world.

World War II brought with it a growing recognition that the security of the United States is affected whenever and wherever the destruction of free government or free people occurs. When that conflict was concluded, and our enemies surrendered unconditionally, we watched with growing apprehension and unbelief as the Soviet Union took advantage of a distraught European Continent, and undertook destruction of the freedom of European countries and the extension of communism all around the globe.

Meanwhile, technological developments were destroying our traditional concepts of space. The protection afforded us by our dividing oceans was disappearing. The American people were brought face to face with the fact that their favored geographical position was no longer any guaranty to their peace and security.

Thus, in the 1940's, the United Nations was created, and our country, through overwhelming Senate ratification, joined it. We took the lead in its formation. We began to discuss with free peoples our common concern on our common problem of maintaining our respective freedoms in a world at peace. If the future were to bring more acts of brutal aggression, we were determined to agree, in advance, that together we would repel them. Mutual security treaties came into existence. NATO was born. Our country applied the old principle of "in union there is strength." Collective defense arrangements in many areas of the world were made by our Government. And, thus, what was almost undreamed of in the years gone by became a new United States policy with a great new responsibility.

I wish now to speak with you on one facet of American foreign policy of great importance to the American people today. It concerns the Far East and Asia. I am neither a military expert nor an expert on foreign relations. I speak as an American and as a Member of the United States Senate who has been required to sit in judgment there on matters of American policy in that area. I do not speak in either a political or a partisan manner.

We are agreed, I am sure, that the most important objective of our country's foreign policy is to safeguard the security of the United States by establishing and preserving a just and honorable world peace.

In the far Pacific and Asia, our summons to responsibility in accomplishing this objective represents a continuing challenge of this Nation's ability to lead. The summons and the challenge have been answered with measurable success, with enlightenment, and with a spirit of helpfulness which characterizes our people; we became a pace setter in creating independent, self-governing nations. We led the march away from colonialism. I wish to recall that on March 22, 1934, Congress granted independence to the Philippines, and on July 4, a fitting date, 12 years later, the Republic of the Philippines was proclaimed a new member of the family of nations. We have no firmer allies in our goal of freedom and of peace than the Filipino people.

Our acceptance of that responsibility in Japan is a demonstrated fact. We set an unprecedented and an inspiring example to the Japanese people almost from the moment occupation forces arrived in those islands. Instead of vengefully punishing an entire race, the United States undertook—and with heartening success, I am proud to observe—to guide, to encourage, and to advise a former foe on building a new government along democratic lines, on rehabilitating a ravaged economy, on lifting the standard of living and on recognizing the dignity of human beings.

We played an important role in establishing SEATO in the Southwest Pacific, as we

did in the establishment of NATO. We have led free powers into combining together to deter Communist aggression or Communist colonialism.

Last January, by reason of the critical situation developing in the Straits of Formosa which posed a serious peril to the security of America, our Government stood united in the declaration of our policy in that area. In a message to Congress asking for such a declaration, President Eisenhower recalled that ever since June 1950, when communism committed armed aggression against Korea, this Nation determined to defend the island of Formosa against possible Communist invasion from the mainland of China. He said: "We believe that the situation is one for appropriate action of the United Nations under its Charter for the purpose of ending the present hostilities in that area. We would welcome assumption of such jurisdiction by that body. * * * The danger of armed attack directed against that area compels us to take into account closely related localities and actions which, under current conditions, might determine the failure or the success of such an attack. The authority that may be accorded by the Congress would be used only in situations which are recognizable as parts of, or definite preliminaries to, an attack against the main positions of Formosa and the Pescadores." He concluded by saying that this country "shall remain faithful to our obligation as a member of the United Nations to be ready to settle our international disputes by peaceful means in such a manner that international peace and security and justice are not in danger."

I quote from the resolution introduced immediately in the Congress:

"*Resolved*, That the President of the United States be, and he hereby is, authorized to employ the Armed Forces of the United States as he deems necessary for the specific purpose of securing and protecting Formosa and the Pescadores against armed attack, this authority to include the securing and protection of such related positions and territories of that area now in friendly hands and the taking of such other measures as he judges to be required or appropriate in assuring the defense of Formosa and the Pescadores.

"This resolution shall expire when the President shall determine that the peace and security of the area is reasonably assured by international conditions, created by action of the United Nations or otherwise, and shall so report to the Congress."

The resolution was adopted by the House of Representatives almost unanimously, and on January 27 debate commenced in the Senate. Senator GEORGE, of Georgia, argued that it was not a question of how much power the President had under the Constitution. In his judgment, the President was right in asking the Congress to pass such a resolution "even if the only reason for so doing was to secure the moral support of the American people."

I want to recall what I said earlier this year in discussing this situation. Every thinking professional military man has unequivocally concluded that Formosa and the Pescadores must not fall into Communist hands. Those islands constitute what they call a part of the defense perimeter of the United States.

That conclusion is not a political conclusion. It was not made by party-minded people. It represented the best thinking of those best qualified from a military standpoint to render it. I assume that our people do not require assurances that the President adopted those conclusions as an American statesman dedicated to our own welfare, and not as a politician. And I am sure that our country approves the bipartisan manner in which the Congress, after debate, adopted the resolution on a basis of your and my right to freedom.

As I listened to the debate, I recalled the phrase which General MacArthur used during Korea when he referred to the area north of the Yalu River as a "privileged sanctuary." And I want to recall again his own words on the stake of our country in Formosa. "Under no circumstances," he told our country, "must Formosa fall under Communist control. Such an eventuality would at once threaten the freedom of the Philippines and the loss of Japan and might well force our western frontier back to the coasts of California, Oregon, and Washington."

During the debate, a number of amendments were proposed. One of them was offered by a Republican Senator who was joined by two Democratic Senators. Let me read the text of the amendment: "Nothing in this resolution shall be construed to authorize the President to us our Armed Forces on the mainland of China, or to intervene in defense of any islands controlled by the Chinese Nationalist Government within 12 miles of the coast of China except for the specific purpose of helping to withdraw nationalist troops and civilians from such islands."

The amendment apparently accepted the importance to our own freedom of deterring Communist aggression in that area of the world so long as we voluntarily prevented ourselves from such deterrence at an imaginary 12-mile offshore limit. If the Communist Chinese were to set off a conflagration aimed at Formosa and the Pescadores, such an amendment would shackle our President with a ridiculous restriction in attempting to deter it. Furthermore, it would present to the Communists a legislative guaranty, in advance, of what we would not do to protect our perimeter of American defense.

Suffice to say, the amendment was defeated overwhelmingly. Other amendments were offered and they, too, went down before bipartisan majorities. A grave conclusion on America's responsibility was reached not by political entitles but by an American President and an American Congress who agreed upon an American policy to protect the freedom of the American people.

Our Government, through both the executive and legislative branches, agrees it is in the interest of American security that Nationalist China shall not be abandoned to communism and that, in the defense of Formosa and the Pescadores, the President is authorized to use our Armed Forces as he deems necessary in their behalf and that authority includes the related islands of Quemoy and Matsu.

By whom do the American people desire to have this authority discharged? Do they wish to have it discharged by our elected Chief Executive as he may determine in accordance with the terms of the bipartisan congressional resolution? That is the way our Constitution provides.

I am convinced that they want this authority exercised, in accordance with the law of the land, and by the head of our executive branch who, after all, is the only person I know possessed of all the facts from day to day, who is the elected head of our people, and who during his lifetime has known the horrors of war and has demonstrated a devotion to peace.

I will not challenge the good faith of those who disagree with me, but I venture to suggest that our bipartisan policy, upon which peace or war could well depend, be not subjected to partisan criticism from either of the two great American parties of our land. The President will make the decision if the exigencies of the days ahead require them. That is the responsibility which the Senate and the House placed upon him. We can be thankful that he has declined to spell out in advance what his decision and his strategy would be under different sets of circumstances if he deemed it necessary to take action.

Some of our citizens have suggested that the United Nations assume jurisdiction of this free-world problem. I believe that it should, and I have included in my remarks tonight the Presidential position that it would be welcomed.

In this connection, I have received an informative letter from Henry Cabot Lodge, Jr., our Ambassador to the United Nations, in answer to my question of America's position.

Ambassador Lodge wrote that the United States has followed a consistent policy of trying to get the U. N. to take up the question of a cease-fire in the Formosa Straits. The United States worked for a meeting of the Security Council, which finally was held. When the meeting occurred, this country showed its good faith and earnestness and took an unusual step to dramatize our desire to bring about a peaceful solution. We voted formally to invite the Chinese Communists to sit in at the talks we hoped would be held about arranging a cease-fire. Ambassador Lodge recalled, and I am quoting his exact words, that "this invitation was contemptuously rejected, to the accompaniment of flagrant untruths and cynical impugning of our motives."

Results of the recent Bandung Conference are heartening. While Communist China has announced somewhat of an about face, only time can tell us whether her spokesmen are in good faith. Yet at the conference, ministers of sovereign nations spoke out against aggression. We had friends there, people of different colors, creeds, and religions, who share our goals of freedom.

Fear of retaliation is not the only deterrent to war. The opinions of peoples are important. The forthright stand at Bandung by the Philippine, the Pakistan, the Ceylon and the Iraq delegates unquestionably had a telling effect on the Communists. They—like others—gathered strength and courage for their stand, I believe, from the leadership which our country and the fraternity of free nations have provided. We are measuring up to the responsibility that destiny has given to us. We are responding to the most important summons of our national life.

Harry S. Truman Gains in Fame

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 4, 1955

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial from the Anniston Star, of Anniston, Ala., May 1, 1955, entitled "Harry S. Truman Gains in Fame."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HARRY S. TRUMAN GAINS IN FAME

It may be because he has come to be viewed in contrast to the indecision and lack of political courage demonstrated by the present occupant of the White House, but whatever may be the cause, it is now evident that Harry S. Truman is beginning to be recognized as one of the greatest of American Presidents.

And it is of considerable moment that one person who recently has voiced the opinion that Truman is far above the average is none other than Alfred M. Landon, the man the GOP chose to oppose Franklin D. Roosevelt in 1936. He says Mr. Truman's true worth will be revealed when all official records are made public.

Admittedly, Mr. Truman espoused several measures that made him unpopular here in the South, among them being his attitude on civil rights and racial segregation. But it remained for a Republican appointee as Chief Justice of the Supreme Court to attempt a disruption of the separate but equal status in our public schools by a decision that was in direct contravention of the rights of the States.

It may be said of a certainty, that Mr. Truman would not have countenanced a Senate leader who opposed him on important administration measures. Nor was it difficult to know where he himself stood on given issues. He had positive views on international affairs and he was represented by a Secretary of State who maintained the leadership of this country in foreign relations—a position we since have lost to Great Britain.

Mr. Truman did not regard a balanced budget as an absolute essential of good government. Yet he did balance the budget without resorting to the subterfuges that characterize the Eisenhower administration. And while he did cut down on defense expenditures, as demanded by Congress, our national peril was not as great then as it is today, due to the losses abroad we have sustained under Eisenhower.

Congressional Medal of Honor Awarded Posthumously to Pfc. Charles H. Barker, of Pickens, S. C.

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 4, 1955

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a press release from the Defense Department announcing the award of the Congressional Medal of Honor posthumously to Pfc. Charles H. Barker, of Pickens, S. C.

Private, First Class Barker's actions on June 4, 1953, in Korea exemplify the fighting spirit and courage of other South Carolina and American heroes who have rendered wartime services above and beyond the call of duty. In World War I South Carolina sons won more medals of honor, proportionately, than any other State in the Nation. They have also served their Nation heroically in World War II and the Korean conflict, as the record of Private, First Class Barker demonstrates here today.

There being no objection, the press release was ordered to be printed in the RECORD, as follows:

DEPARTMENT OF DEFENSE,
OFFICE OF PUBLIC INFORMATION,
Washington, D. C., April 24, 1955.

SOUTH CAROLINA INFANTRYMAN AWARDED MEDAL OF HONOR POSTHUMOUSLY

An 18-year-old infantryman from South Carolina, who sacrificed his life so that a patrol of his unit could withdraw from intense enemy fire in Korea after its ammunition was almost completely expended, has been awarded the Medal of Monor, the Department of the Army announced today.

Pfc. (then Private) Charles H. Barker, of Pickens, S. C., earned the highest award the Nation can give when he "distinguished himself by conspicuous gallantry and indomnitable courage above and beyond the call of duty in action against the enemy" at Sokkogae, Korea, during the early morning hours of June 4, 1953. He was assigned to Company K, 17th Infantry Regiment, 7th Infantry Division.

Private Barker was a member of a screening patrol of 11 men led by 2d Lt. James B. Tomes, Jr., of 1330 Indianaola Avenue, Bowling Green, Ky., now assigned to Fort Knox, Ky., which moved out from an outpost called "Pork Chop" at 4:30 a. m. on July 4 to screen the north finger of hilly terrain where enemy activity had been reported.

The patrol started out in a diamond formation. Lieutenant Tomes was the point man, with Private Barker on the left flank. Soon Private Barker alerted the officer to sounds coming from the left flank. Maneuvering to the north, the patrol surprised a number of the enemy digging in on the finger and immediately opened fire. The enemy ran for cover and weapons.

"During the fierce fire fight which resulted, Private Barker, with utter disregard for his own personal safety, crawled to a position within 15 to 20 feet of the enemy's dug-in position," according to Sgt. Eugent D. Mull, of Buchanan, Va., then acting as assistant patrol leader. "From this position, Private Barker fired his automatic rifle and threw grenades with deadly accuracy. Under the cover of this base of fire, the patrol maneuvered to a more advantageous position from which to fire."

While the higher ground which had been gained as a result of Private Barker's heroism enabled the men to concentrate more deadly fire on the enemy, the patrol's ammunition was beginning to run low. As a result, Lieutenant Tomes ordered the unit to reorganize in order to withdraw.

"As we began our withdrawal," Sergeant Mull reported later, "the enemy noticed the lessening of our fire power and began to come out of their covered positions. Private Barker remained in his position and with a stream of automatic rifle fire kept the enemy pinned down. The actions of Private Barker enabled us to set up a perimeter defense and withdraw from the finger.

"The last time I saw Private Barker was as he stood up and charged at the onrushing enemy, firing his automatic rifle and throwing his few remaining had grenades. When the patrol got back to the outpost, I discovered there were only 12 rounds of ammunition left among the patrol members. The unselfish actions of Private Barker in my estimation saved the lives of every man on that patrol."

The South Carolina Infantryman's heroism made him the 76th recipient of the Medal of Honor for fighting in Korea. Details of the presentation ceremony will be announced at a later date.

Private Barker, on of Mr. and Mrs. Norvin N. Barker, Pickens, S. C., was born on April 12, 1935. He enlisted in the Army on October 29, 1952. Prior to entering the service he was employed in the textile industry.

The text of the citation accompanying the award to Private Barker follows:

"Pfc. (then Private) Charles H. Barker, Infantry, United States Army, a member of Company K, 17th Infantry Regiment, 7th Infantry Division, distinguished himself by conspicuous gallantry and indomitable courage above and beyond the call of duty in action against the enemy near Sokkogae, Korea, on June 4, 1953. While participating in a combat patrol engaged in screening an approach to "Pork Chop Outpost," Private Barker and his companions surprised and engaged an enemy group digging emplacements on the slope. Totally unprepared, the hostile troops sought cover. After ordering Private Barker and a comrade to lay down a base of fire, the patrol leader maneuvered the remainder of the platoon to a vantage point on higher ground. Private Barker moved to an open area firing his rifle and hurling grenades on the hostile positions. As enemy action increased in volume and intensity, mortar bursts fell on friendly positions, ammunition was in critical supply, and the platoon was ordered to withdraw into a perimeter defense preparatory to moving back to the outpost. Voluntarily electing to cover the retrograde movement, he gallantly maintained a defense and was last seen in close hand-to-hand combat with the enemy. Private Barker's unflinching courage, consummate devotion to duty, and supreme sacrifice, enabled the patrol to complete the mission and effect an orderly withdrawal to friendly lines, reflecting lasting glory upon himself and upholding the highest traditions of the military service.

One-Sided Digest of Dixon-Yates

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 4, 1955

Mr. SPARKMAN. Mr. President, in the St. Louis Post-Dispatch of April 29, 1955, there is a letter written by Mr. Frank Ahlden, executive editor of the Commercial Appeal of Memphis, Tenn. It is entitled "One-Sided Digest of Dixon-Yates." It deals with an article recently appearing in the Reader's Digest which presented a very one-sided view of that contract.

I ask unanimous consent that the letter may be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

ONE-SIDED DIGEST OF DIXON-YATES

DEWITT WALLACE,
Publisher, Reader's Digest,
Pleasantville, N. Y.

DEAR MR. WALLACE: The mail brings us a a proof from your April issue of William Hard's account of the Dixon-Yates deal. Your memorandum calls it an "informative overall story" and a "complete picture."

It is nothing of the kind.

It is complete only in its presentation of the power trust lobby version of this situation. It ignores questions of sound public policy as asked by the numerous objectors during months of controversy.

Leaving to one side the unquestionable fact that fears for the future of the Tennessee Valley Authority have a bearing on the views of the objectors, and the fact that the Democratic Party is using the question for political advantage, this is a purchase contract for payment of more than $500 million in tax money for electricity ($20 million a year for 25 years—and then the plant goes to the company).

The very size of the purchase demands close examination on its own merits and demerits. For your account to lump this examination as "hot air" is a disservice to the public interest.

Your account tells of an earlier Dixon offer to sell power to TVA, without saying what his price was, or how very much higher it

was than cost of other power to TVA, or how high this price was in comparison with prices offered by Mr. Dixon a few months later, or the price now mentioned after the spotlight was turned on.

TWO ADMIT "GUARANTEED PROFITS"

Your account says the Dixon-Yates deal obtained approval of all present members of the AEC. The record shows only 2 members of a 5-member board approved and that 1 of them has since attacked it, saying he only approved in the hope of getting AEC back to the atom business and away from the power-brokerage business. (There was 1 neutral member, 1 unconfirmed appointment, and 1 vacancy at the time of the vote.)

You say the Federal Power Commission approved without mentioning that this action was taken over the strong opposition of the head of FPC's Bureau of Accounts, Finance, and Rates—the very man most likely to understand what the contract says.

You say the General Accounting Office approved. You do not record that the GAO appeared before the Joint Committee on Atomic Energy in violent protest which resulted in partial modifications.

You put negotiation for power at Paducah and Portsmouth, when the war situation demanded more atomic plant production at any cost, on the same basis as negotiation for West Memphis power, after the war situation had calmed.

You explore timidly the "guaranteed profit" angle of Dixon-Yates, without mentioning the fact that two former high officials of Mr. Dixon's companies have said for publication that the company is guaranteed against loss.

There is nothing in your "complete picture" to indicate that one interpretation of a clause in this contract requires the AEC to pay the full price of power even though the plant produces none.

Neither is there any hint of the contract clauses which give the Dixon company the chance to take power it is selling to the Government at 3.99 mills for its own use at 1.863 mills, under terms which could mean as much as $12 million a year profit to the Dixon companies. These figures have been published, without challenge, by Walter von Tresckow, who is biased to be sure (because he wanted to bid but was brushed off), but an experienced man in electricity and finance nonetheless.

ABOUT AN "INFORMATIVE STORY"

Your "informative story" mentions the tax clause, without saying that the Dixon-Yates proposal was so far out of line with precedent in years of Government purchase contracts that the United States Senate adopted special legislation to bring it back into line.

You do not mention the many "adjustments" made in favor of the Government after objectors such as the New York Times, St. Louis Post-Dispatch, Milwaukee Journal, and the Commercial Appeal brought the deal before the public.

We further object to this "complete account" leaving out the announcement of Memphis city officials that Memphis will answer its own power needs by financing its own generating station, if necessary. This one fact removes the whole objective of the Dixon-Yates deal. It has a place in any fair summary of this situation.

AGAINST THE PUBLIC INTEREST

And if you use some of your space to tell of the protective attitude of this region toward TVA, you surely should let your readers know that Middle South is the present-day heir of the very company which Memphis voted out when TVA was voted in.

We are close to this situation. We have worked through its details at great length and we are thoroughly convinced that it is against the public interest.

You have only to ask: Why was there no opportunity to bid on this job? to realize it was rigged from the start.

We are surprised that Mr. Hard, ostensibly a reporter, would approach the story with so little regard for objectivity—that he, and you, would violate the primary rule of journalism that requires examination of both sides of a controversy.

Yours truly,

FRANK AHLGREN,
Executive Editor,
The Commercial Appeal.

The Job Harold Stassen Leaves Unfinished

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 4, 1955

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an article written by our distinguished colleague from New Jersey, Representative HARRISON A. WILLIAMS, which appeared in the April 7, 1955, issue of the Reporter magazine.

Representative WILLIAMS again demonstrates in this article the keen insight that he possesses and his expertness in the field of foreign affairs. We are privileged that he is serving as a member of the House Foreign Affairs Committee.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE JOB HAROLD STASSEN LEAVES UNFINISHED
(By Representative HARRISON A. WILLIAMS)

Now that Harold Stassen has been shifted to the post of Special Presidential Assistant for disarmament problems, I am more concerned than ever about what is to become of the important work now handled by the Foreign Operations Administration. Mr. Stassen has been the most consistent spokesman within the administration for aid to Asia. The FOA, of which Mr. Stassen has been the chief since its creation on August 1, 1953, is scheduled to expire on June 30.

Does Mr. Stassen's departure foretell the liquidation, or at least the fragmentation, of FOA? Do we have anything to offer the Asians except threats about tactical atomic weapons?

Along with a number of my colleagues in Congress, I have been trying for some months without success to get a clear picture of what the administration plans to do about technical assistance and economic development in Asia. One day Mr. Stassen would seem to favor a Marshall plan or possibly a Stassen plan for Asia. The next day Secretary of the Treasury George Humphrey, guardian of "responsibility," would deny that any such plan existed. Then Secretary Dulles would clear up the whole issue, as he did during a stopover in Laos, by hinting that all Asia needs on the economic side is a little more trade.

Recently the dust has settled somewhat. In a press conference on March 17, Mr. Stassen announced an administration decision to send up to Congress a foreign-aid program that is to include more public-investment funds for Asia than ever before. Its most striking and praiseworthy feature is to be a "regional fund" amounting to perhaps $200 million.

Although this is still a compromise bold new program—a little long on statements of the compelling need (Stassen) and a little short on substance (Humphrey)—it will probably resolve the administration's internal fight. But, as Mr. Stassen himself said, it is only a first step in meeting the requirements of our foreign policy in Asia.

CHINA VERSUS INDIA

Economic assistance to Asia is both a necessity and an opportunity for the United States. The final answer to communism is neither conventional nor unconventional weapons but the fulfillment of Asia's economic needs by democratic means. The contrast is already there—in the respective means by which China and India are trying to catch up with the industrialized nations of the world.

The nations in the non-Communist crescent of Asia must find ways to improve the economic well-being of their people. All of them are watching this competition between India and China.

In China, the Communist leaders are trying to industrialize their nation by imposing greater sacrifices on those who have least to give—the peasants. That, of course, is exactly what Stalin did in Russia. His Chinese followers are now facing the same stubborn fact he faced. No police state has ever figured out a way to force farmers to grow more food. It shouldn't take long for Mao Tse-tung, applying Stalin's theories in a country that has long suffered from large food deficits, to produce a severe food crisis in China. Already there is bitterness and despair.

It is now becoming clear, even to the overseas Chinese scattered throughout southeast Asia, that Communist land reform is strictly a phony; that the tenants who thought they were getting land of their own have wound up as sharecroppers for the Government. No wonder the Communists are beginning to complain in their own newspapers about "dangerous spontaneous tendencies toward capitalism" among the peasants.

The Indians, on the contrary, build up the agricultural sector of their economy rather than exploit it. Nehru's 5-year plan still has a year to run, but it is already possible to talk of its success. Aided by good weather, better fertilizers, more irrigation, some technical advice, and a widening participation in village community projects, India's farmers have already increased grain production by 21 percent, substantially reducing a deficit that ran close to 5 million tons before the plan got under way. According to a New Delhi dispatch in the New York Times, "It can be said now that India is self-sufficient in food." Nehru's government still has many problems to face, but it has clearly demonstrated for the rest of Asia to see that a democratic state can make a success of economic development.

INEVITABLE CONCLUSION

When we turn to Japan we find that a solution to that nation's economic distress lies in the rapid development of south and southeast Asia. Japan's problem is simple: An island crammed with industrial machinery and skilled workers, it needs markets for what it produces and has to import a wide variety of food and raw materials. The Japanese would like to increase their trade with us. But even if we had no tariffs at all, the United States would be a good market for only a small part of what Japan has to export.

The Japanese would like to increase their trade with Red China, too. But here again the potential amount of such trade has been vastly overrated. The Chinese would certainly be eager to buy what Japan has to sell, but China cannot offer much in return except coal and a few odd commodities like tung oil and hog bristles. What would provide a real answer to Japan's trade problem

is the rapid economic development of the rest of Asia.

Considerations of both politics and economics thus lead us inevitably to the same conclusion: A vigorous program of economic assistance to Asia should be at the core of United States foreign policy.

THE COLOMBO PLAN

How can the program be carried out? A new and hopeful means is now available to us. The Colombo plan, which was originally a family affair within the British Commonwealth, has now been expanded to take in practically all of non-Communist Asia.

The Colombo plan has now become the center where a dozen national-development plans are synchronized. What's more, it allows Western nations to help Asians without arousing their suspicions. The Asians themselves are spending about $2 billion this year on the Colombo plan, and loans and grants from the United States, Britain, Canada, Australia, and New Zealand have amounted to $1 billion since 1950. Alongside this investment program there is a thriving program of technical assistance: Five thousand Asians are being trained, and 2,500 British and Commonwealth experts are building dams, making geological surveys, and applying the West's skills to the East's problems in a hundred fields.

This existing association of Asian nations could be expanded into a source of investment capital for the entire region with the backing of United States funds. A unilateral United States program might be called imperialism; a multilateral program under U. N. auspices might be sabotaged by Soviet participation. The Colombo plan avoids both dangers.

THE OBSTACLES

What's keeping us from doing what obviously needs to be done in Asia? It seems to me that there are three obstacles—apart from the administration's own indecision. One obstacle is our own fixed prejudices about foreign investment. Another, not so widely known but equally damaging, is Mr. Stassen's injection of party politics into the supposedly nonpartisan Foreign Operations Administration. The third obstacle has been and continues to be an absence of clear lines of authority in administering the program.

The illusion persists in the present as well as in the previous administration that private investors can meet most of the need for capital in the economically underdeveloped areas of the world. It is an attractive idea, but the simple truth is that right here at home, to say nothing of prospering Canada, the investor finds more lucrative and far safer investment opportunities than are to be found in any underdeveloped area. Foreign countries are now paying us half again as much return on past investments as American citizens are currently investing abroad. I am afraid that continued efforts by the Government to entice American investors abroad will have little effect. Private investors will go into the less developed areas only after some advance has been made on the basic problems of transportation, communication, and health. This can only be done by some form of public investment.

The International Bank for Reconstruction and Development does part of this job—the part that a strictly banking operation can appropriately do. The Export-Import Bank exists to promote United States trade rather than investment in other countries; so it too can meet only a limited need on a limited scale.

The proposed International Finance Corporation would be an excellent further step in the right direction. By investing in enterprises that Asians themselves start and manage and then selling off its holdings locally when the enterprises become profitable, such a corporation could promote industrial development and help to create a capital market at the same time. It would, however, leave still unsolved the problem of where the money for basic economic development is to come from.

For too many years, our Government has suffered from a lack of imagination in grappling with the whole problem of public investment in less developed areas. Only two forms of assistance have generally been thought feasible: direct grants, which are onerous to the recipients as well as to United States taxpayers, and dollar loans that have to be repaid directly in dollars.

And yet there are other forms of dollar assistance that could be used. We need to learn to use them in Asia.

Suppose we should adopt a program to help finance a regional-development bank under the Colombo plan. The United States could provide the bank with a major share of its initial capital, and loans to the participating countries could then be paid back to the regional bank in local currency. This money could then be loaned out again for further development projects. Such a scheme would have several advantages:

It would create a long-term revolving fund to meet the need for continuous investment in such fields as public health, education, agriculture, and communications.

It would avoid the difficulty of repayment in dollars.

It would avoid the onus of "charity" for the recipient and some of the equally onerous "giveaway" implications for United States taxpayers.

It would clearly indicate a permanent interest on our part in helping Asians to realize their economic aspirations.

THE PORK BARREL

The second obstacle to moving ahead on an Asian program has been the way Mr. Stassen, the man who has advocated a new and bigger program, has been running the one he already had. To put it bluntly, political and patronage considerations have had a devastating effect on the operations of FOA.

Last year, I sponsored an amendment to the Mutual Security Act specifically prohibiting the application of "political tests" to FOA appointments abroad, including technical-assistance positions. Senator HUBERT HUMPHREY (Democrat, Minnesota), sponsored the amendment in the Senate, and the provision is now law. Despite this legal restriction, FOA filled more jobs by the patronage method in the last half of 1954 than did the entire Departments of Defense, State, Treasury, Labor, and Health, Education, and Welfare combined. As a matter of fact, nearly 29 percent of all those given Federal employment under the "jobs-for-Republicans" program found a haven in Mr. Stassen's supposedly "nonpartisan" and relatively small agency.

In a 6-month period FOA found 237 job openings to refer to the Republican National Committee. Furthermore, funds appropriated for economic development and technical assistance have been diverted to pay for "observation trips" of Republican clubwomen. "Operation Reindeer" sent four prominent Republican women and their husbands to Europe during the Christmas season of 1953—at a cost of $19,000—to observe the Christmas package program.

"Operation Crewcut" brought 16 young men into FOA last October to study local investment opportunities around the world. All 16 appointees were cleared with the party leadership. At this writing only three of the young men have been assigned. Thirteen remain on the payroll in Washington. The reason is simple: Small FOA missions abroad fight against the assignment of relatively unnecessary personnel whose salaries will cut into their meager staff allowances. The total cost of this program to date has been close to $60,000, and the only benefit from it seems to have accrued to the Republican National Committee.

Since political affiliation has become an important criterion for recruitment and promotion, many competent technical and administrative people have left the agency, and those who remain find politics constantly interfering with their work. Efforts to find a worthy Republican for a particular job frequently hold up important projects. It has never been easy to find qualified specialists who are willing to go abroad; the intrusion of partisan considerations makes it even more difficult.

Ever since the appointment in 1948 of Paul Hoffman, a prominent Republican, to head FOA's predecessor agency, the Economic Cooperation Administration, there has been a sort of gentlemen's agreement between Republicans and Democrats in Congress that overseas economic and technical-assistance activities are to be conducted on a nonpartisan basis. Mr. Hoffman's successor was another Republican, William C. Foster. This was good politics: The whole program depends upon bipartisan support in the Congress. Mr. Stassen's deviation from the nonpartisan approach has dangerously undermined congressional support.

UNDER ONE ROOF

The third obstacle to an effective program has been disagreement over how the program should be administered. There are those who believe that foreign economic programs should be administered by the State Department and other established Government agencies. Many, though by no means all, of those who want to partition all foreign economic operations into the old-line agencies hope that if the program is split up it can soon be killed altogether.

In my opinion, there are a number of reasons why it is desirable to keep the operating parts of an economic program separate from the regular duties of the State Department and the Foreign Service. The diplomatic responsibilities of Foreign Service officers require that they avoid any action that may be considered interference in the internal affairs of other countries. They cannot be expected to perform their primary duties effectively while operating a program, even one requested by the participating country, that by its very nature is involved in changing the internal affairs of that country.

But some kind of central direction is required. Although it is essential to use all the facilities and knowledge of other Government agencies, the program cannot be "farmed out" section by section to the various old-line agencies—Commerce, Labor, Agriculture, Interior, and so on. Unified administration is esential. The best plan would seem to be a separate agency under an administrator who is responsible to the Secretary of State.

PROPOSALS

To this end, I propose that the Congress enact the following legislation:

Establish a permanent Technical Cooperation and Economic Development Agency under an administrator responsible only to the Secretary of State. Under this plan, economic and technical-assistance programs would be separated from military-aid activities, which would be transferred to the direct control of the Defense Establishment.

Authorize the continuation of the technical-assistance and development programs for periods of at least 4 years. Some degree of long-range planning is absolutely essential for any degree of success.

Authorize a regional fund for Asia, loans to be repaid in local currency. The funds should be used to further economic development through an agency like the Colombo plan.

Congress should furthermore make sure that all the facts about the administration

of FOA are brought to light before new funds are appropriated. If it meant what it said last year about keeping politics out of economic and technical assistance, it should impress its attitude upon the new chief of whatever agency is set up to handle these matters.

Such a program will certainly not solve all our problems. It is only the beginning of a long process. But since so many of the obstacles we face are of our own making, an effective program in Asia must necessarily begin right here in Washington.

World Trade Program

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 4, 1955

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Birmingham News of May 2, 1955, entitled "All Participating Nations Gain Under Wise World Trade Program."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ALL PARTICIPATING NATIONS GAIN UNDER WISE WORLD TRADE PROGRAM

Economic stresses obviously have been responsible for much of human conflict. They have led to wars. They have brought revolutions. They have caused some people to turn to communism and other totalitarian systems. It may be going too far to say that if the peoples of the earth generally achieved a satisfactory economic situation there would be no more world wars. But it is evident in even a superficial study of history that unsatisfactory living standards have been major factors in innumerable international struggles.

It is also readily apparent that no nation is really sufficient to itself economically. Every country can advantageously use many things provided by other countries. Business and industry, of course, may be generally summarized as involving the mutually advantageous exchange of goods and services.

The soundest economy, of course, is based on exchanges that advance the interests of all concerned. If any nation tried to get along exclusively on its own economic activities it could not possibly realize its maximum economic possibilities. Generally speaking, the greater the mutually advantageous trade in which a nation participates, the stronger and more prosperous its own economy.

Such considerations may be obvious enough but still, in striving to advance peace and economic progress in the world, they need to be reiterated over and over again to the end that our people will not fail to see the immediate and vital significance of our Government's efforts to increase international trade.

President Eisenhower, now seeking congressional approval of an extended and improved reciprocal trade program, last week described such trade as "a broad avenue by which all men and nations of good will can travel toward a golden era of peace and plenty."

He emphasized that the expansion of trade should be sought with great care not to weaken our own industry. Such weakness would not strengthen the economy of either the United States or the world.

What he is striving for is the kind of international trade progress that is generally constructive.

Such progress cannot be achieved without producing some problems and pinches and some sacrifices. It calls for the broad view, for devotion to the common interest and for imaginative resourcefullness. Good neighborliness always calls for such things. What soundly advancing world trade requires, in fact, is a continuing growth in good neighborliness.

When two neighbor families are cooperative, both profit. As the nations increase their advantageous trade, good will and peace in the world as well as economic progress are served.

This week the Senate is due to take up discussion of the Eisenhower administration's reciprocal trade extension program. It has been approved by the House and by the Senate Finance Committees. We hope the legislation soon reaches the President's desk without crippling or unduly restrictive provisions.

The Need for an Adequate National System of Civil Airports

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 4, 1955

Mr. MONRONEY. Mr. President, on April 27, 1955, the Senator from Washington [Mr. MAGNUSON] delivered a very interesting speech before the Airport Operators Council in Seattle, Wash., concerning the need for an adequate national system of civil airports. I ask unanimous consent to have the speech printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

SPEECH BY SENATOR WARREN G. MAGNUSON BEFORE AIRPORT OPERATORS' COUNCIL, SEATTLE, WASH., APRIL 27, 1955

I can see no reason for telling this audience how pleased I am that you invited me to be your speaker tonight. Give a Senator the opportunity of coming home, add to that the opportunity to make a speech, and arrange that his home is the State of Washington, and you have made him happy. I know you can see how good I feel over the whole business.

You know, we deal in superlatives on the Senate floor—sometimes. My Kentucky colleagues have a poem they quote now and then which is loaded with superlatives, and I often feel like rewriting it for my State. They say "Moonlight falls the softest in Kentucky, and summer days come oftenest, in Kentucky."

Well, I doubt that, it's just an example of exaggerated State pride.

But I do know that here in Washington we have the biggest, most beautiful dogwood blossoms in the whole land. And none of you has ever seen a city with more perfect reasons for picture windows than my home town of Seattle.

That same Kentucky poem has some final lines that I think all of us here will deny. I've heard some of your discussions and I know now that every one of you face problems much greater than those faced by the other fellow. But Kentucky says:

"Mountains tower grandest, politicians are the blandest,
And politics the damnest in Kentucky,"

Now we all know that isn't true. I'll stack the great Northwest up against any other part of the country, politics, airports, aviation developments, and all.

Of course, you cannot take a sectional view of aviation. This industry is nationwide; yes, worldwide—too big in scope for us to narrow our vision. Each of you can be most interested in your special airport, but you will agree that your airport's most important aspect is its relation with the rest of the world.

Not long ago, speaking on transportation, before State officials of the western States, I pointed at a few of the special conditions that obtain in these States in relation to transportation. I said that airplanes are contemptuous of distance and terrain obstacles, and that—along with the great distances we have out here—makes air transportation especially valuable to us. The results are good loads for the air carriers, and widespread use of the airplane in agriculture and business.

The CAA estimates that owners of 35,070 planes, 57 percent of all that flew in 1953, reported that they did some business flying in that year. That is not surprising to us here in the West. Every day we see ranchers, farmers, contractors, oil-well operators, doctors, merchants, and salesmen using their personal planes to cover great distances and transact business. This business use of what we might call the private plane is growing steadily—rising from 29 percent right after the war to 57 percent in 1953. The personal airplane is doing what the personal automobile has been doing—a promising development, I think.

The airplane is doing great things in agriculture out here, too. At least five new planes, new in design and structure now are being produced for the aerial applicator—a very practical and businesslike example of how firmly this use of the airplane is established in this Nation's food- and fiber-producing business. The CAA estimates that every person in the United States eats, touches, or wears something every day of the year that an agricultural airplane has treated beforehand.

So we have a great stake in the airplane out here where our business transportation needs are great and our crops include food, forests, fruits, and forage crops.

And thus, it follows, we have a great stake in airports. Growth of aviation depends always on adequate airports.

I would commend you men for the progress you have made with your airports. You share a great part in the progress we have made in air transportation. You helped produce the record volume of nearly 35 million air passengers in 1954, and the safety record of eight-tenths passenger fatalities per 100 million passenger-miles. Without fine airports, properly run, neither of these records would have been possible.

But we must again refrain from taking a narrow view in aviation. Yours are the large airports—but what of the small one?

The CAA has prepared three interesting charts which show most graphically how interdependent all airports are in this country. One chart is centered on Los Angeles, and the cities and towns of the rest of the country are represented by dots of various size indicating how many passengers flew from those places to Los Angeles. You would expect many people to fly from Chicago or New Orleans to Los Angeles, but what about traffic from the smaller towns? All the figures surprised me. From Presque Ile, Maine, 800 passengers flew to Los Angeles; from Savannah, 500; from Spokane, 10,000; from Kokomo, Ind., 500; from Des Moines, 5,000; and from Huron, S. Dak., 600.

A second chart showed, with the same surprising results, the traffic from big and little places all over the country to New York.

These two charts show, for instance, that people in Scottsbluff or North Platte, Neb., are interested in there being adequate airport facilities in New York, Los Angeles, and for that matter in all major cities. Likewise, the people in both New York and Los Angeles are interested in adequate airport facilities in Scottsbluff and North Platte.

The third chart showed another aspect of today's aviation in which you are actively interested. The CAA checked on the business flying of the J. I. Case Manufacturing Co., and drew lines on a map to show where the executive planes of the company flew. Despite the fact that Case has but three planes, and many companies have five times that many, they covered practically the entire country in this 1 year of business flying—using 395 airports.

These charts point up, impressively, a point which you already know—that the importance of any airport must be measured in its relation to every other airport. How would you like to be the proud owner of the only telephone in the United States? Or how long would you hold the job of manager of the only airport in the United States?

Airports, as such, mean no more to me than to the average air traveler or citizen, but I have worked long and hard in Congress to bring about a more intelligent and more productive attitude toward the problem. For that matter, I worked hard for the airport here in Seattle.

I can assure you the Congress recognizes the full importance of the airport program. Its record of legislation and appropriation has been commendable and has reflected the conviction that Federal aid is an essential.

Niggardly Federal assistance in airport development to meet the facility demands of skyrocketing air transportation and interference with Federal commissions in carrying out the expressed will of Congress are two of the most important handicaps we are faced with.

We have before our present Congress a request for $101 billion for highway construction—but we have also a request for only $11 million for the entire airport system of the United States. This will hardly provide one airport like the Seattle-Tacoma Airport.

It is true that the need for a nationwide system of superhighways is actual and pressing. That this system should be provided with borrowed money and to 11 roads is a matter for Congress to decide. You are going to have a lot of trouble persuading Wyoming and Montana, for example, to pay their share of such a system. But we need the roads to keep pace with our national growth.

We also need airports. Just as much—if not more than highways. They provide the key to the most essential facility of our national defense. What is more—with our new jet planes we must have large airports and only a few municipalities can provide these.

Unforunately, the desires of Congress are subverted by actions of the executive branch of Government, and I believe this has been the case in the airport program. The Civil Aeronautics Act and the Federal Aid to Airports Act calls for "the establishment of a nationwide system of public airports adequate to meet the present and future needs of civil aviation."

The whole intent of this policy can be changed, however, when the criteria for allowing Federal aid to airports is arbitrarily set by some official in the executive department. I am becoming more and more convinced that Congress should determine these criteria. It would seem to be the only way in which its wishes can be directed and insured, and the actual intent of its legislation carried out.

In particular, I disliked the exclusion of such items as airport buildings, roads, parking areas and fences, all of which were authorized by the original Airport Act. Nor do I favor the criteria under which the program now is operating—of 30 based airplanes or 3,000 enplaned airline passengers for the airport to be eligible for Federal aid. This criteria can exclude whole classes of airports, which are important in our national system. I know you men recognize that your fine big airports would be decreased in value if we did not have the thousands of smaller airports that serve the people of this country along with you, and send traffic to your fields.

I do, however, look for a change in the administration of this program. When the Interstate and Foreign Commerce Committee of the Senate questioned Mr. Louis S. Rothschild before approving his appointment as Undersecretary of Commerce for Transportation, we learned that he had a different attitude toward his duties than his predecessor. Mr. Rothschild told us he considered his new post to be one that is concerned with policy matters and should not be an administrative function in any sense of the word. The Secretary of Commerce had previously written me that he conceived of the job of Undersecretary for Transportation in exactly that light—a position of policy supervision, and not of administration. In spite of that we saw continued interference with the CAA and the CAB in their administrative actions. I was especially pleased to hear Mr. Rothschild say that such agencies as the CAA and CAB "have their own powers which should be carried out without leadership or interference from anyone."

I think the CAA and the CAB are in for much more peace of mind and productive effort in carrying through their good work than they have enjoyed heretofore. As I did in the hearings, I want publicly again to commend Fred B. Lee, Administrator of Civil Aeronautics, for the good job he has been doing under difficult situations.

Let me review the history of the Federal aid to airports program to illustrate these difficulties. Congress originally authorized $500 million for a period of 7 years, with not to exceed $100 million to be appropriated in any 1 year. Now, Congress does not intend that the exact sum of money authorized shall be appropriated and used, but exercises its best judgment year after year in annual appropriations. But note how these appropriations have varied: In 1947, the largest appropriation was made, $45 million; followed by annual appropriations of $32,500,000; $40 million; $39,500,000; $24,200,000; $18,700,000; and $14,321,154 in 1953. Then, the new administration, in its passion for economy, asked for nothing in fiscal 1954, and our airport development stood by for a year while a committee studied the whole philosophy of Federal aid to airports. That committee, in effect, said to the administration, "Go on as you were with Federal aid, with some changes." Then in 1955, we were asked for $22 million to help with the rather small program we now have under way. And for next year, the administration has asked for $11 million.

I would greatly appreciate hearing the views of you men on this matter. Is the Federal Government going about its job intelligently in producing an adequate national system of airports? Is it committed to a sensible, long range policy?

The contrast between our attitude toward highways and airports is disturbing. The administration has asked for $101 billion for roads and $11 million for airports. But the contrast is greater than that. We establish a carefully considered policy in Federal aid to roads that extends 5 years into the future. With airports, we make jittery jumps from year to year, our appropriations ranging from zero dollars to $45 million in Federal aid. It would seem perfectly sensible to me to treat these two forms of transportation with the same intelligent approach.

This would make for much greater stability in the planning done by airport owners. They face the problem of stage planning in almost every case, and some assurance of Federal participation in these heavy expenses would be beneficial to the whole air transportation industry and to the people who need its services.

Of course, we're outgrowing highways and they have to be replaced, but the same argument holds true for air traffic.

Take Seattle as an example. In 1945, we had 221,426 passengers taking off from Seattle-Tacoma Airport and Boeing Field on passenger planes. Last year, this passenger traffic had doubled that figure, reaching 422,618. Of course, a lot of that traffic was generated on the far-eastern schedule of Northwest Airlines and reflects the Hawaiian service, too.

But it also points up why the CAA has Seattle-Tacoma Airport down for $310,560 in the Federal aid to airport program to acquire 80 acres of land to clear the approach to the field. And King County Airport—or Boeing Field is in the Federal aid program for $136,000 to reconstruct a 10,000-foot runway. These Federal funds will be matched locally.

In a matter as important as this, we have to know where we are going.

Congress knew what it wanted and where it was going when it authorized Federal money for aid to airports. For full development of aviation, we must have an adequate national system of civil airports. And I believe Congress feels we have received good value in the airport system so far produced. Since 1947 when the present airport program started, a total of $236,221,154 in Federal money has been shared with the States to carry through 2,641 projects on 1,204 airports. It is not possible to estimate the value of these airports to the Nation. Presence of an airport has saved the lives of military fliers and their expensive planes in emergencies. New businesses have grown up at airports. Business has accepted the airport as a necessity, and we have classic examples like that of Hickory, N. C., which was selected instead of a nearby town for location of a big manufacturing concern, merely because it had a good airport and the rival city had none. All this in addition to the amazing records broken every year by the scheduled and nonscheduled air carriers.

I do not begrudge Federal money spent in this way. We labor for the future when we build and improve our airports, and it is a future almost too broad and promising for us to imagine.

Administration's Farm Program

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 4, 1955

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the Montgomery (Ala.) Examiner of April 29, 1955, entitled "GOP Suddenly 'Loves' the Farmer."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GOP SUDDENLY LOVES THE FARMER

We congratulate the President and Secretary of Agriculture Ezra Benson on their poor-man's farm program, but cannot restrain a persistent questionmark about the seriousness of the program.

It's all very well to come forth with trumpets about a poor-man's farm program, but why is it that the administration's policies to date have been directed against the little farmer?

The Republicans have attacked farm-price supports at every opportunity.

They have attempted to kill off the Soil Conservation Service.

They are now hard at work in an effort to strangle the Rural Electrification Administration by lack of adequate appropriations.

They are going full tilt against the Tennessee Valley Authority, which has brought unprecedented prosperity to farmer and factory worker alike in that area.

One is forced to wonder whether, having left the corpses of poor farmers strewn about, the GOP now seeks by this high-sounding program to draw a clever cover over it all. Remember, the elections of 1956 are not so far away, and farmers are not as of now in love with the elephant.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the official reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix, but this rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD Appendix the full report or print of any committee or subcommittee when said report or print has been previously printed.

10. *Official reporters.*—The official reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this restriction shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. The Public Printer or the official reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Illustrations.*—Pursuant to section 182b, title 44, United States Code (as shown above), requests for authority to insert an illustration in the RECORD should be submitted to the Joint Committee on Printing through the chairman of the Committee on Printing of the respective House in which the speech desired to be illustrated may be delivered. Illustrations shall not exceed in size a page of the RECORD and shall be linecuts only. Copy for illustrations must be furnished to the Public Printer not later than 12:30 o'clock p. m. of the day preceding publication.

13. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Anderson, Eastland, Clements, Humphrey, Scott, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, Kilgore, McClellan, Robertson, Magnuson, Holland, Stennis, Clements, Bridges, Saltonstall, Young, Knowland, Thye, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Bridges, Saltonstall, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Duff, and Welker.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Lehman, Monroney, Capehart, Bricker, Ives, Bennett, Bush, Beall, Payne, and Morse.

Committee on the District of Columbia

Messrs. Neely (chairman), Gore, Bible, McNamara, Beall, Hruska, Case of New Jersey, Allott, and Morse.

Committee on Finance

Messrs. Byrd (chairman), George, Kerr, Frear, Long, Smathers, Johnson of Texas, Barkley, Millikin, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, and Bennett.

Committee on Foreign Relations

Messrs. George (chairman), Green, Fulbright, Sparkman, Humphrey, Mansfield, Barkley, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, Capehart, and Morse.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Kennedy, Symington, Ervin, Humphrey, Thurmond, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Cotton, Bender, and Martin of Iowa.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Long, Jackson, O'Mahoney, Scott, Bible, Neuberger, Millikin, Malone, Watkins, Dworshak, Kuchel, Barrett, and Goldwater.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Daniel, Ervin, Bible, Thurmond, Bricker, Schoeppel, Butler, Potter, Duff, Purtell, and Payne.

Committee on the Judiciary

Messrs. Kilgore (chairman), Eastland, Kefauver, Johnston of South Carolina, Hennings, McClellan, Daniel, O'Mahoney, Wiley, Langer, Jenner, Watkins, Dirksen, Welker, and Butler.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Neely, Douglas, Lehman, Kennedy, McNamara, Smith of New Jersey, Ives, Purtell, Goldwater, Bender, and Allott.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Neely, Pastore, Monroney, Hennings, Scott, Neuberger, Carlson, Jenner, Langer, Curtis, Martin of Iowa, and Case of New Jersey.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, Symington, Thurmond, McNamara, Neuberger, Martin of Pennsylvania, Case of South Dakota, Bush, Kuchel, Cotton, and Hruska.

Committee on Rules and Administration

Messrs. Green (chairman), Hayden, Hennings, Gore, Mansfield, Jenner, Barrett, McCarthy, and Curtis.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Reed, of Kentucky, the Mayflower.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 3701 Connecticut Ave.
Mr. Justice Burton, of Ohio, the Dodge.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Minton, of Indiana, the Methodist Building.
Mr. Justice Harlan, of New York, 1677 31st St.

OFFICERS OF THE SUPREME COURT

Clerk—Harold B. Willey, 3214 N. Wakefield St., Arlington, Va.

Appendix

Commemoration of the Inauguration of George Washington as First President

EXTENSION OF REMARKS
OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, May 5, 1955

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a speech delivered by Secretary of the Interior Douglas McKay in New York City on April 29, 1955, commemorating the inauguration of George Washington as first President of the United States, in 1789. In his address, Secretary McKay enthusiastically endorsed S. 732, which I believe is on the calendar, and which I had the privilege of introducing on behalf of my colleague from New York [Mr. LEHMAN] and myself. This bill would promote public cooperation in the rehabilitation and preservation of the Nation's important historic properties in the New York City area. I urge that the Senate favorably consider this needed legislation in the near future.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SECRETARY OF THE INTERIOR DOUGLAS MCKAY TO THE SONS OF THE AMERICAN REVOLUTION, FEDERAL HALL MEMORIAL, NEW YORK CITY, APRIL 29, 1955

Since February, when Gardner Osborn of the New York Chapter, Sons of the American Revolution, persuaded me to get excused from the regular Friday Cabinet meeting in Washington today to come here, I have been looking forward to this occasion with great pleasure.

I am delighted to be here.

To me it is a distinct privilege to join with you at this national historic site to commemorate the inauguration of George Washington as first President of the United States 166 years ago tomorrow.

For the Department of the Interior I extend sincere thanks to the New York Chapter of SAR for sponsoring this annual observance.

In this way the chapter is helping to keep alive in the minds of the people the import of the historic events which occurred here.

It is a particular pleasure to recall the events which led to the establishment of the three significant areas which we administer in New York as national shrines for the inspiration of all Americans—Federal Hall Memorial, Castle Clinton, and the Statue of Liberty, and to assert my strong support of pending legislation directed at adding to their usefulness.

As you have just noted, there is now an added reason why I am pleased to be here today.

Though I do not minimize the major importance of the historic event we celebrate, I would be less than human if I did not rejoice at receiving this handsome Chauncey M. Depew medal for public service.

I am profoundly grateful to my compatriots in the SAR for the signal honor which has been bestowed on me.

As a Son of the American Revolution in the Oregon chapter for many years past, I have deemed my affiliation with that organization as an extraordinary privilege.

It is a privilege enjoyed by virtue of my great great grandfather, Joshua Armstrong, a Philadelphian, who fought in the Revolutionary War.

It is with a deep sense of humility, therefore, that I accept this significant SAR award, the Chauncey M. Depew medal.

I shall always cherish it as a remembrance of this occasion and as a symbol of the public-service achievements of that honorable American whose memory it perpetuates.

This medal shall serve as a constant reminder of his achievements and an inspiration to strive for greater personal attainment for the public good in the years to come.

It is because of the spirit of a free people is formed and animated out of the storehouse of historical recollections that Federal Hall Memorial has been set apart here as a national historic site.

This is the site of some of the most momentous events in American history.

But more than any other of the historically important occurrences, the inauguration of George Washington as our first President in the old Federal Hall has perhaps given this site its chief claim to fame.

Reviewing these momentous events, we know that we are on truly hallowed ground here. Because of this, the site and this building, which was completed in 1842, were designated in 1939 as the Federal Hall Memorial National Historical Site, under authority of the Historic Sites Act of August 21, 1935.

As such, it is preserved as an area of the national park system and administered by the National Park Service with the cooperation of the Federal Hall Memorial Associates.

All of us who are interested in our historical heritage are indebted to the Federal Hall Memorial Associates for helping to rescue this historic place from possible sale as surplus Government real estate and for aiding substantially in its preservation and development over the past 15 years.

We also are indebted to many other civic and patriotic groups in New York City—the city council, the office of the mayor, the office of Manhattan Borough president, the honorary commissioners of the department of Commerce, the Sons of the American Revolution, the Downtown Manhattan Association, and numerous others for their interest in the development of Federal Hall and the Castle Clinton and Statue of Liberty National Monuments which are closely associated geographically here.

We in the Department of the Interior and the National Park Service take very seriously our obligation to preserve these three historic places for the benefit and inspiration of the American people.

We believe, as do the city and State governments, and the patriotic organizations, that the full development of these sites will be of immeasurable help in making Americans more conscious of their past history and will strengthen their devotion to their country.

With funds available, work of restoration and for interpretation is going forward but much remains to be done at each of the sites before they can provide their full measure of benefit and inspiration.

Along with Independence Hall in Philadelphia, Federal Hall occupies a site so rich in historic events of national importance that very few others are comparable to it.

While we have made admirable progress here, the physical fabric of the memorial building itself is in need of rehabilitation. The great rotunda—an impressive setting for patriotic gatherings—badly needs rehabilitation and furnishing. Displays and exhibits, done by modern methods, are needed to interpret the founding of our Government and the characters and accomplishments of those great personalities, such as Washington and Jefferson, so closely associated with it.

The Peter Zenger memorial room and the inspiring exhibits installed there through the generosity of fourth estate have set the pattern for what is needed to make this site fulfill its memorial function with maximum effectiveness.

Castle Clinton was the last of a series of forts which guarded lower Manhattan from the time of the Dutch settlement in 1624 until after the establishment of the Republic.

Through 146 years of our history as a Nation, it has had intimate association with a succession of historical figures—General Lafayette, President Jackson, Samuel F. B. Morse, Jenny Lind, and many others.

Named for DeWitt Clinton, Governor of New York when George Washington was inaugurated, it was the Nation's principal immigrant depot in the last half of the 19th century.

Since it was established as a national monument in 1950, the exterior of Castle Clinton has been restored yet only a start in its development has been made. It needs some of the military character it had when it was a fort. It needs a museum to interpret how the old forts protected New York Harbor. We hope to succeed in these endeavors.

Out on Bedloes Island, in New York Harbor, stands the statue of the Goddess of Liberty holding aloft the flaming torch of freedom. It was given to America by the French people, paid for by their schoolchildren and their workingmen. It was sent here in 1886, 110 years after Thomas Jefferson had formulated the Declaration of Independence proclaiming to the world the equality of all men and their inalienable rights to life, liberty and the pursuit of happiness.

When the statue was erected, it symbolized the friendship between the Republics of France and the United States. In the intervening years its significance has deepened. To many millions of the oppressed and of the venturesome of other lands who have crossed the ocean in hopeful search of greater freedom and opportunity, it has become the symbol of those ideals of human liberty upon which our Nation and its form of government were founded.

Because of its significance to those of all nations and peoples who have come to these shores in their search for a better way of life, the plan to establish in the base of the statue a Museum of American Immigration seems to be a peculiarly happy and suitable

conception. This Nation of ours has been good to millions of her adopted children, and I am deeply confident that many of them who have prospered here will be glad to contribute to the funds required to make a reality of this plan.

State and city authorities and a group of some 20 organizations of New York are now working to help us solve the problem of further financing the development of these three significant properties in the New York area. As a move in that direction, they have sponsored identical bills, introduced in the Senate and the House of Representatives, which look to public cooperation in the rehabilitation and preservation of the historic sites.

The bills, known as S. 732 and H. R. 3120 propose the establishment of a special advisory board which would endeavor to determine what is needed to increase the public benefit and inspiration from the three areas. The legislation, if passed, would authorize the acceptance of donated funds and the appropriation of such Federal funds as may be necessary to match funds donated contingent upon that requirement.

I have studied this proposed legislation and am heartily in favor of it.

We have recommended its enactment, believing that it will provide an appropriate method for enlisting and encouraging private and public cooperation with the Federal Government in the preservation and satisfactory development of these historic shrines.

In this effort you and other Americans can be of much help.

Federal Hall, Castle Clinton, and the Statue of Liberty belong to you, to me, and to all the people.

They are important parts of our heritage.

Whatever you can do, whatever I can do, to help impart that feeling of pride in our historic past in all who visit them will redound to our own benefit and the benefit of those who will follow us in the years to come.

Massachusetts Heritage Month

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1955

Mr. LANE. Mr. Speaker, the members of the Massachusetts delegation in the Congress have been reminded by Albert West, chairman, Massachusetts heritage program of the Massachusetts Bar Association, that the constitution of the Commonwealth will be 175 years old on October 25.

The Massachusetts Bar Association is planning an extensive program for this occasion and hopes that all Massachusetts churches, schools, libraries, and organizations will join with them in their efforts to spread a greater awareness of our Massachusetts heritage to our fellow citizens of all ages.

His Excellency the Governor, Christian A. Herter, former Member of Congress, will officially proclaim October as Massachusetts Heritage Month. Last year, it will be recalled, December was thus designated, and in this connection the chief justice of the supreme judicial court, the Honorable Stanley E. Qua, and the bishop of Worcester, His Excellency John Wright, were the speakers.

Following is a copy of the great words spoken by the chief justice of Massachusetts and the bishop of Worcester in this connection:

ADDRESS OF THE CHIEF JUSTICE OF MASSACHUSETTS AND THE BISHOP OF WORCESTER AT THE DINNER OF THE MASSACHUSETTS BAR ASSOCIATION INAUGURATING MASSACHUSETTS HERITAGE MONTH AS PROCLAIMED BY HIS EXCELLENCY THE GOVERNOR, BOSTON, NOVEMBER 30, 1954

ADDRESS OF HON. STANLEY E. QUA, CHIEF JUSTICE SUPREME JUDICIAL COURT

When I asked myself what is this heritage about which we talk and which we celebrate, I have been unabe to define it, I can only see it as a sort of vision. It seems to me to be a sort of shining light which comes from the distant past and shines down through the corridors of time into our day and on into the generations that are to come after us. It is a continuous thing. Nevertheless each generation has a duty toward it. It is the duty of each generation to pass that light along undimmed for the benefit of the future.

I suppose that it may be expected that I would say something about our judicial heritage. I am sure that no State in this country has a greater heritage than Massachusetts has and I feel too that that statement holds true of our judicial heritage. You doubtless all know that our history is really divided into three periods.

First there was the colony of Massachusetts Bay, the little struggling colony around the shore of Massachusetts Bay particularly centered around Boston. They were governed under a Colonial Charter given by the King from 1629, although the charter didn't come here until 1630, until the charter was finally declared void in England in 1685. There was a period of approximately 55 years under the old Colony Charter. During the earlier part of that time the conditions of turmoil in England were such that immigration to this colony was rather rapid so that it is said by people who perhaps know something about it, that between 1630 and 1640 over 30,000 people came to these shores. After the troubles in England subsided the tide of immigration was slowed down. Then came the longer period when we were a Province and we were governed under the so-called Province Charter of 1691 or 1692, depending on whether you take the date of its arrival here, and that lasted until the Revolution, we'll say until 1776, a period of somewhat under 100 years. During that time it was slow and steady growth. Then, of course, you know the Revolution came along and after the fighting in this vicinity ceased, people began to think more of ordering their affairs. Then came the constitution of this Commonwealth of 1780, and we have since lived under that constitution up to the present time. And that I call the third period in the history of the Commonwealth.

Now during all these periods we had a judiciary. At the beginning for the first 4 or 5 years, the general court did everything, passed the laws, decided the lawsuits, did everything pertaining to government. But soon that became inconvenient and colonial courts were established in the different counties which soon came into existence and there was a rather elaborate system of courts. Then under the province charter there was a system of courts.

I must not be betrayed into speaking too long because I know that others are following, but I just want to trace down very briefly the story of our judicial history and heritage.

The supreme judicial court, of which I have at the moment the honor to be the chief justice, had its origin in the statute, a provincial statute, of 1692, which established what was then known as the superior court of judicature. It was not called supreme court because there was the Privy Council or the King's Council in England which stood over it and to which appeals might be taken in the most important cases. But when the constitution of the Commonwealth came along in 1780, it did not create the supreme court, it recognized it as already existing and assigned to it, its place in the constitutional system. So we claim that our court has had a continuous existence from 1692 to the present day.

Now after the constitution in 1780, came what I think was the greatest judicial opportunity that was ever offered to any of our States. Remember that at that time the country was new. We were among the older settlements. We had a more stable system than some of them and we had the great good fortune in our very early years as a Commonwealth to have most able men appointed to our supreme court. I mention the name first of Chief Justice Shaw. He wasn't among the first but he held the office of chief justice from 1830 to 1860, a period of 30 years, and that was the formative period of American law and we had here a nucleus, an established system with the great man that Shaw was at its head, so that his influence went all over the country. The decisions of our court were read and had a profound influence on the developing law of a new country far beyond our borders. Then after Shaw's time we had other great men. I'm not going to mention them all but some are well known. Chief Justice Horace Gray subsequently appointed to the Supreme Court of the United States; Chief Justice Oliver Wendell Holmes, subsequently appointed to the Supreme Court of the United States; Chief Justice Knowlton; and in recent times for a period of about 26 years, Chief Justice Arthur P. Rugg, of Worcester, one of the most widely known of all American jurists.

And so I say looking at the judicial side that we have a history of which we can well be proud and I am proud of it. There were 2 things that were in the constitution of 1780 to which I wish to draw your attention, because these were especially important.

In that constitution it is written, "It is the right of every citizen to be tried by judges as free, impartial, and independent as the lot of humanity will admit." And then the instrument goes on and provides for permanent tenure of office on the part of the judge in order to secure that necessary independence. The second provision is one that has been called by students, the greatest contribution America has made to political science and that is the so-called separation of powers. And that clause reads, "In the government of this Commonwealth the legislative department shall never exercise the executive and judicial powers or either of them, the executive shall never exercise the legislative and judicial powers or either of them, the judicial shall never exercise the legislative and executive powers or either of them, to the end that it may be a government of laws and not of men." There you have your checks and balances, the three great departments of government, each in its own sphere, neither having any right to trespass upon the other. So far the system has worked.

And now we look around us and we see the troubled times that we are in and we sometimes wonder about the future and we ought to feel the responsibility that rests upon us, particularly in these difficult times, to keep this heritage pure and strong, to hand it down unalloyed and, in every respect, as fine as it came to us, to those who succeed us. And in that connection I want to read to you a little verse and then I shall be through:

"We that have faith to look with fearless
eyes beyond the tragedy of a world at
strife
And trust that out of night and death shall
rise the dawn of ampler life,

Rejoice whatever anguish rends your heart
that God has given you for a priceless dower
To live in these great times and have your
part in freedom's crowning hour
That you may tell your sons who see the
light high in the Heavens their heritage to take
I saw the powers of darkness put to flight, I
saw the morning break."

ADDRESS OF HIS EXCELLENCY JOHN WRIGHT, BISHOP OF WORCHESTER

Ours is a Commonwealth of venerable and enviable traditions. Many of these are traditions concerned with the things of the mind and the spirit. It is therefore fitting that a month be devoted to the education of our young people in the nature and the richness of the heritage which comprises our State traditions, and it is equally fitting that this month of such education be sponsored by the members of the Massachusetts Bar Association if only because our legal traditions form a major part of the proud heritage of the Commonwealth of Massachusetts and provide the protection of the rest.

It is also fitting that you should have invited a preacher to speak on this occasion, though you might easily have found a better one. The reason why such an invitation is appropriate is because the ultimate fountainhead of the postulates, cultural, social, and legal, of the authentic Massachusetts heritage remains the teachings of Christ. His gospel, illuminated by His own sublime example, prefigured by the fidelity of the people from whom He sprung and illustrated in the example of the saints to whom He gave direction, remains the heart of our heritage.

I am confident that the generation of the Pilgrim Fathers, despite the great differences between their theology and mine, would concur in the thoughts that I shall venture to express this evening. I also think that their generation would have been appalled by any repudiation on the part of the later Massachusetts community of the debt of our heritage to the Christian gospel. Massachusetts began as a kind of theocracy. It was really a parish before it was a civil community. It was a religious community in its earliest settlement. Its historical circumstances have almost inevitably altered the proportions of religious and what we might call secular or civil emphasis in the Massachusetts tradition. But for all that, the roots of our heritage remain as they were with the Pilgrim Fathers and their immediate descendants, religious roots. It was that generation which first caused a prayer, rather than a political slogan or a social formula, to be chosen as the motto of the capital city of our Commonwealth, the prayer from the Scripture, "As God was with our fathers so may He be with us."

The God whom the Seventeeth and Eighteenth Century Bostonians invoked was the God of Jesus Christ and if their prayer meant anything it meant what I propose to recall to you this evening.

Because God was with their fathers, because they and their fathers strove to be with God, those who founded our heritage did not build in vain. Their work was blessed and it bore abundant fruits, fruits of faith and of freedom. Unless God be with their children and their children's children, unless He be with us and unless we be with Him, we shall forfeit the inheritance we have from our fathers and shall annul the achievement that has theirs. Unless God is with us as He was with our fathers, no power on earth will enable us to preserve the heritage which the powers of Heaven were needed to accomplish here in Massachusetts.

The men who wrote the basic law of Massachusetts were typical of those whose thought became in such great measure the mentality of the American Republic. If we would recall how religious that mentality was, we need only examine the thinking of the men of Massachusetts as that thinking is reflected in the basic and traditional law of this Commonwealth. Our fathers in the Commonwealth of Massachusetts knew that the divine attributes of liberty and authority, analogously present among men, could only be reconciled in our topsy-turvy world if God himself would somehow work among us unto their reconciliation. Our fathers did not believe that it is enough for God to be in His Heaven in order that all be well with the world. They knew that Heaven and earth must work together if the earth is ever to achieve something, at least, of the order which prevails in Heaven and if the sons of men are finally to win the freedom of the sons of God.

The men who made the Commonwealth of Massachusetts realized that in God's holy providence all society, religious and civil alike, and all legal traditions, both those of authority and those of liberty, must exist for the perfection of human personality. They would have understood the magnificent political and social implications of the doctrine which the late Pius XI so briefly summarized when he said, "It is according to the dictates of reason that ultimately all things should be ordained to man as a person, that through his mediation they may find their way back to the Creator." It is in this wise that we apply to the human person the words of the Apostle Paul, "For all things are yours, whether Paul or Apollos, or Cephas; or the world, or life, or death; or things present or things to come, all are yours, and you are Christ's, and Christ is God's."

Our Massachusetts legal tradition so respects this concept of the centrality of human personality that even before a child is born our State protects his human rights, his right to life, his right to be born, even, in accordance with a famous decision of a century ago, his right to inherit. Indeed the rights of the unborn child are sacred to our State under a double title; they are the rights of a human, but also of a human incapable of pleading his own rights and therefore with a greater claim, not lesser, on the protection of the State as our fathers understood it.

The law's insistence on the right of a child to be born has demanded in our medical and moral tradition certain acts of heroism which many profess to find superhuman. But our forefathers in Massachusetts considered heroism to be a duty where there is a question of the inviolable rights of human personality.

A child, in the thinking of our tradition, is not born immediately into civil society. Logically, at least, he enters that society, as our forefathers understood it, through the medium of his parents or, more precisely, through his family.

In the Massachusetts tradition of law the family is the elementary social unit. For our forefathers democracy meant a plurality of families cooperating by consent for the collective protection and promotion of those God-given natural rights which the family by itself might be powerless to secure for the individual person. Democracy meant, even more, the sovereignty of the family in its own essential work of the rearing of children. The development of the child's faculties, the formation and refinement of his character, his initiation to the requirements and the disciplines of existence in society, all these are, in our tradition, the work of the normal parent and no agency should be encouraged to supplant the normal parent, our fathers considered, in these works.

The consequent amount of legislation in our State designed to protect the right of the parent over the child is impressively large. Our forefathers followed Blackstone in his suggestion that the positive precepts of the law should correspond accurately to a natural necessity decreed by Divine Providence which has provided for the welfare of children, as never could the State or any other agency, by implanting in the breast of the normal parent an insuperable affection, more imperious than any written law, which not even the wickedness, ingratitude or rebellion of children can totally suppress or extinguish.

And so Massachusetts has always recognized that the normal family is, in its own way, sovereign. Only the abnormal inadequacy of a particular family places its members within the competency of our courts. Even then, whenever possible, it is the tradition of our State to do all that artifice can possibly do to supply the defects of nature by providing the homeless child with the nearest possible approach to family life and family rearing. Our State was, I believe, the first in the Union to provide legislation which abolished, so far as possible, compulsory, institutional, and wholesale bringing up of children. Our State preferred the plan of foster homes where foster parents could, in some degree, supply for natural parents in the training of the human person within a human family.

In our tradition it is recognized that the strength of the State, the good of the child, and the rights we call democratic are best served when the family is protected in its liberty to choose the schools in which the personality of its children may be brought to perfection. Our fathers in the Bay State possessed an extraordinary appreciation of the manner in which the power of education to perfect personality makes education the right of every person.

In our State constitution they wrote, with homely and historic words, their reasoning: "Wisdom and knowledge as well as virtue diffused generally among the body of the people being necessary for the preservation of their rights and liberties, it shall be the duty of legislators and magistrates in all future periods of this Commonwealth to cherish the interests of literature and the sciences, and all seminaries of them; to encourage private societies and public institutions, rewards and immunities, for the promotion of agriculture, arts, sciences, and a natural history of the country; to countenance and inculcate the principles of humanity and general benevolence, public and private charity, industry and frugality, honesty and punctuality in their dealings; sincerity, good humor, and all social affections and generous sentiments among the people." These are archaic phrases, redolent of a more placid age, but God save this Commonwealth when other sentiments impel us to pursue educational objectives contrary to this constitutional directive and the ideals, human and divine, which inspired it.

A graduate from our schools finds himself protected on every hand by the legislation which our forefathers wrote to guarantee his right to choose his own work, to contract at will for payment, to acquire property and otherwise to enjoy the fruits of his toil. If these personal rights be struck down or arbitrarily interfered with there is a substantial impairment of liberty in its long established consitutional sense, a sense to which Massachusetts men made historic contribution.

Behind this tradition is the testimony of human reason in its highest moments of the wisdom of Greece, the law of Rome and the hopes of Israel. Behind it, above all, is the revelation made by Jesus and the traditions preserved by Christendom. The basic law of this Commonwealth, as our forefathers wrote it and as our courts have transmitted it, is religious in its spirit and in its very letter. Nowhere is the religious inspiration of the American tradition better

typified than here in Massachusetts. Again, the men who most contributed to the early building of our State subscribed to a theology which we of the ancient faith can only find heretical. They preached certain moral conventions which their own sons and daughters have felt impelled to relax as excessively austere. But question as one may their dogma and fret as one may at their restraints, for this may their names never die: The men who wrote the law of Massachusetts feared God and they were resolved never to fear any man.

They feared God with a holy and wholesome fear and because they did they wrote into the preamble of the constitution of their State devout words of homage to the Creator. They acknowledged their dependence on Him; they included in our State constitution, almost uniquely among such documents, a formal prayer for His direction in the mighty task of building the heritage that you will ask our children to remember with grateful loyalty. They feared God, and so they did not talk glibly, as our generation is sometimes prone to do, of a mere freedom to worship God, a freedom which they themselves had no intention of implementing. Rather, they wrote in the second article of their constitution words of duty as well as of freedom. They wrote, "It is the right as well as the duty of all men in society publicly, and at stated seasons to worship the Supreme Being, the Great Creator and Preserver of the Universe."

These men feared God, but they were determined to in no necessity of ever fearing man. And so they wrote in the 30th article of our State constitution their high resolve that this was to be a government of laws, not of men; of objective constitutional statutes, not subjective arbitrary impulses however high-minded or however immediately beneficial. They resolved that the moods and the passions of the people must never be permitted to overthrow the institutions which represent their own deliberate development and their own deepest convictions. Our written laws, basic among them our Constitution as interpreted by the judiciary, constitute at once the fruit of our deepest convictions and the safeguard of their survival.

These objective constitutional controls our forefathers committed to the courts. On no point should a people who cherish their freedom be more vigilant than on the character, the background and the philosophy of the judges appointed to these courts.

It was an act of almost superhuman prudence so to place in the hands of judges the security of our liberties. Elsewhere, even in constitutional governments, the judicial power is almost invariably subordinate to the legislative. Even in England, as Chief Justice Taney once remarked the courts are bound to enforce the acts of Parliament even if they believe them in conflict with Magna Charta or the Petition of Rights. But our forefathers built more wisely. They acknowledged in the executive and legislative branches of government only those powers specifically delegated to them in the Constitution and the interpretation of the Constitution they entrusted to the courts.

Most of these New England men, in the case of Massachusetts all without exception, had long since ceased, for reasons of sad history, to concur with the pronouncements of the Roman Pontiff. But all of them, I think, would have endorsed with full understanding a typical declaration broadcast in these latter years from the Vatican. It was a declaration directed primarily, of course, against the dictatorships of the hour, but it set forth a principle inconsistent with arbitrary and totalitarian government of any kind. The Holy See, said this broadcast, indicts attempts to subordinate juridical and legislative activity to the requirements of particular groups, classes, or movements for these must be subordinated in turn to the establishment of justice and to the service of society as a whole. Therefore, the Holy See condemns the political philosophy of those who dare to place the fortunes of whole nations in the hands of one man alone, or of one party subject to a man who, as such, is the prey of passion and error. It is essential that a preestablished set of laws be placed above the governor and the governed alike, far outside the reach of arbitrary action.

It was for like reasons that our New England forefathers providently impowered their courts to test, in accordance with well-settled and familiar principles of law and equity, every demand for political power, political action or for departure from tradition made by any executive, however wise or however popular, or by any legislature, however capable or however representative. Through their courts, as our forefathers constituted them, the American people themselves protect themselves against themselves.

Our courts represent, as one critic has said, "the settled habits of thought and action of our people." An executive might easily be powerfully influenced by the disillusion, the discouragement or the dreams and passion of the mob. He might be deluded by the siren song of the elusive future and forget the warning voice of the sane past. A Congress might easily be stampeded by a madcap outcry and a majority might readily be found to demand crude and even cruel legislation. And so our forefathers looked to the courts to decide whether a popular but passing whim had resulted in political action inconsistent with the considered and secure tradition. If so, even the majority must withdraw their demand or give their apparent wish the time for such patient meditation and cautious procedure as are required to revise the Constitution. But to override the Constitution, to despise the tradition, would be revolution and our forefathers, though they might and did revolt against men, permitted no revolution against the basic law. No political dream could be so dazzling, no social need so urgent, no executive so capable, no majority so overwhelming, that our forefathers would permit any or all of these to put aside the clarified tradition of the Constitution and its authentic interpretation. That is what the men of Massachusetts meant when they planned a government of laws, not of men. These prudent provisions were typical expressions of the shrewd conservatism of New England men, a conservatism sometimes gently mocked and sometimes bitterly derided, but a conservatism for which this Nation has more than once had cause to bless New England.

Thanks to it our forefathers accumulated in the corner of the world committed to their care a cultural and political heritage well worth conserving. It proved so well worth conserving that all subsequent peoples who came here, however otherwise they may have differed from the original colonists in religion, race, or temperament, speedily acquired, as with the air they breathed, the typical conservatism of this Commonwealth. It is not a static, reactionary mold of mind; it is a dynamic conservatism, the result of enlightened conviction, a conservatism bent on losing nothing of the good which the past has preserved for us and resolved to add to that good in transmitting it to those who, please God, may build a better future.

The conservatism of our forefathers in Massachusetts was not designed to enslave us in the name of the past, but it was calculated to save us from enslavement in the name of the future. It recognized that hard-won liberties can be speedily lost under the seduction of easily promised future advantages, and that the God-given heritage of the past and the sacred liberties of the present can be too readily sacrified in the name of a future which may never be and which perhaps were better not.

The conservatism of the Massachusetts heritage is particularly saving in time of crisis. It reminds us that there will be, when the tumult and the shouting dies, no new Heaven or new earth. It reminds us that the citizens of any brave new world to be will still be men, not gods. It reminds us that any future world can only be built out of whatever good survives from the past. It warns us never to hold lightly the good which our forefathers built so patiently in this Commonwealth, never to gamble with the liberties which are the heart and the soul of that good, never to permit religious faith to grow cold, the faith which taught us those liberties, never to forget the blessings on this Commonwealth by which Almighty God confirmed the wisdom of those who, in building it, honored Him and His chief creature, the human person.

Sometimes in the not so distant future the children whose schools you will visit in accordance with this education plan will begin to take over. They will write our new laws. They will interpret, modify, and amend the old laws. Their mentality will determine how much of the old will survive and what will be the direction of the new. It is well that you speak to them now, eloquently and persuasively, of the things you and I have recalled this evening. Make your voices clear and convincing, for by then other voices will be heard in our land.

These will be the voices of new prophets who spread a teaching forgetful of New England's God and of the reverence which Massachusetts had for the human person. These new teachers will bid our children write their law without reference to God and, ignorant of His Scripture with its warning that we put not our trust in princes, even those of the proletariat, they will propose sooner or later a government of men, of bureaus and commissions, not laws. They will talk little of the family, less of the sovereignty of parents and not at all of the dignity of personality. They will speak of race or class or partisan interests. They will repudiate the religious revelation which is the heart of our traditional faith and they will reject the legal concept of objective natural law which was the heart of our tradition of political freedom. They will have no voice for the phrases which meant so much to our Founding Fathers that they enshrined them in the basic documents of our national life, phrases which spoke of natural law and of God's authority, "the laws of nature and of nature's God."

Alas, it may be that these phrases will have no meaning for many who will seek to write and to construe the law of our land on matters of every kind, even those affecting our lives, our fortunes, and our sacred honor. Already people tell us blandly that our Supreme Court is no longer a natural law court or, concerning certain legislation governing education and partially moral matters, they assert that although citizens may singly reverence God and cherish the moral law, the community is not concerned with sacred values or with our religious heritage.

All this may be. But at least in this month when we commemorate the authentic heritage of Massachusetts, let us remember that it was not always so. The men who founded our courts and who wrote our basic law did not believe it so and that is one of the chief reasons why our courts exist. Our democracy may become amoral or unreligious in days of confusion and indifference. But in the days of its original inspiration and initial strength it talked of the endowments which the human person has from his Creator and of his consequent accountability to

God. It may be that our children will not always discern the blessings of God on the faith of their fathers, but if they doubt the wrath of God on those who forget that faith and desert its social corollaries, then let them advert to the military, economic and political preoccupation which were left behind us at the doors of this hall and to which all too soon we must return. No defense of the Massachusetts heritage and of the values which it taught our forefathers could be more effective than the present straits to which certain new prophets, contemptuous of faith and freedom alike, have reduced the world.

Hence the great importance of the positive work of education to which this month the Massachusetts Bar Association has dedicated itself. I pray that the education campaign in all our schools will have as its result an increased respect on the part of our children for public authority and particularly for the majesty of the courts. In this connection we who preach and who hold public posts have an urgent obligation to give the best possible example by emphasizing the dignity of public office, the sanctity of public authority, and the legitimate title to special respect of those who wield it in the executive, legislative, or the judicial branches.

You and I do not believe in the divine right of kings as did the Absolutists, but there is still a divinity hangs about a king if only because he holds authority which comes from God. We, who prefer democratic traditions pay no tribute to democracy when we strip the wielders of civil authority of a dignity and even a divinity which surrounds them, too, so long as they hold as the designees of the people an authority which still comes from God. We must not forget this simply because they sometimes forget it themselves. Perhaps our public officials will be more mindful of the truly sacred character of their trust when those who elect them have been taught in our schools the divine roots and the sanctity of these trusts and have thus become a little more reverent about public authority and a little more wary, therefore, about those to whom they commit it.

In any case, God's standard requires that even in a democracy we think twice and twice again before we threaten public order by pot shooting at the persons or the policies of those who duly hold public office. It is sound democracy to point out that a President or a justice is perhaps no better a man than any one of us, but it is bad morality and bad democracy to forget what the Presidency is and what the majesty and dignity of the office of a judge. Even democracy punishes contempt of court no matter what the private merits of the man who is the judge.

All these things and much more besides the Massachusetts Heritage Month will teach our children. May they learn the lessons well, among them the lesson of how in the Massachusetts tradition we look to the church to inspire us concerning our divine origins and destiny; we look to the school to transmit the knowledge that our fathers developed from reason and revelation; we look to the courts to preserve and protect us in the exercise of the rights and duties arising from these. It is particularly important that the children learn these things at a time when so many and sometimes necessary impulses direct them to look to the heritage of other peoples to learn new wisdom. It is well that for at least a month each year we should direct their attention to the heritage of their own people to meditate the old sanity. During this month reminding them of the Massachusetts Heritage, teach them that they do not need to journey far afield to learn how to build the good society.

This is a good place that we have here. It has firm, humane, divine foundations. Let them begin to plan their future in the light of the lessons of their own heritage here.

The March of Bigotry in the United States

EXTENSION OF REMARKS
OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, May 5, 1955

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the third and fourth articles entitled "Hate, Inc.," written by Mr. Jack Steele, of the Scripps-Howard newspapers. I inserted Mr. Steele's first two articles in the RECORD of May 3, and they appear on pages A2972 and A2973.

These articles deal with the march of bigotry in the United States. They are most interesting and illuminating, and have been appearing in recent issues of the Washington Daily News.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Daily News of May 4, 1955]

HATE, INC.

(By Jack Steele)

A NEW GENERATION OF HATE HAWKERS

Some of the hatemongers who flourished in the 1930's have retired or gone to seed, but new ones have grabbed up their besmirched banners.

Of these newcomers some were lieutenants or disciples of pre-World War II bigots. Others, with curious ease, drifted into the hate business from military service—sometimes after a taste of wartime intelligence work.

Still others turned aside from respected careers as their prejudices suddenly erupted from long-hidden wellsprings.

Here are some of the postwar neophytes in the hate cabal:

Conde McGinley

An oldtime admirer of Father Charles E. Coughlin, Mr. McGinley began his activities in 1946 with a little paper called Think. He soon changed its name to the equally inappropriate Common Sense.

Mr. McGinley and Common Sense—which now boasts it is the most widely circulated paper of its kind in the world—were prime targets of the House Un-American Activities Committee's staff report on neo-Fascist and hate groups issued in December.

The report had this to say about Common Sense: "The most vitriolic hate propaganda ever to come to the attention of the committee."

It described Mr. McGinley as "a modern example of the racketeers who made a business out of un-American hate propaganda during the 1930's."

Common Sense is a fountainhead for anti-Semitic and anti-Negro propaganda. Its abusive articles are widely quoted and reprinted by other hate sheets. Other rabble-rousers, old and new, find it a ready market for their diatribes.

Mr. McGinley last year spread his hate into politics and public affairs.

Issues of Common Sense were trucked into Maine in a futile effort to defeat Senator MARGARET CHASE SMITH, Republican.

Material put out by Mr. McGinley's Christian Educational Association was used against Senator CLIFFORD P. CASE, Republican, in the New Jersey campaign.

Special anti-Negro issues of Common Sense were circulated in areas where school strikes were staged against the Supreme Court's antisegregation decision.

Mr. McGinley pulled all stops with a newspaper-size broadside entitled "The Coming Red Dictatorship." It featured pictures of 36 prominent Jews, many of them officials of the Eisenhower administration.

Its headlines screamed: "Asiatic Marxist Jews control entire world as last world war commences—thousands of plotters placed in key positions by invisible government."

Mr. McGinley, in a recent fund appeal, boasted that he had printed and distributed 470,000 copies of this document from his Union, N. J., headquarters. He ended the appeal with the assurance that names of contributors would be kept secret.

The Un-American Activities Committee summed up its report on Mr. McGinley this way: "It is regrettable that any American may have contributed to the perpetuation of such a hate factory."

An all-Christian jury in Newark, N. J., last month awarded Rabbi Joachim Prinz a $30,000 verdict in a libel suit against Mr. McGinley. The award included $25,000 punitive damages. The jury held that Dr. Prinz had been labeled falsely as a "Red" in Common Sense. He headed the Jewish community in Berlin before being driven out by the Nazis.

Robert H. Williams

This California pamphleteer and hate-sheet editor parades his bigotry under the guise of "intelligence." He advertises that his former service as an Air Force counter-intelligence officer makes his publications, vital for governors, mayors, police and "citizens interested in preventing sabotage and revolution."

But the Un-American Activities Committee reported that his intelligence duty consisted of less than a year as administrative officer for a bomber wing—a post where it said he could have received no information about "the Communist conspiracy."

The Air Force canceled his Reserve commission in 1950 for the best interest of the service.

His Williams Intelligence Summary is openly anti-Semitic. It is billed as "a monthly report on political and military developments, especially revealing the Jewish influence in these developments."

His pamphlet Know Your Enemy opens with the declaration: "This publication attacks no man because of his race, but it spares no subverter because of his race."

In it Mr. Williams suggests that all Jews should be interned in New York and strategic areas. Then, he argues, these areas would not be bombed by the Soviet.

Some of his phantasies are even more outrageous. He has charged that Jewish Gen. Curtis LeMay arranged to drop the first 2 atomic bombs on the "only 2 sizable Christian centers in Japan."

Mr. Williams reported in a recent fund-begging letter that he was running in the red and might have to quit.

"Have I failed in giving you the earth-shaking truth?" he asked.

"I can't believe it, for I find not a line in recent newspapers and magazines about the greatest news story of all time; the swift destruction of the Anglo-Nordic West, the Christian civilization, through the trickery and financial power of a handful of Jewish manipulators who have all but made themselves masters of the world."

Frank L. Britton

Also a Californian, Mr. Britton is one of the smoothest of the new hate peddlers.

His sheet, The American Nationalist, is a tabloid, printed on slick paper and splashed with color. Its format easily might be mistaken for the two most widely read publications in the Los Angeles area where he operates—Variety and The Hollywood Reporter.

Mr. Britton also runs a boycott campaign against Jews through a front group called the New Confederates. His color comic strips

feature Uncle Sam in a pose copied from familiar "I Want You" recruiting posters. In Britton's comics, Uncle Sam offers advice like "Buy Gentile" and "Boycott Jew Stores."

John O. Beaty

Mr. Beaty is professor of English at Southern Methodist University in Dallas. As a war-time colonel in Army intelligence, he helped prepare daily G–2 reports for the White House.

But his book The Iron Curtain Over America has been described by a Methodist minister, the Reverend Ralph L. Roy as "the most extensive piece of anti-Semitic literature in the history of America's racist movement."

Issued in 1951, it has gone through 15 printings and sold more than 50,000 copies. Most newspapers failed to review it and bookstores seldom display it, but it is constantly plugged by hate-sheets.

Gerald L. K. Smith called it "the most sensational book of this generation" and paid Mr. Beaty and his publisher $3,767 in 1952 for copies Mr. Smith presumably resold.

Mr. Beaty denies that he is anti-Semitic. In "Iron Curtain" he explains why. Its theme is that most European and American Jews are not Jews but "Khazars."

His theory—also endorsed by some other haters—is that these Jews are descended from a Mongol tribe known as Khazars who adopted Judaism.

(Reputable historians say this is bunk. They agree that the Khazar tribe was scattered or destroyed centuries ago.)

But Mr. Beaty soberly parades the Khazar thesis. After an opening chapter glorifying Prussian militarism, he blames the Khazars for the New Deal, World War II, Communist subversion, and what not. And in footnotes he quotes such authorities as Mr. McGinley's Common Sense.

Charges that he is anti-Semitic are absurd, he maintains, since "the Khazar Jew is himself not a Semite."

Mr. Beaty's attack on Jews—whether Khazars or Semites—are not confined to this book. Hate sheets carried letters from him last fall declaring that Christmas had become a buying orgy in which money passes from Christian into non-Christian hands.

Jack B. Tenney

Former chairman of the California Committee on Un-American Activities, Mr. Tenney is a recent convert to the hate brigade. He lost his seat in the State senate last year after a campaign in which he attacked Jews.

He once called Gerald L. K. Smith a racial agitator, but in 1952 was the vice presidential nominee of Mr. Smith's Christian Nationalist Party. Mr. Smith contributed to his campaign and Mr. Tenney now writes for Mr. Smith's, The Cross and the Flag.

Mr. Tenney also denies that he is anti-Semitic. But he has written three pamphlets attacking Jews; Zion's Fifth Column, Zionist Network, and Zion's Trojan Horse.

Eustace Mullins

Mr. Mullins is a free lancer of hate. A Virginian in his early thirties, his bigoted articles have appeared since 1951 in Common Sense and other hate sheets.

In 1952 an article entitled "Adolf Hitler: An Appreciation" appeared under his byline in the Bulletin of the National Renaissance Party, since branded by the Un-American Activities Committee as "neo-Fascist."

Mr. Mullins worked briefly for the Library of Congress as a photographic assistant. He was let out in 1952 after Library officials learned of his bias.

[From the Washington Daily News of May 5, 1955]

HATE, INC.

(By Jack Steele)

THE RELIGIOUS BIGOTS SPOUT THE SAME LINE

Prejudice is a disease that infects people of every religion, creed, and race.

There is no common denominator to help classify the sources—any more than the targets—of the voices of bigotry now being raised in the United States.

Individual Catholics, Protestants, and Jews are among those who cook up hate and abuse, just as these groups are among its victims.

A Protestant bigot, Edward James Smythe, is credited with this bit of doggerel which illustrates how the freebooters of scurrility attack every other group and then cloak their hate with some real or imagined menace:

"God bless America.
The Jews own it.
The Catholics run it.
The Negroes enjoy it.
The Protestants founded it."
But the Communists will destroy it.

The hate fanatics use religion as others do patriotism and anticommunism as a cover for their bigotry. One hater, Elizabeth Dilling, even invented the alias of the Reverend Frank Woodruff Johnson as a byline for some of her "literature."

Here are several of the fanatics who are spreading suspicion and loathing today:

Father Leonard A. Feency

An excommunicated Catholic priest, Father Feeney for several years has run noisy hate rallies on the Boston Common with a little band of disciples he calls "slaves of the Immaculate Heart of Mary."

He might be written off as a minor local nuisance except that:

He puts out a vitriolic little sheet The Point which he mails—with or without request—to a growing list of Catholics.

Groups of his followers have sprung up, and have had brushes with the law, in several other eastern cities.

Father Feeney aims his hate at Protestants and the Catholic hierarchy, but mostly at Jews.

A recent issue of The Point denounced the Catholic Church for deserting the "ancient dogma" that all Jews are eternally "cursed" and criticized leading Catholics by name for associating with Jews.

It hailed the Spanish Inquisition as a "glorious institution."

In another issue, Father Feeney—using materials lifted from other hate sheets—sought to label the Jews as "the secret strength of communism." "Jews are behind communism."

Titles of other recent articles in The Point include American Gentile and the Jews, Uncle Sam and the anti-Semites and the Monkeys and the Jews.

The Point often attacks Protestants and protestantism. Last fall it denounced Massachusetts Gov. Christian Herter, Republican, on grounds that he was a Mason. It has suggested that it is an unqualified mortal sin for Catholics to see the movie Martin Luther.

Father Feeney was a gifted author. Once literary editor of the Catholic monthly America he has written pleasant poetry and a widely read little book titled "Fish on Friday."

The Catholic Church has done all in its power to discipline him since he shifted to bigotry.

Archbishop Richard Cushing unfrocked him for preaching the doctrine that there is no salvation for non-Catholics. The Jesuit Order expelled him. The Pope finally excommunicated him.

His headquarters, St. Benedict's Center, once was a study house for Catholic students at Harvard. Now Catholics are forbidden to enter it.

Rev. Gerald B. Winrod

This man ranks close to Gerald L. K. Smith as an old pro. For more than 20 years Winrod has blended bigotry with Protestant evangelism and made it pay handsomely.

He started out attacking Catholics. After a visit to Hitler's Germany in 1935, he took up anti-Semitism. He was linked with most of the prewar hatemongers and was a defendant with them in the sedition mistrial.

In 1940 Reverend Winrod was accused by the House Un-American Activities Committee of joining forces with George Deatherage and others to form a united Fascist movement.

He still operates from Wichita, Kans., an organization he calls The Defenders of the Christian Faith.

During the postwar recession in bigotry, Reverend Winrod soft-pedaled some of his venom. He devoted his monthly Defender magazine—which has an estimated circulation of 100,000—largely to sermons, Sunday school lessons and religious tracts. He went in heavily for plugging alleged cures for cancer and other diseases—cures which some medical authoritics have branded as dubious or worse.

He also began to pay more attention to his Defender Missions, chiefly in Puerto Rico where he operates a seminary and several hundred chapels and puts out a Spanish edition of his magazine called El Defensor Hispanol. He even opened a mission last year in the Near East to evangelize the Arabs.

Reverend Winrod returned to blatant bigotry in the 1952 campaign when he joined the hue and cry of the smearers against President Eisenhower. He charged that Ike was the choice of the international Jewish banking fraternity for President.

Among his fund-raising gimmicks are "prayer-circle letters" mailed to his followers. A recent letter offered to send contributors copies of a brochure by John O. Beaty answering "attacks on him, me, and others calling us members of the Protestant underground."

Rev. Harvey H. Springer

"Cowboy" Springer is another of the flock of Protestant fundamentalists who also preach hate. Since 1935 he has spread evangelism and bigotry from his headquarters, the Baptist Tabernacle at Englewood, Colo., a suburb of Denver.

He is a hellfire and brimstone preacher who often makes evangelical tours of the South. He also is a shrewd businessman who has formed many organizations to foster his activities. They include the Rocky Mountain Evangelistic Association, the Soul Winning Bible Institute, the Protestant Information Bureau, and the American Protestant League.

He operates a 160-acre Christian Youth Roundup Ranch near Denver and has incorporated a $250,000 stock-selling venture for a home for the aged.

Reverend Springer, who is credited with once saying that Catholicism was a worse menace than communism, has developed a split psychosis over Senator JOSEPH R. MCCARTHY, Republican, of Wisconsin.

A recent editorial in his hate sheet The Western Voice developed the theme that a religious controversy was raging over Senator MCCARTHY. One side argued that Senator MCCARTHY is the only barrier against communism, he wrote, and the other that Senator MCCARTHY is a tool of the Pope.

"There is some merit on both sides of the discussion," Reverend Springer wrote, carrying water on two shoulders.

Reverend Springer, constantly has attacked Catholics. For a while he abandoned antisemitism, but recently has been assailing Jews again.

Gerald Smith explained Reverend Springer's change of heart in an article in The Cross and the Flag titled "Prodigal Returns."

He wrote that Reverend Springer, after assuring him years ago he "understood the Jewish problem," later had a resolution adopted in his church condemning antisemitism. Gloating that Reverend Springer

now was "taking swings at Jews again," Mr. Smith added:

"So, God bless you Harvey. Welcome home."

Benjamin H. Freedman

Mr. Freedman is a wealthy, retired cosmetics manufacturer.

His association with hate publicists has been inexplicable and controversial.

He sided with the Arabs in the feud over the creation of the state of Israel.

He has insisted that he is not anti-Semitic but only anti-Zionist, meaning anti-Israel.

He has contributed money and articles to the stridently anti-Semitic hate-sheet Common Sense. And he is widely quoted and praised by some racists—often in an effort to prove they are not anti-Semitic.

Mr. Freedman was the prime mover in the abortive attempt to block confirmation of Mrs. Anna M. Rosenberg as Assistant Defense Secretary. Active in the same cause were Gerald Smith and Mr. Smith's legislative representative, Wesley Swift.

Mr. Freedman witnessed the statements—alleging that Mrs. Rosenberg once had been a member of a Communist-front group—which induced the Senate Armed Services Committee to reopen hearings on her confirmation. It all turned out to be a flimsy case of mistaken identity.

Under questioning by the committee, Mr. Freedman admitted he had given more than $15,000 to Conde McGinley to finance Common Sense.

He later turned out a longwinded account of his role in the case and, writing in third person, explained his relations with Mr. McGinley as follows:

"In 1948 Freedman met McGinley. They found they had much in common. Freedman became interested in Common Sense as one of the most aggressive organizations fighting Marxism (communism) * * *. Since 1948 Freedman has given unsparingly of his time and effort to increase the circulation of Common Sense and has advanced a small fortune for that purpose."

Mr. McGinley recently returned the compliment in a fund-begging letter in which he lamented that Mr. Freedman was no longer able to help finance Common Sense.

"Mr. Freedman was the pioneer in awakening people to the Zionist conspiracy," Mr. McGinley wrote. "He is one of the few most valuable patriots alive."

Facts Forum Public Opinion Poll

EXTENSION OF REMARKS

OF

HON. GEORGE A. SMATHERS

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Thursday, May 5, 1955

Mr. SMATHERS. Mr. President, Facts Forum conducts from month to month a public opinion poll in order to find out what people are thinking about current issues.

From time to time the results of this poll have been published in the Appendix of the RECORD as being of especial interest to the Members of Congress.

I have received the tabulation of the final results of the February poll, which deals with 14 questions, some of which are major issues before the Nation today. All of them, I am sure, will prove stimulating as well as interesting.

Therefore I ask unanimous consent that this tabulation be published in the Appendix of the RECORD.

There being no objection, the tabulation was ordered to be printed in the RECORD, as follows:

	Percentage Yes
Should we substitute an executive council for the Presidency?	8
Does the United States need constitutional protection from treaty law?	81
Is communism gaining more in cold war than is possible in hot war?	83
Is it really un-American for press, radio, and TV to suppress news?	74
Have we lost control of our Government to unelected officials?	64
Should the public schools accept aid from the Federal Government?	30
Is calling our economic system the free-enterprise system a misnomer?	49
Can America defend itself without allies?	53
Will there be another stock-market crash like 1929?	21
Should we blockade Red China as Senator KNOWLAND recommends?	72
Would one-world government prevent war?	8
Is foreign-aid spending a part of the plan to destroy the United States of America?	67
Did the recent Senate censure hearings change your opinion of Senator MCCARTHY?	7
Are Communists in the United States conniving to promote juvenile delinquency?	83

Price Supports for Basic Commodities

SPEECH

OF

HON. JAMIE L. WHITTEN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1955

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 12) to amend the Agricultural Act of 1949, as amended, with respect to price supports for basic commodities.

Mr. WHITTEN. Mr. Chairman, I, too, regret that the time is limited so that we cannot go into this subject fully and completely. Involved in this amendment is the whole price-support program.

Mr. Chairman, it is not my desire to condemn anyone here. The candy manufacturers want cheap supplies, though they do not promise to pass on to the consumer any savings they might have from reduced peanut prices. It is always quite natural for people to try to secure cheap raw materials or to buy cheap, as they are doing. I suspect it is increased profits they are really interested in. If we here today could have the income, as individuals, that we do have and if the cost of living was like it used to be, we would be well off. It just will not work that way. We are dealing with people when we deal with the farm program. When virtually everything else is protected we cannot leave the farmers' prices or income out without bankrupting him. We left the farmer out until about 20 years ago.

During the period of history of this country when we were leaving agricultural commodities without protection, we were providing minimum wages and protective tariffs for others; and we exhausted one-half of the natural resources of the country. We wore the land out. The farmer's lot was a hard one. The price support program was passed in an effort to assure at least some fair return to the farmer. I think all will agree that only under the farm program have agricultural people been able to live somewhat like others.

Mr. Chairman, I repeat, involved here is not peanuts as such. Involved here is a segment of the American people with low incomes, whose livelihood depends upon the growing of peanuts, and a fair return for them. If we do not pass this bill, we make bad matters worse. We would thereby injure the farmer without in any way helping the consumer. The difference to the farmer would be a reduction in his present low income of about 16 percent, but to the purchaser of a bar of candy it would mean only about one mill and there is nothing to show such mill would be passed on to the consumer. You know it would not be.

Farm program opponents are making headway to destroy it. May I say this. Already those farmers, or many of them producing perishable commodities, since section 32 funds are used to support and export their products, believe they have no interest in retaining firm supports on basic commodities. And yet they will later find that agricultural programs even for them will stand or fall with the whole farm program.

If farmers growing peanuts are then separated by this amendment from other farm commodities, then wheat, cotton and the rest will feel the effects, too.

The farm program is essential to the welfare of the Nation. Only by a reasonable income can the farmer put back into the soil a share of what he takes out. His income today is terribly low. The President says we must do something for him. There are only two real ways to help, to increase his acreage and to increase his price. To justify increasing production, we must sell; and the Department of Agriculture won't sell. Then when we try to help even a little bit with price, the administration is here opposing that.

President Eisenhower says we must help the small farmers. These are small farmers with an average of less than $1,500 gross per year income. Now is the time to at least hold what they have.

Life Behind the Iron Curtain—Status of Women in the Soviet Union

EXTENSION OF REMARKS

OF

HON. FREDERICK G. PAYNE

OF MAINE

IN THE SENATE OF THE UNITED STATES

Thursday, May 5, 1955

Mr. PAYNE. Mr. President, I ask unanimous consent that two columns by May Craig, Washington correspondent for the Guy Gannett newspapers in

Maine, based on her recent trip to Russia, and discussing the status of women in the Soviet Union and the dreary life led by our embassy staff in Moscow, be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Portland (Maine) Press Herald of May 2, 1955]

BEHIND THE IRON CURTAIN—BROOD MARES AND BURDEN BEARERS

(By May Craig)

Moscow.—Women do not have equality in Russia, though they tell you so and point to the constitution. Women are the brood mares and the burden bearers. Americans are shocked when they see women doing the heavy work. In the streets middle-aged and old women, bundled in shapeless dirty clothes and big rubber boots with felt tops, do the shoveling of snow, work in the drains, sweep endlessly with the primitive brooms made of twigs tied to a stick.

In the foundry of the Stalin Auto Works, 31 years old, the first plant to make cars in the U. S. S. R., women handled heavy metal forms, at top speed. Piecework (by the group), speedup, lack of safety devices, lack of light, struck me in this plant. Our Marian Martin, who is an expert on industrial safety, would have been appalled to see it. The floor was full of holes, debris stood around, men and women handled forms and even worked with the molten metal without any gloves. I did not see a single pair of heavy-toed shoes. Some few men working with molten metals had goggles, but not the efficient kind we have.

There were a few women with pants, but most wore skirts, though they were short. The clothes were nondescript, though I saw some coveralls in the auto-assembly line that looked alike, including one woman, who wore gloves. The women's clothes were dirty, usually a sweater or jacket underneath, because it was cold, a soiled cotton dress, scanty and short, and some sort of black canvas apron. Their shoes were also nondescript, worn, usually flat slippers, entirely unfit for standing and walking in heavy work on the broken concrete floors, or to support the feet. All wore the kerchiefs on their heads, which are the universal headgear of women here. Seldom does one see a hat; even the few you see, mostly on guides, are not becoming or stylish and are dark, dull colors.

The auto-assembly line and the bicycle line seem efficient. I asked the manager, who had been in the United States, what his annual production is, and got the usual evasive answer. Through the interpreter he said a truck came off the line every 5 minutes and a bicycle every minute. That made 192 trucks a day, the interpreter said, and there were 300 working days a year. They work 6 days a week, 8 hours a day in this "workers' paradise."

They make only commercial trucks here, no military. A bicycle sells for equivalent of $150, but since the rate of exchange is so exorbitant this is not a true selling price. A girl who works on the bicycles would have to work 20 days to buy one, that is a better sample. Most girls on the bicycle assembly line had stools to sit on, but they worked fast. They had compressed air tools to rivet. After the frame of the bicycle was together, of course they worked standing. The manager knew all about the English bicycles displacing the American type in the United States.

There are 35,000 employees in this plant which also makes refrigerators, though we did not see that department. The manager said they had nurseries for working mothers, and schools not only for children but for the workers who wanted to study. Many adults are studying, manager said.

They live in adjacent apartment houses, usually two rooms to a family with a small kitchen and toilet. Buildings are a good many stories high and have elevators. Rents are low and there is free medical services.

They do not either import or export bicycles. As I came away I saw edges of the stone steps broken away, making accident hazards. I did not see a single fluorescent light in the plant, though they had them in the Pravda newspaper plant.

Everywhere there are statues and pictures of Lenin and Stalin. This is often not the grim Stalin in uniform that we are familiar with. There are paintings everywhere, including airports, of a Father Stalin, smiling, in white clothes, standing in a rural scene, or with idealized factory line in the distance. He looks up and away, to the future; sometimes he is with children, benign and gentle.

Everywhere we go, the camera devotees of our party are told what they can take pictures of and what not. There seems no rhyme or reason to what they can take and what not. Since we are strictly supervised everywhere we go I have seen nothing that had any security value, so we might as well have taken all. There are no maps of the city; no maps of Russia. Our tour director was even worried because some of the editors bought ordinary atlas maps before we got into the Soviet. None of the airline maps show Russia in detail. There is no telephone directory—unless you know the number you are out of luck. The operator at this hotel did get the American Embassy for us without our knowing the number. These are little things that surpirse Americans, accustomed to our free and easy life. Overseas telephone messages can get through, with luck, and are fairly clear.

[From the Portland (Maine) Press Herald of May 3, 1955]

BEHIND THE IRON CURTAIN—YANKS IN RUSSIA HAVE A DREARY LIFE

(By May Craig)

Moscow.—Our Embassy staff has a dreary life here. Most of them speak Russian in some degree, some fluently. We are fortunate in having as ambassador, Charles E. Bohlen, a career diplomat, who knows Russia and the satellite area well. The representatives of the free nations have only the most formal contact with the U. S. S. R. officials. They see them when they officially request it; they see them rarely at an official function.

Our Embassy staff is especially isolated because so few Americans come. There are some British businessmen who come hoping for contracts, but since the cancellation of most of the contracts made by Malenkov for consumer goods, this hope has waned. We are the only Americans in Moscow now. One morning when we first came, and two of us were wrestling with how to make the floor matron understand that there was no heat in our bathrooms, two young men came down the stairs and said in oh-how-welcome American: "Can we help you?" They were students from Columbia University who had been studying Russian and had a month's visa to travel in the U. S. S. R.

The ambassador gave a cocktail party for our editors' group at the handsome Embassy, with marble columns and floors—and it was warm. Moment we get to an American place we know it—because it is warm. Naval attaché at the Embassy is Capt. William M. Sweetser, of Portland, who has four sisters living there and in Cape Elizabeth. He will be coming home next year and expects to be stationed in Boston for a tour.

Military and naval attachés are regarded by the Communists with especial suspicion, because the party line is that the United States is a warmonger, plotting the destruction of the peace-loving Communist world. At the party were several American newspapermen—there are only five here—and a few Russians. They are often invited, but the host never knows whether any Russian will show up. Of course, these were not top people, at the cocktail party, only those having to do with protocol and information. The staff were all eager for news from home, real news, not just what is in the papers they get and it is always a battle between them, hungry to talk about home, and us, here to get foreign information.

The Ambassador was very cordial and said he would do anything he could to help us—which isn't much because we are strictly supervised in everything we do and we never did see any official of the U. S. S. R. Government.

The Ambassador chuckled as he added: "If any of you get arrested, I'll see that we write a good stiff note about it." There was an undertone to this, however, because we know, back home, that about all we can do, except go to war, is write notes to this adamant regime when they down our planes, imprison American citizens, or commit other acts of international discourtesy.

With it all, we have fun. This is a very congenial group and being in this hostile country we tend to draw closer together. While we complain about no heat, poor food and service and plumbing, the lumpy beds, the eternal evasions and delays that attend our requests for what we want to see and where we go, we have fun. We chatter and laugh in a way that makes the Russians look at us in surprise. The faces here are all alike—stolid, sober, anxious, enduring. Once, on the subway, I saw a girl talking to a young man and they smile the smile of every young man and maid. Our guides smile, but that is a professional smile.

Our last dinner in Moscow we celebrated and the waiters, whose sketchy English was matter of fun, as our struggles to talk in Russian, German, and French, joined the hilarity. They produced a baked Alaska for the Americans to replace the inevitable vanilla ice cream. Everybody drank toasts in "wodka," as we learned to pronounce vodka—I am not much of a drinker, so the one small glass lasted through all the toasts.

Waiters will accept tips without hesitation, but we were told not to offer money to the help on the floor because that is not good party manners. I left some small toilet articles I did not need, such as nail polish, soap, Kleenex, small tube of shampoo, and the maid was pleased, though I had to tell her in sign language what they were. The embassies where we have visited in our trip have helped us with little things from the commissary when we ran short. Cigarettes, toothpaste, band-aid, and such, for which we paid, of course. One editor from Texas wore high-heeled, pointed-toe Texas boots which made a great hit when he tucked his pants into the tops and wore the astrakhan Russian cap he got from a Russian in return for his 10-gallon Texas sombrero—but the shoes gave him a blistered foot after he had walked a few hundred miles through museums, cathedrals, and palaces, so the band-aid helped. When the Russians wear us out in this sort of thing, it uses the time we might try to spend seeing officials and other places.

Home Economics Research

EXTENSION OF REMARKS

OF

HON. THOMAS L. ASHLEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1955

Mr. ASHLEY. Mr. Speaker, I should like to direct the attention of our colleagues to the following resolution adopted by the Ohio Home Economics

Association at its annual meeting on April 23, 1955:

The Ohio Home Economics Association with a membership of 1,014 members, in session at its annual meeting in Toledo, April 23, 1955, goes on record as strongly protesting the realinment of home economics research in the USDA as set forth in Administrative Order 101.1 issued by Dr. Byron T. Shaw, Administrator.

This protest is made after long and careful consideration by home economists to Dr. Shaw's directive: "that you (Dr. Steibeling) proceed at once to shift the emphasis in research in human nutrition and home economics so as to strengthen our program in foods and nutrition."

We agree that foods and nutrition need to be strengthened but not at the expense of "discontinuance of research in Home Economics Research Branch relating to operating characteristics and performance requirements of commercially produced household equipment and appliances and the preparation of popular and semipopular publications on the selection, care, and use of such goods", "the discontinuance of research in the Home Economics Research Branch relating to selection, design, construction, maintenance, and household reconditioning of clothing and household textiles articles, and the preparation of popular and semipopular publications on the subject."

Since home economics research is located in the Department of Agriculture, the Department currently carries responsibility for supporting all phases of home economics, not only those directly related to utilization of agriculture products. We therefore request, in the best interest of the public, that the Secretary of Agriculture call upon a group of homemakers and professional home economists to review this surprise action and to make plans to: (1) restore the current aspects of the program being discontinued, (2) review the use of the funds in the best interest of homemakers, (3) formulate a long time plan for expanding the home economics research program.

We want to clarify the Agriculture Research Administrator's statements that there is misunderstanding of the issue on the part of home economists. We understand the problem, and we protest the attempt to confuse the issue and make it appear that the complete elimination of research in certain important aspects of homemaking is "of great importance to home economists and to the Nation's families."

We also respectfully urge that Members of Congress study and consider where an adequate program of this important work of aiding millions of homemakers can and should be carried on in the Federal Government.

MARY ELIZABETH HUCK,
President, the Ohio Fuel Gas Co., Columbus.

DOROTHY ELLEN JONES,
Vice President, the Cleveland Board of Education, Cleveland.

BETTY LOU KOOGLER BRADY,
Secretary, Homemaker, 640 Parknoll Road, Dayton.

LILLIAN NELSON,
Treasurer, Marietta College, Marietta.

Dr. HAZEL PRICE,
News Editor, Homemaker, Westerville.

Dr. DOROTHY SCOTT,
State Councilor, the Ohio State University, Columbus.

Members of the executive committee of the Ohio Home Economics Association.

The Postal Pay Bill

EXTENSION OF REMARKS
OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1955

Mr. DINGELL. Mr. Speaker, the postal pay raise bill in this instance has been made an instrumentality to test the average Member of Congress and to determine the mettle of which he is made. Since the beginning of this 84th Congress an effort has been made to reduce the pay raise from the 10 percent across-the-board proposal, with a retroactive provision, as advocated by myself in the House, and by my good friends Senators JOHNSTON and NEELY in the Senate. I have done everything down to the point of compromising with my conscience on certain provisions which I deemed essential to the welfare of postal employees. I believe my original thoughts were even more liberal than the provisions contained in the Johnston-Neely bill, but for the sake of uniformity and acceleration in passage and of collaborating with the distinguished Senators I introduced an identical measure in the House.

Now it was not sufficient for the so-called administration spokesmen and the White House to express disapproval and make known the President's displeasure. Nearly all, if not all, Republican leaders, and I am sorry to say a few, very few, Democrats have used the threat of a Presidential veto to discourage pay raise proponents. They have passed this on to House Members with such absolute assurances as to indicate direct expressions of the adverse attitude of the White House; namely, to the effect that the President would veto any bill above, as I recall, 6.5 percent, and eventually I believe this was raised to 7.6 percent.

At any rate, the Senate had passed a 10-percent raise with a retroactive provision and other features, which it sent to the House for action. The House, without any doubt on the score, declared itself fearlessly and positively by voting upon the three amendments of the gentleman from California [Mr. Moss] and approving them. One bore directly upon the reclassification feature, one was on retroactivity, and the other was to raise the amount of the percentage increase to 8.2 percent. There was no doubt about where the House stood on these questions nor was there any doubt as to where the Democratic and Republican Parties stood on the questions. The Republicans in the House almost to a man and woman, some of whom actually voted for their own 50-percent pay raise, alined themselves with the enemies of the faithful and devoted workers who serve the public so thoroughly and well under circumstances which are frequently not the best. The Democrats, on the other hand, true to form, voted in support of a fair and reasonable increase and stood by the postal workers, as they will by the classified employees of this same Government of ours when that question comes up for disposition a little later. This rankles in my heart and stimulates belligerency to do combat against the determined minority and the White House, and including President Eisenhower, all of whom have stood in the way of a reasonable increase for Government workers, and reaches the point where I am ready to accept the Presidential challenge and the threat of veto by putting it to a test.

Under the circumstances, there was only one thing which the House and Senate conferees could do as regards the amount of the pay increase. They had to take the maximum under the Senate bill and the maximum permitted under the House bill and compromise between the two figures. The figure of 8.8 percent is the total provided for and submitted to both Houses by their conferees as an essential part of the conference report. The House conferees, in fact, had no choice or latitude any more than did the conferees of the Senate. The rule of conference is to compromise between the dictum of both Houses. I have served on too many conferences not to know, and the House conferees of the Committee on Post Office and Civil Service, too, are familiar with this rule.

I resent wholeheartedly the use of a veto threat by the Executive, and that applies to any President whether of my party or not. I am positive that the veto can and will be overridden, if it occurs, and I would wager that the President will not dare to veto the measure. It is a parliamentary trick and threat which altogether too frequently boomerangs against the White House or presidential spokesman. It is one thing for the President to oppose and to plead, but it is quite another for him to repeatedly threaten the legislative branch which, too, has its responsibility. I take my responsibility as the Representative of the 15th District of Michigan very seriously and I attach great dignity to the course which I pursue in legislating for the benefit of the people.

I have held for years that it was the disposition of Congress to lag behind the needs of the workers, and this is not said in any derogatory sense because the demands altogether too frequently are excessive. The pie is only so big and the number of cuts per pie are limited. It is the responsibility of Congress to try as best it can to be liberal with Federal employees, with its wards, and all others who must come to Congress with their problems be they financial or otherwise, and Congress must cut the cloth according to a reasonable pattern. The budget does not always control. It is not the final word. Thus when we deal with an emergency and it concerns a balanced budget or a balanced ration for the hungry we must provide first against starvation. If it is a matter of the Nation's safety and security the budget again is secondary to survival. In this instance, with the postal and classified employees it is a question of trying to meet a condition and solving the problem and finding a means and a method of overcoming any deficit. I am willing to go to any

extent necessary to balance the budget, whatever the legitimate means may require.

The Presidental action as regards the pay bill which he vetoed after the 83d Congress went home was wanton, premeditated, distasteful, and unjustified, because Congress, too, has its responsibilities. The President could have vetoed the bill before adjournment despite the fact that pay action bills were delayed until the very last. I shall always remember this action and point out that that is not my way of legislating nor arriving at a responsible understanding between the executive and the legislative branches.

Price Supports for Basic Commodities

EXTENSION OF REMARKS
OF
HON. JAMIE L. WHITTEN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1955

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 12) to amend the Agricultural Act of 1949, as amended, with respect to price supports for basic commodities.

Mr. WHITTEN. Mr. Chairman, there are several things that we need to consider in connection with the farm bill. Price supports for farm commodities were written into the law by this Congress only about 20 years ago. The price support program was the result of a bipartisan effort, because all saw the need. It was an effort in this country of ours under dire necessity to give some degree of protection to those engaged in taking care of this country and in growing farm commodities. The Congress realized then and we need to realize now, that by law, we provide bargaining rights and minimum wages for labor. We give to the railroads and to business interests the right to reflect, in the rates that they charge, the costs of operation plus a profit. We protect many other industries. About 20 years ago it was recognized that we had to give some protection to those that were engaged in farming, to see that the high cost of other things that were used in our life, most of them protected by law, did not result in a continuing wasting away of our soil and natural resources and the destruction of our farmers. Price supports are tied to the effort to see that a reasonable share of the national income goes to those engaged in agriculture.

In that same law providing price supports for farm commodities, while we supported these commodities at a certain level and would reflect such price in domestic sales, it was provided that they be sold in the world markets at competitive prices. Our CCC losses and, yes, our reductions in acreage have come largely because we would not sell. I do not know a single case—and this is supported by the testimony of even the Department of Agriculture, including the Secretary—there is not a place in the farm-support program where the major cost has not been storage and carrying charges accumulated during periods when we did not offer the commodities for sale in world trade at truly competitive prices, as authorized and contemplated by law. The Secretary of Agriculture has authority to sell all these commodities in world trade and to make the price right. It is because we would not make our sales prices competitive that we have held American commodities in our own hands and paid this high storage. When offered in world trade most commodities have been offered at a higher price than would move them, all by decision of the Department of Agriculture and the Commodity Credit Corporation. That shortsighted policy has resulted in the high cost of the Commodity Credit Corporation operation. The Department now recognizes the effect of this policy. The Secretary of Agriculture only recently said that foreign production was increasing under our convenient price umbrella. But Mr. Benson said he would not change his policies prior to July 31.

Assistant Secretary Paalberg in a speech March 18, said the following:

We are competitive pricewise in the world cotton market only intermittently, in a series of unpredictable interludes. There is no better phrase to describe our position than the phrase used by the cotton industry itself—we are the residual supplier.

* * * * *

There is no question but that our pricing policies have given aid and comfort to our competition.

* * * * *

The United States, which now produces only about 40 percent of the world's cotton, cannot, by regulating its own production, satisfactorily determine prices and quantities for the entire world.

2. The three elements needed for effective selling are quality, merchandising, and a price that meets competition. We cannot, by improving quality and increasing our merchandising efforts, fully compensate for our inability to be competitive pricewise.

* * * * *

I might liken the cotton industry to a stool which needs three legs to stand upright—quality, merchandising, and realistic pricing. It can't stand permanently on just two legs, no matter how strong they're built.

These statements clearly show an awerness on your part of what is happening to us under present policy. And yet this policy is being continued by the Department, notwithstanding the provision contained in the CCC charter for sales in world trade on a truy competitive basis.

And yet Mr. Benson and the Department have authority now to make the prices competitive. Acreage, and the amount or volume of farm production, is tied to the movement of commodities. It is tied to the supply on hand and the supply that we sell.

The Department, by its own decision, in effect has agreed to hold what it has and not sell, for if you don't make the price competitive you don't sell. And then they count those commodities and reduce the farmer's acreage down, down, down. I say to you that the report that was issued by the subcommittee of the Agriculture Committee in the Senate quoted by the minority leader is erroneous. It is true as the minority leader says, the senior Senator from my State was chairman of that subcommittee. However, in my judgment he and the majority of his subcommittee are wrong.

There is no justification for calling on the farmers to vote for lower support prices just to get the department to sell for increased acreage must come from sales.

Support levels and acreage are two different things. Acreage depends upon the movement of cotton, the sale of cotton, and the sale of other farm commodities. Only in the sale and movement of these commodities can you increase acreage; and the Department won't sell because it will not use its authority to offer competitively in world trade. But to say to the American farmer that he has to agree to take a lower support price, before the Secretary will sell, is demanding a contribution from the farmer in order to get a change in policy by the Department. Price supports, in turn, are based upon efforts under the law to assure some fair return to the farmer.

Only a few weeks ago it was pointed out that the farmers of America have an annual income of less than one-half the income the rest of the population has in this country. The records show that in the next year farm income will fall by more than $1 billion. The national income in the same period will increase by more than $20 billion.

And yet under those conditions we are asked to have the farmer agree to accept even less of the national income. Why? In order to get the Department of Agriculture to change its policy. Its present policy is to hold and not sell. They have the authority to sell and they admit the ill effects of holding our commodities above world competitive prices, by which we provide an umbrella for the rest of the world; and believe me, our American investors are taking full advantage of such policy. They are expanding their production in foreign countries. Why? Not because of high supports in the United States, because if you supported at 125 percent of parity, the Secretary of Agriculture could sell competitively in world markets. And if you reduced price supports to 50 percent of parity you would be in the same predicament we face now, as long as the policy of not selling competitively which is now in existence, continues.

Mr. Benson says he is not going to change his policy before July 31. He says that it is ruining us, but he says he will not change it. He is not going to offer these commodities competitively. You say perhaps we could not sell them. Well, we got them last year to offer some minor commodities for sale in world trade on a competitive basis. What happened? We sold them for dollars, 453 million American dollars. Foreign countries do have the dollars. They do not buy in our market, because we hold our prices above foreign prices, but not because of your support law. Your support fixes the amount of payment for these commodities that goes to your farmers, but in no way restricts the price at which we can sell in foreign markets.

In trying to help in this pitiful situation, your President pointed out only a week or so ago that many, many farmers have less than a reasonable income on which to live, pointing out that the Congress needed to do something to relieve those small farmers. But here we find his administration, with his approval, reducing their income. It will help little to have more county agents or to lend the farmer more money if he cannot sell for a reasonable price. The pile-up of commodities in the hands of the CCC was and is unnecessary. I will say that I agree with the President as to the deplorable condition of many farmers; however, I differ with the recommendations of our President and of this administration to help the small farmer. I say that to give him a little more credit, if he has some outside income, will not help him much; to give him another county agent and to do some more research is not going to help him too much. You may differ with me on that, but I know you do not help the farmer when you reduce his prices at a time when his income is so pitifully low as to get recognition of his plight by the President of the United States and secures a recommendation for cure, even though such cure will not cure.

I say to you that the farmer's income now is far too low. I say that you should sustain the former law, to give him at least, for that which he grows, 90 percent—of what? Of the average comparative income in the base period 1909–1914. Is that too much at this time when Mr. Benson told me: "Yes, I am for the increase to 90 cents an hour in the minimum wage"?

I am not attacking that here. I say to you that if by law you are going to give protection to labor in its bargaining rights, if by law you are going to give them assurance of a minimum hourly wage, if by law you are going to have protective tariffs and give the right to monopolies and others to include in their prices the costs that go into their production, plus a profit, certainly you must keep something in the law that says that a fair share of the national income shall go to the American farmer. And when this administration and the President recognize that fair share is not going to them today, you do not cure the farmer's problem by reducing his prices so that even less would go to him in this and subsequent years.

May I repeat, you say to the American farmer: "If you want more acreage and more production, if you want your commodities to move in world trade, we are not going to change the policy of this administration and of this Department of Agriculture unless you agree to take less price for what you grow."

The only argument I can see for Mr. Benson's approach, and I give him the right to his opinion, is that somehow, somewhere, he thinks a farmer could live and let his prices go down to where they were competitive worldwide, but we know he cannot do that when his costs are fixed by other things beyond his control.

Let me repeat, more than $4 billion worth of commodities the Commodity Credit Corporation has, have not and are not now offered for sale in world markets for dollars; yet the authority exists. There is no excuse for paying out this money in storage costs when we could sell the commodities for dollars. Do not tell me they do not want to sell them because they would take losses or because they do not want to lose money; because at the same time they would not sell, they are running around over the world trying to give them away and paying $700,000 per day storage. Certainly you lose more by giving something away than if you sell it for dollars in world trade.

The farmers' share of the national income in 1946 was 12 percent. In 1948 it had dropped to 11.6 percent, in 1951 to 9.4 percent, and in 1954 to 7.2 percent of the national income. The outlook is that it will drop even further this year.

During that period profits and dividends of American business have gone from $8.3 billions to $17.8 billions last year, and a probable increase of $19.6 billions this year is in sight.

Mr. Chairman, with the administration recommending legislation to add to the farmers' costs, there are only two ways for the farmer to be helped under present conditions, first, to increase his volume, second, increase his price—for volume times price less cost is the farmer's income.

The administration is recommending increased costs.

Volume is dependent on selling his production, and on that the Secretary of Agriculture would not offer $4 billions worth of commodities on hand for sale competitively, as authorized by law, but counts the commodities to reduce acreage and thereby reduce volume.

All that is left is price and now we find our friend, the majority leader, opposing our efforts to at least help a little on price.

The farmers' plight is becoming serious on the farm. I think it is serious at the White House and at the Department of Agriculture. It looks like it is becoming serious in the Congress.

Remember, a break in farm income has led the way to every depression. Sooner or later the farm situation will be reflected throughout the country.

All farmers and farm groups are interested in the whole farm program, but the businessmen, organized labor, and all the rest have a real stake in his welfare, too. I hope they will realize it before we have another 1929.

The Proposed Austrian Treaty

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter addressed by me to the Secretary of State:

Hon. JOHN F. DULLES,
Secretary, Department of State,
Washington, D. C.

DEAR MR. SECRETARY: I am taking the privilege of including in this letter to you brief remarks made by me on the floor of the House today in connection with the proposed Austrian treaty.

I am concerned, as I am sure you can well imagine, with this country approving language as found in the so-called article XVI, which will permit in any way the bringing about the shocking circumstances which developed in Europe following World War II, when so many thousands of anti-Communist prisoners and escapees were forcibly returned to Russia and torture and death.

I am aware of the appearance of the word "voluntary" in the language of the proposed article XVI, but knowing as we do the long history of the Soviet attitude toward these people the word is a mockery. To disband and penalize committees or groups of men and women in these cantonments, who have expressed anti-Communist beliefs; to open without protection or reservation these cantonments to committees or commissions of Russian "agents," can only produce a repetition of many sad and unsavory events of the past under like or similar agreements.

You are aware, of course, of the current forceful propaganda drive by all-Soviet to induce the return of many of these persons to their homelands, with the resulting propaganda victory to the eastern bloc in the eyes of the world, if these desperate, frustrated, and disillusioned people should return.

In this feeling of desolation which overwhelms these refugees, coupled with anything but proper treatment they have received from the western nations, they are entitled to be protected from inducements and blandishments of Soviet propagandists operating under the cloak of the language originally proposed in article XVI, of the Austrian Treaty.

I trust, with your full awareness of the circumstances, you will see fit to direct the spokesman in the Vienna conferences for the United States, to be alert to the dangers and the subject matter of this communication.

Sincerely yours,

DANIEL J. FLOOD,
Member of Congress.

Tabulation of Poll

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1955

Mr. WILLIAMS of New Jersey. Mr. Speaker, recently I sent out a 12-question poll to 28,000 Union County, N. J., citizens requesting their views on issues presently facing the Nation and the Congress. The response to my questionnaire was most gratifying and is, I feel, a graphic demonstration of the vitality of our democracy. I have found the questionnaire to be an invaluable instrument for establishing contact between myself and my constituents and would urge every elected Representative to utilize this means of ascertaining his constituents' views on issues.

Under unanimous consent, I ask that the results of this poll be included in the Appendix of the RECORD and would like to point out in particular the re-

sponse to my first question concerning reciprocal-trade legislation. I think it most important to bring to the attention of the Congress that a typically eastern industrial area indicates such an overwhelming interest in and support of continuation of the reciprocal-trade program.

The results of the poll are as follows:

1. Do you favor the continuation of the reciprocal trade program of negotiating with other nations to jointly lower tariffs as a means of expanding world trade? Yes, 83 percent; no, 15 percent; undecided, 2 percent.

2. Do you favor granting statehood to Alaska? Yes, 82 percent; no, 15 percent; undecided, 3 percent. Do you favor granting statehood to Hawaii? Yes, 81 percent; no, 17 percent; undecided, 2 percent.

3. In the light of the present world crisis, as well as our budgetary situation, do you believe the proposed cutback of the Army is warranted? Yes, 38 percent; no, 54 percent; undecided, 8 percent.

4. The last pay raise granted to postal and other Government workers was in 1951. Do you believe their salaries should be increased by: 5 percent, 27 percent; 10 percent, 49 percent; 15 percent, 16 percent; not at all, 6 percent; undecided, 2 percent.

5. Do you believe the present minimum wage should be increased from 75 cents an hour to: 90 cents an hour, 22 percent; $1 an hour, 35 percent; $1.15 an hour, 5 percent; $1.25 an hour, 18 percent; not at all, 17 percent; undecided, 3 percent.

6. The present immigration law operates in favor of immigration from northern European countries and against immigrants from southern Europe and other parts of the world. Do you believe this law should be altered to eliminate this discrimination? Yes, 53 percent; no, 40 percent; undecided, 7 percent.

7. Do you favor the continuance of the "point 4" technical assistance program which extends technical help to underdeveloped areas of the world? Yes, 78 percent; no, 18 percent; undecided, 4 percent.

8. Do you favor the proposal which would establish universal military training? Yes, 70 percent; no, 22 percent; undecided, 8 percent.

9. Do you favor the establishment of a Federal Fair Employment Practices Commission to insure that discrimination on the basis of race, creed, or color is not practiced in employment? Yes, 69 percent; no, 29 percent undecided, 2 percent.

10. Do you favor continued United States support of the various activities of the United Nations? Yes, 78 percent; no, 19 percent; undecided, 3 percent.

11. Assuming the continuance of the present operations of our Government and the present economic conditions in the Nation, do you favor an across-the-board lowering of the personal income tax? Yes, 42 percent; no, 55 percent; undecided, 3 percent.

Freedom of Association in Venezuela

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by the International Confederation of Free Trade Unions, with headquarters in Brussels, Belgium, asking for the release of all imprisoned trade-union officials in Venezuela who have not been accused of criminal acts and permit them to leave that country:

WORKERS' REPRESENTATIVE AT CARACAS CONFERENCE CALLS FOR FREEDOM OF ASSOCIATION IN VENEZUELA

A "fervent appeal" to the Government of Venezuela to allow trade unions to operate freely in that country was made by A. Vermeulen, representative of the workers' group of the governing body of the International Labor Organization, at the opening of the session of the ILO Petroleum Committee in Caracas yesterday.

He called, in particular, on the Government of Venezuela to:

1. Release all imprisoned trade union officials not accused of criminal acts and allow them to leave the country if they so wish;

2. Submit without delay the cases of others to legal investigation;

3. Declare that it will promote the development of genuine freedom of association along the lines laid down by the International Labor Organization.

The speaker recalled that the ILO had received many complaints over the last 6 years about the violation of freedom of association in Venezuela and that the situation had been investigated on the spot by missions from the ILO and from the ICFTU, both of which had found the complaints substantially justified. As long ago as 1952 the Venezuelan Government had agreed to release imprisoned trade unionists. Nevertheless, many are still in jail without having been tried, and Mr. Vermeulen cited the following names: P. B. Perez Salinas, president of the Confederation of Labor of Venezuela; R. Quijada, president of the Farm Workers' Federation; L. Hurtado, secretary of the Confederation of Labor; and I. Ordaz, A. Hernandez, and H. Borrome, founders and leaders of the Oilworkers' Federation.

Mr. Vermeulen made it clear that the workers' group of the ILO governing body had been opposed to the holding of the conference in Caracas because of the lack of trade-union freedom in Venezuela, and that the same attitude had been adopted by the ICFTU, the Inter-American Regional Organization of Workers, the International Federation of Petroleum Workers, and the democratic oilworkers' trade unions in the principal producing and refining countries, which were boycotting the conference. As a member of the ILO governing body he had considered it his duty to attend the conference, but took the opportunity of voicing the feelings of the free trade-union movement in the manner outlined above.

Heads I Win, Tails You Lose

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. HOFFMAN of Michigan. Mr. Speaker, labor leaders—some sincere and patriotic, others self-seeking—who have taken over the Democratic Party, delight in nurturing discord in the Republican Party.

Their main objective is to become and remain the dominant political party of the country, administering their own theories of political economy—the main thought in which seems to be forcing employers to create and maintain a job at adequate pay for all who desire to work, plus unemployment and social-security compensation which will prevent anyone, anywhere, any time, suffering discomfort.

More of every good thing is unquestionably the objective of practically all of us, but some still realize that someone, somewhere, sometime, must work if any of us is to have anything.

But, back to an example of how some writers for labor publications avail themselves of every opportunity to create discord in the Republican Party, which has not yet been taken over by labor leaders, note editorial comment by Willard Shelton in the April 29—current—issue of Labor's Daily:

EISENHOWER AND KNOWLAND

(By Willard Shelton)

There's a legend floating around that it is still unpopular to criticize President Eisenhower, whose individual standing with the people is alleged to remain incredibly high. Would it be too much to suggest that the President, personally and regardless of popularity, faces an inescapable obligation to do something about Senator KNOWLAND, his theoretical floor leader in the Senate?

KNOWLAND issued another blast this week at the Eisenhower-Dulles announcement that we were prepared to do business with Red China, to try to negotiate a cease-fire in the Formosa Strait, with or without the acquiescence of Chiang Kai-shek's Nationalist Government-in-exile.

Dulles came to this position belatedly and only after he and the President had been pushed by Senator GEORGE, of Georgia, Democratic chairman of the Foreign Relations Committee.

The State Department made itself ridiculous by its sour first response to the soft words of Chou En-lai, Red China's premier.

Dulles had to tell a news conference that he had been out of touch, that our position was being altered, and that our real response was different from what we had originally said.

The unhappy fact is that GEORGE, a Senator, has for practical purposes been the American Secretary of State for the past several months.

It was GEORGE who pushed through the reckless resolution giving Eisenhower advance congressional approval—a blank check—for whatever war he might decide to fight on and close by the mainland of China. "What is the alternative?" GEORGE cried, and because of his great prestige he carried the day.

Now it is GEORGE speaking up for a Big Four conference, and GEORGE who says that we should accept Chou En-lai's offers to negotiate, and because GEORGE has spoken Eisenhower and Dulles find the courage to agree with him.

Something must still be done by the administration about KNOWLAND.

The Senator from California has been raging around for more than a year, threatening to resign his leadership in the Senate and campaign through the country if Eisenhower does thus and so about Far Eastern policy, or if the United Nations does thus and so.

KNOWLAND is barely polite toward the President. He openly doubts the wisdom of drafting Eisenhower for a second GOP nomination. He sarcastically proposes that we split mainland China in two, giving half to the Reds who already hold it all and half back to Chiang, who was chased away once. He spies appeasement in every proposal for negotiation.

KNOWLAND is technically the elected floor leader of Republicans in the Senate, and technically speaks for them rather than the White House. But it is impossible for a

President to get along with a Senate official spokesman who constantly challenges the White House.

Eisenhower and KNOWLAND can't both lead the Republican Party, and Eisenhower and Dulles cannot constantly depend on GEORGE and the Democrats to rescue them from KNOWLAND.

Let's ignore the matter of Eisenhower's popularity and suggest that he act like a President. The next time KNOWLAND blasts him, let him blast back, even at the expense of daring the California Senator to carry out his frequent threat to resign and wage open political war.

American Bases in Iberia

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article of David Lawrence: United States Has Real Friend in Spain—The Fact of American Bases in Iberia Might Well Forestall World War III:

UNITED STATES HAS REAL FRIEND IN SPAIN—THE FACT OF AMERICAN BASES IN IBERIA MIGHT WELL FORESTALL WORLD WAR III

MADRID, May 4.—If all allies on this side of the Iron Curtain worked as cordially together and as understandingly and as enthusiastically as Spain and the United States do today, the chances of preventing a third world war would be immeasurably improved.

For only after surveying the wonderful strategic setup and the plans for an even bigger build-up in the future does one realize that here in Spain a relatively inconsequential investment of funds by the United States already has brought results far in excess of what the American people may ever get out of the other countries into which billions of Marshall plan aid were poured in the last several years.

To understand the strategic value of American bases in Spain it is necessary to take into account two possibilities. One is that, due to internal political pressure, some day neither Britain nor France will—unless there is a direct attack on their cities—permit American airmen to retaliate with atom bombs flown from bases on their soil even though some American city may have already been destroyed by bombs. The other is that American airplanes starting from Spanish bases can carry on strategic air missions into the heartland of the enemy areas and refuel or come to rest at points in the Eastern Mediterranean and the Middle East.

But what is also important is that Spain is to our bases in England what Texas is to our forward units in Montana and the Canadian defense line. Here in a sunny climate, where all-year-round operations are possible, the big supply and support depots of the future will be available to the American Air Forces operating throughout Europe.

But, in addition to the tremendous value of Spain to the United States Air Force and the Strategic Air Command, there is another advantage, which the ports on the long Spanish coast lines at the western end of the Mediterranean give to the United States Navy, whose aircraft carriers must refuel and take on supplies at convenient locations. The opportunity presents itself for joint tactical operations in the Mediterranean, with the United States Air Force and the Navy working in cooperation.

As American military missions become firmly established here—and they have moved in quietly and efficiently—there is a sense of real security achieved for the American people. The planning began when the late Adm. Forest Sherman, under the Truman administration, came here to lay the groundwork for what has since become perhaps the most successful piece of two-nation cooperation on a military level that the modern world has seen.

Spain, of course, is not a member of the North Atlantic Treaty Organization, and sometimes one wonders whether fate has not, after all, decided for us that under a two-nation partnership there would be less red tape and less opportunity for the injection of what are sometimes frustrating problems of a political nature than might be the case under the cumbersome setup of a 19-nation group.

Americans can breathe easier because Spain has opened up big areas of land for airfields and has generously bestowed military advantage after advantage to make possible a real defense operation; ready for instant action. It has cost Spain more than has been received here, and this is something that ought to engage the earnest attention of the Washington authorities. Here economic aid, for example, is reckoned in terms of 30 millions—not billions—and the annual amount should really be at least twice that sum, because there is no question that America got far the better of the bargain in the way the military agreements were set up. The Spanish officials are much too proud to make a point of it, but many Americans feel the United States could well afford to pay fully for the many tangible things that have been given here. Thus, for instance, the American military mission occupies a lot of office space rent free. One wonders in what other allied country any such generous gesture has ever been made by a government.

There is little talk of war here, and the newspapers lately have been publishing dispatches from America and elsewhere about the hopes being expressed that world war III is more remote. But it is a fortunate thing that no effort of a defense nature has been relaxed in this enormous base. It is precisely because the Communists know what can be done by America with airpower based in this country that they may never risk provocation to a major war.

The John Day Dam

EXTENSION OF REMARKS
OF
HON. SAM COON
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1955

Mr. COON. Mr. Speaker, I have here two editorials, one from the Union Bulletin, Walla Walla, Wash., and one from the Capitol Journal published at Salem, Oreg. Both of these editorials concern H. R. 5789, legislation calling for the construction of the multiple-purpose John Day Dam on the Columbia River, and are so excellent that I want all of my colleagues to have the benefit of reading them. Therefore I ask unanimous consent to insert them in the RECORD.

The editorials follow:

[From the Capitol Journal of Salem, Oreg.]

FINALLY—A REAL "GIVEAWAY"

We've heard much here in Oregon about giveaways, most of 'em phoney, such as "giveing" the States the tideland oil rights they'd been acknowledge owners of for nearly a century before Harold Ickes thought up a scheme to transfer title to the Federal Government.

But at last we are confronted with a genuine giveaway, and right here close to home. Three Northwest public utility companies—Portland General Electric, Pacific Power & Light, and Washington Water Power—have announced willingness to put up $273 million of the cost of the proposed $310 million John Day Dam on the Columbia. The Government would advance $37 million for flood control, fish ladders, etc., which is a governmental, not a corporation job.

Where's the giveaway in this? It is in the fact that the Government will own the entire dam. The corporations will take their money back in electric power. They gain the further advantage, which they will have to pass on to their 600,000 customers in the Northwest, of exemption from property tax on this huge investment because it will be in the Government's name. This is presumably why they prefer to let the Government own it.

Why shouldn't they prefer a Government dam such as the public power people constantly demand? We see two reasons: (1) There is no telling when Congres will make that much money available, and (2) under the public power preference clause the current from a straight-out Government Dam might all go to public power agencies, leaving the 600,000 customers of the 3 privately owned companies in the relative position of a Negro down South, as second-class citizens of the Government to which they pay taxes.

If there is anything wrong with this proposal, other than that it is wicked for anyone but the Government to invest money in electric power generation, we'd like to hear it. For this looks like a feasible plan for early construction of a much needed Northwest power facility.

We are not alarmed at the thought of the investors receiving an interest rate on their money, for we know Federal, State, and local tax-levying agencies will promptly capture about two-thirds of whatever return this investment realizes. Industry is two-thirds socialized now as to profits. The question is, Must we go the rest of the way?

[From the Union Bulletin of Walla Walla, Wash., April 22, 1955]

A TRUE PARTNERSHIP PROPOSAL

The bill introduced Thursday by Representative SAM COON, of Oregon, for construction of John Day Dam, represents a challenging attack on the problem of multipurpose dam construction in the Pacific Northwest.

Because it is one of the first proposals which would utilize to the fullest the partnership concept of development which has been stressed by President Eisenhower, the project should receive the full support of the administration. And because it does not appear to violate the comprehensive approach to the region's water-resource program or open up a dispute between public and private power interests, we can see no reason why it should not be given a helping hand by both political parties.

As we have long recognized the primary problem in obtaining construction starts on new major projects has been a simple one of insufficient money. The Federal budget has been under such pressure as to preclude the appropriation of sufficient Federal funds to keep the program moving ahead as rapidly as needed. Yet it has been obvious that at least 1 or 2 new starts must be made within the next year if a serious power shortage is to be averted by 1960.

The Coon proposal appears to meet this problem head-on in realistic fashion. Since power costs will represent nearly 90 percent of the estimated $310 million bill for John Day Dam, the legislation provides that an equivalent share of the construction funds

should be advanced by local public and private utilities in return for 50-year contracts for the dam's power output. This would mean that roughly $273 million would be put up by local interests, with the Federal Government's share being limited to $37 million which would cover costs allocable to navigation and other so-called "nonreimbursable" features.

As Representative COON pointed out in introducing the bill, in effect this plan would provide for advance sale of power, rather than waiting until the generators are on the line before disposing of it. It would relieve the Federal Government of the responsibility for long-range financing of the power construction costs, with large appropriations which would be repaid only over a long period of years.

At the same time, however, the objection can no longer be raised that this would be a "sellout" to private power interests. For one thing, both public as well as private utilities would have an equal right to participate in the project, without reference to State boundary lines. And for another, the local utilities would not own any portion of the project but would merely be paying in advance for the use of power from the dam, which would be fully owned and operated by the Federal Government.

Feasibility of the proposal appears to be insured, as several Pacific Northwest utilities have already indicated their willingness to put up all of the $273 million or as much as would be allocated to them by the Federal Power Commission. The FPC would have final responsibility for deciding the allocation among any responsible utilities interested in participating in the program.

The only possible source of objection that we can anticipate would come from those who feel that complete Federal financing is the only answer. It must be conceded that the Federal Government can obtain a lower interest rate on bonds than can other borrowers, and that private financing of a large portion of the cost will have some unfavorable effect on power rates. But our feeling is that electric power at a slightly higher cost is still preferable to a power shortage, and certainly there are grave doubts that the Federal Government will be in a position to assume the entire $310 million expenditure in the near future.

Considering the region's economy, the completion of John Day is significant not only from the power standpoint but almost equally so in the development of navigation facilities. It is the final dam in the series between Portland and the Tri-cities, and would make possible the long-awaited day when barges can move up and down the river under slack-water conditions.

We hope that the Coon bill will receive speedy approval from Congress. Here is a method of facing up to the continuing financial problem of river development that will be relatively painless to the Federal Government. It is a true partnership plan, and it deserved a try.

Unlike Texas, Ukraine Is a Nation

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1955

Mr. SMITH. Mr. Speaker, in the past 5 years a sufficient amount of knowledge and information has been disseminated in our country with regard to the history, culture, and political aspirations of the non-Russian nations in the Soviet Union that it seems to be inexcusable, at this stage, for anyone concerned with foreign affairs to misinterpret these important nations. Yet commentators, journalists, and others continue to equate the Soviet Union and "Russia," to falsely characterize Ukraine as Russian Ukraine, in effect, to manifest their ignorance of this obviously significant area of the world.

It was my privilege 2 years ago to serve on a subcommittee which conducted a hearing on a resolution pertaining to Ukraine and Byelorussia. The facts presented then established beyond doubt the historic struggle of these two large non-Russian nations for their genuine independence. This indisputable fact was further fortified by the massive evidence assembled by the Select House Committee on Communist Aggression in the course of its hearings last year. Thus, for anyone to parallel Ukraine and Byelorussia with Texas and Massachusetts runs counter to the nature and meaning of this general fact and indicates an unfortunate misconception of the political context of this area of the world.

Such a misconception still appears to reemerge, this time in connection with the revision of the U. N. Charter. Concerning this subject, an informative letter-memo, written by Dr. Lev E. Dobriansky, professor at Georgetown University and president of the Ukrainian Congress Committee of America, appeared in the December 15, 1954, issue of the Ukrainian bulletin under the caption, "Unlike Texas, Ukraine Is a Nation." Because of its marked relevance to the current Senate hearings on U. N. Charter revision, I request that this material be included in the RECORD:

UNLIKE TEXAS, UKRAINE IS A NATION

Below is must reading for all Americans. It is the letter, dated November 23, 1954, which was written to Senator ALEXANDER WILEY, of Wisconsin, by Dr. Lev E. Dobriansky of Georgetown University and president of the Ukrainian Congress Committee of America.

The letter was occasioned by the lack of knowledge—still disheartingly present—at high official levels with regard to the submerged nations of the U. S. S. R.

For example, an interview was recently granted to U. S. News & World Report (November 26, 1954) by Henry Cabot Lodge, chief American delegate to the United Nations. In discussing China and the U. N., Mr. Lodge former Senator from Massachusetts, said, "China is there." The interviewer commented, "We should be entitled to have Texas in there, too, then, shouldn't we?" Whereupon Mr. Lodge, our representative to an august international body, responded:

"If they've got the Ukraine and Byelorussia, then we certainly ought to have Texas—I would add Massachusetts."

Senator WILEY shares this gravely erroneous view.—EDITOR.

As far as I know, it appears that on two recent occasions you have publicly declared yourself in favor of a revision of the United Nations Charter that would eliminate the representations of Ukraine and Byelorussia in the U. N. and thereby reduce the total number of votes at the disposal of the Soviet Union, taken as a unit. On the surface, this proposal may seem to bear some merit and easy attraction, but, as I should like to point out below, when careful thought is devoted to the ground upon which you predicate your recommendation and to the likely political consequences of even a favorable official consideration of the idea, one cannot but pause to reconsider seriously its advisability in terms of relative advantage and net political worth of our Nation.

In order that there might not be any possibility of misunderstanding regarding the reasoned analysis presented here, it is observed at the outset that the proposal as advanced by you entails no evident, logical relationship to any general demand or principle aimed at the expulsion of delegates from Communist-dominated areas because of their democratically unrepresentative character. Surely, if this were the case, then we would have little rational cause to restrict the proposal to only two Communist representations. Moreover, I believe it will also be logically admitted that the motivating reason for your proposal is not exclusively the quantitative end of reducing the Communist votes in the United Nations by the mere number of two. For certainly if this were so, the final cause of our action would be, from this quantitative viewpoint, far more impressive by abolishing all of the Communist votes on the basis of the principle alluded to above or some similar one. From a functional viewpoint, it is almost impossible to see how the elimination of the Ukrainian and Byelorussian votes alone would substantially reduce the difficulties that we are forced to encounter in the U. N.

BACKGROUND OF ISSUE

However, from a general political viewpoint, it is not at all difficult to estimate accurately the effects of our official submission of this proposal, no less its dubious acceptance on the part of the U. N. membership. To arrive at such an estimate naturally presupposes an elementary recognition of the fact that this issue can scarcely be considered and properly appraised in a context of thought devoid of essential historical knowledge related to the developmental sequence of events forming the intelligible background of this subject. Indeed, one could hardly with any degree of appreciative understanding begin to treat it otherwise.

In the manner of the basis of your proposal, to view the non-Russian nations of Ukraine and Byelorussia as simple state counterparts of Texas and New Mexico in our federated national structure is a gross misconception of modern East European history which, doubtless to your astonishment, the Russian Communists have circulated at different times and in various dialectical forms to support their unfounded contention that the Soviet Union is a voluntary association and union of states. Perhaps it should also be noted that this spurious parallel is recklessly employed by some anti-Communist Russian emigres who fundamentally share a common ground with Red Moscow by their totalitarian insistence upon a "one and indivisible Russia," which in their lexicon means an empire similar in scope to the present Soviet Union. Needless to say, undoubtedly neither of these disinforming sources is to be associated with the basis of your proposal, but, unfortunately the parallel action of thought results in a common negation of the distinctive national and cultural substances of the Ukrainian and Byelorussian peoples.

Without in any way exaggerating the negative and denialist significance of this erroneous basis, it can be said to encompass, in addition, the indisputable historical events of Ukrainian and Byelorussian national independence prior to the military conquest of the two countries by the Russian Communists in 1920–22 and to their forcible incorporation into the Soviet Union shortly thereafter. Although in real effect the formation of the U. S. S. R. in 1922–24 was tantamount to the reestablishment of the Russian Empire, the Russian Communists were politically astute enough to recognize the historical meaning of the sweeping non-

Russian revolution for national independence in 1917–22. In addition to rendering nominal status to the self-assertive non-Russian nations in the republics of the Moscow-contrived Union, they have skillfully alternated periods of harsh repression with phases of political and cultural concessions in order to canalize the irrepressible patriotic eneries of these captive nations to their own maximum advantage of imperialist control and manipulation. In this they formed a workable pattern of future aggression, as witnessed in the past decade and a half, and successfully shaped methods and techniques for the permanent enslavement of new victims.

Thus in the light of the basis of your proposal, are we now to regard Estonia, Latvia, and Lithuania as state counterparts of Idaho, Utah, and Arizona? If Poland were nominally included in the Soviet Union, although functionally its position in the real empire is substantially no different from that of the Baltic States or Ukraine or Byelorussia, would it be rationally sound to view it as a counterpart of Nevada or Oregon? The correct answers to these determining questions should be obvious if we maintain in our informed minds that sound historical perspective which proportionately discounts a 20 or more years' difference in the experiences of subjugated nations with Communist imperialism to only a few minutes in historical time. In short, the unfortunate and harmful effect of the premise upon which you found your proposal is the denial of Ukraine and Byelorussia as separate and distinct nations from the Russian; indeed, the unrational denial of the known aspirations, resistance, suffering, and perseverance of their peoples in their continuous struggle against the foreign yoke of Moscow, as much as it would be for those of the Baltic countries. In the framework of concrete, political realities, I think it will be agreed that no amount of legalistic juggling can becloud the crucial fact that these prominent known phenomena do not characterize the inhabitants of Texas and New Mexico who are conscious, integral parts of a single nation.

CONSEQUENCES OF PROPOSAL

Now, within this founded context of thought, it should not be difficult to anticipate the consequences and effects of our official consideration and acceptance of your basically insupportable proposal, especially in view of the most recent developments in the Soviet Union. Sound and factually substantiated reasoning on this subject forces us to the conclusion that by submitting this revisionist recommendation the United States would be providing Moscow with a powerful political weapon in its current efforts of consolidation in Ukraine and Byelorussia. One cannot overlook the essential facts, as confirmed by Senator Vandenberg, Mr. Stettinius, and others, that Stalin's insistence upon the admission of Ukraine and Byelorussia into the U. N. in 1945, was based primarily on the urgent consideration of appeasing the intense patriotic nationalism raging in those countries rather than on the superficial reason of merely gaining two additional votes for the Soviet Union. In another wave of concessions this past year Moscow donated the Crimea to the territory of Ukraine, and in a 6 month's celebration of the Pereyaslav Treaty of 1654 played on the theme of Russo-Ukrainian partnership in realizing the goals of Ukrainian freedom and independence. As quoted from the Theses issued on this occasion, "It was only thanks to this friendship that the Ukrainian people, as all the peoples of the U. S. S. R., upheld their freedom and independence."

When sober thought is given to the outstanding fact that Ukraine, with a population of about 45 million, is the largest non-Russian nation in both the Soviet Union and enslaved Eastern Europe, the importance of Moscow's endeavor to mold a tight Russo-Ukrainian combination becomes manifestly evident and, from our point of view, quite ominous. The highly significant question for us to answer is whether, in the contest for the minds and loyalties of the large Ukrainian and Byelorussian peoples, we are content to offer them less than what Moscow has, including a denial of their separate national characters, as your proposal unquestionably signifies.

Following the recent Theses of Moscow, an adept student of this subject can with reasonable certainty envisage the propaganda content that Moscow in its constant appeal to Ukraine would derive from the proposal. It might well sound as follows: "We consolidated your historic territories in 1939–40 (as in Theses, p. 13). We fought to have you as one of the founding members of the U. N. (p. 14). For years we have told you that only with us you can prosper, grow, be strong, free, and independent. Now, surely, here is evidence enough that the imperialist Americans seek to deny you even the status of a world-recognized nation by urging your expulsion from the U. N., etc."

The Fate of Poland's Underground Leaders

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1955

Mr. FLOOD. Mr. Speaker, during the last war the Soviet Union with diabolical calculation set out to destroy all sources of Polish democratic leadership that might arise in the postwar era and thus frustrate Communist objectives of making Poland a satellite state. In Katyn Forest the cream of the Polish officer corps was wantonly massacred by direction of the Soviet Government. In the futile but heroic Warsaw uprising the Soviet Army waited silently and deliberately at the gates of Warsaw while the Polish Underground Army was ruthlessly devoured by the Nazi war machine. And finally in March 1954 the leaders of the Polish underground were misled by acts of Soviet treachery and ultimately were arrested and imprisoned by the Soviet Government.

Prior to the formation of the Polish coalition government in 1945, Moscow agreed to allow 12 underground Polish leaders to consult with the Polish Government in London on the arrangements for the coalition regime. The Polish underground leaders, among whom were Gen. Leopold Okulicki, commander of the Polish Home Army, Jan Stanislaw Jankowski, Stanislaw Jasiukowicz, and Antoni Pajdak, received an invitation through indirect channels to confer with Colonel General Ivanov, of the Red Army. Colonel Pimenov, of the Soviet NKVD, assured the Polish leaders that "as an officer of the Red army who has been entrusted with such a greatly important mission, I guarantee to you, under my word as an officer, your fate will be in my hands and that after your arrival at our quarters you will be absolutely safe."

But on March 27, 1945, when General Okulicki and Vice Premier Jankowski presented themselves at the headquarters of Colonel General Ivanov, in accordance with previous arrangements, and on the following day, when three members of the Home Council of Ministers and 8 representatives of the principal political parties took the same step, they were all arrested. Not until May 5, 1945, was there any statement regarding their whereabouts. Subsequently 3 of the men were acquitted, while the others were given sentences up to 10 years in prison.

This entire proceeding, needless to say, was a flagrant violation of all established principles of international law and of justice. I, therefore, respectfully recommend that the following resolution be acted upon as a demonstration of our desire and the desire of the American people to redress this wanton miscarriage of justice.

Exceptional Children

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1955

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials entitled "Exceptional Children," which appeared in the New Orleans States of Friday, April 29, 1955, and "The Catholic Action of the South:

[From the New Orleans States of April 29, 1955]

EXCEPTIONAL CHILDREN

Those who have concerned themselves with the plight of the Nation's mentally retarded, or "exceptional," children ought to take heart from what has been going on in Washington recently.

Several legislative proposals indicate that as far as the lawmakers are concerned these children who formerly were relegated to the social scrap heap are going to lose their unwanted tag as "forgotten children."

Both the House and the Senate have considered bills to give financial relief, in the way of additional income tax exemptions, to parents of such children. Also considered is a plan for the retarded themselves, when unable to earn a living, to continue to qualify for child's benefits under social security regulations even after 18 years of age. And a House appropriations subcommittee is pushing a program for study into the causes of mental retardation, the possibilities of preventing or alleviating it, and methods of training such children to become useful citizens.

More important than the results of such legislative proposals is the fact that debate about them has brought to the Nation's attention a considerable segment of the population about which there has been very little knowledge before now.

Surprising to most people is that there are an estimated 4,800,000 retardates in the United States. Surprising to Orleanians is that there are about 9,000 such children under the age of 25 in New Orleans. And embarrassing to all is the fact that despite these numbers next to nothing has been done for their care and training.

Whatever has been accomplished has been the result of enlightenment of the parents of such children. Formerly they accepted them as a cross, to be borne in silence. Now

realization has come that retardation, resulting from many causes, is no stigma. Now parents know that most such children can be trained to perform useful functions; that they need not be classed as permanent dependents of the parents or the State.

What is surprising is how much attention has been given by the public to other ailments which effect fewer persons. The whole Nation joined the fight against polio, for example, though polio is estimated to be only one-tenth as common as mental retardation.

Locally, the Association of Retarded Children, Inc., of Greater New Orleans has been plugging away at this problem for some 3 years. Its members, who conduct a continuing recruiting campaign, include parents of exceptional children, professional men interested in the problem and civic-minded citizens who want to help. They meet, discuss mutual problems, and reap the benefit of their association.

Next week, for example, the local group will meet to hear a discussion by Dr. Herman Yannet, director of the Southbury, Conn., training school, said to be a model in the training of retardates. Whatever Dr. Yannet's message, we doubt that it will cheer members as much as the news that Congress at last has become aware of the problem and is trying to help find solutions.

[From the Catholic Action of the South of April 17, 1955]

SEEING THINGS: EXCEPTIONAL CHILDREN

(By M. F. Everett)

A long and thoughtful letter from a reader calls attention to the serious need for assistance to retarded persons, a cause that affects society in general as well as relatives of the retarded, which has in general been pitifully ignored in the past because of society's failure to recognize its moral responsibility as well as the practical returns from rehabilitation.

In contrast to the former hopeless, apathetic attitude a more realistic one is now arising to combat the quagmire of secrecy, do-nothingness, and ignorance that smothered consideration of the problem despite the fact that there are some 4,800,000 mentally retarded in the United States alone and that sociological problems of lesser importance have been met.

With a few exceptions, such as the splendid work of some Catholic institutions, the problem until recently remained one in hiding. Families kept a mentally retarded person isolated in shame. Society accepted a crippling physical illness as unfortunate, deserving of sympathy, but shunned the mentally retarded though many could have been helped to a satisfactory place in society.

Fortunately, modern research has given a better understanding of this and other afflictions that have caused fear throughout the centuries. Any family, no matter what its wealth, educational background, race, color, or religion, may have a mentally retarded child. There are at least 70 known or suspected diseases or mishaps occurring before or during birth or in early childhood that may cause mental retardation.

This is a condition, not a disease, and is not the same as mental illness. It is an impaired and incomplete mental development dating from birth or an early age. Usually it involves, besides slow development, a limited ability to learn, with reduced social aptitudes and vocational capacity. Like normal children, the retarded child may become delinquent if his needs for guidance, training, recreation, and proper social relationships are denied, and the frustrations and emotional disturbances resulting from such denial can subject him to mental illness.

The mentally retarded are 9 times as numerous as victims of cerebral palsy, 10 times as polio sufferers permanently afflicted. About 1 of every 1,000 of our population is severely retarded. Some are totally dependent and must be cared for like babies all their life. Others have responded to training along minimum social lines but must have constant supervision.

About 1 of every 250 persons develops at less than half the rate of the normal child. This class is short on judgment and ability to make important decisions, but many can learn self-care, acceptable social behavior, and useful work under sheltered conditions.

Twenty-five of every 1,000 are sufficiently retarded to need special education for adult living. Most can become self-supporting adults, capable of managing their own affairs under favorable conditions. About five per thousand because of personality or other variations find difficulty in coping with modern living and join the dependent or semi-dependent groups. In all about 1 percent of our population needs care, training, or other special consideration because of mental retardation or similar difficulty.

There are three main needs: The right slant on the problem by parents and the general public, increased research into the causes of retardation, and more facilities for the special training of retarded children. With special training 25 of every 30 can become self-supporting, that is, capable, with counseling, of handling their own affairs.

Public and private home schools exist but are too few and fees are beyond many families. A promising development is the community day school, which gives the child instruction while allowing him to live at home. Public and parochial schools are experimenting with special day classes. State institutions are being improved in care and facilities provided.

More and more dioceses are adopting measures to meet the problem. Bishop Charles P. Greco, of Alexandria, last fall established St. Mary's Training School for Retarded Children at Clarks, which is operated by Sisters of Our Lady of Sorrows.

The problem has been discussed extensively at meetings of principals of Catholic schools in the New Orleans archdiocese. A Dominican sister was sent a few years ago to the Catholic University of America for special work concerning visually handicapped, and the Catholic Daughters of America are making another scholarship available this year for a nun.

Information is being gathered on conditions and on how best to meet the situation. The Right Reverend Monsignor Henry C. Bezou, archdiocesan superintendent of schools, on a recent visit to Philadelphia spent an entire afternoon going through St. Barbara's school there. Though special training is needed for the care of retarded children, he feels there are a number of lay teachers in the archdiocese who would welcome the opportunity to do such work.

The religious approach is highly important, he asserts, for, although some manipulative training can be given retarded children, it is hard for them to learn to read. They understand pictures more readily and delight in religious pictures. Both the charity of Christ that prompts help for these unfortunates and the attitude of the children themselves make training under religious auspices a happy solution.

A serious handicap in this and other dioceses is that officials are hard put to provide facilities and teachers for normal children. Though they are anxious to meet the problem of the retarded, it is hard to obtain sufficient funds and personnel. An extent of the problem may be seen in the estimate that it would cost $7 million yearly to care adequately for handicapped children in Louisiana alone.

The Association for Retarded Children, Inc., a group in the metropolitan area, has headquarters at 314 Balter Building, New Orleans. It was started by parents in Jefferson parish and will be 3 years old in May. There are over 200 paid members and mail is sent to some 400. Dues are $3.50 a year, of which 50 cents is sent to the national association and $1 to the State organization. The State group has more than 1,000 members. The national society, organized in 1950, has 325 affiliated associations numbering 40,000 persons.

Advances have been made in Louisiana and more progress is assured if sufficient support is had. The State Colony and Training School at Pineville, with Dr. William P. Hurder as clinical director and acting superintendent has improved its conditions. The legislature in 1954 appropriated $235,000 for an evaluation center, to be affiliated with a medical school in New Orleans, but to serve the whole State. A medical director for this center now is being sought. A law also was passed licensing private schools for the retarded, which will put them under the State Department of Institutions.

It is hoped to have more classes for the retarded in public schools. There is a 3-week summer course at Louisiana State University for teachers of retarded and a course at Tulane University, New Orleans, that meets one night a week. Teachers in the past had to go elsewhere to obtain credits for such specialized teaching. Another serious need is a center for social and other activities for those over 16. The young adult, incapable of higher education, finds it hard to adjust to ordinary conditions and needs special help in this area.

Archbishop Richard J. Cushing, of Boston, a leader in work for the retarded, points out that such children are "neither punishments nor pointless." God has an important work to do through "exceptional" children. The best index to the civilization of a community is what is done for "exceptional" children, for they are usually least in so many ways—in years, in endowments, in privileges, in all the things people cover for their children. Christ declared: "For as much as ye have done it to the least of these, ye have done it unto Me."

Fleet Adm. William Daniel Leahy Reaches 80th Milestone on Life's Highway

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1955

Mr. VAN ZANDT. Mr. Speaker, today America has another opportunity to honor a most distinguished naval officer, Fleet Adm. William Daniel Leahy, on his 80th birthday. So as to indicate the distinction due this great American, I am going to mention the highlights of his career, which more eloquently than any words of praise reflect his service to his country.

Admiral Leahy was born on May 6, 1875, in Hampton, Iowa, the son of M. A. and Rose Hamilton Leahy. Upon graduation from high school in Ashland, Wis., he entered the Naval Academy in 1893. After completion of the course at the Academy he was assigned to duty aboard the new battleship *Oregon* which was then stationed in the Pacific. It

soon became apparent that war with Spain was imminent. So as to have her available for possible operations against the Spanish Fleet, the *Oregon* was ordered from the west to the east coast. She executed these orders by her famous 14,700-mile voyage around Cape Horn at the then record speed of 11.6 knots. More important, when she arrived in the Carribean, the *Oregon* was in readiness for battle which shortly came with the Spanish Fleet in Santiago Harbor. In the engagement which resulted in the destruction of that fleet, the crew of the *Oregon* distinguished itself and among the ship's officers who were commended in the report of the commanding officer was W. D. Leahy, naval cadet. The distinguished conduct under fire by Naval Cadet Leahy in his first assignment aboard ship became the pattern for his future illustrious career.

During the Philippine Insurrection and the Boxer Rebellion he was assigned to the Asiatic station, where after service in the *Castine* and the *Glacier* he received his first command in the gunboat *Mariveles*.

After several assignments ashore and afloat, his outstanding qualities of leadership and ability to shoulder responsibility were recognized by his appointment in 1911 as fleet ordnance officer of the Pacific Fleet, and the following year by his assignment as chief of staff to the Commander Naval Forces in Nicaragua. Late in 1912 Admiral Leahy was given shore duty in the Navy Department but by 1915 World War I was having its effect on the United States and he took command of the dispatch gunboat *Dolphin* engaged in the hazardous search for German supply vessels. After a short tour in 1917 as executive officer of the battleship *Nevada*, attached to the Atlantic Fleet, he took command of the troop transport the U. S. S. *Princess Matoika*. For his distinguished service as commanding officer of this vessel in transporting troops and supplies to European ports through waters infested with enemy submarines and mines, he was awarded the highest naval decoration, the Navy Cross, and also a special letter of commendation by the War Department.

The end of World War I did not enable Admiral Leahy to rest on his laurels. Instead, even more exacting and important assignments were soon to come his way. In 1921 he had command of the flagship *St. Louis* with responsibility for protecting Americans and American interests in Turkish waters and the Black Sea during the war between Turkey and Greece. After assignments in the Bureau of Navigation and in command of the battleship *New Mexico*, he was appointed Chief of the Bureau of Ordnance in 1927 with the rank of rear admiral. Although by this time he had completed 30 years of outstanding naval service, it seems that this service was just a practice for that which was yet to come.

After duty in the fleet and on a Navy reorganization board, Admiral Leahy was appointed Chief of the Bureau of Navigation. It is a signal honor to serve as chief of one bureau of the Navy but to be honored by an appointment to serve as chief of a second bureau is indeed rare.

However, outstanding performance of duty was to bring more responsibility and higher honor. He again returned to sea, this time as Commander Battleships with the rank of vice admiral and soon to be commander in chief, battle force, with the rank of admiral. I can well imagine that he may have felt that he had reached the pinnacle of a naval career. But by 1937 the dark clouds of World War II were gathering and on January the 2d of that year, Admiral Leahy was appointed Chief of Naval Operations, the only officer in naval history to receive that appointment who had already served as chief of two bureaus of the Navy Department. As was his habit he served with distinction and was responsible for laying the groundwork of the two-ocean Navy which swept the enemy fleets from the seas in World War II, carried troops and supplies to our allies and to which all the allied nations should be thankful for its great contribution to victory.

After completion of his term as Chief of Naval Operations, Admiral Leahy retired from naval service. Upon this occasion, the Secretary of the Navy wrote him:

> Your career in the active naval service extending over a period of 46 years has included many activities within the varied scope of the naval profession. You have seen active service in two wars. * * * You have represented the Government on diplomatic commissions, and have served on vessels of the "Old Navy" as well as the latest of the "New Navy." Your sea service terminated as commander, Battle Force United States Fleet, and from that command you were selected for the highest post in the Navy, that of Chief of Naval Operations. Your conduct as Chief of Naval Operations has been marked by sound and original thinking, as well as vigorous action and has greatly contributed to the welfare of the service. These and all the other duties which have been assigned to you have been discharged competently, ably, and to the fullest satisfaction of the Government.

Sixty-four years of age—forty-six years of arduous naval service including two wars—certainly now he could rest. But to those who are dedicated to the service of their country, rest is more often a hope than a reality. Six weeks after his retirement he was named Governor of Puerto Rico and a year later was called from that post to be Ambassador to France which at that time was under the occupation of Nazi Germany. There he laid the groundwork for French collaboration with the United States. To him is due much of the credit for the neutralization of the French Fleet and preventing its addition to the Nazi and Italian navies which were seriously threatening our shipping at that time. His work in this regard was a triumph over an extremely intricate complex of French politics and personal loyalty.

He was recalled to active duty on July 20, 1942 and given the unparalleled appointment as Chief of Staff to the President in his capacity as Commander in Chief of the Army and Navy. In this appointment he served as Chairman of the Joint Chiefs of Staff and as a member of the Combined Chiefs of Staff. Here, and as personal adviser to the President he played a large part in formulating the political and military decisions which led to the victory in World War II.

In December 1944, he was honored by appointment to the newly created rank of fleet admiral.

Fleet Admiral Leahy continued to serve as Chief of Staff to the President as Commander in Chief until March 25, 1949, when his resignation was reluctantly accepted. On that occasion the President presented him with a gold star in lieu of a third Distinguished Service Medal. The citation reads in part:

> His supreme loyalty to his country and his appreciation of its place in world affairs, supplemented by his fundamental concern in the welfare of humanity as a whole, transcended his already vast knowledge of military affairs to culminate in statesmanship beyond that required of any naval officer in our history.

Fleet Admiral Leahy's record serves as an inspiration and a challenge to every American. He presents an example of dedication to his country; of inspired service which disregards all personal considerations; and of strong individual character derived from habitual discipline and scrupulous regard for obligation and duty. In a word, he is the personification of the traditional Navy spirit of self-sacrifice in the service of his country. God grant that we shall always have officers like Admiral Leahy to call on in time of need.

Farm Props Versus Wage Floors

EXTENSION OF REMARKS

OF

HON. RICHARD M. SIMPSON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1955

Mr. SIMPSON of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times:

FARM PROPS VERSUS WAGE FLOORS

When the Senate voted last August for the abandonment of high, rigid price supports for the so-called basic commodities it marked the culmination of one of the most courageous and politically difficult legislative battles in which the Eisenhower administration has engaged. It was a fight to dislodge powerful vested interests created under World War II emergency legislation. The legislation had been scheduled to expire 2 years after the fighting ended (which would have been at the end of the crop year 1947), but the farm bloc had succeeded in having the provisions extended every time the date of their expiration approached. After going through the motions of fighting for a return to flexible supports for several years the Truman administration was suddenly blinded, on the eve of the 1952 elections, by the light of a great revelation. This revelation, it seems, had to do with certain unsuspected, and as yet unidentified, virtues, discovered in the 90-percent rigid supports it had been castigating at more or less regular intervals up to that time.

Now there is talk of a deal between labor-minded legislators from urban areas of the North and the agricultural legislators favor-

ing a return to 90-percent supports. With the time approaching for the vote on a proposal by the farm bloc to restore wartime supports, one city Democrat—Representative ANFUSO of Brooklyn—did make an appeal for such a coalition of forces, or, as it is more colloquially referred to, logrolling. Representative ARENDS, Republican, of Illinois, has declared that in supporting 90-percent price props the urban Representatives hope to obtain help from southern Members in their efforts to have the minimum wage raised from its present 75 cents an hour to $1.25. (The President has advocated an increase to 90 cents an hour.) Representative COOLEY, Democrat, of North Carolina, and chairman of the House Committee on Agriculture, denies the existence of such a coalition. All that has happened, he says, is that some labor leaders have endorsed the pending bill because they are aware that a strong farm economy is part of a national prosperity.

Labor leaders who believe that a strong agriculture is essential to a balanced prosperity are, of course, eminently correct. But any labor leader who believes that high, rigid price supports and a strong agriculture are interchangeable terms for the same thing, or that they are even compatible, is proceeding on a seriously mistaken assumption. And to the extent that they or others have fallen into this error the farm bloc must be charged with a large share of the responsibility. For the farm bloc, as Representative ARENDS has correctly pointed out, has diligently sought to identify declining farm prices, not with the huge surpluses created under rigid supports, but with the recent adoption of flexible supports.

Labor leaders have also been led astray if they have been persuaded that there is any similarity between high-level price supports and the minimum wage. In the first place, farm-price supports have their own built-in provisions for escalators, which is not the case with the wage floor. In the second place, the beneficiaries of the minimum wage are a small segment of labor at or near the subsistence level; the chief beneficiaries of high-level price supports (assuming that anyone benefits from them in the long run) are, on the whole, upper-bracket income farmers who produce what are referred to euphemistically but arbitrarily and erroneously as our basic crops.

American Veteran Leader Calls for Free Trade on Return From World Goodwill Tour

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1955

Mr. WILLIAMS of New Jersey. Mr. Speaker, upon his return from a recent goodwill world tour, Mr. George Mark, former national commander of the Polish Legion of American Veterans, issued a plea for the expansion of trade among free nations and the liberalization of American trade policies. Under unanimous consent, I ask that Mr. Mark's statement appearing in the March 31 edition of the Obywatel Amerykanski be included in the Appendix of the RECORD.

This article, I believe, presents a strong and coherent argument for the necessity of American leadership in the direction of freer trade. I heartily endorse Mr. Mark's views on this subject.

The statement follows:

WASHINGTON, D. C. March 22, 1955.—George Mark, former national commander of the Polish Legion of American Veterans, just returned from a world tour and discussions with leaders of many countries, has issued a plea for the expansion of trade among free nations and the liberalization of American trade policies. Mr. Mark stated that his observations of world conditions have led him to the conclusion that maintenance of our reciprocal-trade program and a lowering of our tariff barriers are imperative if we are to prevent the free nations of Europe and Asia from falling into Communist hands.

During his good-will tour, Mr. Mark met with such leaders as Chiang Kai-shek in Formosa, Vatican officials, and United States Ambassadors throughout the world. He visited Spain, Italy, Greece, Turkey, Pakistan, India, Thailand, Formosa, and Japan. In the statement issued on his return, Mr. Mark said:

"Distrust of America's capacity to lead the world in a global fight against communism is rolling over the skies of Europe and Asia like an atomic cloud. In every country I visited I found government and party leaders suffering from the fall-out of empty promises, broken pledges, and diplomatic double-talk emanating from Washington.

"The effects of this loss of world confidence in the United States are worse than those of radiation disease. They sap the strength of government leaders in dozens of countries where they are fighting a battle against communism in their own front yards, instead of comparative safety of Washington, or the United States State Department.

"The world has no faith in the Republican promises to liberate enslaved nations or to use massive retaliation against Communist aggression. People in Europe and Asia are wondering whether the balance of the Republican Party pledges to restore peace in the world will be forgotten as just campaign promises.

"I believe the entire world is waiting now to see whether the Eisenhower administration has the strength to carry out its last remaining pledge—to safeguard the economies of free nations by unconditionally supporting and promoting world trade.

"President Eisenhower's decision to raise tariffs on Swiss watches was considered throughout Europe as the test case of his foreign trade policy in which he completely failed to live up to his own trade principles.

"One European statesman with a sense of humor told me that he regarded this decision as America's massive retaliation against the Swiss for the crime of being the best cash customer and one of the most loyal supporters of America's tradition of democratic freedom.

"I returned to America to find a wave of pessimism regarding the future of our trade policy. Protectionists, encouraged by Eisenhower's desertion of principle in the watch case, are waging a savage struggle to destroy our positive trade policy and to replace it with a Grover Cleveland type of trade program.

"If we break this final pledge we will forfeit the respect of the world. Europe's leaders, who have been made cynical of American trade promises by the example of our treatment of Switzerland, will turn to more and more trade with Russia as they see the American market withdrawn from them. This will mark the beginning of the greatest Communist triumph. Russia will not hesitate to insidiously penetrate the economies of every nation in the world and to weaken the morale and political fiber of each of these countries by becoming the ruling economy power in trade, because we have abdicated our position."

The McCarran-Walter Act

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1955

Mr. ASHLEY. Mr. Speaker, today I have introduced a bill which would completely revise and replace the McCarran-Walter Immigration Act. This bill is a codification of all existing immigration, naturalization, and citizenship laws, clarifying and simplifying the present act. This in itself would be an important step toward eliminating the confusion which exists both in our own country and abroad as to the real policy of the United States toward those who seek to enter her boundaries. But above all, this bill would give positive and real meaning to the democratic principles which we, in this country, hold as a shining beacon to those beyond our borders.

It is no secret abroad that the present immigration laws of the United States belie our expression of "Welcome" to those brave enough to flee their oppressors—indeed, every day our radio broadcasts are beaming American ideals of freedom and democracy and opportunity for all to the downtrodden people behind the Iron Curtain. We tell the peoples of Europe and Asia of the real humanitarianism of the United States, and then set legalistic boobytraps for those who take us at our word. This is a shameful manner in which to act, and certainly no thinking American can fail to see the very real consequences of such a policy.

It is time that we, as American citizens and as legislators for the American people, see that this disparity between word and deed is ended. And the only way to do this is to enact a fair and comprehensive law.

Now I realize that such a sweeping law is open to critics who say that all immigrants are a danger to the United States, and that any immigrant may be a Communist wolf parading in the proverbial sheep's clothing. Let me reply to such critics that my bill provides full and comprehensive security against subversive and undesirable aliens; it actually tightens existing laws which permit thousands of unscreened aliens to cross our borders. Certainly what this Nation needs is a law which permits desirable people to come to the United States, and a law which absolutely protects those in the United States from the seditions of subversives, and this bill does both.

My bill would also eliminate all racial and national bias, establish a uniform right of review and appeal from administrative decisions, and remove the distinctions between native-born and naturalized American citizens. Certainly there can be, in this Nation of equality, no "second-class" citizens. My bill would also replace the national origins quota system with a new unified quota system. It would provide for a separate single agency to handle all immigration and naturalization functions,

which are now divided between the Consular Service of the State Department and the Immigration and Naturalization Service of the Justice Department. It would also differentiate between aliens seeking permanent residence here and alien visitors coming here for scholarly or scientific purposes, for business or pleasure.

May I remind the spokesmen of both major political parties that the American people have been promised revision of existing immigration laws. Both candidates for the Presidency in 1952 declared that such revision is essential to the good name of the American people, and I believe the American people think so too. President Eisenhower reiterated this declaration in his state of the Union message in 1953, and in April he specifically requested such legislation in letters to the Vice President and the Speaker of the House. We cannot continue to maintain what has been called a "redtape curtain" in our immigration and refugee laws and still in all honest sincerity criticize the Iron Curtain abroad.

May I propose to the Members of Congress, then, that we, each of us, rid our Nation of the hypocritical sham and pretense of democracy contained in the McCarran-Walter Immigration Act, and show the world that the American ideals of freedom and justice are realities both at home and abroad.

Poland's Constitution Day

SPEECH
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. WILLIAMS of New Jersey. Mr. Speaker, this annual occasion, May 3, the date of Poland's Constitution Day and free Poland's national holiday, calls for a renewal of the strong bonds of culture between the American and Polish people. The fate of Poland, the traditional friend of the United States, will always be of primary interest to Americans regardless of ancestry. Freedom has always been the first principle of the Polish political tradition. The Polish struggle to regain her lost freedom through the centuries is a long and familiar story. The world's records know no parallel to the epic resistance of the Pole to efforts of aggressors to enslave, denationalize, and break him. The real appreciation of the value of the individual and of the worth and dignity of the person makes the Pole loathe equally communism and fascism—any denying of the worth and dignity and freedom of the individual. As history amply illustrates, to the Pole the rights of the individual must be duly regarded by the state.

As embodied in the great democratic Polish Constitution, the state exists to protect and facilitate the life and occupations of the individual, not to use him as cannon fodder and the instrument of dictatorship. To be sure, he is glad to die for his country if need be, but that is his desire for a country he loves—not for a dictator he has to obey.

Today, the Polish struggle for freedom is widespread. It is being waged on the national, social, cultural, and moral levels, where human mind and feeling play often a much greater role than that of bayonet, revolver, prison, or concentration camp. The tradition of individualism constitutes an obstacle to the subordination of Poland to the Communist system which disregards the dignity and freedom of man. The Communists have recently put great stress on the elimination of these Polish national characteristics in their determination to snuff out the spirit of Polish independence. Fortunately, for the free world, that spirit still lives and will continue to live.

What hope can we hold out to these brave and courageous, but long-suffering people? Would that we could be more encouraging—more reassuring. But I think we can say that we recognize and appreciate their courage and their desire for freedom. We certainly will never rest easily, never forget their justifiable and burning desire for freedom until the yoke of Soviet enslavement and brutality has been lifted. The struggle is long and arduous, but never too long or too arduous to give up hope. We look to the day when Poland will again emerge as a strong, free, prosperous, and happy nation. We know the people will never give up their hope; we know they will be ready when the day arrives to throw off their suppressors.

With courage, with perseverance, with faith in freedom, this day will come.

Governor Leader's Tax Plan

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1955

Mr. SCOTT. Mr. Speaker, my constituents, like a great majority of Philadelphians and Pennsylvanians, view with alarm and great concern the vicious and inequitable tax proposals being urged by Governor Leader and endorsed by Mayor Clark. In this connection, under permission granted, I am quoting a letter to the editor appearing in the May 2 edition of the Philadelphia Inquirer clearly outlining the inequities in Governor Leader's tax plan and an editorial in the Philadelphia Inquirer of May 4, 1955, entitled "Mayor Sets Stage for Senate Race":

INEQUITIES IN GOVERNOR LEADER'S TAX PLAN

To the EDITOR OF THE INQUIRER:

It is appalling that there should be introduced in the legislature of any State of the Union by the responsibly elected administration of a major political party, such a vicious and inequitable tax program as has been recommended by the Governor of Pennsylvania.

As is well known, the constitution of Pennsylvania prohibits a graduated income tax. Attempts to alter the constitution in this respect have been decisively defeated by the people at the polls. Notwithstanding this definite demonstration of public opinion, and in the face of campaign protestations against an income tax, the administration nevertheless now demands not only a graduated income tax in cheap disguise, but something infinitely worse.

A graduated income tax—onerous as it is when the rates become oppressive, and they are certainly already oppressive under the Federal law—at least makes some attempt to conform to that sacred—and much overdone—principle, ability to pay. The present tax proposals have nothing to do with ability to pay. On the contrary, they lay the burden upon our people according to types of income, not levels.

For example: a businessman, grocer, service station owner, or master plumber, or a professional man, architect, lawyer, or dentist, struggling along on an income of $4,000, is taxed at 2 percent of his net income; while at the same time a person on salary or wages, earning $10,000 a year, is taxed at 1 percent.

For further example, and even more vicious: a widow or retired couple, with their savings invested in mortgages, municipal or corporate bonds, and some stocks, even though their net income might be only $3,000, are taxed at 4 or 5 percent of net income, or 4 and 5 times the $10,000 man in the earlier example.

The certain effect of such legislation is to drive as much business from Pennsylvania as can find it possible to move away. And no industry seeking a site to locate and give employment could conceivably be foolish enough to choose Pennsylvania, where dividends are taxed at 5 percent, and capital gains—the fruits of that initiative and free business enterprise which have made America the greatest of nations—are taxed at 6 percent over and above the already prohibitive Federal rates of 25 percent.

It seems inconceivable that the courts of this commonwealth, sworn to uphold the principles of the Constitution, could ultimately do other than to declare these tax measures unconstitutional. However, the immediate task of all citizens is to impress upon the Members of the legislature, Senate and House, their vigorous opposition, in the hope that the whole program will be quickly scrapped by the representatives of the people.

JOHN F. GOLDSMITH.

PHILADELPHIA, *April 27.*

MAYOR SETS STAGE FOR SENATE RACE

As mayor of Philadelphia, Joseph S. Clark, Jr., should be deeply concerned about Governor Leader's plan to put a third bite on the pay envelopes of Philadelphians in the form of a State wage tax.

But as a potential candidate in next year's election for the United States Senate seat now held by JAMES H. DUFF, Clark is much more interested in securing Governor Leader's support.

Accordingly, the Clark brand of strategy has called for him to come out enthusiastically in favor of the governor's tax program and to inform the people of Pennsylvania that they should be glad to put up the additional $411 million that it requires.

The mayor doubtless believes he is playing smart politics. After all, he needs the governor's backing if he is to be the Democratic nominee for the Senate, doesn't he? Therefore, it is up to him to pat Mr. Leader on the back and tell him what a fine thing he is doing in preparing to take a new tax cut from workers' wages.

But Clark's ardent espousal of the wage tax may not turn out to be such a shrewd maneuver after all. He has every right, of course, to indorse the tax and to argue in its favor. But the taxpayers have the right, also, to pick and choose, when it comes to

voting, between candidates who sought to inflict a burdensome new tax on them and those who opposed that tax.

In coming out for the Leader taxes, Mayor Clark has resorted to an old political dodge: place the blame one someone else.

It is not George Leader's fault, he contends, that all these heavy taxes have to be imposed, but the fault of two other fellows named John Fine and Jim Duff.

He would have us believe that the tax problem now facing the Democratic governor at Harrisburg was left on his doorstep by his two predecessors and that Leader has to clean up the mess.

He hails Leader as a "responsible, mature statesman" and admonishes the people of Pennsylvania that they should be glad to do everything they possibly can to help him "put the State back on a solvent basis."

If this script seems familiar, there is good reason for it. It has been followed faithfully an untold number of times in the past, as those newly taking public office have sought to blame all their problems on the delinquencies of their predecessors.

The trouble with the Clark rendition of this old theme is that it doesn't quite come off.

Even Mayor Clark cannot convince anyone with a grain of intelligence that the whopping budget submitted by Governor Leader wholly represents hang-over commitments made by previous State administrations.

There is more than $100 million in quite new appropriations, for instance, for purposes referred to by the Governor in the vaguest terms. It will take quite a lot of doing to blame these proposed expenditures on preceding administrations.

When it gets down to the heart of the Leader program, which is the tax on wages, Mayor Clark's statement is deftly evasive. He merely asks a question: "What fairer method of raising revenue necessary to balance the State budget can be suggested than that recommended by Governor Leader?"

We suggest that he take a look at his morning mail. He will probably get quite a number of answers to that question.

He may even be called upon to answer this query: "Just what is fair about a State tax on wages, on top of Federal and city taxes on income already in effect?"

The mayor chose to ignore the alternative of a sales tax, following the lead of the Governor, who prefers to tax the pay envelope.

Clark's statement is doubtless appreciated by Governor Leader, who has found his tax plan widely unpopular even in his own party and it may even convince Leader that the mayor is a statesman of a high order who ought to sit in the Senate. But it will be the people of Pennsylvania, not the tax-happy Governor, who will fill the Senate seat next year.

Who Should Run Technical Aid?

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1955

Mr. WILLIAMS of New Jersey. Mr. Speaker, I have been deeply concerned with the problem of how our foreign aid program will be administered when the Foreign Operations Administration goes out of existence. The President proposes to set up an International Cooperation Administration under the State Department. I would like to call the attention of the Congress to the following comments of the Washington Window, a column published by the Public Affairs Institute, on this entire problem:

WHO SHOULD RUN TECHNICAL AID?

For the past 5 years the United States has been tinkering with its technical-aid program designed to help underdeveloped countries to get on their feet.

The tinkering has been notoriously unsuccessful. Since 1950, the organization setup of the program has undergone three major reorganizations and is due for a fourth on June 30, when the Foreign Operations Administration, under Harold Stassen, is scheduled to go out of existence. The program is then supposed to come under the wing of the State Department.

Is this a good idea?

There are a good many people who think not. They feel that the State Department is essentially a diplomatic agency and not an operating agency, a field in which it has failed repeatedly. Others think that the State Department should have general supervision of the program but that the actual work should be carried out by the various Government departments concerned. Still others feel that the best solution is to keep the technical-aid program as a completely independent organization.

The case against turning the whole program over to the State Department is a good one. In 1950, the technical-aid program was set up within the State Department and for the 3 years that it remained there it floundered pretty badly. Not only did the Department keep policy control, but it tried to run the program, too.

The State Department, critics of the new plan say, is not an operating agency, never has been and is not likely to be one in the future. They contend that President Roosevelt understood this thoroughly and it was for that reason that he set up wartime agencies such as the Board of Economic Warfare, Lend-Lease and similar operating groups outside of the State Department despite the frantic protests of Secretary Hull.

Largely as a result of the State Department's bitter resentment of independent agencies in the foreign field, the point 4 program originally was set up inside the State Department. Commenting on this experience, the National Planning Association recently said:

"Those who watched TCA's (point 4) 3 painful years of attempting to administer an operating program from within the Department almost despair that State will ever be able to gear itself to enable a fast-moving action program to operate with speed and decisiveness."

The proper solution, in the opinion of those who don't want the program in the State Department, is that it should be operated by an independent agency working under broad policy agreements with the Department of State so as to keep a consistent foreign policy.

Going beyond this, they feel that if point 4 is to be revived from the lethargy into which it has fallen, it is necessary once again to dramatize the original purpose for which it was established to fight communism on a broad economic level that would give hope to the world's undeveloped areas.

To do this they feel that the cold government-to-government approach has long since proved its inadequacy. They urge wider participation of nongovernment groups in this effort, organized so that the missionary zeal of private citizens can be put to use in this worthy cause; that the one hope is to make the program a people-to-people program that can rearouse both the enthusiasm of the American people for whom point 4 once meant so much and that of the recipient people for whom point 4 once represented a living hope.

Among ideas that have been advanced is creation of citizens' advisory committees, perhaps one in every State, to follow point 4 affairs closely, to press for its extension and to fight for appropriations for it.

Unless this is done and done soon, they fear that point 4 is likely to wither away until it becomes simply a minor bureau within the State Department lost in the shuffle of high diplomacy.

It's Hard To See a Letter to the Editor as Really Immoral Political Activity

EXTENSION OF REMARKS

OF

HON. JOHN V. BEAMER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1955

Mr. BEAMER. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD an editorial entitled "It's Hard To See a Letter to the Editor as Really Immoral Political Activity" found on page 12 of the May 7 issue of the Saturday Evening Post.

The bill to amend the so-called Hatch Act to make the provisions inapplicable to State officers and employees, is before the House Administration Committee and preliminary hearings have been held. Letters received from three-fourths of the attorneys general of the 48 States unanimously approve this legislation and urge that the proper authority be restored to the States.

The editorial follows:

IT'S HARD TO SEE A LETTER TO THE EDITOR AS REALLY IMMORAL POLITICAL ACTIVITY

When W. Arthur Simpson, a Vermont State employee, sat down to write a letter to the editor of the Boston Herald back in October 1951 he had no idea that this exercise of an ancient and honorable American privilege would eventually land him smack in the middle of a States-right fight to determine how much authority over its own affairs a State must surrender in exchange for Federal aid.

Mr. Simpson, a Republican, is Vermont's Commissioner of Social Welfare, a job that involves administering State funds plus certain grants-in-aid from the Federal Government. In the preconvention discussion of the best possible Republican presidential candidate, Mr. Simpson favored Senator Robert Taft. He wrote a letter to the editor of the Boston Herald saying that while he didn't think Robert Taft was the only alternative, "he at least has the virtue of being honest, forceful, a fighter, and a successful campaigner." Surely Mr. Simpson's views should have no more to do with his fitness to hold his job than if he had come out for Senator KEFAUVER.

However, the United States Civil Service Commission in 1953 issued a letter of charges against the Vermont social-welfare head, charging that he had violated the Hatch Political Activities Act by writing the letter, and by presiding at a session of the Republican State convention in 1950. The Commission did this even though published Federal Security Agency rules and the laws of the State of Vermont seemed to Mr. Simpson to exempt him from the Hatch Act on the ground that he was putting in most of his time for his State, and not for the Federal Government.

The Federal Commission ordered Vermont to fire Arthur Simpson. Vermont refused. The Civil Service Commission then told Vermont that Uncle Sam would hold out from Vermont's share of welfare aid an amount equal to Simpson's salary for 2 years. At this, the Vermonters appealed to the Federal district court in Montpelier, where the case is now pending.

Incidentally, Mr. Simpson has worked for his State quite a while, apparently without trouble. In April 1953, the Vermont Legislature adopted a resolution praising him for distinguished service over more than a third of a century, citing him as a "gracious neighbor and public administrator," and concluding, "Well done, thou good and faithful servant."

Other States are up in arms about what was done to this Vermont Republican, and the expansion of Federal power which it implies. New Hampshire has joined Vermont in the court battle. Indiana, where four State employees have been charged with political activity, seems about to follow suit, with Hoosier Gov. George Craig leading an effort to persuade other States to support a bill by Congressman JOHN V. BEAMER, Indiana, Republican, which would make the Hatch Act apply only to Federal employees.

Lawyers for the State of Vermont urge persuasively that the Federal Government's idea that the Hatch Act applies to anybody who works even part time for a State agency receiving Federal funds could logically involve a State employee serving 1 day or members of any State board or commission financed by $1 of Federal funds. Such a person couldn't write a letter to the editor on a political matter, even if he didn't write in his official capacity. (Mr. Simpson signed only his name, didn't use his official title.)

Conceding that the Hatch Act was wisely intended to keep Federal employees out of politics, it is certainly doubtful that Congress intended to extend its prohibitions to every State office that gets a nickel of Federal money or to mere expression of preference for candidates for office. If that is what Congress did intend, a vote on the Beamer resolution provides an opportunity to make the intention plain. In the meantime a vote of thanks is due the Vermont, New Hampshire and Indiana rebels for bringing the whole thing to light.

The Simpson case may go against them, now that the Federal camel has thrust its head legally into so many local tents. If it does, it will be time for a lot of Americans to get into poitics in earnest and reverse the trend by which Federal control of State affairs is assumed as the price of Federal "aid." If the Simpson case causes the citizenry to look these Federal gift horses in the mouth, there's nothing wrong with that.

Sale of General Aniline & Film Corp.'s Assets to American Management

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1955

Mr. WILLIAMS of New Jersey. Mr. Speaker, under unanimous consent, I include the following resolutions which have been submitted to me by the General Aniline Supervisors' Association on legislation which would permit sale of the General Aniline & Film Corp.'s assets to private American management:

Whereas the supervisors' association, comprising more than 300 management employees at the Linden, N. J., plant of the General Aniline & Film Corp., has noted with concern the effects of continued Government control, by virtue of the provisions of the Trading With the Enemy Act, over the assets of the corporation; and

Whereas in meeting assembled on the 13th day of April 1955 has unanimously voted to urge passage of Federal legislation to permit the sale of the corporation's assets to private American management; and

Whereas bills S. 1405 and H. R. 3608, introduced by Senator CLEMENTS and Representative O'BRIEN, now before the Senate Judiciary Committee and Committee on Interstate and Foreign Commerce, respectively, embody provisions which would effectively serve the purposes of securing the future welfare of all employees of the corporation and their families, and fulfill the best interests of the corporation and the Nation as well; and

Whereas any further delay in the disposition of the corporation's assets will work to the greatest disadvantage of all concerned: Therefore be it

Resolved, That the Congress of the United States be urged to take prompt action to effect passage of legislation during this session of Congress, in the sense of the bills introduced by Senator CLEMENTS and Representative O'BRIEN; and, therefore, be it further

Resolved, That copies of these resolutions be distributed to Members of Congress in whose home district employees of the General Aniline & Film Corp. now reside.

H. R. 12

EXTENSION OF REMARKS
OF
HON. WILLIAM K. VAN PELT
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1955

Mr. VAN PELT. Mr. Speaker, under leave to extend my remarks I include an editorial taken from the March 4, 1955, issue of the Daily Record, St. Paul, Minn.

The editorial points out in a very concise way why H. R. 12 should be defeated. The views expressed in the editorial further support my position as to why I voted against H. R. 12:

USELESS, HARMFUL LEGISLATION

At this writing the House vote on H. R. 12 has not yet been taken, but it is anticipated that it will have been registered by the time this issue of Daily Record reaches its readers.

It is our sincere hope that the bill will have been voted down since, from the standpoint of the dairy industry at least, it is about as useless a piece of legislation as has come before the Congress in a long time. H. R. 12, it will be recalled, is the Cooley bill, which, among other things, proposes to raise the support level of dairy products from the present 75 percent to 80 percent of parity.

Just how useless the bill is to dairymen may be gleaned from a consideration of the fact that on March 15 all milk at wholesale was at 85 percent of parity and manufacturing milk at 82.3 percent, so that the industry would have nothing to gain from the bill but would suffer the stigma of supposedly asking for more money from the Federal Treasury, even though nothing would be forthcoming.

There is the additional objection, of course, that a move designed to raise the price of dairy products (even though it did not do so) might discourage the industry just when it is beginning to see hope of getting out from under the paternal wing of the Federal Government and doing a better job of increasing its return from the market place than it would get as a Government pensioner. This is added reason for leaving well enough alone.

It happens, however, that there are other very good reasons. One is the fact that a higher price derived from Government aids cannot be justified in the face of heavy Government purchases of the past 3 years. A second additional reason is the danger that unjustified demands may bring unfavorable reaction from consumers and their representatives in Congress, which might well imperial the whole support program—even though the industry still needs to have that program as insurance. Last, but by no means least, is the danger that demands for higher support prices will almost certainly bring counter demands for production controls—and we still think that they represent the greatest evil likely to befall the industry.

As a matter of enlightened selfishness, if nothing else, it behooves the dairy farmer to go back to the original concept of the price support program and accept it as a device to safeguard the farmer against bankruptcy, and not as an instrument intended to guarantee his prosperity. That prosperity can be assured only by dint of his own efforts.

American Merchant Marine

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1955

Mr. BOGGS. Mr. Speaker, the New Orleans Item recently published two very timely editorials—one deals with the American merchant marine and points out the essential character of this industry. It also shows the degree of misinformation about the operation of our American merchant marine.

The second editorial deals with the need for a weather ship in the Gulf of Mexico.

Both are timely and of interest to all Members of Congress.

They follow in full:

[From the New Orleans Item of April 15, 1955]

PAYBACK FEATURE LITTLE KNOWN—MERCHANT MARINE SUBSIDIES

It's often said it is easier to be misinformed about the merchant marine than about any other activity subsidized by the Government.

Perhaps this is because the payback clause in operating subsidies to shipping companies is so little known.

It works this way—when the subsidized operator's profits reach 10 percent of his investment, he starts paying back the subsidy money to the Government.

Most other subsidies don't have this insurance feature. The usual idea of a subsidy is an outright, nonrecoverable payment.

The payback subsidy applies to the shipper's operating expenses. The Government pays him the difference between American scales and the much lower worldwide scales on such essentials as wages, insurance, repairs, and supplies. If the Government did not do this, United States shipping would be run off the seas by competition from the

lower-operating-cost vessels of other nations. This would be a national calamity, equivalent to the loss of most of our naval auxiliary vessels.

After he has been brought up to scratch by operating subsidies, the United States shipping operator still must compete for his profits. Nothing in the subsidies guarantees profits.

The guarantees are made by the shipper. He pledges to serve certain trade routes. He must provide the type of ships needed for specific trade areas. And he must replace wornout and obsolete ships (this is covered by a construction differential subsidy).

What makes the operating subsidy good business all around is the fact that the United States is the world's biggest importer. Mountains of the world's raw and finished products pass through our ports constantly.

When American shipping carries its share of these cargoes, several beneficial things happen. The American crewmen make good wages. The shippers make profits. The Government gets back an appreciable share of its operating subsidy payments.

We must not overlook another basic reason for maintaining our merchant marine. In crisis, our ability to handle our own shipping is essential.

Our merchant marine, in time of war, becomes our fourth arm of defense.

[From the New Orleans Item of April 17, 1955]

SHIP SUPPORT GROWING—WEATHER-EYE ON THE GULF

Support for a floating weather station in the Gulf of Mexico is growing in Congress.

In the last session, Representative T. A. THOMPSON, of Ville Platte, asked for the station in a bill which died in the Merchant Marine and Fisheries Committee.

When THOMPSON resubmitted his bill this year it was 1 of 4 idenical weather station proposals. The others were sponsored by Congressmen from Mississippi, Texas, and Alabama.

Senator EASTLAND, of Mississippi, has also introduced weather-ship legislation in the Senate.

Where the gulf weather ship lacks support, according to local backers of the project, is in the Federal departments which would have to pay for it—Commerce, Treasury, and Interior.

Representative THOMPSON wrote to one of these backers that "legislation is not really necessary • • • if the departments are willing to proceed under existing authority. In the absence of this, legislation is the only means of attracting attention."

Apparently the "absence of willingness" does not mean that the Department secretaries believe the vast, 716,000 square-mile gulf area has all the weather forecasting facilities it needs. Rather, the economy-minded secretaries favor a less-than-perfect forcast system that would still be an improvement.

Commerce Secretary Weeks stated that present radar and aircraft weather-scouting would be good enough, if it were supplemented by a little trained weather sleuthing by gulf fishermen.

Weather-ship supporters tore into Weeks' statement with glee. The fishing boats he wants to equip with barometers are among the most urgent needers of better weather forecasting, they said. When threatening weather blows up, the fishermen are interested only in hurrying to safety—and rightly so.

The weather-ship backers have their own views about the economy of the project. The Treasury Department estimates it would cost $2.8 million a year to support the three Coast Guard vessels which would alternate on the gulf weather station.

The offshore oil drillers, fishermen, farmers, coastal property owners, and others would save much more than that in storm damage if there was a really adequate warning system, the backers say. They point to other possible economies, like lower storm damage insurance rates.

It is difficult to outline all the benefits of having a gulf weather ship. Doubtless, it would do a better job of forecasting than radar, with its 200-mile range, and aircraft, which can't operate around the clock every day as a ship does.

Some forecasters say that 70 percent of the weather for the whole east coast is formed in the gulf. Reliable early warning against all degrees of storms would pay off not only for the gulf coast but for a much larger area northward.

The job ahead for weather-ship proponents is to hammer away with economy arguments which are strong enough to convince the three governmental Departments concerned. Everyone else seems sold on the idea.

H. R. 2967

EXTENSION OF REMARKS
OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1955

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following correspondence with regard to H. R. 2967:

MICHIGAN COUNCIL OF CHURCHES,
Lansing, Mich., March 22, 1955.

Hon. ALVIN M. BENTLEY,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN BENTLEY: We wish to convey to you the representative thinking of the Protestant leadership, both clergy and laity, here in Michigan. The Michigan Council of Churches represents more than 2,600 local churches and most of the major demominations of the State. In the past the churches have very actively opposed universal military training legislation. It appears to us now that bill H. R. 2967 is, as described by Hanson W. Baldwin, military analyst of the New York Times—"really universal military training and service by another name."

In the opinion of many church leaders this is UMT because of these 4 features: (1) Its goal is the conscription of all physically fit young men for some type of military training or service. (2) It is envisioned as a permanent or continuing program. (3) It is a compulsory program. (4) It would keep men under military jurisdiction for a period of 8 to 10 years on precisely the same basis as the present system of universal conscription by classes. It is our opinion that H. R. 2967 is not the best solution of the problem of national security. We feel that the possibilities of building a voluntary Reserve rather than a compulsory Reserve have not been fully explored.

We are certain that you will wish to give this measure searching study and that you will not be a party to hasty examination of these issues. We are confident that you are endeavoring to get the real facts and then vote on their merits. That is why we are making available to you the convictions of the substantial constituency represented by the churches in Michigan that have been facing this issue for a number of years. These churches continue to oppose universal military training. Please do not misconstrue this opposition as an indication that we oppose national security. We feel, however, this is not the way in which it can be best achieved.

Most sincerely,
HAROLD C. MCKINNEY, Jr.,
Director of General Operations.
MERRILL R. ABELY,
Chairman, Committee on International Affairs.

THE AMERICAN LEGION,
DEPARTMENT OF MICHIGAN,
Battle Creek, Mich., April 30, 1955.

Hon. ALVIN M. BENTLEY,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN: I am herewith forwarding correspondence received from James R. Wilson, director of the national security commission, and Miles Kennedy, director of the national legislative commission of the American Legion, relative to the objections raised by the Michigan Council of Churches relative to national security training.

These I thought would be of interest to you. I would appreciate receiving them back when you are through with them.

Very truly yours,
J. ADDINGTON WAGNER.

APRIL 1, 1955.

MILES KENNEDY'S COMMENTS RELATIVE TO THE FOUR QUESTIONS SUBMITTED TO MR. ADD WAGNER

1. The American Legion has advocated national security training for all young men who are physically and mentally qualified to take such training. We submit the only way in which the obligation a young man owes to his country can be equitably carried out is to enact a law calling for universality of service. Selective Service tells us that for every 5 boys who register for military service, only 1 is actually inducted into the Armed Forces. Furthermore, the American Legion feels that, if we are going to have to rely solely upon volunteers, we will never get enough of them to meet the country's needs; that if the United States is faced with another emergency, we would again have to rely upon veterans, over 950,000 of whom were recalled for 2 years' service during the Korean war. The great majority of these men had already served their country from 2 to 5 years during World War II, while hundreds of thousands of our eligible young men sat home and rendered no military service at all.

This situation will never be corrected until we have provided a strong citizen reserve so that we do not have to rely upon veterans to meet each new emergency as it arises. Any young man, physically and mentally fit, does not think much of his country if he is not willing to spend a few months of his time in learning how to protect it.

2. As long as we have wars and international strife, this country is going to have to take the necessary steps to protect itself, or it will become a victim of Communist aggression and perish. Present indications are that this situation is going to obtain during the foreseeable future. The American Legion advocates extending the Selective Service Act for 4 years from July 1, 1955, to the 1st of July 1959. Our bill, H. R. 1630 (sec. 7 thereof), advocates that the authority to induct men for service in the Armed Forces shall cease and be suspended and shall thereafter remain inoperative effective not more than 5 years after the first person is inducted into national security training. This in order to provide an orderly replacement of national security training for the present Selective Service System.

3. This is answered under 1 above. While the American Legion feels that all young men who are physically and mentally fit should spend at least 4 months in national service training, we have no objection to these men volunteering for such service provided they have not been called for active duty through the medium of Selective Service machinery. As above stated, we doubt very much that sufficient numbers will volunteer to meet the country's actual needs.

In addition, why should a boy who is patriotic enough to volunteer have to carry the burden of protecting the country, while his less patriotic neighbor remains home, does no military service at all but reaps the benefits and protection afforded the stay-at-homes by-the more patriotic young men of our country. There is nothing fair or reasonable about such a system at all; it is morally, ethically, and legally wrong. We boast a lot about our democratic systems and policies; let's apply some of them to national security training.

4. It is true that the bill H. R. 2967, advocated by the Pentagon, calls for a 10-year overall obligation. Under the current law (Public Law 51, 82d Cong.), all young men now have an 8-year overall obligation, consisting of 2 years on active duty and 6 additional years in the Reserves. However, under the American Legion's bill H. R. 1630 (sec. 18 (b)), the Reserve obligation could be reduced to 4½ years if the trainee made a reasonable effort to meet his Reserve obligations or duties. Our witnesses so testified before the Brooks subcommittee of the House Armed Services Committee on March 2, 1955.

It is respectfully requested that Mr. McKinney and his associates examine the bill H. R. 5297, introduced by Congressman OVERTON BROOKS, chairman of the Subcommittee of the Armed Services Committee, under date of March 29, 1955. Such an examination would reveal that many of the features advocated by the Pentagon in H. R. 2967 have not been accepted by the subcommittee, but, on the other hand, several suggestions advanced by the American Legion in H. R. 1630 have been adopted. Under the provisions of the Brooks bill, about the only compulsory feature therein is that members of the Reserves who fail to live up to their obligations (provided they have not already served at least 2 years on active duty) could be recalled to active duty for a period of not to exceed 2 years. The American Legion subscribes to this provision.

Under the Pentagon's bill, trainees who did not live up to their Reserve obligations could be given a dishonorable discharge. The American Legion does not agree with this thinking.

We respectfully submit that the Brooks subcommittee, during its long and exhaustive hearings, which covered a period of several weeks, has made a thorough and competent study of this problem from all angles, including the possibilities of building a voluntary reserve rather than a compulsory reserve, as advocated by Mr. McKinney. It is to be noted also that Mr. McKinney puts forth no concrete suggestions for our study or consideration. If he and his associates can offer a better plan, I am certain that the proper officials of the American Legion would be more than glad to give it every consideration.

MILES D. KENNEDY.

THE AMERICAN LEGION,
NATIONAL SECURITY COMMISSION,
Indianapolis, Ind., April 5, 1955.

Mr. J. ADDINGTON WAGNER,
Wagner, Wagner & Wagner,
Battle Creek, Mich.

DEAR ADD: Thank you so much for your letter of March 30 and the attached copy of a letter from Harold C. McKinney, Jr., of the Michigan Council of Churches sent to Hon. ALVIN M. BENTLEY.

Actually, Add, Mr. McKinney is right in the four points that he sets out in his letter. To briefly review those points:

First. National security training or UMT is designed to give every physically fit young man some type of military training. As proposed by the American Legion, this would be of aproximately 1,000 hours or 4 months duration between the boy's graduation from high school and his entrance into college or embarkation upon a career.

Second. The American Legion has always envisioned national security training as a permanent and continuing program; otherwise we would fall into the same valley of unpreparedness following World Wars I and II.

Third. In order for the program to be effective it would necessarily have to be compulsory for eventually the American Legion hopes that voluntary enlistments would maintain the strength of the Armed Forces while the reserve components would be maintained by national security training graduates.

Fourth. On this point Mr. McKinney is merely talking about existing law because Public Law 51 established the total military liability of every young man at 8 years. National security training would merely mean that the young man would have approximately 7 years, 8 months of Reserve liability following his release from the National Security Training Corps.

On this last point (fourth) it is reasonable to assume that after NST has been in operation for several years the Reserve obligation could be reduced because of the huge number of young men flowing into the reserve components semiannually.

What we are actually faced with in Mr. McKinney's letter, Add, is the tremendous opposition of the clergy to a youth training program, even though it is under civilian control. As a deacon in my own church and one who is in a position to know how our membership feels on this subject, I can violently disagree with Mr. McKinney's contention that he speaks for the laity of the Michigan Council of Churches. As you well know, the group that is opposing national security training today is the same group which in 1940 opposed the Selective Service Act. Today they are praising selective service to high heaven and condemning national security training. It is reasonable in my mind to assume that 10 or 20 years hence these people will be lauding national security training.

In conclusion, Add, I realize that this has been a long letter. Miles has made some points which I think are quite important and I am enclosing a copy for your information. Last week the Brooks subcommittee of the House Armed Services Committee took favorable action on a bill which while not 100 percent what the American Legion advocates, is certainly a step in the right direction and contains the majority of points which we advocated. I sincerely trust that this session of Congress will see the accomplishment of this long-standing mandate.

If further material or information is needed, I trust that you will advise me accordingly.

Kindest regards.

Sincerely,

JAMES R. WILSON, Jr.,
Director, National Security Division.

ASSISTANT SECRETARY OF DEFENSE,
Washington, D. C., April 8, 1955.

Manpower and personnel.

Hon. ALVIN M. BENTLEY,
House of Representatives.

DEAR MR. BENTLEY: Thank you for your letter of March 28 with which you enclosed a copy of a letter from the Michigan Council of Churches expressing their opposition to universal military training and H. R. 2967.

I would like to stress that the national Reserve plan, formerly H. R. 2967 and now known as H. R. 5297, is not related to universal military training. It is true that the 6 months active-duty-for-training feature of the plan gives it a surface resemblance to a form of universal military training, but any similarity to that program ends there.

In the first place, universal military training was proposed as a permanent system. Our plan is for 4 years only and is subject to continuing study during that time on the basis of future requirements. Universal military training is based upon universality of training without regard as to whether the trainees are needed by the Military Establishment. Our plan is based solely upon military requirements. In addition, trainees, under universal military training, would be members of a separate corps which would not be a part of the Military Establishment while under our plan they are members of the Armed Forces for the full period of their military obligation. Perhaps one of the most important differences between the two programs is the matter of compulsion. Universal military training proposes an entirely compulsory system of training; the national Reserve plan offers young men affected thereby four choices as to how they may fulfill their military obligation.

These, then, are the principal differences between the two programs, and I trust this explanation will serve to indicate that our plan represents a new, and we believe a logical, approach to the problem of providing the Active and Reserve Forces necessary for the military security of the United States.

I am enclosing two copies of a booklet which describes the objectives and principal features of the national Reserve plan. In the event you should wish to forward a copy to the Michigan Council of Churches I believe it would be of great value to them in developing a better understanding of our proposed legislation.

Sincerely yours,

CARTER L. BURGESS.

To Increase Refugee Entry

EXTENSION OF REMARKS
OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1955

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks I should like to include an article from the New York Times of May 3, 1955, entitled "To Increase Refugee Entry":

TO INCREASE REFUGEE ENTRY—LEGISLATIVE CHANGES IN ACT, ECONOMY OF OPERATION PROPOSED

(The writer of the following letter was formerly in the United States Foreign Service, his last post as vice consul in Rotterdam.)

To the EDITOR OF THE NEW YORK TIMES:

The taxpaying United States public must be considerably confused over the present controversy being waged over the administration of the Refugee Relief Act. Even State Department consular officers who have been and are engaged in the operation of the refugee program must admit, and do so privately, that the well-intended and humantarian parcel of legislation is a rusty old locker to which no one seems to have the key.

Despite a huge expenditure of public funds and the pooled efforts of State Department, Immigration and Naturalization Service, Public Health Service, Department of Labor, and Counterintelligence Corps personnel assigned to the program, the results to date are pitifully meager. The American taxpayer has reason to ask why.

At the Rotterdam consulate we were prepared, as a result of a costly administrative buildup, to issue the 17,000 special visas allotted by the act to refugees in the Netherlands. It soon became all too clear that the goal set by Congress would never be met.

ISSUANCE OF VISAS

On March 25, after 1 year of active operation under the act, only approximately 400 visas had been issued. About 380 of these were to persons who normally would be entitled to visas under the yearly Netherlands quota. Some 20 visas had been issued to bona fide refugees. Yet our results were not considered poor in comparison with other offices in Europe.

The main hurdle to effective operation we found lies in the wording of the Refugee Relief Act itself. The act requires that every person issued a visa under its provisions be guaranteed by his sponsor in the States a specific set of living quarters and a definite job, approved by the Department of Labor. Prospective sponsors soon discovered that the red tape involved in proving and completing these guaranties involved more effort than they were willing to exert.

Those who did secure housing and promised jobs for prospective immigrants and executed the numerous forms to be forwarded to the consulates, via the Department of Labor, Department of State, and various local offices, learned that this paper battle was only the beginning. Security investigations would require from 2 to 6 months more and by that time the future employers and landlords in America would have grown impatient and canceled their agreements.

Consular officers do not question the importance to national security of thorough field investigations on all visa applicants. It is honestly felt, however, that the normal secure consular investigative procedure used in processing regular quota immigrants is adequate. Also there is no need for a separate, expensive and duplicating investigative staff. The act provides that an independent investigations unit report on each visa case, however, and by law this procedure must be followed, regardless of the waste of money and extra processing time involved.

It had been hoped by our officers abroad that the appointment of a qualified professional migration adviser to the Secretary of State such as Edward Corsi would result in either corrective administrative procedures or in strong recommendations to Congress by the Department for elimination of the bottleneck features of the act. These hopes proved but dreams, however, by recent developments.

REVIEW OF OPERATIONS

The most desirable action would be for responsible Members of Congress who are not involved in the present controversy to take action. They could review the entire operational history of the program with the Department of State, the Immigration and Naturalization Service, and the Department of Labor, consult directly with consular officers to get their suggestions for necessary administrative and legislative changes and work out a workable, yet secure, and expeditious program of operation.

This would definitely require amendments to the present RRA and administrative economy cuts. It would also save the program from certain failure, effect considerable economy, relieve our missions abroad of diplomatic headaches and foreign criticism, and make possible achievement of the original worthy aims of both our Congress and the President.

The assistance promised by our Government to refugees from the horrors of communism and from the ravages of war constitutes an important part of our foreign policy. Victims of totalitarian aggression and natural disasters must be encouraged to look toward our shores for the shelter of political and economic freedom which has become not only a basic facet of our historic identity but also the stimulant which has enriched and strengthened our national development. To permit this tradition to suffer through indifference, personal ambition, and administrative disagreement is folly.

ROBERT G. SCHUCK.

CORNWALL, N. Y., *April 24, 1955.*

American Loyalty Day

EXTENSION OF REMARKS

OF

HON. JOHN LESINSKI, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1955

Mr. LESINSKI. Mr. Speaker, the Veterans of Foreign Wars, through its Loyalty Day observance on May 1 of each year, desires to help combat anti-American propaganda at home and abroad. This effort, dating back numerous years in the annals of the VFW has grown in scope each year. The Communist demonstrations that have taken place in this country annually on May 1 have been effectively counteracted. Thousands of patriotic Americans take an active part in Loyalty Day parades and celebrations that are sponsored by VFW posts and their auxiliaries in towns and cities throughout the Nation. It has been proved that loyal Americans are more than willing to demonstrate their allegiance to the principles of Americanism. The VFW should be congratulated and profoundly thanked by every loyal American for its use of the weapon of truth.

As far back as 1929 the Veterans of Foreign Wars defined Americanism in the following timeless phrases:

Americanism is an unfailing love of country; loyalty to its institutions and ideals; eagerness to defend it against all enimies; undivided allegiance to the flag, and a desire to secure the blessings of liberty to ourselves and posterity.

This definition follows somewhat the preamble to the Constitution of the United States. Loyalty becomes something more than a theory or a postulate when it is translated into practice.

We Americans are a logical people when it comes to matters pertaining to organization. We have a genius for the creation of the mechanics of civic organizations. There is no country in the world with our multiplicity of civic efforts. Service club follows service club—for both men and women.

The same tendency is obvious in the field of the printed word. Magazine follows magazine in abundant profusion, many dedicated to reforming something. Topics vary all the way from foreign policy to mosquito extermination.

It has been said that America is a slave to resolutions, and that the average citizen feels a thrill of exaltation when he attends the annual dinner of his trade society, and votes aye to numerous resolutions all aiming at reform or regeneration of someone else.

Again we have a very riot of special days: Father's Day, Mother's Day, Army Day, Navy Day, and so forth, all designed to focus attention on some concrete definite policy or group.

Thus, logically, we have an American Loyalty Day to call attention to the needs of such efforts. If we can only get people to think American loyalty just once a year, something at least has been accomplished in the cumulative effort, a habit of mind has been formed. Such a day has numerous implications. The date itself is important—May 1—the famous Red May Day, the day of international protests. This day has always been regarded with apprehension in the capitals of Europe, and, to some degree, in our crowded eastern seaboard cities and the industrial centers of the Nation. May 1, set aside in the minds and hearts of all loyal Americans, can reduce the Red May Day aspects to the dull level of anticlimax.

American Loyalty Day is not merely for native-born citizens of this land, but for all who have chosen this fruitful, democratic way of life. It is not a selfish, personalized observance, but gives opportunity for the individual to examine his American loyalty and decide whether or not he is actively making use of it for the good of all mankind.

Effective loyalty must be inspired and strengthened by a capacity to see beyond the material facts which surround us. Otherwise, it can never survive the inevitable changes which take place daily in material things. "The things which are seen," wrote St. Paul, "are temporal; but the things which are not seen are eternal."

True American loyalty demands a capacity to look beyond the immediate difficulties. That is the secret of its power. It is an age-old promise. History is filled with apparent miracles achieved by men who, in the face of impossible odds, held loyal to their basic principles of life and looked beyond the immediate present, regardless of current skepticism. Consider the incredible things in which the great inventors have believed, the impossibilities which the scientists have created, the miracles that have occurred upon our own athletic fields.

Loyalty is certainly not a blind devotion; it is ready to transform beliefs into action; it must recognize the responsibilities of American citizenship; it has an appreciation for the perils arising in everyday life but chooses to overcome them.

Loyalty may be difficult to define. It is not something that is bought and paid for. It is not purchasable on an open market. It must be given open heartedly, freely, with the kind hope that the recipient will find happiness and comfort in it. It must be felt as a warmth of welcome, a deep sincerity. It must leave an indelible imprint which is unforgettable and is remembered long after the deed which it accomplished is forgotten. It cannot be demanded or commandered.

The loyalty that these United States expects of us on May 1, 1955, and the other 364 days of the year, is the loyalty it deserves—no more, no less.

Again, may I commend the Veterans of Foreign Wars for their patriotic endeavors and urge each citizen to become active in the demonstration of American loyalty.

Curious Choice

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1955

Mr. WILLIAMS of New Jersey. Mr. Speaker, President Eisenhower has designated Mr. John B. Hollister, of Cincinnati, as the head of the new International Cooperation Administration, which is to handle our foreign-aid program when the Foreign Operations Administration goes out of existence. I believe the Congress will want to learn a good deal about Mr. Hollister's thinking on foreign aid and I ask unanimous consent to include two editorials from the Washington Post and Times Herald which raise some legitimate questions regarding Mr. Hollister's philosophy and how it may affect his administration of our aid program.

The editorials are as follows:

[From the Washington Post and Times Herald of May 2, 1955]

CURIOUS CHOICE

John B. Hollister, of Cincinnati, whom President Eisenhower has designated head of the new International Cooperation Administration to be set up in the State Department, is an able lawyer and administrator who has been executive director of the Hoover Commission. In his new capacity, if he is confirmed by the Senate, he will be in charge of all foreign-aid operations, including the technical-assistance programs. The post demands unusual energy and special organizational gifts, both of which Mr. Hollister has. But it may be asked whether he wholeheartedly believes in the program he is picked to administer and whether he will bring to it the zeal which is required if the Asian part of it is to strike fire. If rumors concerning a preliminary Hoover Commission report on foreign aid can be relied on, Mr. Hollister's chief interest would seem to be to liquidate it as soon as possible.

Mr. Hollister is a former law partner of Senator Taft and a member of the Taft wing of the Republican Party. His choice for this significant post may have been influenced in part by a desire to keep the Taft wing of the party under the Eisenhower banner. If such is the case, it may prove to be as unfortunate as the appointment of Clarence B. Manion, former Chairman of the Commission on Inter-Governmental Relations, whose resignation the White House requested when he criticized many Eisenhower programs. Mr. Hollister would make an excellent director of the General Services Administration or some other agency chiefly concerned with economy and efficiency. But the foreign-aid chief should be concerned with social and economic development programs as well as with economy and efficiency. He must be interested in bold experiments designed to raise living standards in the underdeveloped countries. These require the Government to take risks with its money in the interest of long-term and sometimes intangible returns.

We hope that our misgivings about Mr. Hollister, who is a man of ability, experience, and patriotism, are ill founded. But the Senate ought to satisfy itself on these questions before it approves him for a task that is of such importance in our foreign relations. The vigorous continuance of some form of foreign aid to the underdeveloped areas is an investment in world stability of vital concern to the American people.

[From the Washington Post and Times Herald of May 5, 1955]

THE POLITICS OF AID

One reason, seemingly, for the nomination of John B. Hollister to head the foreign aid program is the administration's hope that a man of his conservative reputation will be able to sell the program to Congress. This has some plausibility, provided that first the administration can sell the program to Mr. Hollister. President Eisenhower acknowledged Wednesday that he had not inquired whether Mr. Hollister is in sympathy with the aid concept—surely a strange way to run a railroad. Mr. Hollister is an able and conscientious man, however, and we hope that since he has agreed to take the job he will strive sincerely to carry out the administration's wishes.

Negative comments on Capitol Hill indicate that the task of persuasion will be formidable. There is reason to criticize some past blunders in the administration of economic assistance. Yet never has it been more important to convince the peoples of Asia that this country has a genuine concern for their welfare beyond treaties and guns. If there is any underlying meaning to be read into the Bandung Conference, it is that Communist China is flexible in her bid for leadership. The real rivalry in Asia is between China and India; and the way to resist China's magnetism is to strengthen the independent government's including India. That will require, not a big splash, but technical help and modest capital expenditures tailored to individual needs—to assist the development of resources, improve standards of living and broaden the bases of independence.

The challenge is for Congress to show its understanding that the independence of Asian nations is more important than dotted-line agreement with the United States. It would be little consolation later to investigate "who lost Asia?" The time to help save it is now.

Roosevelt Subcommittee—Small Business Applies Requirements of House Resolution 151 to First Hearings

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1955

Mr. DOYLE. Mr. Speaker, by reason of the unanimous consent heretofore granted me so to do, I am pleased to present for your information, and also the information and guidance of my other distinguished colleagues in this great legislative body, the full text of a letter dated May 2, 1955, to me from Hon. JAMES ROOSEVELT, 26th District, Los Angeles County, Calif., in answer to my letter to him of April 21, 1955, on the same subject.

I wrote the distinguished California Congressman, in my letter of April 21, the text of which is hereinafter set forth, for two reasons:

First, the hearings of the Roosevelt Subcommittee on Small Business were the first committee investigations, I believe, held following the unanimous approval of House Resolution 151, on March 23, 1955, and as author of said resolution I sought to have the earliest possible benefit and information about any experiences the Roosevelt subcommittee might have had operating under House Resolution 151.

Naturally, as author of the resolution, I did and shall undertake to keep as fully informed as possible as to the operations thereof in connection with House committee investigations.

Second, I was informed that some newspaper comment was made out West claiming that there was a possibility that the prompt functioning of the Roosevelt subcommittee hearings would be limited or hampered by reason of the requirements of House Resolution 151.

I am sure that you, Mr. Speaker, and all the Members of this great legislative body will note the letter statement by Mr. ROOSEVELT with exceeding interest. And, because during the debate on House Resolution 151, the brief question was raised as to the intent and spirit thereof with reference to when closed committee sessions were required, I wish to say that the statement made by the chairman, Hon. HOWARD W. SMITH, of the House Rules Committee, to Congressman ROOSEVELT in describing the type of testimony which was required to be in closed session meets with my hearty approval and I respectfully urge that each and every chairman and subcommittee chairman of House investigative committees carefully note the reasonable and sound explanation made by the distinguished Representative from Virginia, Hon. HOWARD W. SMITH.

In this connection, I will state that during the time Subcommittee Chairman ROOSEVELT was making inquiry I was not available in Washington because I was presiding as subcommittee chairman of the House Un-American Activities Committee hearings in Milwaukee, Wis. I make this explanation in connection with Mr. ROOSEVELT's letter to me for the reason that several Members have asked if I concurred with the interpretation placed upon this section of House Resolution 151 by Rules Committee Chairman SMITH and Subcommittee Chairman ROOSEVELT who was so fine and fair in undertaking to apply the full intent and spirit of House Resolution 151 to his subcommittee hearings.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., May 2, 1955.

Hon. CLYDE DOYLE,
1030 New House Office Building,
Washington, D. C.

MY DEAR CLYDE: Responding to your letter of April 21 requesting full information as to the application of House Resolution 151, of which you are the sponsor, and which passed the House of Representatives unanimously March 23, 1955, I am happy to send you the following report:

Pursuant to section 2 (m) of House Resolution 151, as chairman of Subcommittee No. 5, House Select Committee on Small Business, I consulted with the Parliamentarian of the House concerning anticipated testimony which might conceivably be incriminating to certain large firms in the oil industry. The Parliamentarian advised that it would be wise to hold executive hearings until the nature of the evidence was completely established. The committee, therefore, held its first hearings in executive session. It soon became apparent that the testimony was of a responsible and factual nature, and the committee, therefore, voted to make the testimony public in its entirety as per section 2 (o), and the oil firms were

advised that they would have full opportunity to respond.

As chairman of Subcommittee No. 5, I then consulted with the Honorable HOWARD W. SMITH, chairman of the House Rules Committee, and described to him the type of testimony received by the committee in the previous session. Chairman SMITH advised that in view of the responsible testimony he believed future testimony should be open in character, inasmuch as the spirit of House Resolution 151 indicated that witnesses were not to be held in closed session unless their testimony was expected to be irresponsible and of a harmful nature which could not properly be defended against. Subcommittee No. 5, therefore, in agreement with and in conformity with Chairman SMITH'S suggestion, has held the rest of its hearings in public session, and I believe that they have been generally by all parties considered to have been fair and impartial.

We, therefore, feel that under this interpretation of House Resolution 151 the committee's work has not been hampered and that the rights of all concerned have been respected. In accordance with section 2 (h) the committee has also always had at least 2 out of the 3 of its members present at all hearings.

I trust that this will give you the information you desire, and with appreciation for your good wishes, which I reciprocate most heartily, I am

Very sincerely,

JAMES ROOSEVELT.

APRIL 21, 1955.

HON. JAMES ROOSEVELT,
House of Representatives.

MY DEAR COLLEAGUE: I am communicating to you at this time and asking your cooperation along the lines requested by me herein as an aid to me in connection with the practical application and working out of the Doyle resolution, House Resolution 151, which passed the House of Representatives unanimously on March 23, 1955.

As you and your subcommittee of the Small Business Committee of the House apparently held the first investigative hearings by a subcommittee subsequently to the enactment of House Resolution 151, I am interested in your full advices and information to me of how the aforesaid resolution worked out in connection with the important subcommittee hearings here at the Nation's Capital and then out in California. Did you have any occasion to apply any particular paragraph of House Resolution 151? If so, how did you apply it and what the practical result?

I will also thank you for any comment or suggestions you may have in this connection.

Thanking you in advance and with personal regards, I remain,

Cordially yours,

CLYDE DOYLE.

Rural Doctors Needed

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 31, 1955

Mr. MACK of Illinois. Mr. Speaker, there is still a definite need for expanded medical facilities to educate young men in the medical profession to alleviate the critical shortage of doctors in our country. This situation is especially acute in our rural communities as most of the young men who have been educated for this profession have settled in the larger cities. The St. Louis Post-Dispatch published a very interesting editorial on this subject and I would like to include this editorial as part of my remarks:

RURAL DOCTORS NEEDED

Securing an adequate number of doctors for the rural areas of Missouri has been a constant problem for many years. Consistently the young physicians choose to start their practice in the city where they served their internship, although their roots may be in the country or in some small town. This means that many elect to stay in St. Louis or in Kansas City, or if not in those two cities in a place where there is ready access to research and hospital facilities. As a result, the doctors are few and far between in many counties where their services are needed.

A serious effort is being made to correct this situation by the University of Missouri School of Medicine according to its dean, Dr. Roscoe L. Pullen, who told a KWK–TV and KWK audience over their Operations Progress program last Sunday that medical internship programs are in the works for Columbia, St. Joseph, Springfield, and possibly Sikeston or Cape Girardeau. The net result should be more doctors for the rural areas.

An interesting point was made that frequently the doctor who is closing out his internship has decided to be married—and to a city girl. Usually she takes a dim view of going to a small town, and the result is that her husband opens an office in the city.

It was facetiously suggested that perhaps one good way to take the doctor to the country would be for medical groups to go into the match-making business. That is, to see to it that the graduating physician meets a girl from the rural precincts—object matromony.

But if the original suggestion was made with tongue in cheek, it was soon developed by the panel that the idea isn't at all bad and that it is well worth exploring. In fact, steps have already been taken in that direction and it may develop into a recognized procedure once the intern is prepared to quit his apprenticeship and strike out on his own.

One of the panelists, Dr. James Tolinger of Jackson, Mo., made the practical observation that along with the marital tie-in, small towns and rural areas should assist the young doctor financially in getting started. Most of them begin their practice with meager funds, if any. They have completed their medical courses at great expense to their parents; they earn a bare subsistence during their internship. But to start practice they will need from $6,000 to $16,000 for equipment alone if they are to do a worthwhile job. If the rural communities where they might practice would supply that assistance, the inducement would be great to take a chance in the country.

This has been tried in several States, one of which is Illinois. Dr. Andy Hall of Mount Vernon, who is still practicing at the age of 90, says a plan has been in effect since 1948, sponsored by the Illinois State Medical Society, by which loans up to $1,250 annually are available for 4 years to medical students. The interest rate is 2 percent if they stay; 7 percent if they do not. In some States the funds are outright gifts, with certain stipulations that the young doctor must continue his practice in the community that has helped him.

One of the potent arguments for the establishing of a State medical school at Columbia a few years ago, instead of in St. Louis or Kansas City, was that more medical school graduates would return to the rural communities from whence they came. A survey shows that at least 1 out of every 4 doctors remains to practice in the city in which they intern.

It is to be hoped that the plan to take medical internship programs to at least 5 or 6 communities outside the 2 large cities of the State, will be given every opportunity to develop. Many counties are woefully lacking in doctors, and those in practice are overworked and cannot provide needed services. Some means must be found to supply them with more men of medicine.

Statement by Hon. Charles A. Wolverton, of New Jersey, on Deepening of Delaware River Channel

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1955

Mr. WOLVERTON. Mr. Speaker, the deepening of the Delaware River Channel to accommodate the growing foreign and domestic commerce that utilizes the Delaware River requires an immedate appropriation of $25 million to commence the 4-year program that such development will require.

I include as part of my remarks the statement I presented to the House Appropriation Committee at the hearing held today in connection with the matter.

It reads as follows:

STATEMENT OF CONGRESSMAN CHARLES A. WOLVERTON, REPRESENTING THE FIRST CONGRESSIONAL DISTRICT, NEW JERSEY, BEFORE THE HOUSE COMMITTEE ON APPROPRIATIONS, IN SUPPORT OF $25 MILLION APPROPRIATION TO COMMENCE WORK ON DEEPENING OF DELAWARE RIVER CHANNEL PROJECT

Mr. Chairman and members of the Appropriation Committee, we are very appreciative of the opportunity you have given to us to appear before your committee and present the facts and figures that, in our opinion, amply justify the inclusion of a $25 million appropriation at this time for the deepening of the Delaware River Channel.

The deepening of the upper Delaware River Channel has been found economically justified by the business, industrial, maritime, State, and municipal interests of the entire Delaware River area. It has the enthusiastic and aggressive support of each of these.

There is no area in the entire Nation that gives promise of greater expansion than the area within the Delaware River Valley. Industrial, commercial, and maritime interests have made, and are now making, large investments amounting to many hundreds of millions of dollars to promote economic expansion of the entire district served by the Delaware River. The importance of this contribution to our national wealth and our national security cannot be disputed.

The Delaware River is the main artery of commerce, foreign and domestic, that serves an industrial and farming area not exceeded by any other river in the entire Nation. At the present time its insufficiency of depth is a great handicap in fulfilling its complete usefulness. The traffic on the Delaware River is seriously hampered by this condition and if it is not speedily corrected the injury wrought upon the commerce of the entire area will be incalculable. Furthermore, we must not overlook the further fact that the Delaware Valley lies in the heart of an area in which there is taking

place a rapid industrial and commercial expansion that will require service of ocean-going vessels of a draft in excess of 35 feet.

The resultant financial gain to the United States Treasury is a further justification for an adequate appropriation to deepen the Delaware River Channel. The following figures show that it is just ordinary good business for the Federal Government to invest in the Delaware River:

(a) Customs receipts alone bring $52 million a year into the United States Treasury. Since 1936, the Federal Government has spent a little over $100 million on our Delaware River Channel—but since 1900, it has collected almost $1.5 billion in customs revenue—or a return of $14 for every $1 invested.

(b) Every day the Delaware River carries 700,000 barrels of crude oil to feed our great petroleum refineries. With an adequate channel, the large modern tanker can deliver crude oil at least 60 cents per ton cheaper than the smaller tanker which our Government built during World War II. The Navy's Military Sea Transport Service is now asking Congress to authorize the building of 20 such large modern tankers because of their defense value. The yearly saving in transportation costs of $20 million—for just this one item of our Delaware commerce—will mean a Federal tax revenue of $10 million.

(c) The Delaware River will handle for the steel industry an estimated 15 million tons of imported iron ores. If we calculate conservatively that the large ore carrier will bring this ore to our dock for 50 cents per ton less than the cost of using smaller ships, the benefit to the Federal Treasury will be almost $4 million in additional taxes.

(d) Prosperity in our three-State Delaware Valley area depends upon an adequate Delaware River channel. With such a channel, we will have greater opportunity for industry to employ our people, and this means more Federal revenue from business and individual taxes. In the last fiscal year, Pennsylvania and New Jersey alone contributed over $7 billion in internal-revenue collections of all kinds—better than 10 percent of all tax revenues.

In conclusion, I wish to make reference to the strange suggestion that comes to us from the Chief of Army Engineers, namely that local interests pay half the cost of increasing the depth of the Delaware River. This contribution has been estimated at $18 million.

The Chief of Army Engineers admits that the deepening of the channel as proposed would unquestionably contribute to the general welfare of the region. But he makes the qualifying observation that the use of channel depths greater than 35 feet will be confined to a single company.

In answer to this suggestion, I reply, Why should an industry be compelled to contribute directly to the cost of a public improvement which benefits not only that industry but a whole region, as the 40-foot channel undeniably would? Even if a private enterprise is willing to shoulder such a charge, should the Government want it to? Would there not be corollary questions of the industry's rights in the improvement it is helping to finance, and of tax deductions? Should an industrial firm whose tax payments help produce public improvements be required also to pay directly for such projects?

If a 40-foot Delaware Channel is in the public interest, as it appears to be, it should be treated as a public improvement, built with public funds—not as part of a corporate investment.

Furthermore, to adopt a policy of required local participation in cost of river and harbor improvements creates a situation that would not only be novel and unique in the Government policy that has heretofore prevailed, but the results could conceivably prove most disastrous by curtailing future expansion of our principal ports and rivers.

Questions immediately arise as to not only the lack of justification for such a policy but also as how such a policy could ever be practically applied in its application. For instance:

1. What is meant by "local interests"? Is this to mean "local industrial interests," "local commercial interests," "local maritime or shipping interests," or "local, State, or municipal interests"?

2. If industrial, commercial, or shipping interests are intended, then would it be applicable to the presently existing interests or would it contemplate also contributions from future interests of a similar character? If so, then how would it be applied as between present and future interests?

It can be readily seen that it would be unfair and unjust to apply it only to existing interests as against future interests that would equally benefit, and most objectionable of all considerations, that would naturally grow out of such a policy would be the tendency of new interests to avoid placing their industries or other interests along the Delaware River. Thus it would have a tendency to stifle future development of the whole Delaware River Valley.

3. Furthermore, if such a policy should be adopted as to the Delaware River, then it would be the application of a policy that runs counter to our river development policy since our beginning as a Nation, and in all fairness, would require the application of the same policy to all our rivers and harbors and thus create a situation that would prove most detrimental to port developments throughout our Nation.

Thus I wish to record my objection to the proposal of the Chief of Engineers, Corps of Engineers, Department of the Army, that local interests be required to contribute in cash to the United States one-half of the actual additional cost of construction of the recommended improvement of the 40-foot channel in excess of the cost of a 35-foot channel, and I respectfully urge the committee to report favorably legislation for an adequate amount that will enable this great improvement to be started at the earliest possible day.

Pulitzer Board Honors Arthur Krock

EXTENSION OF REMARKS
OF
HON. RICHARD B. WIGGLESWORTH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1955

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article appearing in the Washington Star, of May 4, 1955, reporting the eloquent tribute to Arthur Krock of the New York Times, by the Advisory Board on Pulitzer Prizes, on his retirement from its membership. His many friends will applaud:

PULITZER BOARD HONORS KROCK

NEW YORK, May 4.—The Advisory Board on Pulitzer Prizes has cited, for the second time, Arthur Krock of the New York Times, for distinguished correspondence from Washington.

The citation was contained in a resolution approved by the board on Mr. Krock's retirement from its membership under a rule that he proposed. The new rule limits tenure of board members to 3 terms of 4 years each.

The resolution said the board "accepts with great regret" his decision to retire from membership and "recognizes with deepest gratitude the distinguished services he has given to the Pulitzer prizes." The resolution also said:

"That Mr. Krock, through his exclusive interview with President Harry S. Truman, achieved the extraordinary distinction of being cited by the board for doing the outstanding work of 1950 in the national reporting category, but being denied a Pulitzer prize because he was a member of the board, no national reporting prize being awarded that year;

"That Mr. Krock is hereby cited, both for his unselfish efforts as a member of the board and for his distinguished correspondence from Washington, as a great newspaperman and an example to all newspapermen."

General Pulaski: American Benefactor

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1955

Mr. LESINSKI. Mr. Speaker, about 2 months ago was the 207th anniversary of the birth of General Pulaski. As a person with dogged determination, General Pulaski has few, if any, equals. His perseverance to accomplish his mission marked him by his enemies as a "must" to be disposed of. Only due to his likewise determination to be free was he able to acomplish so much before death finally overtook him at Savannah.

A review of his background in Europe, his continued fight for freedom and finally his meeting with Benjamin Franklin in Paris, led him to battles in America which should inspire all of us with greater hope. His ability to overcome so-called insurmountable difficulties should inject us with new vigor to accept the challenges thrown before us today.

It is my pleasure to submit for the RECORD on this day commemorating the Polish Constitution of 1791 an admirable piece of research written by Joseph Wytrwal. Mr. Wytrwal is a social-studies teacher at Eastern High School in Detroit. He has written about General Pulaski in a way that should interest every American.

GENERAL PULASKI

One day in September 1775, 28-year-old Gen. Kazimierz Pulaski wrote the following dramatic words in a letter addressed to his close friend Prince Radziwill:

"Education received in earlier days prevents me from raising my own hand against myself; but the prolonged hours of this torture do not bring the deserved end to my life."

Little did Pulaski known that 3 years later he was to become a protege of George Washington and that his fame and glory would be part of American history.

Who was this Polish general, whose monuments cover the American continent and whose name will be repeated in classrooms for generations to come?

Kazimierz Pulaski was born in nobility in the Podole Province of Poland on March 4, 1747. His life on his father's estate passed without any special significance. In com-

parison with the upbringing of other youngsters of that violent era, Pulaski's father had been an able jurist who lived a retired life, devoting his time to the education of his sons in accordance with the tradition of the country. Apart from a military training, horseback riding and political indoctrination his sons received the best education one could get through private tutors. It was at the age of 17 when young Pulaski learned to despise the Czarist regime and all it had stood for, and he had learned to suffer from privation when he and his family were locked up in a castle by the Russians. It was there that young Pulaski learned more, through practice, about the art of open warfare. This experience came in handy later when Pulaski bravely opposed the enemy in the skirmishes at Starokonstantynow and at Chmielnik, which he defended in the name of the Bar Confederation.

His attitude and stand at that time came as a result of the unprecedented arrest by the Russians of four Polish deputies to the Sejm. The Sejm, being paralyzed by the threatening force of 30,000 Russian soldiers, could not do much to defend the arrest of its deputies. Neither did King Stanislaw August Poniatowski take any action. The only answer to the Russian outrage was a firm plan for an uprising, which was drafted by Jozef Pulaski. He found an able and loyal supporter in his own son, Kazimierz. On January 29, 1768, the insurrection was proclaimed at bar and from then on Gen. Kazimierz Pulaski fought uninterruptedly one battle after another. He was in charge of the armed positions at Zwanice and at the Holy Trinity trenches. He crossed the swollen Dniester River, when outnumbered by 4,000 Russians, and unimpressed he led his attachment of 400 horsemen through Bukovina to Karkow. Meanwhile, Jozef Pulaski, the general's father, had died in a Tartar prison, his younger brother was arrested, and he himself was called by the enemy an ambitious opportunist. Pulaski did not lose his courage. He once more started an offensive after having joined remnants of the Confederates at Sanok. After an unsuccessful attack upon Przemysl, he went north to Lithuania in order to start an uprising there. But here again he was defeated, and added to everything else, he lost his brother, Francis, who fell in the battle against General Suvorov's forces. With only a handful of men Kazimierz escaped into Hungary in order to form new forces and to get courage for new battles to come. Kazimierz Pulaski did come back into Poland and in September 1770 he occupied the famous Chestochova Convent, forcing the Russians to retreat. Yet, despite this and many other victories of the Tsarist armies, the Bar Confederacy was growing more and more desperate. In addition General Pulaski was being accused by his own compatriots of having planned the kidnaping of King August Poniatowski, a plan he had rejected when it was secretly offered him. Pulaski defended himself in a proclamation that he had written, but to no avail. He was pronounced a criminal, and from fear of being delivered into Russian hands he began moving from place to place. He would find refuge in Dresden and when the trail after him become hot he moved to Strasbourgh and thence to Paris. Although denounced by the High Court in Poland as a renegade, Pulaski remained loyal to his cause. His only sin was a desire to overthrow the Tsarist regime in Poland and to liberate his beloved country. Once again he made the attempt. At the very moment when Turkey had been defeated after the Turkish-Russian War, Pulaski, with only a few enlisted volunteers, appeared in the Balkans at the camp of the Grand Vizier. He arrived too late. From Rodosto he went to Smyrna and from there to Marseilles. Luck had left him completely. In Marseilles he was robbed of his personal papers and money. He was thrown into jail like a common criminal for his debts. As he was sitting and brooding in jail over his past, the French who had felt responsible for Poland's misfortunes notified Pulaski about the presence in Paris of Benjamin Franklin and Silas Deane, who had been recruiting volunteers for America. In the spring of 1777 Pulaski met Franklin in Paris. The latter gave Pulaski a letter of introduction to George Washington saying:

"Count Pulaski, of Poland, an officer famous throughout Europe for his bravery and conduct in defense of liberties of his country against the great invading powers of Russia, Austria, and Prussia, will have the honor of delivering this into Your Excellency's hands. The court here has encouraged and promoted his voyage, from an opinion that he may be highly useful to our service. Mr. Deane has written so fully concerning him, that I need not enlarge; and I only add my wishes that he may find in our armies under Your Excellency, occasions of distinguishing himself."

A new unexpected chapter in General Pulaski's life had begun. At the end of July, Pulaski landed at Boston. At that time there was fierce fighting on the Hudson River and on the shores of Lake Champlain. Like a firehorse, temporarily disused, Pulaski grew impatient and wrote the following to George Washington himself:

"I wish to receive under my command a detachment of cavalry volunteers, and to hold such a rank as would authorize me to command a whole division if I deserve it. * * * I should like to receive a position in which I would be under orders only from the Commander in Chief. If this is impossible, I would like to share the hardships of war with the Marquis de Lafayette, and to execute the Commander in Chief's orders as the subordinate of the Marquis. The chief thing for which I ask is to be near the enemy, to have the opportunity to earn the name of a good officer. I had under my command in Poland in various battles 18,000 men; attacks and sieges which I commanded allow me to count myself among those who have acquired experience in war. You should not slight such men; I have come from Europe in the hope that I may be accepted in the ranks of those worthy citizens who fight for their country and independence."

On August 28, 1777, the President of Congress received the following letter from George Washington:

"To think of some mode of employing him (Pulaski) in our service there is none occurs to me liable to so few inconveniences and exceptions as the giving him the command of the horse."

Meanwhile, until commissioned by Congress, Pulaski had the opportunity to show craftsmanship in military art at the battle near Warren Tavern. Not only did he check the British but he personally saved General Washington's life, insisting to see the latter when he found out that British forces were mistakenly taken for Americans. As a result of Pulaski's conduct in the Battle of Brandywine, Congress awarded him a commission, and on September 15, 1777, he became a brigadier general in command of the entire cavalry of the American forces.

On Christmas Eve of 1778 British forces, after having captured Savannah, threatened Augusta, Ga., and Charleston. Pulaski, who was serving under the command of General Washington, arrived just in time to push the British back. In this battle he lost his second in command, Colonel Kowacz, a compatriot, and 50 men of his legion. Had it not been for Pulaski's display of bravery and personal combats, Charleston would have been lost to the enemy.

During the summer military operations were suspended and the silence on the front frustrated Pulaski. In consequence on August 19, Pulaski wrote the following letter to Congress:

"Enthusiastic zeal for a noble cause and for life in America, and disregard for death made me enlist in your ranks, and I flattered myself that I should work to your satisfaction and earn your approval. It must be my fate that nothing but honor to which I have ever been faithful, makes me continue in this service; but I am disheartened by ungenerous treatment. * * *

"Be just, gentlemen, and I think as I could not bow before the powers of Europe I came here to sacrifice everything for the independence of America. I wish to live in a free country, and before I settle down I wish to fight for that country's freedom. * * * Maybe I shall have the opportunity to prove that I am a friend to your cause, though I have not been lucky enough to commend myself to some person."

Pulaski's desire to take to arms came sooner than he had expected. In an attack to recapture Savannah, Pulaski led his cavalry under the command of Count d'Estaing. When d'Estaing fell wounded, General Pulaski took over, but he soon fell too, hit by a grapeshot. As a result of infected gangrene the brave fighter for Poland's and America's independence died in agony on board the *Wasp* on October 11 and he was buried in the watery grave. Thus, this great son of Poland never lived to see the finished fruits of his adopted country, whose foundations he so vigorously helped to lay.

Mr. Speaker, the Polish Daily News recently printed an article by Joseph Wytrwal in which he presents Pulaski Proclamations issued by 12 of our State Governors. The survey on General Pulaski which is reported in this article was conducted by students in his American history class at Eastern High School in Detroit. Contributing work to the survey came from Larry Blair, Richard Pastick, Howard Cloutier, Dwight Alison, Patricia Verlinden, Ernestine McNeece, Carlos Broadley, Louis Gaines, Richard Stys, Cynthia Beaudion, Curtis Butler, and Norman Geohring.

The article is as follows:

TWELVE GOVERNORS ISSUED PULASKI PROCLAMATIONS

(By Joseph Wytrwal)

President Eisenhower made the following statement in his General Pulaski Memorial Day proclamation for 1954:

"The story of this Polish patriot's supreme contribution to our independence is a treasured chapter in the annals of a grateful nation."

According to a recent survey, conducted among the governors of the United States, Count Pulaski's deeds of valor on behalf of the American colonists in their fight for freedom have not gone unnoticed or unsung by subsequent generations of Americans.

Last year, to commemorate the 175th anniversary of Pulaski's death at Savannah, Ga., 12 governors issued proclamations.

They were:

Gov. John Lodge, of Connecticut; Gov. Christian A. Herter, of Massachusetts; Gov. Thomas E. Dewey, of New York; Gov. G. Mennen Williams, of Michigan; Gov. Hugh Gregg, of New Hampshire; Gov. Lawrence W. Wetherby, of Kentucky; Gov. Robert E. Meyner, of New Jersey; Gov. Robert B. Crosby, of Nebraska; Gov. George N. Craig of Indiana; Gov. Theodore R. McKeldin of Maryland; Gov. C. Elmer Anderson of Minnesota, and Gov. Dennis J. Roberts of Rhode Island.

Gov. Christian A. Herter of Massachusetts, made the following observation in his proclamation:

"After the last partition of Poland, Pulaski was forced into exile to Turkey and later to France, where the news of the American

struggle for freedom reached him. Therefore, at Paris, he at once presented himself to Benjamin Franklin as a volunteer, was readily accepted, and in July 1777, landed, at his own expense in Masachusetts, being immediately invited by George Washington to serve as an officer on his staff.

"Shortly afterwards, as a result of Pulaski's praise-worthy conduct in the Battle of Brandywine, Congress awarded him a commission as brigadier general to form and command the entire cavalry of the American forces. Thus Count Pulaski earned the title of 'Father of American Cavalry,' which units led so effectively at Germantown, at Charleston, and at Savannah. At the latter place, leading his legion to the defense of our French allies, Pulaski was fatally wounded. Two days later, on October 11, 1779, at the age of 31, he had made the supreme sacrifice on the Altar of Liberty."

Gov. Hugh Gregg, of New Hampshire, stated:

"Informed Americans are grateful for the memory of the gallant Gen. Casimir Pulaski, who so bravely aided our people to win their independence in a past generation."

Gov. S. Fine, of Pennsylvania, made the following statement in his proclamation:

"On the honor roll of heroes and patriots who suffered and died that we might enjoy the priceless boon of liberty, the name of Count Casimir Pulaski stands forth with great distinction."

Gov. Lawrence W. Wetherby, of Kentucky, declared:

"In battle, General Pulaski's devotion to the great American cause was demonstrated by his gallant charge into the enemy lines, and his tragic death has served to ennoble him in the eyes of the entire liberty-loving world; and, it is fitting that the recurring anniversary of this day be commemorated with suitable patriotic and public exercises in observing the heroic death of this great American hero of the Revolutionary War."

Gov. G. Mennen Williams, of Michigan, stated:

"Casimir Pulaski came from his native Poland to offer, without reservation, his assistance and his fortune in developing the cavalry for the Army of George Washington. Fighting not for personal advantage but the principles and ideals to which he was dedicated, he died, on October 11, 1779, in the battle of Savannah, that the liberty he loved so well might live."

Gov. Thomas E. Dewey, of New York, said:

"Count Pulaski's exploits at Brandywine were such that Congress made him a brigadier general and chief of cavalry. The gallant defense of Charleston by the Pulaski Legion in May 1779, which he organized, is an unforgettable chapter in the military history of our country. General Pulaski literally gave his life for our freedom when he perished October 11 of the same year from wounds he sustained at Savannah."

Gov. Robert B. Crosby, of Nebraska, said:

"A Polish patriot, Casimir Pulaski, was a man who so fervently believed in the principles of freedom that he was willing to fight and die for this cause. He was killed during the American Revolution defending the rights of a people who, like him, wanted above all else to be free. So great a patriot was he that the Nebraska Legislature some years ago saw fit to call the attention of its citizens to this martyr by proclamation each year."

Gov. Theodore R. McKeldin, of Maryland, asserted:

"His contribution to our cause, and through that cause to liberty in the world, gives him a permanent place in the history of this Nation which is today's main bulwark of freedom and the hope of oppressed peoples everywhere, including those of Pulaski's beloved Poland."

Gov. Elmer Anderson, of Minnesota, said:

"General Pulaski's dedicated and devoted service to this Nation has provided inspiration not only for the service men and women of this country but also for the freedom-loving people of his native Poland."

Gov. Dennis J. Roberts, of Rhode Island, said:

"He was assiduous in hoping to find opportunities of proving his devotion to the American cause, although he encountered opposition and discouragement in trying to put his ideas into effect. At the age of 32 he was mortally wounded at the Battle of Savannah and did not live to see the victory to which he had contributed."

Gov. John Lodge, of Connecticut, declared:

"For his bravery and splendid leadership at Brandywine less than a month after he had been given his command in America, Pulaski was accorded the rank of brigadier general. His example was an inspiration to all Americans, and especially to the men of the famous Pulaski Legion, who performed signal service in the War for Independence."

Gov. George S. Craig, of Indiana, made the following observation in his proclamation:

"The passage of the years since General Pulaski's death had not dimmed the glory of his sacrifice or the luster of his fame; and his selfless devotion to the cause of freedom stands today as a challenge to all men who work for freedom in all nations."

No; the glory of Pulaski's sacrifice, or the luster of Pulaski's fame has not been dimmed by the passage of the years. With every passing year, the memory of Count Casimir Pulaski is held in ever greater reverence.

Gen. Casimir Pulaski is acclaimed with warmest affection by our entire Nation. This affectionate place his memory holds in the hearts of millions of Americans is well earned—for General Pulaski is truly one of our national glories.

National Better Material Handling and Packaging Week

EXTENSION OF REMARKS
OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1955

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I wish to include two communications which I have just received from Mr. J. Wellington Hall, national secretary of the American Material Handling Society, Inc., with respect to my resolution, House Joint Resolution 231, which would proclaim a National Better Material Handling and Packaging Week:

AMERICAN MATERIAL HANDLING SOCIETY, INC.,
Toledo, Ohio, April 27, 1955.

Hon. PETER W. RODINO, Jr.,
House Office Building,
Washington, D. C.

DEAR MR. RODINO: I would like to further add to the letters previously forwarded in support of your resolution, House Joint Resolution 231, a National Better Material Handling and Packaging Week the following:

Mr. Edward H. Leighten, editor, Flow magazine, has written, stating: "Thank you for sending the information on the proposed week. This is certainly a fine idea and aside from writing letters to Congress, we will be glad to do anything that may be indicated to further the promotion."

Mr. Carl Harrington, editor, Mill and Factory Magazine writes, stating: "In reply to your letter we will be delighted to help publicize this week. Please keep us advised and we will take an active part in bringing it to the attention of our readers."

Mr. J. Sack, managing editor, South African Mechanized Handling, Johannesburg, South Africa, writes, and I quote: "Many thanks for your kind thought in sending me a copy of the original correspondence with the Honorable PETER W. RODINO, Jr. regarding the proclamation of a National Better Material Handling and Packaging Week by the President of the United States.

"Once again, I am moved to sincere admiration of the work of your society specifically, and American enterprise generally, in drawing public attention to important problems. The way you are handling this matter is, in my opinion, an object lesson from which I hope we, in this part of the world, will be able to profit."

Assuming there are no objections I am going to feature it prominently in South African Mechanized Handling.

Mr. Richard M. Oliver, industry planning service, Aircraft Industries Association, writes, stating: "We are pleased to know of the effort and shall be glad to assist in whatever way we can.

"The Aircraft Industries Association does not have any particular group working wholly on material handling problems, but there are interested personnel among the membership of material, manufacturing methods, and preservation and packaging committees. We shall be glad to publicize the National Better Material Handling and Packaging Week to our interested personnel."

Mr. Richard Malkin, executive editor, Air Transportation Magazine, writes: "Congratulations on your fine effort. Air Transportation will be happy to cooperate in the job of getting the idea across."

Mr. A. Lawrence Young, secretary, International Air Transport Association of Montreal, Canada, writes, and I quote: "As an international association I do not think we can at this stage, participate formally in your program. However, we appreciate fully the importance of your objectives. I have shown your letter to Mr. Groenwegge who handles cargo matters in our traffic section. We should be most appreciative if you could see your way to keep him advised of developments."

Mr. R. N. Redmayne, general manage, Air Industries & Transport Association of Canada, has written, stating: "May I acknowledge your letter to Mr. T. P. Fox, president of our association, and in reply advise that we wish to commend the steps taken to focus attention on material handling problems."

I would request that this information be included into the CONGRESSIONAL RECORD as of benefit to the effort to establish a National Better Material Handling and Packaging Week.

Very truly yours,

J. W. HALL,
National Secretary, AMHS, Westinghouse Electric Corp., Meter Division, Newark, N. J.

AMERICA MATERIAL HANDLING SOCIETY, INC.,
Toledo, Ohio, April 27, 1955.

Hon. PETER W. RODINO, Jr.,
House Office Building,
Washington, D. C.

DEAR MR. RODINO: I am in receipt of a letter and other information from Mr. Harold F. Hess, executive vice president of the Construction Industry Manufacturers Association, Inc. who writes: "I have read with interest your letter to Congressman RODINO on the subject of a National Better Material Handling and Packaging Week. Attached is information on use of construction machinery and allied equipment in many segments of industry."

Construction machines and allied equipment are the basis of all human welfare and physical progress. They make modern construction possible, and from construction springs the fundamentals of all civilized man's existence—his food, water and shelter, clothing, transportation, defense against his enemies, and even his recreation. Everything man uses in peace or war starts with construction of facilities for production and distribution.

Without construction there would be no civilization. Without proper tools, materials and machinery there would be no construction.

Construction equipment is special equipment, designed, developed and constantly improved through the years to let us build better, faster and more efficiently. Yet, because, of its high capacity, ruggedness, efficiency and versatility, construction machinery is becoming indispensable to production operations in other basic industries. It is found in the mines, producing, hauling, and processing vital minerals. It is found in the woods, handling and hauling logs for timber production. It is found in the oil fields, digging slush pits, building and handling pipelines, erecting derricks and other production equipment. And it is found in many large industries handling heavy materials.

This industry, invaluable in peacetime, is in wartime called upon to furnish the equipment to generate the electric power for Signal Corps, build the airports on foreign battlegrounds, repair bomb-wrecked bridges, assemble big cannon in the field, build the roads for advancing troops, unload supplies (or evacuate them in rough going), drill wells, and build the docks for supplies to be unloaded.

This equipment is also used by the Armed Forces to build pontoon bridges, lay cables for telephone communications, and travel with the combat engineers and the Navy "Sea Bees" as an integral part of the operations, for without it a nation could not survive in modern-day warfare.

In time of mobilization and in war, construction machinery assumes the importance of planes, guns, and tanks. It makes possible the rapid expansion of plants for producing war materiel. It makes possible the fast building of vital air bases, ports, camps, and other military establishments, helps in production of critical materials needed for a military program. And, in combat, construction equipment carries the building of roads, airfields, and other facilities right up to the front lines.

In the interests of the effort to establish a National Better Material Handling and Packaging Week through your House Joint Resolution 231, I would request that this be included in the record as of benefit to the program.

Very truly yours,

J. W. HALL,
National Secretary, AMHS, Westinghouse Electric Corp., Meter Division, Newark, N. J.

Resolution of School Committee of Dover, N. H.

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1955

Mr. MERROW. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein a resolution adopted by the school committee of the city of Dover, N. H., and transmitted to me by Mr. Maurice A. Blais, chairman of the Dover School Committee:

Resolved by the School Committee of the City of Dover, That our Representatives in Congress be and hereby are requested to work for the enactment and passage of Federal legislation to aid education which will contain direct grants to cities and towns for the construction of school buildings. Solely guaranteeing bonds as provided in some of the proposed legislation will not benefit cities and towns to any appreciable extent nor permit them to start new contruction as the real-estate taxpayer cannot carry this extra burden. The chairman is hereby instructed to send a copy of this resolution to our Representatives in Congress.

Floyd J. Pemberton Named "Driver of the Year"

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1955

Mrs. GRIFFITHS. Mr. Speaker, it is with a great deal of pride today that I point to a high honor which has recently been conferred upon a Detroit citizen and resident of my district.

He is Floyd J. Pemberton, a driver for Commercial Carriers, Inc., of Detroit. Mr. Pemberton has just been named the trucking industry "driver of the year," the highest award given by the industry in recognition of safe driving habits and personal heroism. One driver is selected each year from among the 6 million on the highways.

Not only does driver Pemberton have an excellent safety record—over a half million miles with only a minor mishap in which an automobile bumped the rear of his truck—but last December he risked his life to save two women, helpless in a burning car. They are Miss Dorothy Powell and Miss Eleen Cooper, both of Ypsilanti, Mich.

It was Christmas Eve and Floyd was heading toward Detroit, and home. He had safely delivered a load of new cars to Cincinnati.

Suddenly, about 300 feet in front of him, 2 cars collided head-on. The driver of one was thrown out and killed instantly. The other car burst into flames.

Mr. Pemberton pulled to a stop and risked an explosion of the gasoline tank to use the fire extinguisher he carried in his cab to put out the flames. He placed flares on the highway to prevent other motorists from crashing into the two wrecked cars.

He then removed Miss Powell from the wreckage and applied a tourniquet to her leg, which had been nearly severed at the knee. He did not remove Miss Cooper because as he explained afterward, "she was bleeding too badly at the throat to risk being moved." However, he did place cloth padding under her chin to check, as far as possible, the bleeding.

A physician who cared for Miss Cooper later said "her survival could have been termed a miracle" and was due largely to Mr. Pemberton's quick action at the scene of the accident.

Michigan is proud of Floyd Pemberton. But the pride goes much deeper than mere respect for his new honor.

Floyd has an honorable discharge from the Marines and was wounded at Saipan and Okinawa. He and his lovely wife, Bonnie, live with their 3 sons in their own home in Redford Township, just outside Detroit.

With no time for the usual scoutmaster's schedule, Floyd makes up for it by taking his boys and fellow members of Troop 227 on special fishing and bowling outings.

The Pembertons are a typical, happy American family group.

And it is for this that Michigan primarily honors Floyd. It is respect for the solid American citizen, who did not hesitate to plunge himself unselfishly into the midst of a dangerous situation to aid his fellow beings.

His kind are the citizens of whom we all are proud.

Effect of Automation on Our Economy

EXTENSION OF REMARKS
OF
HON. IRWIN D. DAVIDSON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1955

Mr. DAVIDSON. Mr. Speaker, recently, I introduced a resolution which was referred to the Rules Committee. It provides for the creation of a select committee of seven Members of this House to study the effects of automation on our economy.

I humbly ask the support of the Members of the House for the early establishment of this committee. I believe the urgent need for the study envisaged in my resolution, House Resolution 221, is clear. The resolution would authorize the creation of a select committee to make a full and complete investigation and study of the growing use of automatic machines to make decisions previously requiring the exercise of human judgment, and to perform functions previously requiring human participation or supervision. I feel an analysis now is necessary with regard to the effect of automation on the American economy.

That definition, in the vernacular, is a mouthful. I tried to find a simpler definition and turned to the dictionary in my office. We have a 1951 edition of Webster's New Collegiate Dictionary; and, do you know, the word "automation" is not in there. I then asked the Library of Congress for a definition of the word. They report it is not contained in any dictionary they have. Despite this, we have all, however, heard a great deal about automation recently. Just a day or so ago, a certain great American industrial company sent out

its employee relations newsletter, "for circulation among management." It is entitled "Automation—Friend or Foe?" On page 5 of that newsletter this concern said that today the employer must automate to stay alive, and to automate, he must get his costs down appropriately and "remove from his payroll any substantial surplus of employees not needed." The company continues, saying:

The point is that there is no royal road to technological progress and if we want to continue to see our level of living go up, some risks by all are inescapable. Since it is no longer a question of whether industry in general will automate, but only whether a given company will be a leader or fall behind, anybody who is temporarily displaced by improvements in that company would lose his job anyhow—along with all the other employees in that company losing their jobs—if it should fall back in the parade.

What that company is really saying is this: There is no longer any question about industry adopting automation. Companies which do automate will have to fire substantial numbers of employees and those who do not automate—and reduce their payrolls to remain competitive—will be unable to remain in business, and all their employees will be put out of work. That is what this concern told its management.

Certainly no one here wants to put a damper on the increased expansion and growth of American industry. One of the marvelous results of the genius of the people of the United States is an economic machine capable of building our Nation into a true paradise. I say—full speed ahead. There can be no turning back, no halt to progress. If we falter, we plant the seed of our own downfall. However, we must proceed carefully and not foolishly; intelligently and not wastefully; forcefully and not destructively. This same wonderful economic machine which we have built can very easily turn upon us, devour our workingmen, eliminate our consumers, and like the Frankenstein monster, destroy its creator.

There can be no doubt that economic planning is an absolute necessity today. Recognizing this, the Federal Reserve Board has raised the margin requirements for stock purchases twice in the last 4 months and has taken other steps to help guide our economy and our well-being. We must not neglect the labor and industrial situation and the helpless condition of the millions of American employees.

You may be sure if we do, the Communists may be counted upon to seize upon every dislocation and resultant period of unrest and unemployment to further their own plans.

And please, let us not deceive ourselves: automation has arrived and will continue to expand with ever-increasing rapidity. The labor supply is, according to all predictions, scheduled for great increases. With the simultaneous increase in automation, what will these prospective employees do. I do not know and I do not believe any one person knows the answer. According to governmental reports, industrial employment decreased again in March, reaching the lowest level since last September.

The best available data shows that the packing industry is being seriously affected today by automation. Due to automation in that industry, more job rates were "bargained out" of the new contract with one packer this year than in all the last 15 years put together.

The electronics industry, in the well-chosen phrase of Robert Bendiner, of the Reporter magazine, "the fountainhead of automation," which should be employing many new people in producing the new mechanical wonders, shows that employment just is not keeping pace with production. "Electronics output in 1952 was 275 percent higher than in 1947, but was produced by only 40 percent more workers," according to Bendiner.

The telephone industry furnishes a daily example of the effects of automation. Many of the calls which once were toll calls needing a special operator are now dial calls and can be completed by the individual placing it. Fifty thousand telephone operators have been replaced so far by this new dial system.

Life magazine, with calm aplomb, says:

With a total of 2.7 million not working, we have been able to turn out and consume virtually as much goods as at the record heights of the boom. What this indicates—

And this is the point—

is that the United States may be able to produce and consume at boom-time levels, yet still have a "permanent reserve" of unemployment, which may increase.

That is a fine way to describe a worker with a family to feed: "Permanent reserve of unemployment." We cannot just set aside these men and women and call them trained reservists like the National Guard or Reserve.

The Factory Management and Maintenance industrial editor had this to say, according to Bendiner's excellent article, which I highly commend as "must" reading—the Reporter, April 7, 1955:

The jobs that are "duck soup" for elimination by automatic production are mainly the semiskilled ones, such as machine operating and materials handling. Some observers believe the factory of the future will go so far as to wipe out this great "middle class" of industry.

The effects of automation will first be felt in the areas of the country most heavily populated and industrialized. These areas, my own New York, New England, Ohio, Michigan, and other industrial States, are all in the path of catastrophic dislocations. As automation accelerates, the obsolescence of present plant facilities mounts, thus causing mass exodus of industry from these areas having skilled, trained labor pools.

While the effects of automation have not as yet been completely recognized, automation today is like a slow, creeping paralysis. The employee who is being replaced by a machine is in many cases rehired for merely temporary work, while the millions now unemployed cannot find new work. It is this employee who is not hired who is the most seriously affected at the moment.

Certainly in the long run automation, like all progress and industrial advancement, will prove highly beneficial to all. More jobs will be created. More goods will be produced. More leisure and more pay will be available to everyone. Walter Reuther, of the CIO, recognized this when he said that we will achieve an "abundance in terms undreamed of before," with "vast improvements in the living conditions of the American people."

Before we reach this pleasant state, however, we must face the problem which automation is now creating. Newsweek reported:

Ford's automatic engine plant turns out twice as many engines as before with one-tenth the manpower. A radio assembly line producing 1,000 radios a day uses only 2 workers where 200 were used before. An average refinery which employed 800 people without instrumentation, now uses 12.

The man put out on the street today or tomorrow is not in the least concerned with the land of plenty we will achieve in 1975. He needs help now. Life's vast "unemployed reserve" must have help now.

Obviously the State and local governments cannot assume this immense task alone. Federal guidance and planning are essential. What is needed, how much help, and what kind of help the Federal Government should supply is unknown and should be explored.

Senator JOSEPH C. O'MAHONEY has made the point most forcefully when he said that we must "find out how automation may be made to pay its way in terms of human welfare."

It is clearly the human problem with which we are concerned. The material values we have in ever-growing abundance, but the individual must not be lost and buried in a mound of statistics.

This Congress can establish itself as one of the wisest and best America has known. We have the golden opportunity now to evaluate and assess, in advance, the benefits, problems, and difficulties which automation will create. If we seize this chance we can truly help mold a greater and healthier society.

We must act now. We cannot allow an era of "technological unemployment" to come upon us, for if it does, international communism will seize the opportunity to feed upon this disaster. It is our duty to avert this calamity.

I implore your support and prompt approval of this study of automation.

The Time Is Now

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1955

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I wish to include a timely editorial on the subject of civil defense which appeared in the Newark Star Ledger of May 4, 1955:

THE TIME IS NOW

United States Civil Defense Boss Val Peterson delivered a real whoop-and-holler speech the other day to the governors of our States about the need for pepping up State

civil-defense work, but the governors are throwing the question right back at Mr. Peterson.

They want to know what Uncle Sam is doing first.

They say it's primarily a Federal job and the United States isn't showing them what to do.

This hassle has been going on for over a year now. We're no further along the line toward adequate civil defense than we were in 1950. We're probably worse off, because lots of new weapons have been developed, lots of new warnings have been thrown out, but no new instructions.

There's no sense in teaching the population what to do about civil defense after a bomb has fallen. The time is now, before the fatal event. And there's no sense in each agency exhorting the other to get going. It's obvious by now that somebody has to take the lead and the Federal Government is the logical choice.

We need a set of rules and regulations. We need clear and precise instructions on what kind of shelters to build, where, and how. We need to know what supplies to store in public places, how to control our roads and our airports and railroad terminals. We need to know what burdens we in New Jersey are expected to carry for our less fortunate brethren across the river, who won't find it so easy to escape into the hinterlands.

When is the Federal Government going to answer the questions?

H. R. 5986

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. METCALF. Mr. Speaker, I have introduced H. R. 5986 to provide for Federal employees who are injured in the line of duty the right to ultimate review by the courts of their claims for workmens' compensation—a right which they do not now possess.

A Federal employee, who is injured on the job, is entitled to compensation upon application and approval of his claim by the Bureau of Employees Compensation in the Department of Labor. Should the Bureau deny his application, the worker is privileged to request the Employees' Compensation Appeals Board to review his case. Under the present statute, this is the court of last resort.

The procedures for making such claim and the right of appeal from an adverse decision from the Bureau of Employees Compensation are described in the Federal Employees Compensation Act of 1949—Public Law 357, 81st Congress.

In most States there is an analogy between the Federal Bureau of Employees Compensation and the Employees' Compensation Appeals Board and the machinery established by the States for presenting and reviewing compensation claims of private-industry workers. In one important respect, however, the comparison is not valid. Under the law covering Federal employees, the claimant exhausts all rights after appealing to the administrative tribunal, the Employees' Compensation Appeals Board. An employee in private industry in 47 States is permitted to appeal to the courts following use of all procedural machinery established under the various State laws. Attached is a list showing the type of judicial review accorded by the States. Hence, Federal workers are not granted the same rights as their fellow employees under State laws.

Review of proceedings before the Employees' Compensation Appeals Board will reveal that approximately 70 percent of Federal employee appeals are decided adversely to the employee. Ignoring appeals which are completely without foundation in law or fact, there remains a substantial number of cases where the worker has no further recourse.

The bill I have proposed is an effort to remedy this defect by extending to Federal workers the right to secure judicial review of compensation claims after use of all administrative procedures. I am hopeful that the appropriate committee of the House will consider this legislation at an early date.

The list showing the type of review accorded by the States follows:

STATE AND TYPE OF JUDICIAL REVIEW

Alabama: Supreme court within 30 days.
Alaska: United States district court in 30 days.
Arizona: Supreme court within 30 days.
Arkansas: Circuit court within 30 days; further appeal to supreme court.
California: Supreme court or district court of appeals within 30 days.
Colorado: District court within 20 days; further appeal to supreme court.
Connecticut: Superior court within 10 days.
Delaware: Superior court within 10 days.
District of Columbia: Federal district court within 30 days.
Florida: Certiorari to supreme court in 30 days.
Georgia: Superior court within 30 days; further appeal to court of appeals.
Hawaii: Circuit court in 20 days.
Idaho: Supreme court within 30 days; 6 percent interest from date of acicdent.
Illinois: Circuit court or city court, in cities over 25,000 population, within 20 days; further appeal to supreme court in 60 days.
Indiana: Appellate court within 30 days.
Iowa: District court within 30 days.
Kansas: District court within 20 days; further appeal to supreme court.
Kentucky: Circuit court within 20 days; further appeal to court of appeals if amount involved is sufficient.
Louisiana: Proper appellate court; further appeal to supreme court.
Maine: Law courts within 20 days.
Maryland: Circuit court or Baltimore common law courts in 30 days; further appeal to court of appeals.
Massachusetts: Supreme court within 10 day.
Michigan: Supreme court within 10 days.
Minnesota: Supreme court within 30 days.
Mississippi: Circuit court within 30 days and further appeal to supreme court.
Missouri: Circuit court within 30 days then to appellate court.
Montana: District court within 30 days after decision; further appeal to supreme court.
Nebraska: District court within 14 days; further appeal to supreme court.
Nevada: No provision.
New Hampshire: May be taken to supreme court.
New Jersey: County court within 30 days; further appeal to appellate division of superior court.
New Mexico: Supreme court as in other cases.
New York: Appellate division of supreme court in 30 days; further appeal to court of appeals.
North Carolina: Superior court within 30 days.
North Dakota: District court within 30 days; further appeal to supreme court.
Ohio: Common pleas court within 60 days after rehearing; further appeal to supreme court.
Oklahoma: Supreme court within 20 days.
Oregon: Circuit court within 30 days; further appeal as in other cases.
Pennsylvania: Common pleas court (county court in Allegheny County) within 20 days; further appeal to superior court. To the circuit of county of which applicant was a resident.
Rhode Island: Superior court within 10 days; further appeal to supreme court.
South Carolina: Common pleas court within 30 days.
South Dakota: Circuit court within 20 days; further appeal to supreme court.
Tennessee: Circuit court within 10 days; further appeal to supreme court.
Texas: Court of county where injury occurred; within 20 days.
Utah: Supreme court within 30 days.
Vermont: County court within 15 days, questions of law and fact; or to supreme court within 15 days, law only.
Virginia: Supreme court of appeals within 30 days.
Washington: Superior court within 30 days.
West Virginia: Supreme court of appeals within 30 days.
Wisconsin: Circuit court for Dane County within 30 days; further appeal to supreme court.
Wyoming: Supreme court within 70 days.

Statehood for Hawaii and Alaska

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1955

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial which appeared in the Washington News today, May 5, 1955, entitled "A Reasonable Request":

A REASONABLE REQUEST

When the House of Representatives takes up the Alaska-Hawaii statehood bill Monday it will have a rare opportunity to make history. It has been more than 40 years since an American Territory was made a State of the Union, and these two are the only Territories remaining.

The case for Alaska and Hawaii is compelling—legally, economically, and morally.

There is no other way under our Constitution to give these people full citizenship and self-government.

A Territory by the very nature of things is under the Federal Government's thumb in important matters. It is prevented by bureaucracy from making any solid plans for its future. Its people cannot even vote on the men who govern them.

Alaska has the land the resources to support millions. But they first must be developed, and a steady flow of immigration and capital is necessary to bring that about. Fast as Alaska has grown, it would attract many more people from the States if it controlled its land and other natural riches

and could offer people a chance to come and develop them.

While the Government has encouraged settlement and exploration as a paper policy, it virtually has stopped there. A government of Alaskans is the only kind that understands Alaska's problems, the only kind that will do anything substantial to solve them.

Morally, colonialism is indefensible when its victims are capable of governing themselves. And while independence for Alaska and Hawaii is a theoretical alternative, they do not want it for the good reason that they are as American as any of us—and we could not do without them, from the military standpoint.

They ask no more than most of us have possessed and taken for granted all our lives—full and free citizenship in our country, and the right to choose those who govern us.

We should be big enough to share it with them.

Naval Veterans of 1898

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1955

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the text of a letter I have sent to the Honorable FRANK W. BOYKIN, chairman of the Subcommittee on the Spanish War of the Committee on Veterans' Affairs, concerning House Joint Resolution 151.

The letter follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., May 4, 1955.

Hon. FRANK W. BOYKIN,
Chairman, Subcommittee on the Spanish War, House Committee on Veterans' Affairs, House Office Building, Washington, D. C.

DEAR COLLEAGUE: I am pleased to endorse House Joint Resolution 151, introduced by Congressman BARRATT O'HARA, which was the subject of recent hearings by your subcommittee. A good friend and constituent of mine, Capt. Laurence H. Parker, of Fiskdale, Mass., treasurer-in-chief, Naval and Military Order of the Spanish-American War, has brought to my attention the provisions of this measure and I am hopeful that the subcommittee can take favorable action.

House Joint Resolution 151 seeks to correct an injustice to the naval veterans of the Spanish-American War by placing them on the same basis as those veterans who served in the Army insofar as pension benefits are concerned. With the passage of the years, only some 20 or so surviving naval veterans and widows would benefit from the passage of this legislation.

The naval veterans of 1898 and their dependents are not being accorded the same treatment granted through law to the Army veterans. At present, no pension is allowed the widow of a naval veteran of the combat area, who had as much as 89 days of actual service, whereas a widow of an Army volunteer, with no duty in the combat zone and only 60 days of actual service, receives a full pension. This discrepancy apparently results from the fact that furlough time can be included by Army veterans in the computation of service time while this particular provision of the pension laws has not been extended to the naval veterans.

House Joint Resolution 151 will correct this inequity and I will be thankful for your help in bringing this legislation before the full membership of the House. It would also be a favor to me if you would include this letter in the RECORD when House Joint Resolution 151 is before the full committee for consideration.

With thanks and best wishes, I am,
Sincerely yours,

PHILIP J. PHILBIN.

What Has Happened to the United States of America?

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1955

Mr. DORN of South Carolina. Mr. Speaker, the following article by Lt. Gen. George Stratemeyer, retired, is worthy of consideration by all of us in dealing with the Formosa situation. General Stratemeyer spent many years in this area of the world and is very familiar with the problems of the Far East:

WHAT HAS HAPPENED TO THE UNITED STATES OF AMERICA?

The old spirit of 1776 seems to have nearly disappeared from our leaders and many of our people. The American guts of our forefathers have evaporated. Even the Golden Rule here at home seems to have gone. Also conspicuous by their absence are the Flag, the Constitution, and our Bill of Rights. I do not understand the strange times we are encountering.

Our airmen, soldiers, and civilians still remain in Red Chinese dungeons or have been tortured to death. Our country doesn't seem seem to be bothered about this as word came out yesterday that we would confer with the Chinese Communist murderers and apparently double cross our great World War II ally, Chiang Kai-shek. This from America is beyond my comprehension.

Our flag symbolizes God, the Constitution, love of native land, patriotism, Americanism, fearlessness, loathing of cowardice, pride, integrity, dignity, and truth.

The Constitution was the foundation for many years for the very life of the United States of America, but it seems to have died. It must arise from the dead by a new birth. God demands of us morality, a Constitution of one Union of 48 States. Human rights are now desperately longed for by the people when they are not taxed to death and they again can have a gold standard dollar. Senator HARRY F. BYRD, of Virginia, has stated in the American magazine that our Nation can start operating in the black "right now," without impairing essential government functions.

It takes great leaders to live up to the Golden Rule, and it will take a great nation to do the same—America once had this so why not again? God demands morality. Our fathers had to start from stratch with their accumulated experiences and knowledge of governments and human nature—so must we again have this realism, standing on their shoulders of wisdom, plus our newly acquired realisms. We are told that we can't turn the clock back. I say we can turn the clock back. We can dignify our flag; we can stand up for the Constitution and our Bill of Rights (including every word in both); we can have a solid and sound gold standard dollar; and we can "In God We Trust," with fight.

The flag demands that it no longer be a pair of pretty pajamas for those pleading the fifth amendment. God demands morality. Liars must be punished as criminals when they evade the Constitution or try and make a dirty rule of the Golden Rule. The American eagle will scream with approval if we will just turn the clock back to "In God We Trust," with fight. Then every home will be a sanctuary, a church, a cathedral, a place of reverence for God and a respect for God's laws. Fear must be gotten rid of and be replaced by courage, integrity, Americanism, patriotism, and truth.

If the United States of America forces the surrender of Quemoy and Matsu to the Chinese Communists, it will be a great disaster for our country. Remember the Red Chinese have no effective north-south communications except shipping. Nationalist guns on Matsu and Quemoy force this shipping far out to sea where Chiang Kai-shek's naval vessels destroy or intercept it. With Matsu and Quemoy abandoned to the Red murderers, their shipping can hug the coast and the Communist domination of southeast Asia and the Communist seizure of supplies we propose to send to Indochina can be made certain.

This abandonment of Quemoy and Matsu would surely immobilize Chiang permanently on Formosa, and in a few years, as his army grows old, the Communists would take without opposition that great strategic island so essential to the security of the United States of America. That island is the key to the free world's Pacific defense. Moreover, President Chiang Kai-shek is our faithful ally, not as the chieftain of Formosa, but as the rightful dignified head of the Government of China.

In view of China's great mountain ranges and west-east rivers, there is no chance of the Soviet or the Red Chinese Government sending decisive military aid to South China. In fact, it appears that if Chiang were allowed to land on the Chinese mainland in South China, he could establish there an anti-Communist government friendly to the United States. And besides, the Chinese Communists couldn't do a thing about it. This is especially true now, because of the desolation of the Yangtze due to the worst flood in modern times. Moreover, there are hundreds of thousands of anti-Communist guerrillas in China proper and particularly in South China who are friendly to Chiang Kai-shek and the United States who are just waiting for leadership and supplies to rise into deadly action against the Chinese Reds and to liberate their country.

In my opinion, there is reason to believe that the Soviet would welcome a South China government hostile to North China. This would prevent North Red China from getting too strong—something which the Soviet hierarchy probably fears because of their restive satellites, their internal problems, and their long thin supply line to the North China-Korea area.

God demands morality, so let's be honest for once and keep our word to the Chinese Nationalists, our fighting ally, and get our boys out of Red Chinese dungeons.

Minimum Wage of $1.25 an Hour

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following resolution adopted by the City Council of the City of Lynn, Mass.:

Whereas the President of the United States has proposed, and Congress is now considering, legislation to increase the Federal minimum wage above the present inadequate figure of 75 cents an hour; and

Whereas a fair and reasonable minimum wage would raise the living standards of underpaid workers, increase the national income, stimulate business activity, minimize unfair industrial competition based upon sweatshop wages, and help to solve the problem of runaway shops; and

Whereas the city of Lynn, Mass., has suffered serious competition because of the inadequacy of the present minimum wage and is threatened with further difficulties unless action is taken quickly; and

Whereas the President's proposal of a 90-cent minimum falls far short of meeting the needs of underpaid workers or of the population as a whole: Therefore be it

Resolved by the City Council of the City of Lynn, That we call upon the Congress of the United States to enact a Federal minimum wage of $1.25 an hour, and urge our Senators and Representatives to support such legislation in the interests of both our own community and the Nation; and be it further

Resolved, That an attested copy of this resolution be sent to each of our Massachusetts Senators and Representatives in Congress.

Minimum Wage

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1955

Mr. METCALF. Mr. Speaker, the following statement by Mr. L. S. Buckmaster, general president of the United Rubber, Cork, Linoleum and Plastic Workers of America, CIO, points out the need for immediate action on the part of Congress to increase the minimum wage. Mr. Buckmaster's statement follows:

As the duly elected president of our organization, consisting of approximately 200,000 men and women working in large and small manufacturing plants throughout the United States, it is my privilege to submit this statement to the Labor Subcommittee of the Senate Committee on Labor and Public Welfare, which is now considering proposed changes in the Fair Labor Standards Act.

Our organization was formed 20 years ago and has steadily grown to its present size. We represent workers engaged in the manufacture of rubber products, cork products, linoleum and other hard-surface floor coverings, and a wide variety of plastic items. Our union negotiates with some of the major industrial concerns in the United States, including the Goodyear Tire & Rubber Co., United States Rubber Co., the Firestone Tire & Rubber Co., and the B. F. Goodrich Tire & Rubber Co., as well as with smaller concerns employing as few as 25 employees.

Average straight-time hourly earnings for persons working in the rubber industry are approximately $1.95 and the industry ranks 7th among the 21 manufacturing industries in the United States in this regard. There are few members of our union who are currently earning less than $1.25 per hour.

Nevertheless, I urgently recommend that this subcommittee approve an increase in the minimum wage to $1.25 throughout the United States, and the broadening of coverage, as proposed in Senator LEHMAN's bill, S. 662. The general economic and social justifications for such an increase have been presented in great detail to the subcommittee in both oral and written testimony by other spokesmen for the CIO and, therefore, do not need repeating here. I would like to add to that testimony, however, 1 or 2 general comments and some specific information about situations in industries which we represent, which further point up the need for this increase.

There are perhaps many desirable social changes which cannot be achieved by legislation. Increasing the minimum wage and extending its coverage, however, will provide a means, which the country can well afford, by which depressed living standards in sections of our population may be raised toward a national level of decency. In a sense, a low minimum wage such as now exists, condones the existence of certain factories or operations, at least partially, because they are able to exploit labor.

Fair competition is certainly a healthy characteristic of our American economy. We would suggest, however, that one aspect of "fair" competition would be that it should not thrive, or even partially exist, by virtue of substandard wages. Competition is not "fair" when it exists in whole or part by depriving people of opportunities toward a humane fullness of life.

THE RUBBER INDUSTRY

There are a few specific cases, however, in which our membership has some direct interest in increasing the minimum wage to $1.25.

Within the rubber industry almost 50 percent of the employees are engaged in the manufacture of tires and tubes. Earnings in this segment of the industry are higher than the average, namely about $2.24 per hour on a straight-time basis.

There are no tire and tube plants at which employees are paid less than $1.25 per hour. However, these plants also manufacture tire retreading material known as "camelback" and, in the production of this item, the plants face competition from small, low-paying establishments. Following is a list of the well-known rubber companies manufacturing camelback: Armstrong Rubber Co., Cooper Tire & Rubber Co., Dayton Rubber Co., Denman Cord Tire & Rubber Co., Firestone Tire & Rubber Co., Gates Rubber Co., B. F. Goodrich Co., Goodyear Tire & Rubber Co., Kelly-Springfield Tire Co., Lee Tire & Rubber Co., Mansfield Tire & Rubber Co., Mohawk Rubber Co., Pacific Rubber Co., Polson Rubber Co., Seiberling Rubber Co., Southeastern Rubber Products, U. S. Rubber Co.

These companies are all paying their employees more than $1.25 per hour, in most cases substantially more than $1.25. In contrast to this, the Continental Tire & Rubber Co. in Guntersville, Ala., is paying its skilled employees 80 cents per hour, and other employees 75 cents per hour.

The key operation in the manufacture of camelback is the tubing process, in which the rubber is forced through a die to make a continuous strip of camelback. In preparation for this, it is necessary to have a warm-up operator work the rubber to the proper consistency for tubing. These are the two skilled jobs in the process; other workers are neded to perform unskilled work.

An analysis of the rates that are paid for producing camelback at various URCLPWA plants will show that even a minimum wage of $1.25 will not completely eliminate the wage differential between established plants and the low-paying camelback companies. For example, at the Seiberling Rubber Co. in Barberton, Ohio the warm-up mill operator is earning $2.15 per hour and the tread tuber $2.55. At the Mohawk Rubber Co. in Akron, Ohio these two key jobs pay $2.66 and $2.86 per hour respectively. At the new plant of the Mohawk Rubber Co. in Littleton, Colo. (constructed for the sole purpose of producing camelback) these two operations pay $1.85 and $2.05 respectively. At the plant of the Polson Rubber Co. in Garrettsville, Ohio employees receive $1.91 for these operations.

These wage differentials of over 100 percent are important enough under conditions of normal economic competition, but they become particularly important when Government contracts are involved. It is our understanding that the Continental Rubber Co. with hourly wage rates approximately half as high as at established plants manufacturing camelback, has been the successful bidder on numerous Government contracts for the production of camelback, some to be used within the continental limits of the United States and some to be used at overseas installations.

It is not claimed that competition between companies is solely in the field of hourly wage rates. Certainly, manufacturing efficiency and output per man-hour both affect unit costs. But, nevertheless, a wage differential of over 100 percent is so extreme as to present unfair competition to even the most efficient plant.

Substandard wages in the rubber industry are not entirely confined to specific operations or individual companies. I should like to call the subcommittee's attention to the fact that in Ohio even in the high-paying rubber-products industry, where nationwide average straight-time hourly earnings in 1953 were $1.87, 3,686 persons were receiving less than $1.25 per hour. This condition may have altered somewhat since 1953 as a result of collective bargaining, but it certainly still exists.

In conclusion, may I again say that my statements herein should be considered by the subcommittee as supplementary to testimony offered by others in the CIO. I have not repeated them here, as a convenience to the subcommittee, but our organization fully supports the position advanced before the subcommittee by CIO President Walter Reuther.

Reciprocal Trade Agreements

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1955

Mrs. GREEN of Oregon. Mr. Speaker, under leave to revise and extend my remarks, I include the following resolution from the Junior Chamber of Commerce of Portland, Oreg., in approval of the reciprocal trade agreement program, without crippling amendments:

Whereas

1. The value of exports and imports of the Oregon customs district amount to approximately $200 million (sea borne commerce directly in and out of local ports only);

2. The exports of this area are almost six times the value of imports and this area would likely gain considerably from a higher level of foreign trade;

3. A higher level of foreign trade can best be achieved by: (a) A two-way flow of goods, (b) international free enterprise, (c) and gradual reduction of artificial barriers to trade; and

4. The reciprocal trade agreements have been in successful operation for 21 years without damage to the United States economy: Therefore, be it

Resolved, That the Junior Chamber of Commerce, Portland, Oreg. supports expanding the foreign commerce of the United States by approval of the Trade Agreements Act principle. It further supports H. R. 1 without crippling amendments as it now appears before the Senate Finance Committee, which will extend our reciprocal trade agreement program for 3 years.

Poland's Constitution Day, May 3, 1955

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1955

Mr. PRICE. Mr. Speaker, the people of Poland have the right to know that we of America, who owe so much to those of Polish birth, cherish the thought that a free and sovereign Poland will rise again.

On this day when liberty-loving Poles celebrate their national holiday and the anniversary of their constitution, they should be plainly given the encouragement that may reside in the simple fact that we have not forgotten them.

We of the Western World, who share a common, humane, and democratic tradition with the Polish people, are temporarily separated from direct access to many of them. Violations of solemn agreements by the Soviet Union, whose word we hoped could be trusted, have closed the Poles in the mother country behind the Iron Curtain.

It is impossible that this situation shall forever exist, that the patriotic citizens in Poland proper can be ground into dust, that they can be forced to forget their heritage, to abandon their proud culture.

The national spirit of a brave, free people cannot be destroyed by the tyrant's yoke and the foreign oppressor, even when he uses puppets and quislings from within to execute his will. A wise writer pointed out that after the several partitions of the past "Poland survived as a national entity" although held for a century in a "state of emulsion."

The Polish people today are not less devout in their religion and their national faith, not less courageous and determined, than those who went before them and who recovered Poland's sovereignty and liberty after the First World War.

We of America must have a special consideration, in all truth, for the oppressed in Poland. In our own time of struggle, in the days of our revolution, the Polish people sent Thaddeus Kosciusko, soldier and patriot, whose devotion to liberty and military skill were equally serviceable to General Washington.

Mr. Speaker, the plight of Poland's people and the slavery in which they are held by the Soviet Union's violations of faith are not a new theme to me.

More than 8 years ago, on February 12, 1947, I took the floor to warn that in contempt of her own pledged word the U. S. S. R. was attempting to sovietize the Polish people and territory. I stated then, and I repeat today, that this attempt was foredoomed to fail.

I stated then, and I repeat today, that America should never recognize a Soviet-dominated, fraudulent election that purports to reflect the people's will but actually reflects only the demands of the foreign overlords.

I said in 1947, and I most solemnly repeat today, that the leaders of the Soviet Union must recognize there is no hope for lasting peace when they lightly and contemptuously break agreements entered freely in conference.

America must never cease to make this clear to the men of the Kremlin. America must never cease to express, on every occasion, her desire and faith that Poland will once again be free.

Mr. Speaker, under unanimous consent heretofore granted, I include the remarks I made to the House on February 12, 1947:

UNITED STATES MUST PROTECT POLAND AGAINST COMMUNISM

(Speech of Hon. MELVIN PRICE, of Illinois, in the House of Representatives, Wednesday, February 12, 1947)

Mr. PRICE. Mr. Speaker, America today pays tribute to two great men, Abraham Lincoln and Thaddeus Kosciusko.

Others will review the achievements of Lincoln in addresses throughout our great Nation. I take the floor this afternoon in tribute to Kosciusko, Polish soldier and patriot, who became an officer in America's first Army and aided our Founding Fathers in their struggle to make the Colonies an an independent nation.

Two hundred years have failed to dim the luster of Kosciusko's glory, achieved in the cause of freedom. He brought from his native land of Poland a military skill which he placed at the disposal of General Washington for 6 long years. He contributed so much to the success of the American Revolution that when his work was done he returned to Poland carrying with him a vote of thanks of Congress.

Kosciusko's name will live forever—symbolic of the struggle of man against the forces of oppression. His name means to the world emancipation from human bondage. It is fitting that on this anniversary of his birth we should think of him—honor the memory of a valiant hero and stanch defender of the ideals of liberty and justice, not only for Poland but for all mankind.

Others came from Poland in those days of trial for the colonists—indicating that over 200 years ago there burned in the hearts of the Polish people that same love for freedom that remains alive today.

The Polish people know oppression—have known it for many centuries. On this anniversary of the birth of one of their great men whose friendship for America helped to relieve her from oppression, it is fitting today to give some thought to the plight of Poland.

America has always befriended the small nations of the world. To Poland we owe a lasting debt of gratitude; first, because it is the land of some of our earliest benefactors; second, because it was brave Poland that first accepted the challenge of Hitler. For her heroism shall Poland be partitioned; shall her Government be made the puppet of a stronger nation whose ideologies are so foreign to the Christian beliefs of the Polish people?

We should have some concern for Poland's welfare, just as Kosciusko and other Polish patriots had concern for America. We cannot follow the happenings in Poland today without coming to the very definite realization that the U. S. S. R. is doing some very questionable things. Russia has taken over the economies of all Central Europe and America must face the ugly fact that the U. S. S. R. in violation of agreements made with her wartime allies, is spreading the tentacles of sovietism over unprotected and unwilling people.

A great Christian people like the Poles will never accept the Godless political or social philosophy of the Soviet. There can be no peace in Europe, or in the world when one people try to force upon another ideologies in which they have no faith.

Our Government cannot ignore and, of course, it has not ignored the attempts to perpetuate a puppet government in Poland. President Truman only a few days ago delivered to the new Polish Ambassador a scathing denunciation of the manner in which the recent Polish elections were held and made it clear that America does not feel that provisions of the agreement between the war Allies has been followed.

America should be unyielding in its protest against the Soviet-influenced election in Poland.

Liberty is slowly bleeding to death in prostrate Poland. Countless thousands of Poles have been victims of political murders or exiled. Through former Secretary of State Byrnes, America has voiced its disapproval of these persecutions.

The fraudulent Polish elections are a warning of eventual Soviet annexation of all Europe by employment of similar methods unless stern and effective measures are adopted by the United Nations.

The flagrant violation of even the meager obligation of holding free elections in Poland, as guaranteed by the Yalta agreement, raises doubt in the United States concerning the sanctity of Russian pledges. These dishonest elections are aimed at the complete enslavement of the Polish Nation.

I have repeatedly stated that the future holds no hope for a lasting peace unless the nations of the world can arrive at mutual understanding. How are we to expect such if one of the great powers holds so lightly agreements made in conference? However, it is done, the Soviets must be brought to realize that their attempted domination of Europe must be curbed if a way to lasting peace is ever to be found.

Sacred pledges were made by the victorious United Nations at Yalta and at Potsdam guaranteeing freedom and personal security in life and property to all peoples in all lands. Russia was a participant in these conferences. She assumed obligations by agreements concurred in by the United Nations. If the Soviets do not choose to honor these agreements, they leave the world with serious doubt as to their future course.

As a Nation dedicated to freedom—recognizing the blessings of liberty as we do—America should continue to exhibit the liveliest concern in the welfare of Poland and all small nations who were given such hope by the Atlantic Charter. America's great weight must be thrown behind the fight of all true Poles for a truly free Poland.

Loyalty Day, Gary, Ind.

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1955

Mr. MADDEN. Mr. Speaker, I wish to submit for the consideration of the membership an outstanding address

made by Capt. Benjamin B. Lipsner, representing Irving Breakstone, commander of the American Legion, Department of Illinois, at the Loyalty Day celebration held at Gary, Ind., May 1, 1955:

LOYALTY DAY CELEBRATION MAY 1, 1955, AT GARY, IND., SPEECH BY CAPT. BENJAMIN B. LIPSNER, REPRESENTING IRVING BREAKSTONE, COMMANDER OF THE AMERICAN LEGION, DEPARTMENT OF ILLINOIS

Mayor Mandich, distinguished guests, citizens of Gary, fellow Americans, as the duly authorized representative of the American Legion Department of Illinois and the personal representative of the distinguished State commander, Irving Breakstone, I consider this a personal honor and privilege to be here and to receive this fine heart-warming reception at your hands.

It seems fitting and proper that this fine city of yours was chosen in which to open our national campaign "education for freedom." Your city is particularly dear to my heart because it was here that the world's greatest pioneer in gliding which was the forerunner to successful flight that the great Octave Chanute commenced, experimented, and developed his great gliding techniques, using your great sand dunes from 1891 to 1896. The Wright brothers, one of them Wilbur Wright, was born in Millville, Ind., they were disciples of Chanute, and it was his friendship and great encouragement that brought ultimate success to the Wrights, who made their first powered controlled flights at Kill Devil Hills, near Kitty Hawk, N. C., on December 17, 1903. The Wrights learned from Chanute the art of construction as well as gliding and he went to the scene of their great triumphs in North Carolina. There is a glacial boulder marker in Marquette Park which was dedicated to this great pioneer, "The Father of Aviation." I was present and took part in those ceremonies on July 11, 1936.

We have a great deal in common with our neighbors of Gary and the State of Indiana. You gave the American Legion two great national commanders, the late lamented Gov. Paul Vorhees McNutt and your present distinguished Governor Craig. We of Illinois also contributed several great national commanders, Gen. Milton J. Foreman, Edward Hayes, and former Gov. John Steele, all of whom were my dear friends. General Foreman and Edward Hayes have passed on, but ex-Governor Steele is still very active in the American Legion.

"Education for freedom" is the only positive approach to a true understanding of our rights and prerogatives as Americans, under our precious Constitution and our Bill of Rights. There is nothing difficult or mysterious about our Constitution or Bill of Rights. Our mission is to openly discuss among ourselves in Legion posts, churches, clubs, and schools, the great virtues of these important instruments of freedom. We should know our history incident to the creation of our Constitution and Bill of Rights. It is a glorious history which fills one's heart with inspiration, gratitude, and pride, whether you are a college graduate or only attended public school. Every American should readily understand the great heritage which is ours by virtue of our patriotic forefathers whose wisdom created a great Nation dedicated to God and His children of every class, creed, color, or religion, into one great family, where right, not might, determines all questions that affect our children, ourselves, and our posterity. Our great and dynamic State commander, Irving Breakstone has thus far succeeded in establishing throughout our State, discussion groups in every part of Illinois, all of whom are revitalizing and influencing our citizens to take a positive, rather than a negative view of our rights and privileges which our forefathers designed for us to follow.

The American Heritage Council, an organization composed of public spirited and patriotic men and women who are fostering a campaign to bring to the American public a patriotic program as well as aiding the American Legion in its education for freedom movement. We in the American Legion owe a great debt of gratitude to this great patriotic organization that is doing such a splendid job of promoting patriotic discussion groups so as to familiarize in a simple and earnest manner just why our Constitution and Bill of Rights is an American heritage and is responsible for making America the greatest Nation in the world.

In short, under the leadership of our distinguished State commander, Irving Breakstone, of the Illinois Department of the American Legion, this splendid program is being sponsored to educate its members about American history and the fundamentals of justice, freedom, and democracy.

The cracker barrel roundtable method is an interesting and valuable method of teaching adults. Here's the way it works: Groups of 8 or 10 persons are set up. They read important American documents and then meet and discuss them. Under the guidance of a moderator they match their ideas and opinions. Discussions that start off with, say, the Declaration of Independence, often wind up in a discussion of today's headline news.

The participants quickly learn, many of them for the first time, the wide variety of opinion that exists on many subjects they believed were not debatable. Americans are not conformists and thrive on controversy. Group meetings teach the liberals to respect the opinions of the conservatives and vice versa.

Meetings of this character help make the Legion post of a community the center of being well informed. They help Legionnaires understand why we and others have been concerned about the tendency toward a Gestapo-type of activity circulated by some uninformed members of so-called service organizations.

These zealots have the mistaken notion that anyone who disagrees with their own particular brand of patriotism is un-American. They do not understand that a basic American right is the right to disagree with the majority. The new positive approach to Americanism inaugurated by Breakstone is a better way of fighting communism and protecting Americanism, because for the first time, it will teach many Americans exactly what Americanism really is.

In conclusion, I want to thank Mayor Mandich, Col. Harry Rothman, Commander Richard S. Kaplan, your fine patriotic leader of the American Legion, and all the citizens of this great community for their cooperation in making this affair possible.

American Forefathers of Italian Origin

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1955

Mr. ANFUSO. Mr. Speaker, people of many national origins have made valuable contributions toward the founding and development of our great country, its culture and civilization, and its way of life.

Recently, there has come to my attention a very fine address which is a piece of excellent research in the field of American history. It deals with the subject Our American Forefathers of Italian Origin, and it was made by my good friend, the Honorable Luke A. Mercadante, before the Nassau County Chapter of the American Committee on Italian Migration on April 27, 1955.

Mr. Mercadante is one of our very prominent citizens in New York. He is a former mayor of Glen Cove, N. Y., where he now resides and is in private law practice. In 1950, he was the Democratic candidate for attorney general on the State ticket. He is active in political, civic, and philanthropic affairs, an able leader and administrator, and a fine speaker.

Mr. Speaker, I am certain that many of our colleagues and the public at large will find Mr. Mercadante's address most interesting. For this reason, I am placing it in the RECORD. It reads as follows:

OUR AMERICAN FOREFATHERS OF ITALIAN ORIGIN

The treasury of our country's heritage is replete with contributions of Americans of Italian origin. Their tremendous value is appreciated by the persons knowing the facts. Unfortunately, the scholastic history books have failed to recite most of these incidents. For that reason many people are not aware of the leading role played by the citizens of Italian origin in the creation of practically every American tradition.

The discovery of America by Christopher Columbus stands as the most important event of modern world history. Almost as important were the feats of his contemporaries and countrymen, Giovanni Caboto and his son, Sebastian. Their discoveries served as a basis of England's claim to Newfoundland, Greenland, Labrador, and most of the eastern coast of North America.

Giovanni Verrazano sailed to the coast of New Jersey, discovered New York Harbor and the mouth of the Hudson River almost a hundred years before Henry Hudson.

Amerigo Vespucci, after whom America has been named, made some exploratory trips to the Gulf of Venezuela.

The feats of these men stimulated and inspired other men to come to America to meet the problem of civilization. The interior of this vast new country had to be exploited. Physical hardships brought by the elements had to be overcome. Hostile Indians abounded everywhere.

A young Neopolitan daredevil by the name of Tonti came with La Salle in the latter part of the 1600's to explore the Mississippi Valley. Together they founded the first settlement of the Mississippi Valley, and great cities like Detroit, and so forth, owe their existence to them. Tonti was La Salle's lieutenant. He had lost his right hand in the explosion of a grenade and wore a hook in its place. Nevertheless, he was such a fierce fighter that the Indians were terrified of him. He and La Salle were the first to sail down the Mississippi.

As the Thirteen Original American Colonies were beginning to take shape, Virginia, the first to be colonized, was making progress. One of its leading citizens, Philip Mazzei (Poggia) introduced the culture of grapes for the first time in America. He was a close friend of Patrick Henry, governor of Virginia, who sent him on an expedition to Europe as a representative of Virginia. He was also an intimate friend of Presidents Madison, Jefferson, and Adams. During the Revolutionary War, he was captured by the British and imprisoned on Long Island. He published the most accurate history of America. His letters had a tremendous influence on the great Jeffersonian political philosophy.

The most outstanding member of the colony of Maryland at that time was William Paca, the third governor of Maryland. Paca was involved in all of the important politi-

cal movements in Maryland from his entrance into politics until his death. He was elected to the First and Second Continental Congresses. He also served as chief justice of the court of appeals in admiralty and as a delegate to the Constitutional Convention. His signature can be found on the Declaration of Independence. In addition to public service, William Paca contributed much of his own money to outfit troops during the Revolutionary War.

Young Virginia was full of ambitious and restless men seeking new horizons. One of them, George Rogers Clark, was anxious to conquer the Northwest but was sadly in need of funds. A Piedmont soldier merchant, Joseph Vigo, who made a fortune fur trading in New Orleans threw in his wealth. Without his help Clark could not have conquered the Northwest. This territory now includes many States. When Virginia, later, ceded all of its territory to the Confederation of American States, she made the condition that the United States should assume its debt to Vigo. Vigo was not paid in his lifetime. He died almost penniless after generously giving his time and money to the American cause. Nearly 100 years passed before the Federal Supreme Court ordered his claims to be paid and his heirs received about $50,000. Indiana has named a county and a township for him and great tribute was paid to him at the dedication of the memorial to George Rogers Clark.

President James Madison and President James Monroe made frequent trips to Philadelphia to visit a mutual friend. He was the Venetian musician and composer, Philip Tragetta. Tragetta established the American Conservatorio in Philadelphia and thereby set aflame a torch of culture in this new country.

Elsewhere, Americans of Italian origin were spreading a refined civilization. In the hills of northern Idaho a Jesuit missionary worked among the Indians. Father Antonio Ravalli built with his own hands a church in the wilderness. He carved the altar and statues. With the same hands that perform the sacrifice of the mass, he built a sawmill and small flour mill. Then came the days of the gold rush, of roaring, shooting Virginia City, Last Chance, Silver City, Crook Creek, and Hell Gate. Father Ravalli won fame in these Montana towns as a priest and physician to Indians and white alike.

In Missouri, a Neapolitan missioner, Joseph Rosati, aided in the creation of St. Mary's Seminary in Perryville which provided many pioneer Catholic missionaries. He built numerous churches, the greatest of which is the Cathedral of St. Louis.

The first collegiate institutions on the Pacific coast, the College of Santa Clara, was molded by the hands of Father Greg Mengarini, a Roman missioner and educator. After performing fruitful labor among the Blackfeet and Flathead Indians, Father Mengarini devoted his later years to the college.

Father Benedict Sistini pioneered the teaching of algebra, geometry, and trigonometry in this country with his outstanding treatises on the subjects. He also started a periodical which had the widest circulation of any Catholic magazine in the United States, The Messenger of the Sacred Heart.

Nowadays we talk about splitting the atom and molecular activity. A Jesuit priest, Joseph Bayma, wrote a book around 1850 entitled "Elements of Molecular Mechanics" which was considered by famous mathematicians as a most extraordinary advanced work. Right after that he was transferred to California as president of St. Ignatius College in San Francisco. There he wrote many elementary textbooks in mathematics.

Father Samuel Mazzuchelli (Milanese) after working with the Indians, established a congregation of teaching sisters, the Dominican Congregation of the Most Holy Rosary. He was also chaplain of the first territorial legislature of Wisconsin, and the designer of the first capitol building of Iowa.

The Jewish Theological Seminary in New York was founded in 1886 by an Italian Rabbi (Leghorn) Sabato Morais. He was an ardent abolitionist as were other famous Italian-Americans of the day. Vincenza Botto, during the Civil War, advanced the cause of the North in the Italian press. Botto, a professor of Italian and literature at the University of the City of New York entertained Horace Greeley, William Cullen Bryant, and Edgar Allen Poe. Establishing the first important salon in the history of American letters was his greatest contribution.

Just about this time (1880) the first Italian daily newspaper Il Progresso was established by Charles Barsotti. He is responsible for the erecting of statues to famous Italians, Verrazona at Battery Park, Garibaldi in Washington Square, Columbus in Columbus Circle, Dante at Broadway and 63d Street, Verdi on Broadway.

It may seem that the Italian-Americans were contributing only to the cultural growth of Americans. They were distinguishing themselves in battle, too. Bancroft Gherardi, while commanding the *Port Royal* in Farragut's fleet, routed three enemy gunboats in the battle of Mobile Bay. He was highly commended for his cool and courageous conduct. During the Civil War he commanded several ships in the west gulf blockade. He fought in the Mexican War and also secured the settlement of Haitian Revolution. His highest title was commander in chief of the North Atlantic Squadron.

When the Civil War broke out Luigi Cesnola founded a military school for officers. Later he served as a major in the 11th New York Cavalry. He was with Sheridan all through the Shenandoah Valley campaign. He had been wounded and taken prisoner. He received the Congressional Medal of Honor. Later President Abraham Lincoln made him a consul.

An early contributor to American industrial know-how was Giuseppe Tagliabue. He invented the apparatus for determining proof in spirits which was officially adopted by the United States Revenue Bureau. He also invented a mercurial barometer, an apparatus for testing iron and coal, an instrument to determine the amount of water in a barrel of oil. His thermometer is very famous. Tagliabue made delicate instruments used in the refining of sugar, condensing of milk, and for collective weather data.

Beautiful Meridian Hill Park in Washington, D. C., was designed by a Florentine, Ferruccio Vitale. He was also founder of the Foundation for Architecture and Landscape Architecture.

In the New National Museum Building in Washington there has been on exhibition a pair of bronze doors for the west entrance of the Capitol made by sculptor Louis Amateis—Turin. His monuments can be found in Galveston, Houston, Washington, Connecticut, and in many other places. His better known portrait busts are those of President Arthur, James G. Blaine, General Hancock, and Andrew Carnegie.

Recently, Congress has taken time to honor probably the greatest painter of American history, Constantino Brumidi—Roman. He worked in the Capitol Building for over 30 years, much of the time in the rotunda. He was a 70-year-old man, with silvery hair and beard. He performed the dizzy climb to the heights of the rotunda in a slow-moving cage by manipulating ropes. He worked 3 years on the rotunda and received $30,000. In the corridors you will recognize his Washington at Valley Forge, the Battle of Lexington, the Death of General Wooster, the Storming of Stony Point, and the Boston Massacre. In the Agricultural Committee room he painted figures symbolizing history, geography, arts, science, mechanics, commerce, and war. Also portraits of Robert Fulton, Franklin Morse, and John Fitch. When he first went to work in the Capitol he was paid $8 a day. Later, Jefferson Davis, the President of the Confederacy, had this increased to $10 per day. Brumidi can truly be called the Michaelangelo of America.

While Brumidi was beautifying the Capitol physically another American of Italian origin was trying to beautify it spiritually. This man, Father Charles Pise, was the only Catholic Chaplain of the United States Senate. He had been nominated by Henry Clay and, of course, duly elected.

Edward Marzo gave the United States the American Guild of Organists and 50 years of inspired musical activity.

These are only a few of the early Americans of Italian extraction that have helped to make our country great. They serve to illustrate that Italian endowment to the American heritage has been long, constant, and enduring.

Starting with the discovery of America by Columbus and shortly after the discoveries of the Cabot's Verrazano and Amerigo Vespucci, the glorious pagent features the exploration of the Mississippi Valley by Tonti, the inspiring letters of Mazzei which gave Thomas Jefferson much of the substance of the Declaration of Independence, the political genius of William Paca helping to mold the new Republic, the sacrificing of Vigo's personal fortune to finance Clark's great expedition, the seed of culture germinated by Tragetta's American Conservatorio, the civilizing of the wilderness by Father Ravalli and the missionaries of Father Rosati, the founding of the first college on the Pacific coast by Father Mengarini, the scholarly treatise of Father Sistini and his Messenger of the Sacred Heart, the mathematical genius of Bayma, the tremendous contribution to education by Father Mazzuchelli's teaching sisters of the Dominican Congregation of the Most Holy Rosary, the founding of the Jewish theological seminary by Rabbi Moris, the establishment of the first important salon of American literature by Professor Botto, the culture of Charles Barsotti and his Il Progresso, the naval strategy of Bancroft Gherarardi in winning important victories in the Civil War, the military genius of Cesnola in training officers for the Union Army and his own heroic participation in battles, the great inventions of Tagliabue which advanced American industry, Vitale's Foundation for Architecture, the great sculptures of Amateis which have immortalized many great Americans, the beautification of the Capitol Building by America's greatest painter, Constantino Brumidi, and finally, the musical culture of Marzo's American Guild of Organists.

In reviewing this parade, every American of Italian extraction should feel a justifiable pride and should resolve to make the utmost effort to contribute to our glorious American heritage.

Port Report No. 2

EXTENSION OF REMARKS
OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1955

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Houston Post of Monday, April 11, 1955:

PORT REPORT NO. 2—TO NEW ORLEANS FREIGHTER WHISTLE SWEETER THAN JAZZ

(By Jim Mathis)

The city that care forgot.

This is the New Orleans that Texans know. The grand old lady of the yellow, surging Mississippi River.

A city of quaintness, fervent piety, strange sins, joyous laughter, and hep jazz. It has ancient trolley cars, Pat O'Brien's, Gypsy Lou, street peddlers, and Pirate's Alley. A playful place of surface charms.

Don't you believe it.

The New Orleans of today is a rejuvenated giant with one aim—regaining its No. 1 place in the gulf coast sun. Beneath that wrought iron and magnolia front are steel sinews of commerce and dollars.

For its resurgence, wise Orleanians chose the city's greatest asset and Houston's greatest current weakness—its port and foreign trade, respectively.

While brash young Houston rests for a time on its turbulent, half-century laurels, New Orleans is quietly and delicately plucking the leaves from the wreath.

In 1954, as in the past 5 years, New Orleans is second only to New York City in the dollar value of water-borne commerce through its miles of docks.

New Orleans is willing to concede that Houston is No. 2 behind New York in tonnage through its port, but officials ask a pointed question:

Which is more desirable, tonnage or dollars?

It's obvious they'll take the cash.

With Houston dropping in tonnage since 1952, even the margin of annual tonnage is now narrow. Houston's 1954 estimated figure is 40,647,159 tons; for New Orleans about 39.5 million tons.

New Orleans is still the only port outside of New York City which operates on the billion dollar level in foreign trade. It has no intention of letting anyone else slip up on it in that field.

From a wartime peak of $700 million annually in foreign trade, the city has zoomed to $2 billion. Nothing is likely to halt that climb except a general decline in foreign trade.

A combination of geographical and community spirit, a spirit unmatched in postwar years—have formed the basis for New Orleans' resurgence.

When Jean Baptiste Le Moyne, Sieur de Bienville, chose the site of New Orleans in 1718, he chose as wisely as did the Allen brothers, who promoted Houston.

New Orleans lies 110 river-miles from the sea, inside a crescent bend of the Mississippi, which seldom drops below 150 feet in midstream.

In effect, the city lies squarely at the small end of a mighty funnel through which drains half the Nation's export goods.

When port agents send publicity maps into the hinterlands to promote commerce, the maps do not only lay claim to the natural Mississippi Valley business, however.

The western line of their "territory" starts at El Paso, runs northward through New Mexico, Colorado, western Wyoming, and into northwestern Montana.

The eastern boundary begins at Savannah, Ga., on the Atlantic Ocean, runs northwestward through South Carolina, Tennessee, Kentucky, Indiana, Chicago, Ill., and Wisconsin.

A network of tributaries, and the Mississippi itself, touch 31 States from Minnesota to Louisiana.

Texas, of course, is only a minute portion of this commercially fertile field, somewhat larger than even the Louisiana purchase. (Oddly, freight rates from many West and mid-Texas cities on the Texas and Pacific Railroad are less to New Orleans than to Houston.)

The essence of New Orleans' advantages in location, however, is in the tremendous barge traffic plowing down the Mississippi. Tons of bulk commodities such as ore and grain pour into New Orleans by this route for transshipment to foreign destinations.

These unwieldly barges serve a secondary purpose, also. The cheapest transportation known, they force competing railroad lines to keep rates into New Orleans at a minimum.

With all these advantages, New Orleans became the first port of the Nation, even ahead of New York, 100 years ago. At that time the port was already 150 years old; Houston was an infant.

But time was to bring reverses to the city, and the postwar years of World War I found it in 16th position in value of cargo. It became a pawn of political regimes, and at one time 2,000 persons drew checks from the Port Commission, although few ever reported for work. Docks rotted.

A reform movement ended this "deadheading," and a constitutional amendment took the State-owned port out of politics. Now board members serve 5 years, with staggered terms. Candidates are named by the presidents of trade and civic organizations, narrowed down to a list of three, from which the governor must choose one member.

World War II meant a boom to the port, and New Orleans became a major port of embarkation for the armed services. It performed well enough to get the warm praise of Army officials. A survey showed New Orleans could handle cargo cheaper and faster than even New York. The city prospered along with its port.

The years of peace, however, were just ahead, and with them the specter of another lean era. This time merchants and businessmen knew what to expect, however, and they weren't having any of it.

A survey disclosed what most suspected—70 cents of every dollar in the city came directly or indirectly from port activity. Businessmen pondered the future, cast about for possibilities.

William G. Zetzmann, a soft-drink bottler, acted first. He sent letters to 55 businessmen, asking them to a luncheon to discuss ways to promote foreign trade.

"Don't bother to come unless you have a lot of money to invest in the future of your city," Mr. Zetzmann wrote.

Of those invited, 53 came—to pledge $250,000 at that first meeting. This grew to $600,000 within 1 year, and by 1945, the organization—formally labeled International House—had purchased a 10-story building in the center of the city. Three stories were converted into a club, and International House was ready to go.

It began as an organization of 500 members. Each had to furnish bank references, and dedicate a goodly part of his time to the task of making foreigners feel at home in a strange land.

Today, International House has 2,400 members, and more are clamoring for admittance.

It works something like this:

A businessman from Brazil arrives in the city on a definite mission. He is brought immediately to the International House. He gets a membership card, an office and a bilingual secretary within 10 minutes.

Then the World Trade Development Department gets busy, finds out whether the businessman wants to buy or sell. Appointments are made for him, and business contacts furnished. He gets a list of all the suppliers or merchants who sell or buy the merchandise or service he wants.

If he wants to conduct his own research, a fully staffed, fully equipped business library, in many languages, covers one part of the building floor.

An international relations department moves in then, to make reservations for plane or train visits to other cities, to round up social entertainment, a bilingual assistant to help the visitor's wife shop, or even a multilingual babysitter.

All these services are absolutely free. The visitor pays only for his food and drinks, perhaps not even these.

Its services are not confined to the foreign visitor, however. The same help is offered to the American businessman, with special emphasis on assistance to the small manufacturer to whom foreign trade is an unknown field.

The development department's files bulge with records of contacts made and the results.

A manufacturer in an Illinois city who had never exported his farm machinery before is now routing a major part of his business through New Orleans to ports of South American nations.

A Tampa, Fla., baby stroller builder sold 452 of his strollers within 6 months to Latin American buyers there.

Some $30,000 in leaf tobacco from Kentucky went out to Africa and the Canary Islands through International House contacts.

Not all contacts are small. One multimillion-dollar flour deal began from a single contact furnished a Kansas City, Mo., firm.

What New Orleans expects of this service—and is certainly getting—is at least a portion of the shipping generated by the connections it furnishes. In most instances New Orleans gets all of it.

But New Orleans, wisely, has decided that one-way traffic is not the sole answer to foreign trade. Representatives promote imports as avidly as exports.

A direct growth of this effort is the International Trade Mart, a sleek, 5-story building a block away from International House.

Here, foreign nations and manufacturers may rent space and display their products. Buyers from New York City or Chicago may come directly to New Orleans, look over items ranging from Belgian handmade shotguns or African patio mats, to Indian embroidery.

Organized in 1945, with 66 percent of its space rented when it opened, the Trade Mart now operates at capacity. It has always been in the black, and is retiring its bonds ahead of schedule.

Its offices now exhibit over 600 items, from all over the world.

Clay Shaw, director of the mart, estimates that $50 million in business is done annually through the mart.

To keep pace with the growing use, the interlocking boards of the 2 institutions are already negotiating for construction of a new international building—one at least 12 stories and with more space. They ex-

pect to have it in operation within 30 months.

Indicative of the long-range approach to foreign trade taken by the city is the International House's devotion to its cultural program—interchange of Latin American and American students.

In 1945, the International Relations Department organized 13 Louisiana and Mississippi colleges into an exchange group, and even pulled scholarships from many of Latin or South American students.

In the last 10 years, over 10,000 Latin or South American youngsters have moved through New Orleans to these colleges. The program became so effective that the Cordell Hull International Foundation asked that the International House take over direction of its exchange efforts.

Today, approximately 6 percent of Louisiana State University's enrollment is Latin American. In New Orleans, there are 25 Latin American interns and nurses doing advanced work in hospitals.

These youngsters, of course, will grow up as the leaders in their country. When someone says United States they will think New Orleans. As their influence spreads, the direct benefit to New Orleans will become incalculable.

In postwar years, New Orleans has also renewed, through the International House, its Trade and Travel Missions. There have been 21 big plane flights, and countless smaller and individual missions. Writers, newsmen and businessmen from all over the Mississippi Valley have made these forays.

Mayor de Lesseps Morrison, the city's energetic young mayor, has made 12 of these flights.

The mayor is also on call to entertain the visiting Latin American officials, as are other officials and businessmen. It's no trouble at all in New Orleans to whip up a 300-man luncheon or dinner for an important visitor.

Rounding out the port's extra-curricular promotional efforts is a free trade zone—a 12-acre area set off in the port in which foreign goods may be kept without custom charges.

Inside this zone, a foreign manufacturer or a New Orleans importer may store and process goods which may be sold in the United States or transshipped to other nations.

If the goods are sold here, the customs levy is made. If they go out again to other nations, no charge is levied.

Since the zone was established, the giant Sears and Roebuck firm has moved all its imports through New Orleans. Sears maintains a huge warehouse, filled with items like Japanese dishes and Italian motor scooters destined for its South American retail outlets.

Importers of Brazil nuts bring shipments into the zone, clean them and dry them before importation to reduce customs cost.

LOSS LEADER PAYS OFF ON ITS OWN

Another importer cleans and processes coffee beans. A $75,000 wool and cotton fumigator has been established by the Port Commission in the zone.

While importers pay no customs in the zone, they do hire New Orleans labor, drayage, and pay warehouse fees. And the zone generates considerable traffic for the port, like a grocer's loss leader.

Despite all these outside community efforts, the visions of developing foreign trade would have been impossible of fulfillment had not the port proper kept abreast with facilities and service.

Shut off from new construction along its 52 miles of waterfront during the war years, the port faced a big overhaul task as restrictions lifted. Luckily, wartime commerce had built up a backlog of funds for changes.

About $16 million has been poured into the reconstruction and replacement of old wooden wharves, some over 50 years old. A number of modern facilities have been built. Over $7 million went into doubling the capacity of the port's grain elevator, which now holds over 5 million bushels.

Present plans call for expenditure of $10.5 million for 1955, and an overall total of $44 million. Port officials publicly say the face-lifting can be done in 10 years, port engineers say privately it will take 20 years.

Whatever the time, the money is being plowed into the port. And solely from revenues. The port hasn't issued bonds since 1939.

With the exception of approximately $400,000, all the revenue from a Louisiana gasoline tax goes into servicing bonds issued prior to 1939. The time may come, and soon, when the port must finance part of that $44 million expansion with bonds.

Currently, the Port Commission has jurisdiction over 77 berths, along 7½ miles of riverside, in the New Orleans port. Of these, 63 are for general cargo and 14 for special purposes. Two are banana terminals which give New Orleans the edge over all other ports in importation of this fruit.

There are scattered over 5½ miles, 27 private berths in the port, varying from 450 to 500 feet in length. Many of these are for special purposes or are for the United States Navy.

By this November, Port Director W. J. Amoss says, the dredging of the present 5½-mile Industrial Canal linking the river with Lake Pontchartrain to a depth of 30 feet will be completed. This will bring the port some 55 miles nearer to the Gulf of Mexico, at least for the smaller freighters. It will be that much more advantage for the port, even at 30 feet.

Port figures show that 6,342 vessels entered the harbor in 1954. Of these, 3,878 were deep-sea craft and 2,464 inland craft.

Many Orleanians, while fascinated by the continued boom in foreign trade, are happier over the influx of industry in the area. Tremendous strides have been made in recent years.

Some estimate that over $1 billion in permanent industry has moved onto the Mississippi, or the Industrial Canal, since 1950.

The largest single new plant is the Kaiser Aluminum Works, a $145 million plant for production of pig aluminum. Chrysler Corp. converted an unused plane factory into a tank engine installation worth $70 million. The American Cyanamid and Chemical Corp. invested $47.7 million into the production of fertilizer, and Lion Oil put $31 million into an anhydrous ammonia factory.

Shell Oil, an oldtimer at New Orleans, expanded its facilities by $30 million, as did other major plants in the area.

An index of the industrial growth may be seen in the booming annual expansion of the local power companies, Louisiana Power & Light and the New Orleans Public Service Co. Both spend over $10 million annually.

The whole of New Orleans has felt this new blood pumped into old veins, and responds accordingly.

Port Director Amoss calls this response, from the International House to the cabbie who is exceptionally pleasant to a foreign visitor, "a state of mind that we enjoy in New Orleans."

"To put it in a word, we are 'simpatico'," Mr. Amoss continued.

That is a Spanish word which, liberally translated, means "in sympathy with."

"We feel here that Latin Americans and other foreigners, no matter from where, aren't rascals just because they are foreigners," Mr. Amoss said. "It's an outgrowth of long experience in New Orleans and understanding through our mixture of peoples for centuries.

"It trickles down from the top to the clerks, the police, and all levels.

"Perhaps our efforts are part necessity, and certainly a great many interests aren't unselfish. But I don't think we have to apologize for such unselfishness."

Mr. Amoss credits the International House with crystallizing the "simpatico" feeling already present, and channeling it into a productive force.

But he feels that the credit should be more widespread—all over the community.

He and other port officials point to the long happy relationship with labor in New Orleans; there hasn't been a strike in decades.

"You can't develop this feeling overnight," Mr. Amoss ended.

So while other gulf coast ports hang on grimly to what business they have, or let it slip gradually, New Orleans holds more promise for the future, and cash for the present.

Right now, 53 percent of the city's total foreign trade is with South or Central American cities, and 10 percent of the European commerce has been directed to gulf ports through its International Mart, with New Orleans getting the big chunk.

You can still hear the best in jazz on Bourbon Street, sip soup at Antoine's if you want to stand in line, or pay exorbitant prices for antiques, all the modern pleasures of a tourist are still to be found in New Orleans.

But the solid heart and the real color of the city lie in the hoot of steamship whistles and the smudge of factory smoke.

The Milk Program: What It Has Meant to Schoolchildren Across the Nation

EXTENSION OF REMARKS

OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1955

Mr. ELLIOTT. Mr. Speaker, it is always refreshing to me to get a report direct from the people about some of the programs for which the Congress is responsible. I have in mind the milk program which has meant a great deal to schoolchildren all over the Nation.

Recently, when I was reading the April 28 issue of the Southern Democrat, one of Alabama's fine weekly newspapers, published in Oneonta, Ala., in the Seventh Congressional District, I noted this article written by Sudie Cowden Hicks, of the Remlap School. I think that its reading will give each Member of the House a good insight into the milk program.

The article follows:

When I first heard about the subsidized milk program for the schoolchildren I said, "Well, that is one thing we won't have to fool with. Our children get plenty of milk at home. We don't have a lunchroom and it would be too much trouble for us." As I thought about it more I knew that this was a decision for the parents and not for me. I talked to the children and found to my surprise that almost none were drinking what is considered the minimum essential to good health.

I then got out a letter to the parents asking how many would be interested. About two-thirds said they would, so we began the program. We drink the milk at morning recess and find that it helps to fill that big empty spot that develops in our stomachs between an early breakfast and 11:30 lunch. After a few weeks other benefits developed that were completely astounding to us teachers.

Now, of course, I had read and heard most of my life of what proper food can do for people but I never dreamed that one glass of whole milk a day could make the change it has. One beginner who had not learned to

read at all is now reading and is learning some number work and looks like a different child. Another overage, retarded boy whose disposition and conduct were so bad that I had considered having him taken out of school has become pink cheeked, usually pleasant in manner and attitude, eager to do the chores of a country school and he is improving in his schoolwork.

Now when I see the pleasure of the children as they drink the milk and as I note the improved appearance of most of them I am glad that Mrs. Cline and I trusted the judgment of our parents and helped Uncle Sam make a good investment in his future citizens.

Imports of Tuna

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1955

Mr. WILSON of California. Mr. Speaker, the critical predicament of the American tuna-fishing fleet is dramatized by two messages I have received from fishermen's groups in the past few days. The situation results from an increasing flood of frozen tuna imported into this country absolutely duty-free.

Preparation of tuna by freezing, in order to import it, is a comparatively new technological method. In the past, frozen tuna has never been included in tariff schedules which covered canned tuna. This has resulted in a loophole through which most of the woes of the tuna industry have emerged.

Consideration by our Government is currently being given to the binding of the present duty-free status of frozen tuna into permanent trade agreements with foreign nations. If this is allowed to happen, the American tuna fleet is doomed, and tuna production and control of tuna prices will be lost to the Nation. This must not occur. The best interests of the consumer and the thousands of workers in the tuna industry and allied fields will be served by reasonable controls on imports of tuna.

Under unanimous consent, I include the following communications as a portion of my remarks:

SAN PEDRO, CALIF., *April 30, 1955.*
Hon. BOB WILSON,
House Office Building,
Washington, D. C.:

Have just adjourned meeting composed of boat owners, labor, local government representatives, and members of allied fishing interests that have been and are being seriously hurt by the crush of imported fish. We are most unhappy and certainly not proud to report to you that the majority of tuna canned by United States packers so far this year is imported fish. At the same time there is and has been tuna on American vessels waiting at the dock to be unloaded. We have been delayed constantly in this unloading of American tuna boats and have just learned that our future sailings might be on a restricted basis. Unless our Government recognizes our plight immediately and cooperates in some manner to perpetuate our fishing fleets, this committee feels that date of complete collapse of the American fleet is imminent. We ask your advice and cooperation in this matter.

MASON CASE FISHERMAN'S COOPERATIVE ASSOCIATION OF SAN PEDRO.

AMERICAN TUNABOAT ASSOCIATION,
San Diego, Calif., April 21, 1955.
Hon. BOB WILSON,
House Office Building,
Washington, D. C.

DEAR BOB: I am enclosing herewith a copy of the San Diego Labor Market Bulletin which reached my desk this morning. You have recently received material from the chamber of commerce, which is a report of a committee on the tuna situation, and in it reference is made to the labor situation in San Diego. This particular bulletin amply bears out that situation. You will observe that San Diego has now been classified as in group IV–A area for the first quarter of 1955. In the second paragraph it speaks of the employment dropping to a new 3-year low and speaks there of losses in fishing and food processing.

You will observe that they forecast some increase in employment in the canning of fish, and, inasmuch as we haven't been doing any, this will be true, and we hope to get that on such a basis as it will continue. You will observe, however, declines in shipbuilding, which has a reference to the tuna business also, inasmuch as our activity has a great effect upon shipbuilding.

All in all, the situation is not good. We are fighting hard in the tuna business to reestablish ourselves. We hope that the Department of State does not see fit to consign us to the ash heap through some foolish negotiation with Japan, particularly as it regards frozen tuna. I know we have written to you many times and I feel almost apologetic bringing up the subject again, but there seems to be no other way we can proceed than to keep reminding the people in Washington that we have a difficult situation. I know that you have done a very fine job in keeping the people in the executive departments aware of this situation. I trust that you will be able to do that again and for that purpose am enclosing some additional copies of the San Diego Labor Market Bulletin.

Yours very truly,
AMERICAN TUNABOAT ASSOCIATION,
H. F. CARY, *General Manager.*

Opportunity Provides Success: Tribute to the First Lady of Arkansas

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1955

Mr. HARRIS. Mr. Speaker, it is always acknowledged that success follows opportunity in life. We acknowledge the contributions from a successful individual which has meant so much to the welfare of our Nation. Every State in this great Nation of ours has many citizens who have contributed to the welfare of America.

We acknowledge the contributions of so many of the citizens from our own State of Arkansas. Recently, in a special program in Little Rock, Ark., an appropriate tribute was given to the outstanding men and women of our State.

On this special occasion, sponsored by the Arkansas Democrat, one of our outstanding newspapers covering the State, an award was made to the first lady of our State, the wife of our esteemed Governor, the Honorable Orval Faubus, at which time she was designated as the outstanding lady for 1955. On this special occasion, Col. J. Carroll Cone, native of Arkansas, and of my congressional district, delivered a very fine and appropriate address, paying tribute to not only our first lady but to other outstanding and successful men and women of our great State. I commend this special message to you, Mr. Speaker, and the Members of Congress, and, by unanimous consent, include it with these remarks in the RECORD:

ADDRESS BY J. CARROLL CONE, APRIL 23, 1955, LITTLE ROCK, ARK.

I am highly honored to have your invitation through my good friend, Mr. Rex Hayes, of the Arkansas Private Flyers Association, to appear on the program today—wherein you are paying honor to four of the outstanding men and women of Arkansas. Your invitation gives me an opportunity to renew acquaintances with many old friends of my native State, and to meet, for the first time, several of your outstanding citizens whom it has not been my good fortune to meet heretofore. I am glad to have this opportunity to meet, for the first time, the first lady of our State, Mrs. Faubus, and her husband, the Governor.

I wish to congratulate the Arkansas Democrat for sponsoring on an annual basis, awards of this kind to outstanding Arkansan men and women, and I congratulate your Arkansas Private Flyers Association on having been permitted to participate in the awards being given today.

I am proud to be a native son of Arkansas, particularly when, in my travels throughout the United States and in many foreign countries, I frequently have called to my attention Arkansans who have made outstanding records in this and in other countries. I am reminded of a great man, Mr. Samuel W. Rayburn, many years ago president of the Union Trust Co. of Little Rock, who went to New York about 20 years ago as president of Lord & Taylor—later becoming president of the Associated Dry Goods Corp.—and who has now retired and is making his home in Florida. Also, there is Arthur McCain, until recently president of the Chase National Bank, and Charley McCain, former president, and still a member of the board of Dillon Read & Co. of New York; Van B. Sims, formerly comptroller of the State of Arkansas, and now vice president of Lord & Taylor; and Miss Dorothy Shaver, a native daughter, now president of Lord & Taylor.

The city of Washington is filled with outstanding men and women, born and reared in Arkansas—men and women who are making great records for themselves, and reflecting great credit upon our native State.

I am particularly proud of the daily comments I hear in Washington and around the country—highly commendatory of the Arkansas delegation in Congress. We have two outstanding Senators, JOHN M. MCCLELLAN and WILLIAM FULBRIGHT (by the way, I know you will be interested in knowing that, since Senator MCCLELLAN has become such a national figure in the Democratic Party, there is a growing sentiment in favor of his nomination for President of the United States at the next Democratic Convention), and our entire delegation in the House of Representative is equal, if not superior, to the delegation of any other State. Another great Arkansan, and a national leader in the Democratic Party, is Leslie Biffle, of Piggott, Ark. Leslie, as you know, was for many years Secretary of the United States Senate and is one of the most highly respected leaders of the Democratic Party.

The longer I live outside of the State, though I retain a legal residence here, the more anxious I become to again make my permanent home here—which I fully expect to do in the next few years.

I am proud of the record Arkansas men and women have made in their contribution to the development of American aviation

both in war and in peace. I remember that Field Kindley, of Gravette, Ark., was the second ace of aces among the American flyers in World War I. I remember that many Arkansan men who learned the rudiments of aviation in Arkansas have become pilots or important officials in the great airlines of the country, and many others have attained high rank in military aviation. I remember that I taught senior State senator, Ellis Fagan, to fly back in the early days of aviation in Arkansas and, not only did he become an excellent pilot, but he was the first man to own and operate in airline in Arkansas which ran from Oklahoma through Fayetteville, through Little Rock, to Memphis. I remember Johnny Howe, whom I started as a second lieutenant in my old 154th Aero Squadron, who is now a general in the Air Force. Another young man whom I encouraged to start flying and who became a major general in the Air Force, and whose death was a great loss not only to the State but to the Air Force, was our good friend, Earl Ricks, of Hot Springs. In the early days in the development of civil aviation, there were many young men of our State who led the way in the development of civil and military aviation not only in Arkansas but throughout the Nation. There was Felix Smart, of Pine Bluff; Adrian Williamson and Russell Lambert, of Monticello; Charles Taylor, of Little Rock; and many others too numerous to mention in the short time allotted to me at this moment. I am humbly proud that it was my good fortune to have had a part in all of these activities.

The State of Arkansas and its fine citizenship has been good to me, and I am truly deeply grateful for the friendship of the fine people of this great community. You helped me in many ways in my early struggles for an education and a livelihood.

It was my good fortune to serve you for 2 years as assistant secretary of State, and to be elected twice as your State auditor—in which campaign I made the first statewide political campaign by airplane that was ever made. You gave me the honor of serving you for 2 years as your State Director of Aeronautics and, finally, you accorded me the privilege of being candidate for Governor of Arkansas—and you kindly defeated me by a fairly substantial majority. My defeat as a candidate for governor was really a favor because it is a fact that if I had any particular qualifications, they were in the aviation line—and I remember quite well that within a few weeks after my defeat, and at a time when I felt my life had been ruined, I received an entirely unexpected long distance telephone call from the president of an aircraft company in Kansas City, who asked if he could see me in Little Rock the next day. The result of that visit was my election as vice president and sales manager of a Kansas City aircraft factory, at a salary of more than twice the salary of the Governor of Arkansas.

In 1932, due to some of my great Arkansas friends, particularly Senator Joe T. Robinson and Senator Thaddeus Carraway, President Roosevelt appointed me Director of Civil Aeronautics in the old Bureau of Air Commerce—which led to a later appointment as adviser to the United States on European aviation, with particular reference to the European technique in airline operation. During my work in this capacity I was based in London and Paris, and it was while on this work that the president of Pan American World Airways, Mr. Juan T. Trippe, called me by trans-atlantic telephone from New York to Paris and prevailed upon me to quit Government service and join Pan American for the purpose of organizing and operating the Atlantic division of Pan American Airways, which operation had just been decided upon by the Pan American Airways board of directors.

After establishing the Atlantic division of Pan American, I was promoted to my present position in connection with Pan American Airways System public relations.

I am in my 18th year with the greatest airline in the world, which, incidentally, employs scores of native sons of Arkansas. An old Little Rock boy, whom you all know, is one of our most valued officers—I have reference to Charles Shoemaker, Jr., who has been with us for many years and who is in charge of the passenger service department of our Latin American division, and is based at Miami, Fla.

During the years I have been with my company my work has caused me to travel through over 40 foreign countries and colonies—which has been an education in itself—and during which travels I have run into numerous former Arkansans who are doing important work for our country or for private companies in various sections of the world.

All of the opportunities I have had in my life, and any accomplishments I may have been able to make, have been due, directly or indirectly, to the friendship, encouragement, inspiration, and aid that has been given to me in the past by my wonderful Arkansas friends, and I am grateful to you all.

In conclusion, I want to thank you again for the honor you have conferred upon me by inviting me to participate in this event today.

Thank you, and God bless you all.

The Compulsory Reserve Bill

EXTENSION OF REMARKS

OF

HON. EDITH GREEN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1955

Mrs. GREEN of Oregon. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following concerned with the proposed compulsory Reserve bill:

BRONXVILLE, N. Y., *May 2, 1955.*

Representative EDITH GREEN,
House Office Building,
Washington, D. C.

DEAR MRS. GREEN: You probably are as concerned as I am about the pending compulsory Reserve bill. As you know, 8 years is a long time for Americans to be under military control.

When General Smuts said: "Conscription is the taproot of militarism," I believe he meant that you can't train the boys of the Nation physically for war without also training their minds for war.

The European experience with such a program was so disastrous that I am sure we ought to think twice before adopting, in the atomic age, a program that may gradually make our people rely primarily on military solutions to world problems.

Is it not true that Reserve groups have testified in the public hearings in favor of the voluntary system, and that the Navy and Air Force were especially vocal against this compulsory plan? They are apparently confident that they can meet required goals without this bill.

Why then should we tamper with our precious freedom to impose an 8-year draft on every boy?

Very sincerely,

HARRY EMERSON FOSDICK.

NATIONAL ASSOCIATION OF SECONDARY-SCHOOL PRINCIPALS,
Washington, D. C., May 4, 1955.

The Honorable EDITH GREEN,
The House of Representatives,
Washington, D. C.:

Will you oppose the 6-month military training portion of H. R. 5297?

The high-school principals of this country who are genuinely interested in the defense of their country and also in the welfare of all school youth opposed, by resolution at their recent convention, any military program that would induce youth to leave secondary school before graduation.

The present 6-month military-training portion of H. R. 5297 will offer a special plan to youth to evade the present selective-service provisions, or any extension of it, by enlisting for military service between ages 17–19. This the youth will be induced to do and to leave high school before graduation so they can be included in this limited quota of 100,000–250,000 youth every year. Such a program will tend to violate the present stay-in-school-until-graduation policy of all branches of the Armed Forces, which we believe you wish to maintain.

We are authorized by the high-school principals of our country to urge all Members of Congress to preserve and continue the present selective-service provisions in any military program before the Congress.

Youth should not be permitted or induced by a 6-month option to enter the military-training program before graduation from high school or until ages 18½–20 if still in attendance in high school. Consider this a personal letter expressing the prevailing attitude of high-school principals toward the 6-month portion of H. R. 5297.

LELAND N. DRAKE,
President; Chairman, Legislative Committee.

PAUL E. ELICKER,
Executive Secretary; Secretary, Legislative Committee.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Foreign Policy in the Pacific

EXTENSION OF REMARKS
OF

HON. HENRY M. JACKSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Monday, May 9, 1955

Mr. JACKSON. Mr. President, on April 13 my distinguished colleague from the State of Washington [Mr. MAGNUSON] delivered a very interesting address concerning our foreign policy in the Pacific at the Democratic fund-raising dinner at San Mateo, Calif. Because this subject is of such extreme interest to all of us, I ask unanimous consent to have the address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE DULLES DILEMMA

I have come to you this evening to make a brief report on foreign policy in the Pacific—a policy which summed up is the Dulles dilemma. It is a dilemma vitally—maybe mortally—important to us on the Pacific coast. It is also, like any dilemma, frighteningly confused—in this case more than usual because of a last-minute discovery by Mr. Dulles of a paper tiger—a tiger which he claims to be this country but which many feel is merely this country's Secretary of State.

In a consideration of foreign policy of the United States, there is one all-important point to remember. We are told of the administration-Republican foreign policy—of the Democratic foreign policy and of the bipartisan foreign policy. The administration-Republican foreign policy can only be defined if you name the day and define it.

Of the Democratic foreign policy we have a clear idea indelibly written in history of which we are inordinately proud; of the bipartisan foreign policy we have no idea whatsoever. You first must decide which fraction of the Republican Party you will bipartisan with. However, none of these policies are the American foreign policy. The American foreign policy can only be decided by the American people themselves—people such as you who I am addressing tonight. It is you who must and shall set policies of the United States—domestic or foreign. To do this, you must be appraised of the facts—of the choices before us and their dangers.

I have come tonight to tell you as many of these as I have time for so that you can help dissipate both the Dulles dilemma and the paper tiger.

To begin with—to you as Democrats—as one of your Democratic Senators, I want to say that there was never anything wrong with the basic Democratic foreign policy set down by Truman and Acheson. It was the policy of containment—the policy of implacable opposition to aggression. The Communists understood it that way and respected it. Today the Republican Party is trying its best to get back to it as quickly as possible. In fact, the heart of the Dulles dilemma is how they can get back without having the Democrats say, "I told you so"—without the Communists putting us behind an iron curtain instead of us keeping them behind one.

For campaign purposes purely, the Republican Party today is making a terrific ado about two things. First, they are claiming that the Yalta agreement was the original sin so far as the Orient is concerned. From it they claim stem all the problems of China, Korea, Indochina, Matsu and Quemoy, and Formosa. Second, they say that the only way we can possibly extract ourselves from our present dilemma is to trust implicitly in the clear judgment of our military leaders—the foremost of whom is our President.

With this we must take emphatic exception. Our present situation has been caused to a large extent by too great dependence upon the judgment of our military leaders. After the Second World War we found, as did the old tiger of France Clemenceau after the First, that "War is too serious a matter to be left entirely to the generals."

Regardless of it merits, the Yalta Agreement was signed by President Roosevelt at the insistence of the military leaders of the Republican leaders in the United States Senate in order to shorten the war and to save 500,000 American lives.

That the military leaders were dead wrong, that they miscalculated our strength, the devastating effectiveness of the atomic bomb and the capacity of our scientists and industry to make bombs, is the tragedy of Yalta—if tragedy there is.

You have heard of the insistence of our Joint Chiefs of Staff that we must get Russia to take an active part in the Pacific in order to save our boys. What you probably have not heard is what the Republican party itself was saying at the time. I have in my hand a speech given on the Senate floor at this time by Senator WILEY of Wisconsin, one of the ranking members of the Foreign Relations Committee. Here is what he had to say:

"Why then should we pussyfoot with our Russian ally and not declare only that we want them to make common cause in the Pacific? Why then should we not strengthen President Truman's hand by making known this desire from here at home in no uncertain terms? * * *

"Why should we act like helpless milktoasts when we have vast financial and other bargaining power to use as pressure on Russia? Why should we follow the lead of the 'nice Nellies' of our State Department who have been more concerned with diplomatic niceties than with the preservation of American interests and lives? * * *

"Thus America has everything to gain and thousands of her boys' lives to lose unless Russia joins in the Pacific struggle. * * *

"I would be remiss in my obligations as a United States Senator if I did not voice, in all humility but with all the force at my command, the feeling of millions of Americans that Russia do her part in the Pacific."

Our second great example of military judgment occurred in Korea. We undertook Korea with the complete support of the Congress of the United States. We undertook our responsibilities instantly. I know because it happened that I was at Blair House, the White House at the time, the evening we took that action. Republicans, Democrats, Military staffs all agreed that this action was imperative and confirmed it next day.

In Korea we fought a confined, highly successful and—to begin with—not an excessively costly war, up to the great error in military judgment. We had rolled the North Koreans back to their own borders when the military decided they would push on to the Yalu. You remember that incident. The Chinese said: "If you do, we will get into this ourselves." The military leaders said, "We don't believe you. You can't and you won't." So they crossed over into North Korea. They pushed to the Yalu and they were wrong. Not only did the Chinese Communist armies get into the fight, they pushed us clear down to the southernmost tip of Korea and cost us the long and bloody war that followed.

This is the war that the Republican Party promised to end if they were reelected and they did. They ended it in a way President Truman could have ended it at any time—by surrendering.

You will remember when your San Francisco newspapermen interviewed a dejected Gen. Mark Clark when he came home from that surrender. They asked him why we gave up airfields and island that were strategic. He answered, "I guess because they wanted them." The Washigton papers characterized it was the "voice of the mouse" and the first surrender in American history.

After Korea comes the third great example of military judgment—Indochina. Mr. Dulles and every expert on Asia said that once the Communits armies were freed in northern China they would move down to southern China and attack Indochina. They reported that these armies were moving in that direction—that they were building up for an invasion. Finally they did invade.

No preparations were made by our Government to meet this invasion. We closed our eyes and hoped it wouldn't happen. We refused to pour in arms and assistance to our allies as we had in previous wars. We left them helpless quarry of the red snake. But we did trust in the military appraisal of the situation. This was that the defenses of the French could stand without us—that the strategy of Dien Bien Phu would be successful. Well, it wasn't.

Mr. Dulles said that Indochina was absolutely necessary to the defense of the whole of Southern Asia. You remember the statement that all Southern Asia would fall—like a house of cards.

He went to Geneva to say that we were going to be tough. We made promises to the French and moved our aircraft carriers into the gulf to back him up. But he held a news conference just the night before the Geneva meeting and said, "Well, of course. He didn't mean it." That was the time they cartooned him as rushing to Geneva but leaving his head behind.

You can see what Clemenceau meant when he said that war is too serious a matter to be left entirely to the generals.

Today we must make another fateful decision. Whether to defend Quemoy, whether to use atomic bombs. The military tell us that the Chinese cannot withstand our first assault—that Russia will not back up China. But don't forget that if they are once again wrong and Russia does keep her treaties and back up China, we are in for a major war.

In digging up Yalta as a campaign issue, the Republicans are hoping to attract our attention from their two surrenders and their bumbling foreign policies.

In passing we might also point out that if Yalta is the original sin in the Pacific—the refusal to follow Prime Minister Churchill's advice and enter Europe through the Ljubljana Gap into the Balkans gave eastern Europe to the Communists—and in that the President cannot say he had no part.

The first step toward our present dilemma in the Pacific was taken on February 2, 1953, by President Eisenhower in his State of the Union message. In the Republican campaign for votes, regardless of truth or national safety, that party turned its back upon the policy of containment for one they described as broad and daring. It was not the containment but the liberation of Communist China. In line with it, the President unleashed Chiang Kai-shek. Said the President:

"There is no longer any logic or sense in a condition that required the United States Navy to assume defensive responsibilities on behalf of the Chinese Communists. I am, therefore, issuing instructions that the 7th Fleet no longer be employed to shield Communist China. This order implies no aggressive intent on our part, but we certainly have no obligation to protect a nation fighting us in Korea."

It sounded comforting, but it was the first roar of the paper tiger. I knew—I had been in Formosa. The military knew and the Communists knew that Chiang Kai-shek had no army worth unleashing. It was like unleashing me in the ring with Marciano next month. The operations of our 7th Fleet did not change; they flew and sailed the same patrols.

But it certainly gave Communist China something to think about. They looked upon Chiang's 50,000 men on Quemoy and his increasing fortifications, not as far from their mainland as Oakland is from San Francisco and decided they should do something about it. They announced they were going to drive the Nationalists out of these islands and out of Formosa too, by the way.

As for the defense of Formosa, we are all firmly, unanimously, and wholeheartedly committed to that adventure. Last January—lest China or the world have any doubt as to our determination and provoke a war by accident—we made it brilliantly clear by passing the Formosa resolution in the Senate. We gave the President no new powers, but we did confirm our unhesitating support of his constitutional powers.

We made it clear that the American people would make war against China or any other nation if such a course was thought essential to national safety; that we did not favor waiting supinely until attacked but were drawing a line—a distant line—which we would not permit to be crossed by a hostile force.

There is a fraction of the Republican Party—and your Senator KNOWLAND is among them—that do not think this goes far enough. They believe that China must be liberated, that the Communists must be utterly crushed—atomic bombed to surrender, and that such a bloody course is essential not only to world peace but our own survival. In this they have the ears of the administration—the support of the generals. Their demands for preventative war furnishes the only reason for the defense of Quemoy and the Matsus. We must realize this and take our part in this debate. If these two inconsequential islands, as some Senators claim, are invaluable as a springboard to launch a full-scale war to liberate China, then the American people should know that this is their value. They should know the cost. It is no matter for secret deliberation and decision.

What devilish, ghastly irony it would be for all of us here on the Pacific, if after so emphatically eliminating the chance that China accidentally set off a world war because she did not clearly know our intentions, we ourselves set off one because we did not believe the Chinese and Russians.

I have been to Formosa several times. I have listened to the debates and I believe it is clear beyond a reasonable argument that these offshore islands are in no sense essential to the defense of Formosa. Arguments to the contrary are almost frivolous. As the New York Times says, "It is almost like arguing that the loss of Staten Island—a ferry boat ride from Manhattan, would jeopardize the defense of Bermuda."

Two reasons are given for our defending these islands to the bitter end. The first is that if we don't we will be considered a paper tiger. The second that if we lose them, Chiang's troops will lose their morale and might even defect.

As to the paper tiger, he was discovered by Mr. Dulles himself and described to the Nation in a speech upon his return from the Bankok conference on March 8. He said we must not make any further concessions that would lend support to the Communist charge that the United States is such a flimsy animal.

It is useless for us to protest now that Mr. Dulles should have thought of this eventuality before the administration unleashed the noneffective Nationalist armies, before he declared "massive retaliation."

There is no use of my pointing to the speeches I have made on the floor of the Senate—and Senators LONG, JACKSON, etc., have made protesting Mr. Dulles' policy and predicting its inevitable outcome. He has most certainly brought it on himself. All I can insist upon is that the paper tiger is not the United States—but the Secretary himself and an administration that has put political expediency before wise and courageous action.

As to the humor of Chiangs' troops—to this end we can scarcely risk atomic war—justify the millions of inevitable casualties and back up an army that can get no fresh recruits or reenforcements except from ourselves.

If we defend Quemoy, it will mean the use of small atomic bombs. It will mean that we will fight with only two allies—Chiang and Sigmund Rhee. Even Canada has said it will refuse to come along. If the Russians keep the mutual defense treaty with China it will mean submarines, planes, and even small atomic bombs to resist us. Only one hydrogen bomb on Formosa would end all of this dilemma for eternity. It is just the right size for such a bomb.

It is my opinion that it is high time we end this dilemma. Let us with protests, votes, and every means at hand, make it crystal clear to the White House that we want no part of these offshore islands. That we want no part in experiments with atomic warfare that is cheap in money but astronomically costly in human life.

Let us also demand an end to the bumblings of our State Department—to the putting of politics before wise policy and money before national defense.

We must, as the administration said it would do 3 months ago, introduce clarity and certainty into our relations with the Chinese Communists and the whole world. We must let America be America—have an American foreign policy which is a fearless Christian foreign policy.

As to this in conclusion, I would like to point out that world events are showing us that even our democratic policy of containment may not be enough. We live in a day when the underprivileged of the world are on the march demanding equality of opportunity, freedom from economic exploitation, and the enjoyment of a better life. The Communists are capitalizing on this to the ultimate enslavement of nations. Until we can capitalize upon it too, and bring hope to these people of a new and fresh day, we will really have no effective American foreign policy.

If only they had a faint ray of hope that they might enjoy a pitiful little of what we enjoy they would never become Communists. Every one of us here wants them to have not only the hope, but to actually have what we have. For that we would gladly fight in the American tradition—to make them feel it, know it, and to realize the benefits of it, must be your American foreign policy.

Loyalty Means Liberty

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, May 9, 1955

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Merton B. Tice, commander in chief, Veterans of Foreign Wars of the United States, over the American Broadcasting Co. facilities, the address being entitled "Loyalty Means Liberty." Mr. Tice is a citizen of South Dakota. I commend to all American citizens a careful reading of his address.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

LOYALTY MEANS LIBERTY

"The most shameful and sordid period in the relatively short history of our great country is the more than 30 years during which Soviet espionage has been allowed to spread its tentacles over the United States," so reported the Committee on Un-American Activities of the United States House of Representatives, on December 30, 1951. We of the Veterans of Foreign Wars also noted, particularly during World War II and afterward, that the United States was fast becoming "the promised land" for Communists. Why? Because many of our industrial and military secrets were not protected; and secondly, disloyal Americans enjoyed the greatest individual freedom ever known by man.

Think of it—men of dishonest purpose, enjoying all the blessings of liberty, engaged in a conspiracy to destroy the Government that provided their very own protection. And, as of this month, FBI Director J. Edgar Hoover reported that the known Communist Party members in the United States still numbers about 24,000.

As a veterans' organization of well over a million members, we learned something about this that caused us years ago to stage parades in the East to counter the Red May Day demonstrations in that area. As you know, as far back as 1926 we requested Congress to outlaw the Communist Party. And, thank heavens, this mandate was fulfilled last year by our Congress. But as we learned more and more of the astounding number of Soviet spies and traitors in our midst, we decided, as our country's oldest veterans' organization, to do something to smash the Commies, and at the same time strengthen America. It was time to stand up and be counted. So, on May 1 in 1950, Loyalty Day, on a national scale, was launched by the VFW.

Loyalty Day gives an ideal opportunity for every patriotic organization to show the world their dedication and allegiance to the

Government of the United States of America, and to restate their vow to preserve and defend the United States from all enemies, whomsoever.

As commander in chief of the VFW, I want to thank warmly the veteran, civic, fraternal, labor, religious, women's, and youth groups which have participated. In particular, our thanks go to the school children who have taken part in patriotic programs during Loyalty Week.

This year, our theme is: Loyalty means liberty. That is true, of course, only if the present and succeeding generations appreciate and understand the benefits and are willing to defend liberty from all her enemies. Edmund Burke, a noted writer, wisely said: "For evil to triumph it is only necessary that good men do nothing." Apropos of Loyalty Day, and in paraphrase, one might say: For Communist slavery to triumph it is only necessary that free men do nothing.

We are gratified, as an organization, by the successful results of our efforts to do something. For example, nothing has given more impetus to State celebrations than the unanimous gubernatorial endorsements. And the awards for the last 5 years from Freedoms Foundation at Valley Forge have spurred us on. Publicity media have been extremely outstanding in this nonpartisan, nonsectarian, cooperative patriotic program. And Congress has now designated May 1 of each year as a national observance. We of the VFW are grateful.

We, as Americans, have much to be proud of. However, we have avoided anything that might be called selfish nationalism. And although the United States has the tremendous responsibility of leadership in the free world, we stress our international obligations rather than our international standing, and our desire to help our allies rather than our national material strength.

However, we do reflect in these programs our never ceasing resistance to totalitarianism; and, we continually stress, that for us the Constitution is revered as the symbol of national unity and American liberty. Let me point out that just to hate communism is not of much help. That is just water off a duck's back. We have to do something in a positive and constructive way if we are to accomplish anything.

Let us now—you and I—examine a definite area wherein much may be done to further Americanism. Consider the field of education. I believe all will agree that human dignity and freedom is the high trust of education. In fact, upon this base depends the maintenance of our representative government. Accordingly, we believe it mandatory that educators teach that the principles upon which this Government was founded deserve the devoted loyalty of every true citizen. I sincerely believe that few duties for parents are more important in the rearing of children than vigilance as to what our beloved future citizens are studying, and how their teachers feel about this great land of ours.

It is certain that youth must be prepared to live in our present day world and able to face the grave problems of the hydrogen age. Yes, a fundamental knowledge of his precious, national birthright should be an essential element in the education of an American. It conditions his patriotic content wherein lies his respect for law and constituted authority; his deference to the conscience and dignity of man; and his love for his land and its people. If the young American understands all this, he will know, as did Kipling, that:

"All we have of freedom—all we use or know—
This our fathers bought for us, long and long ago."

One also learns through a study of American history, that the stability of our Government rests on loyalty to the constitutional leader after final decisions are made and laws passed. Disagree, yes—the absolute right to disagree. Always, public opinion must be permitted full opportunity to be heard, but when laws are declared constitutional, then to them the good citizen must ever be faithful. And because of that quality of loyalty, we have enjoyed the most successful self-government the troubled world has yet known.

In the matter of patriotic education, I ask you: How can we produce outstanding American citizens without an adequate knowledge of realistic American history, exposure to the theory and practice of democratic government, and a heart-searching examination of the spiritual needs and history of man? Could there be a finer course of study for American citizenship?

We of the Veterans of Foreign Wars have for some years strongly advocated that Americanism should be taught as it once was: A way of life charted according to the humanitarian ideals and democratic principles which our forefathers wrote into the Declaration of Independence and the Constitution. What better patriotic inspiration is there for youth, or for any American, than that contained in the exciting story of the creation of the American Nation? And today, as we negotiate on an international scale, if we expect to win the hearts and minds of men—and that is the struggle—at a time when free governments are falling on distant fronts, we must show a unity in social faith and unquestionable proof of our devotion to the ideals that have made us great.

There is nothing dry or dull in this social faith as expressed by Washington, Franklin, Jefferson, Madison, Lincoln, Theodore Roosevelt, Wilson, Franklin D. Roosevelt, and Eisenhower. In fact, when we review our history since our founding, we can safely say that no three centuries were ever crowded with so many moments of drama and adventure, of tragedy and glory, than found in the colorful history that shaped our destiny in the New World.

And never should we forget, whether we are of the first generation or the tenth, that we are all co-sharers of that proud heritage. We are grateful that on Loyalty Day so many foreign-born march with us in large parades—Americans all. We should remember also that the casualty lists of all our wars bear witness that these newcomers through the years who fought and died for their foster mother—America—were of the conviction that:

"Each generation of free men
Its share of liberty
Must win again and yet again
That men shall be free."

Sometimes, though, we wonder exactly how far, as a Nation, we will go to defend the freedom and dignity of the individual. For example, how far will we go to effect the release of our young men held by the Reds—the 11 airmen illegally held by Communist China? There are also reportedly some 800 other Americans in Communist jails, many confined in dungeons, some in leg irons and arm chains for months. It seems high time that this country did everything possible for the release of these men. We simply cannot afford to do less.

Of course, these questions are complicated and involved, but that is all the more reason that something should be done, and done now. We do not believe our people should be held for ransom—the price admission to the United Nations. Red China should never be permitted to shoot her way into the United Nations, and we beg of Congress to take a firm stand. Furthermore, we are firmly convinced that if the Communist world continues "nibbling" on any front, force should be met with force. The only proviso is that all concerned be informed in advance exactly what to expect. We should know by this time that appeasement is a sure road to defeat.

Challenges and problems confront our generation as we come to the crossroads of civilization in our redezvous with destiny. There are no simple answers. Only with a deep-seated belief in God and a full arsenal of atomic bombs may we hope for survival. We must accept the fact there is no cheap way to bring about worthwhile results or to achieve an adequate military defense. We know that liberty will survive only if men and women defend it. And as we give thanks to Almighty God for our rights and privileges, we should also ponder how better to discharge our duties and responsibilities as Americans.

To deserve a title, one should earn it. And I submit, that to deserve the world's greatest title—"I Am An American"—one must be willing to defend the Nation at any cost, to fight for the noble concepts of the free way of life, and to die if need be that freedom may live. Let us always remember that cowards did not found this country and cowards will never preserve it.

The Future of the American Merchant Marine

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, May 9, 1955

Mr. BUTLER. Mr. President, among Americans best informed regarding transportation problems, especially as they relate to the merchant marine, is Gen. John M. Franklin, whose patriotic service as Chief of the Water Division of the Transportation Corps of the United States Army, and as Assistant Chief of Transportation during World War II, represented a major contribution to the welfare of this Nation. General Franklin delivered a forceful address before the Hampton Roads Maritime Association on April 14, and because of the factual information it contains I consider it worthy of the reading of the American public and ask that excerpts from the address be printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

It will be my endeavor to show how essential was the role of the merchant ships in World War II and the necessity of equalizing construction and operating costs between foreign-flag ships and American ships, if we are to have an American merchant marine at all, and, finally, what the real cost to the taxpayer actually is.

The 1936 Merchant Marine Act is the act under which the Government equalizes the cost of constructing and operating American-flag vessels with competitive foreign-flag vessels. The soul of the act is parity. It has nothing to do with profit.

* * * * *

The first question is, Why is it necessary to subsidize American shipyards and the American merchant marine?

1. The answer is simple: Because of the higher scale of wages and the higher cost of materials in the United States as com-

pared to foreign countries. The cost of building ships in foreign yards is between 40 and 50 percent lower than in the United States. This cost must be equalized, or there will be no building of commercial ships for foreign operation in this country. The shipowner gets the same ship he could buy abroad for half the money he would otherwise pay here. A large number of Americans do build their ships abroad and operate them under foreign flags.

This construction equalization is in reality a subsidy to American shipyards and American labor.

If no ships are built in the United States in peacetime, there will be a serious lack of shipyard facilities and personnel with the developed skills for the tremendous expansion of shipbuilding which experience has taught us will be vital in wartime. This is inviting disaster.

2. Now, as to operation: The average monthly wage cost of operating a 10,000-ton American-flag cargo vessel in 1953 was $24,500; British, the next highest, was $6,500 per month; German, $5,100 per month; Japanese, $4,100 per month. It is obvious that unless these costs are equalized there will be fewer and fewer American-flag ships operating foreign in peacetime. I do not think these wage differentials are far out of line with those in other industries. As an example, the wages of a coal miner in the United States are about four times the wages of a British coal miner.

* * * * *

Just prior to World War I 90 percent of Amercian trade was being carried in foreign vessels. When the war broke out and foreign ships were withdrawn from commercial service, the American economy was for a time almost completely shut off from needed foreign raw materials. Our export trade was left high and dry.

These experiences, combined with the recent lessons of Korea, are more persuasive than words. As a world power, we cannot depend on foreign nations to transport the sinews of war to our troops and vital raw materials to our production plants.

* * * * *

Now let us look at the cost of the American merchant marine to the taxpayer and what it contributes to our National economy and security.

First, as to the real cost. I welcome a chance to discuss this, because the cost to the taxpayer is somewhat misleading and very often misunderstood.

An American-flag steamship line operating under a contract with the Government must meet certain Government requirements as to operations and equipment:

1. Its ships must be constructed in American shipyards;

2. All of its ships must be registered under the American flag;

3. Safety requirements imposed by Congress, which are the highest in the world, must be met. Foreign standards are much lower.

4. Regularly scheduled service over specific essential trade routes must be maintained;

5. All the officers and 90 percent of the crewmen it employs must be American citizens;

6. All of the equipment, food, supplies, and other materials used on its ships must be of American origin.

If these qualifications, among others, are met, the steamship company is entitled to what is called an operating-differential subsidy as provided in the Merchant Marine Act of 1936. Operating-differential subsidies represent the difference in cost of operating under American registry—with an American crew, using American stores and equipment, and maintaining the higher standards of marine safety—as against operating under a foreign flag, using lower salaried foreign seamen, cheaper stores and supplies, and lower safety standards.

Moreover, under the act, 50 percent of all profits, earned by a steamship company holding an operating-differential subsidy, in excess of 10 percent of its capital necessarily employed, are recaptured by the Government.

In the 14-year period, 1938 to 1951, inclusive, the subsidized lines have received or accrued operating-differential subsidy totaling $258,550,362, of which $111,392,038 has been recaptured or accrued for recapture by the Government, leaving the net operating subsidy paid by the Government during this period of $147,158,324.

During the same 14-year period, 1938 to 1951, inclusive, the subsidized lines paid to the Government Federal income and excess profits taxes amounting to $130,503,000. Therefore, the net cost to the Government for operating-differential subsidy for the period 1938 to 1951, inclusive, after considering taxes paid by the subsidized lines, was only $16,655,000.

Foreign Aid Forever?

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Monday, May 9, 1955

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have incorporated in the Appendix of the RECORD a thought-provoking editorial entitled "Foreign Aid Forever?" written by Mr. Henry Hazlitt and published in Newsweek, May 9, 1955.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FOREIGN AID FOREVER?

(By Henry Hazlitt)

Once a government bureaucracy has been set up to do any job whatever, it will find endless excuses for expanding, prolonging, or perpetuating that job. This is the sad history of our postwar foreign aid.

Originally urged by Secretary Marshall in 1947, to meet what was then regarded as a temporary emergency situation, foreign aid has gone on and on, from year to year, constantly changing its stated purposes, constantly changing its name, but showing not the slightest tendency to terminate or even taper off. It may come as a jolt to some readers to discover that the President is actually recommending an increase in the amount to be spent in the next fiscal year even over the amount being spent in the current fiscal year. He wants foreign aid to rise from $4.3 billion in 1955 to $4.7 billion in 1956. Worse than this, far from even suggesting a tapering off, the President in his letter to Secretary Dulles of April 16 made it clear that he thought foreign giveaway should be a continuing program under a permanent government establishment.

The President's April 20 message to Congress on foreign aid gives the perfunctory and mainly rhetorical arguments for it that we have been hearing for the last 9 years. The message raises a hundred doubts about details. I can mention only 1 or 2.

It is a program for scattering the taxpayers' money over nearly the whole world—practically to every country outside of the Iron Curtain. To a few countries, in the world as it is today, continuance of military aid is unavoidable. This now applies most notably to Formosa and Korea. The President's message makes out a less obvious but still persuasive case for aid to Iran, Greece, and Turkey. But having mentioned these specific countries, he suddenly plunges into the wholesale and unsupported generality that it is the duty of the American taxpayer to promote welfare and growth for the peoples of Africa. Next we find that it has become somehow our duty to shower money all over Latin America. Where a critical situation exists, as in Guatemala or Bolivia, we must toss in still more. Then we must continue to give to Yugoslavia and India, though there is not the slighest assurance that these countries will be on our side when the chips are down.

This is dangerous business. To scatter aid all around the globe is not only inexcusably wasteful, but its effect must be to reduce the aid we can give, for example, to Formosa, where it is urgently needed. The argument for such indiscriminate largess seems to be that having given aid to countries A, B, and C, we must give it to D, E, and F to prevent resentment.

The President's foreign-aid program still allots substantial funds for "economic" aid, Truman's point 4, and all the rest. We are told that "three out of every four dollars" in our foreign giveaway program "will be immediately spent within the United States." This is like trying to appeal to the self-interest of an automobile dealer by telling him that if he makes you a gift of $4,000, you will use $3,000 of it to buy one of his cars. Yet an economic argument that would be rejected as ridiculous if made to a private business firm can be solemnly made to a Nation.

Again the President tells us that we cannot be secure in our freedom unless, elsewhere in the world, we destroy "the conditions under which totalitarianism grows—poverty, illiteracy, hunger, and disease." Are these really the reasons for communism—or any other form of totalitarianism? Germany went Nazi with less poverty, illiteracy, hunger, or disease than any country outside the United States.

It is ironic, in the light of our foreign-aid program, to compare the budgets of the United States and Great Britain. In its last fiscal year Britain had a surplus of $1.2 billion; the United States will have a deficit of more than $4 billion. In the fiscal year ahead Britain plans a surplus of $414 million; we plan a deficit of $2.4 billion. Yet the country that had the surplus got $120 million of aid last year from the country that had the deficit. And we think it was Alice who lived in Wonderland?

University of Wisconsin To Honor Three Distinguished Americans

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, May 9, 1955

Mr. WILEY. Mr. President, I am pleased to know that at the commencement ceremonies of the University of Wisconsin on June 17 next, three distinguished Americans will be honored.

There are a noted labor leader, Jacob F. Friedrick; a famous architect, Wisconsin's world-renowed Frank Lloyd Wright; and a great women leader, Mrs. Lillian Gilbreth.

Each of these outstanding Americans well deserves the plaudits which will be given them.

In the April 21 CONGRESSIONAL RECORD, as appears on page 4136, I personally paid tribute to Frank Lloyd Wright at the time I had reprinted an NBC radio interview and a Diplomat magazine interview with him.

Mrs. Gilbreth, a famous wife of a famous husband, has been part and parcel of the whole new science of industrial engineering which she and the late Frank Gilbreth pioneered in this country.

I should also like to say just a word about Jacob Friedrick, not only is he an universally respected leader in the ranks of labor, but he is held in greatest admiration in the community, as well, and throughout all segments of Wisconsin life.

The honor which will be accorded to Mr. Friedrick at the University symbolizes the honored new role of American labor. Time was when labor, in its legitimate efforts to organize, in order to achieve a higher standard of living, was smeared and denounced. Labor leaders of the highest patriotism were treated as if they were "Red revolutionaries," simply because they sought the right of the workingman to bargain collectively.

But now, fortunately, that unhappy day has passed. Labor has come into its own. There is no field of community or patriotic endeavor in which the leaders of organized labor do not contribute alongside the leaders of every other section of society. So I am delighted that this fine AFL spokesman is to receive honor at the hands of my alma mater.

I send to the desk an article published in the Saturday, May 7, Milwaukee Journal, announcing the intention to award the three honorary degress. I ask unanimous consent that the text of the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNIVERSITY OF WISCONSIN TO HONOR LABOR LEADER—FRIEDRICK NAMED WITH FRANK LLOYD WRIGHT AND MRS. GILBRETH

A Milwaukee labor leader, a world famous Wisconsin architect, and a noted woman author and industrial consultant will be awarded honorary degrees by the University of Wisconsin at commencement ceremonies in Camp Randall stadium, Madison, at 5 p. m., June 17.

University regents Saturday confirmed degrees for:

Jacob F. Friedrick, general secretary-treasurer of the AFL Milwaukee Federated Trades Council. Doctor of laws.

Architect Frank Lloyd Wright, of Spring Green, Wis. Doctor of fine arts.

Mrs. Lillian Moller Gilbreth, of Montclair, N. J., president of Gilbreth, Inc., construction engineers in management and currently Knapp visiting professor of mechanical engineering at the University of Madison. Doctor of science.

Friedrick, 63, is one of the most highly respected labor leaders in Wisconsin. He has been cited as the model of the self-educated man who has worked selflessly to enable others to benefit by education. He has been called the man most responsible for the strong support given the University of Wisconsin by the Wisconsin labor movement. Friedrick came to America from his native Hungary when he was 13. His formal schooling was limited to an eighth grade education plus a year and a half at what is now Boys' Technical High School. He joined the AFL International Association of Machinists in Milwaukee in 1913, almost immediately became an active unionist and rapidly moved up in the local IAM organization.

WAS REGIONAL DIRECTOR

From 1935 to 1945, Friedrick was general organizer of the Federated Trades Council. For the next 6 years he was AFL regional director here. He then became general secretary of the trades council, the county central AFL body, and last Wednesday became general secretary-treasurer of the council with the formal abolition of the separate treasurer's post.

Friedrick is chairman of the city sewerage commission and has been a member of the advisory committee of the University of Wisconsin's school for workers since its inception and a member of the State industrial commission's advisory committee on unemployment compensation since 1932.

LEAVES MARK AROUND WORLD

Wright, 85, has been widely recognized as one of the great creative artists of the century. After more than a half century of architectural pioneering, he has left his unique mark on landscapes around the world. Born at Richland Center, Wis., Wright studied civil engineering at the University of Wisconsin in the middle 1880's and in 1887 went to Chicago where he became an apprentice of the late Louis Sullivan, one of the architects in American history.

The Imperial Hotel in Tokyo was only the first of the daringly original buildings that brought Wright world recognition. Some 500 buildings around the world, each representing a new facet of Wright's genius, are testimony to his pioneering.

Wright in 1911 built Taliesin ("radiant brow" in Welsh) at Spring Green, Wis. Wright since 1932 has trained young men in his architectural methods at Taliesin East, which he has, thrice rebuilt after fires, at Spring Green.

Only last year, Wright said he would leave Wisconsin after the State supreme court ruled that the foundation that runs Taliesin was not tax exempt. Wright later relented.

During his long career, Wright has been accorded numerous honors. Among them are honorary degrees from Wesleyan, Princeton, Temple and Yale universities, Florida Southern college, and an award from the University of Venice.

Mrs. Gilbreth's fame has been spread in two books, "Cheaper by the Dozen" and "Belles on Their Toes," written by 2 of the 12 Gilbreth children. Mrs. Gilbreth, 76, was born in Oakland, Calif. She married Frank B. Gilbreth, a pioner industrial efficiency engineer, in 1904. After her husband died in 1924, Mrs. Gilbreth turned her attention to science and engineering in order to take up her husband's work where he left off.

She earned a master's degree in engineering at the University of Michigan in 1928 and a doctorate in engineering at Rutgers in 1929. From 1935 to 1948, Mrs. Gilbreth was director of courses in motion study and utilization of technological progress and professor of management at Purdue university.

During World War II, Mrs. Gilbreth was a member of advisory committees to the office of war information and the war manpower commission.

Mrs. Gilbreth is the author of many articles in the field of education, management, psychology and time-motion study. She has received many awards, among them two in 1954 never before won by a woman—the Washington award conferred by 5 major United States enginering societies and the gold medal of the International Committee of Scientific Management.

Tribute to Robert A. Taft

EXTENSION OF REMARKS
OF
HON. WILLIAM F. KNOWLAND
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Monday, May 9, 1955

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech I delivered at the Taft memorial dinner, before the Suffolk County Republican Club, in Boston, Mass., on last Friday, May 6, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, distinguished guests, and fellow Americans, I am pleased once again to be in the city of Boston and the State of Massachusetts.

For many years I have known your distinguished Governor, Chris Herter, who has made such an outstanding record as your Chief Executive. This is also the home State of my good friend and colleague, Senator LEVERETT SALTONSTALL, who serves as Senate Republican whip.

I am also happy to be here tonight with Lloyd Taft, the son of the man whose memory we are to honor.

Robert A. Taft was generally known as "Mr. Republican." In a larger sense, however, he was "Mr. American" as well. His death was not only a great loss to his family, his friends, and his colleagues in the Senate, but to the Nation as well.

In the course of events someone had to be selected to succeed to his position as Republican leader of the Senate. However, in the broader sense, no one could ever replace Bob Taft, the great leader that he was.

It was my privilege to serve as chairman of the Senate Republican policy committee while he was Republican leader of the Senate. As a result, my association with him was a pleasant and cordial one and we worked very closely together in developing the legislative proposals of the first Republican administration in 20 years.

From the earliest meetings at the White House with the Republican leaders of the House and Senate, President Eisenhower had made it clear that he recognized, under the Constitution, that Congress was and is a coequal branch of the Federal Government. He requested a full and frank discussion of the various problems brought up for consideration at these gatherings.

During the 20 years of the New Deal a misconception had developed in some quarters as to the place of Congress in our constitutional system.

We will not find President Eisenhower seeking to seize American industry, large or small, without authority of law and under the vague doctrine of inherent powers in the Presidency.

On the doctrine that Congress was not intended to be and should not be a rubberstamp or a subordinate body to the Executive, Bob Taft and President Eisenhower were in full agreement. Needless to say, I completely concur in this viewpoint.

The first section of article I of our Constitution states: "All legislative powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives."

As can be readily seen, this is not a partial grant of legislative power, it is total in character. The Congress is where "all" legislative power was intended to be and where it will continue to remain if our

constitutional Government is to survive. The American public has an intuitive understanding of what is at stake. They understand the importance of maintaining the coequal and coordinate status of the three great branches of our Government.

When President Franklin D. Roosevelt attempted to subordinate the Supreme Court by his Court-packing legislation public opinion rose to support the opposition to that legislation in the Congress.

When the same President attempted to purge members of his own party who were exercising their independent judgment and following their convictions, that purge attempt badly failed. The Nation does not want nor in the end will it tolerate either the Supreme Court or the Congress abdicating their responsibilities or becoming subordinate to the will of the Executive.

Fortunately for the Nation we have in President Eisenhower a man who recognizes this fact and the constitutional limitations of Presidential power under the American Constitution.

The Republican convention recognizing the sound principle that we should be the government of laws and not of men and having great faith in our Constitution wanted to make certain that there would be no shortcut method of depriving Americans of their constitutional rights. In this regard the 1952 platform states: "We shall see to it that no treaty or agreement with other countries deprives our citizens of the rights guaranteed them by the Federal Constitution."

From time to time, however, it has to be pointed out to some of the columnists and to the New Deal opposition that the party leader in the Senate has a dual responsibility. It is not only to help interpret the views of the administration to his colleagues, but it is also to help convey the views of the Members of the Senate to the executive department.

He is not and, in my judgment, should not be like a Cabinet officer who can be dismissed at will or a military officer who can be disciplined. For the Senate leader of either party to be placed in that position would, in fact, help to establish the doctrine that the Congress was a subordinate rather than a coequal branch of Government. The party leaders in the Senate and the House, along with the President, also have the responsibility of carrying out the pledges of the party platform during the period between the meetings of the national nominating conventions.

In the past, Republicans have been properly critical of Democratic platforms that have not been carried out during the term for which their candidates received their mandate from the people. We must be alert to the fact that if we ourselves do not have a good batting average in this regard our derelictions would be pointed out by the opposition.

Personally, I believe that the party platform adopted in 1952 in Chicago is as sound today as it was on July 10, 1952, when it was adopted.

A section of the platform reads as follows: "Our goal is a balanced budget, a reduced national debt, an economical administration, and a cut in taxes. We believe in combating inflation by encouraging full production of goods and food, and not through a program of restrictions."

Part of this platform pledge has been met and we have less than 2 years left to comply with the balance.

The Republican Party as a basic matter of principle has stood for a balanced economy, a solvent Government, and a sound dollar.

I believe that before the next Republican National Convention meets in San Francisco in 1956, the Republican Party will have carried out a substantial majority of its pledges. Such an accomplishment will require a continuous devotion to this objective by all Republicans in the executive and legislative branches of our Government.

For we have been faced with the unusual situation that after 20 years under the New Deal, the Republicans were given a mandate and control of the executive branch, and a narrow control of the legislative branch, of the Government for a period of the first 2 years. This year the opposition party gained control of the House and Senate.

I want to remind this audience and the country of several key paragraphs in that party platform:

"The Government of the United States, under Republican leadership, will repudiate all commitments contained in secret understandings such as those of Yalta which aid Communist enslavements. It will be made clear, on the highest authority of the President and the Congress, that United States policy, as one of its peaceful purposes, looks happily forward to the genuine independence of those captive peoples."

The publication of the Yalta papers was a necessary step in giving to the Congress and to the Nation the full facts relative to the Yalta Conference. It is equally important that there be a prompt publication of the papers of the Teheran, Cairo, and Potsdam Conferences.

It was not until the publication of the Yalta papers that the Congress and the country had the information that the then Secretary of State Stettinius in January of 1945 ordered that all the papers being prepared for consideration of the President at the February Yalta Conference of the Big Three should be forwarded to the President through Alger Hiss.

This placed Hiss in a position to know in advance the various recommendations on policy being recommended to the President by the various executive agencies.

In view of the fact that it was some years earlier on September 2, 1939, information was first taken to the executive branch of the Government relative to the Hiss activities with espionage groups it places a heavy responsibility upon the then administration for permitting him to hold such a key position on the eve of the Yalta Conference and to attend the sessions.

On page 91 of the recently released Yalta papers it states:

"At the Secretary's staff committee meeting of January 10, the Secretary asked that all memoranda for the President on topics to be discussed at the meeting of the Big Three should be in the hands of Mr. Alger Hiss not later than Monday, January 15."

It was also quite clear that the party platform pledged the administration to enter into no deal or understanding with the Soviet Union that would destroy the hope of the enslaved people of the world, be they in Europe or Asia, that some day they might be free. In this regard the platform reads:

"We shall again make liberty into a beacon light of hope that will penetrate the dark places. That program will give the Voice of America a real function. It will mark the end of the negative, futile and immoral policy of 'containment' which abandons countless human beings to a despotism and Godless terrorism, which in turn enables the rulers to forge the captives into a weapon for our destruction."

* * * * *

"The policies we espouse will revive the contageous, liberating influences which are inherent in freedom. They will inevitably set up strains and stresses within the captive world which will make the rulers impotent to continue in their monstrous ways and mark the beginning of their end."

In the 10 years since the Yalta Conference of February 4–11, 1945, great advances have been made by the Communist world.

At that time there were less than 200 million people behind the Communist Iron Curtain. Today, over 800 million people have lost their freedom to the most godless tyranny the world has ever known.

Our policy is and should be, "peace with honor," not peace at any price.

The world should have learned at Munich that the road to appeasement is not the road to peace.

The world balance of power has been so upset that no prudent person can ignore the realities of the situation. Not only the future of this Republic but the hope for a free world of freemen largely depends upon the policies that we follow and the firmness with which we and the free nations deal with future Communist aggression or threat of aggression.

Recognizing the inherent danger in further Communist conquest, the Government of the United States has undertaken a series of commitments under the North Atlantic Alliance, the ANZUS (Australia-New Zealand-United States) Mutual Defense Pact and mutual defense pacts with the Republic of the Philippines, the Republic of Korea, Japan, Southeast Asia, and the Republic of China.

The last 2 treaties were overwhelmingly ratified by the Senate during this session of Congress.

In a display of national unity that should have encouraged our friends abroad, given courage to the neutrals, and opened the eyes of the would-be aggressor, the House of Representatives passed the Formosa Resolution by a vote of 409 to 3 and the Senate by a vote of 85 to 3.

It is important that we have a system of effective collective security and to demonstrate to the Communist world that there will be no further retreats or the abandonment of free people into Communist hands.

This Nation will live up to all of its treaty obligations, and we have the right to expect that our Allies will do likewise.

I have a deep conviction that the American people and those throughout the free world who understand the dangers facing us will never again pay the price of another Yalta or another Geneva in order to buy a temporary respite from the insatiable appetite of international Communists to destroy human freedom.

In violation of the terms of the Korean armistice, the Chinese Communists still hold 15 American prisoners of war. Eleven of them have been sentenced to prison terms of from 4 to 10 years.

I believe that the position taken by the State Department on Saturday, April 23, was sound when they stated our policy would be to have the Communists show their good faith by the forthwith release of the American prisoners they now hold.

Despite the lessons of history, the voices of appeasement appear to be growing at home and abroad. Some suggest that Quemoy and Matsu be allowed to pass into Communist hands. It is my strong belief that such an event will be looked upon as a great Communist victory in Asia and will undermine the remaining confidence the free anti-Communist nations of Asia have in the Government and the people of the United States.

Why is it that the voices of appeasement always urge that our friends and allies be the ones to give up territory or to yield up more people to communism Why do they not suggest that it is time for the Iron Curtain to move backward rather than forward? The fact of the matter is that Quemoy and Matsu are as important to free China as Western Berlin is to free Germany.

What military or civilian official would try to maintain that Western Berlin, a metropolitan island completely surrounded by Soviet territory, is defensible in and of itself? The fact of the matter is that our garrison in Berlin, the wives and children who accompany them, are hostages to potential Soviet aggression.

We have felt it important, however, to maintain this island of freedom in the heart of Soviet territory despite the fact that it is aggravating to the Communist of the

Soviet Union and of Eastern Germany, because it is important to the morale of the free German Republic and it is a beacon of hope to the Germans behind the Iron Curtain that some day they too may be free.

The reason that Western Berlin has not passed behind the Iron Curtain is the fact that the Soviet Union knows that any attempt to the take over the area by force would immediately involve the western allies in military action.

Though we took some grave risks, we broke the 1948 blockade of Berlin by the air lift. There are now indications that the Communists are again attempting to strangle the economic life of the island of freedom.

Have they been encouraged in this new action by the voices of appeasement here and abroad which have indicated that we must placate communism when they get aggravated for otherwise we may be risking armed conflict.

Does history teach us that this is the way to a lasting peace? The answer, of course, is no.

At Munich, Chamberlain and Deladier succumbed to the threats and pleadings of Hitler that if they would but agree to turn over the Sudetenland area of Czechoslovakia to him that he would have "no further territorial demands in Europe".

Without the consent of the Government of Czechoslovakia this sordid deal was made. To salve their conscience, Great Britain and France agreed to guarantee the frontier of the reduced Czechoslovakian state.

Seven months later, Hitler's legions took over the balance of Czechoslovakia. The conscience of the two guarantors was disturbed and several speeches were made as to the immorality of such aggression. But the guaranty given 7 months before did not save the people of Czechoslovakia for by then they had lost their will to fight, largely because they had lost their faith in the Western Allies to do anything more than to talk and to appease.

What deadly parallel does this furnish to the situation in the Formosa straits today?

Quemoy and Matsu have never been Chinese Communist territory and they are not today.

That these outposts have a military value, no man can deny, for they certainly make more difficult the launching of an amphibious assault out of Amoy and Foochow as long as the Free Chinese control these islands.

But equally important as their military value is their psychological value. Their loss by appeasement will bring as much despair to Free China as the deal at Munich for the Sudetenland caused despair to the free people of Czechoslovakia.

It will also shake the confidence of our friends in Korea, Japan, the Philippines, Thailand, Pakistan and elsewhere where people understand the brutal and aggressive nature of communism.

There are some who believe that you can distinguish between a Communist assault on Quemoy and Matsu in and of themselves and Quemoy and Matsu as steppingstones toward Formosa and the Pescadores.

When the assault is underway, are we to inquire through the good offices of Mr. Hammarskjold, of Mao Tse Tung and Chou En-lai in Peiping as to whether their assault is only for the possession of these outer ramparts? If at such a time, with tongue in cheek, the Communist leaders believe that it would be to their advantage to prevent American support going to our ally, the Republic of China, and their reply that their temporary objective is only Quemoy and Matsu will we ask them to reenforce their statement by saying: "Do you guarantee this with a cross your heart and hope to die assurance?"

In the light of the bald-faced violation of the Korean armistice and the Geneva agreement what would such an assurance be worth?

This Nation was nor born nor did it grow to its position of greatness based on a policy of fear, but rather one of faith and courage.

I want to share with this audience tonight a letter I recently received from an American pilot now stationed on the island of Formosa. He wrote me as follows:

"As an Air Force jet pilot assigned to this island for the next 2 years I'm sure my interest in lasting world peace is as acute as is any Americans. The presence here of my wife and children tends to intensify my natural desire that no one toss any atom or hydrogen bombs this way.

"I'm quite convinced that my best chances as well as those of my country and the entire free world rest with the firm 'stop the Communist march' movement which you so forcefully represent.

"I have flown 400 combat missions and would rather fly 400 more than to see my kind of world go down the drain 1 island or 1 small country at a time.

"America must wake up to the real intentions of communism and take real and purposeful steps to frustrate those intentions."

As an American citizen and as a Senator of the United States, I am convinced that if we will only use the same faith and courage that motivated the men who sat at Philadelphia and under what I believe to have been divine guidance, gave us first our Declaration of Independence and later our Constitution, there are none of our great domestic problems which we as a free people cannot solve and there is no foreign foe we need ever fear.

The March of Bigotry in the United States

EXTENSION OF REMARKS

OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, May 9, 1955

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the fifth and sixth articles, entitled "Hate, Inc.," written by Mr. Jack Steele, of the Scripps-Howard newspapers. I have inserted Mr. Steele's previous four articles in the RECORD of May 3 and 5, and they appear on pages A2972, A2973, A3037, A3038, and A3039.

These articles deal with the march of bigotry in the United States. They are most interesting and illuminating, and have been appearing in recent issues of the Washington Daily News.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Daily News of May 6, 1955]

HATE, INC.

(By Jack Steele)

A NAAWP, THE KLAN AND A NEGRO CULT

The ink was hardly dry on the Supreme Court's decision last year outlawing school segregation before the bigots and racists got busy.

Hatemongers seized upon the decision—a milestone in the evolution of civil rights—as potentially the most explosive and exploitable issue that had come their way since they discovered the Communist menace.

Typically, they "exposed" the Supreme Court decision as being Communist-inspired, ignoring the fact that attacks on segregation in the United States long have been a favorite weapon in Moscow's propaganda arsenal.

Hate sheets from coast to coast flamed with vicious attacks on the Supreme Court and what they called its "mongrelization" policy. Some are still at it.

Old Ku Klux Klan elements hastily tried to regroup in the South, and new little racist groups sprang up here and there to fan prejudices.

Haters first moved to stir up trouble here and in border States where integration was put into effect in some schools last fall without waiting for the Supreme Court's follow-up order.

Strikes

Anti-Negro groups encouraged "strikes" of parents and pupils here, in Baltimore, and in small towns in West Virginia and Delaware. But firm-handed city and school officials—backed by responsible community groups and public opinion—soon quelled most of these demonstrations.

For the hatemongers this was only a trial run.

Some hope to start far more serious troubles when the Supreme Court lays down its plan for enforcing public-school integration in the South, possibly starting next fall.

These are some of the individuals and groups engaged in fomenting disorder:

The NAAWP

The first hate group to cash in on the school disruption was the National Association for the Advancement of White People. Its not-very-clever play on the name of the National Association for the Advancement of Colored People (NAACP) apparently had an initial appeal to prejudice.

Its leader, Bryant Bowles, a 34-year-old ex-Marine and Florida "cracker," had a record of arrests for passing worthless checks.

Mr. Bowles first formed the NAAWP here late in 1953 in response to the Supreme Court's decision outlawing racial covenants on real estate. He quickly reactivated it last year and in a few weeks claimed to have enrolled 50,000 members.

The law moved in fast on Mr. Bowles. He vacated his offices here after a fracas with a Negro mailman and, last December, moved to Milford, Del., the scene of his only minor success. He now lives on the outskirts of Milford and is trying to organize a battle with its school board. A few days ago he was fined $600 for helping stir up the Milford school strike.

Mr. Bowles is discredited and unimportant except as a sample of the bigots who are trying to capitalize on the segregation issue.

His speeches soon revealed that he hated Jews as well as Negroes. He started a newsletter called the National Forum. Its first issue featured a story picked up from Frank L. Britton's hate sheet under this headline: "South Indignant as Jew-Led NAACP Wins School Segregation Case."

Conde McGinley threw the support of his anti-Semitic paper Common Sense behind Mr. Bowles. He put out a special issue in July which carried the headings: "Communism Hits South With Nonsegregation" and "Jewish Marxists Threaten Negro Revolt in America." A lead article by Eustace Mullins "traced" the Supreme Court's decision to a 1921 resolution by the Communist International.

Mr. McGinley put out a second anti-Negro edition of Common Sense headed: "NAACP Communist Front Splits U. S." Both issues were mailed and shipped by the thousands into Delaware to help Mr. Bowles.

Mr. McGinley in recent weeks has appealed to his followers for money to distribute these throwaways to "every resident in many States." He wound up a fund-appeal letter with these words: "We will be glad to talk confidentially with any real patriot who

wants to help awaken millions to this Satanic conspiracy."

Gerald L. K. Smith devoted a section of the January issue of the Cross and the Flag to the segregation decision. Included were a picture of Mr. Bowles and a highly laudatory article. Mr. Smith also reported a $50 contribution to Mr. Bowles.

The White Brotherhood

Several new organizations are trying to rally old Klan elements in the South. One being watched closely is the so-called White Brotherhood, formed last fall in Tallahassee, Fla.

Its big wheel is Bill Hendrix, one-time adjutant of the Southern Knights of the Ku Klux Klan. He was convicted in 1952 of sending defamatory postcards through the mail and given a 3-year suspended sentence.

The White Brotherhood appears to be an undercover offshoot of the American Confederate Army, an ineffective Klan-like group. At least, ACA "colonels" are given cut-rate membership in the brotherhood.

CITIZENS' COUNCILS

The Citizens' Council move began in Mississippi and spread to Alabama and other States in the deep South. Its avowed aim was to bring economic pressures to bear on Negroes who insist on enforcement of the Supreme Court's antisegregation decision.

Many southern newspapers attacked this movement, one referring to it as a "refined descendant of the Ku Klux Klan."

However, citizens' councils have been set up in many deep South communities. They haven't done much yet, but they are ready to go into action when the first efforts are made to enforce school integration.

Other groups

The National Citizens Protective Association, which started out to stir up racial troubles in St. Louis, is trying to expand into a nationwide group. The power behind it is John W. Hamilton, a one-time aide of Gerald Smith. He turned to anti-Negro activities when, he said, he got tired of Mr. Smith's "Jew, Jew, Jew stuff." Mr. Hendrix is one of the group's directors.

Other anti-Negro groups which have sprung up or gained a new lease on life in the South include: The National Association for the Preservation of the White Race; the National Association for the Advancement and Protection of a Majority of the White Race; the National Patrick Henry Organization; the Southerners; the Pro-Southerners; the Moonlighters; the Grass Roots League; the American States Rights Association.

The Islam cult

Negro organizations like the NAACP have fought bigotry in all its forms. But a few Negroes have formed little hate groups of their own. One is known variously as the Nation of Islam, the Allah Temple of Islam, and the Muslim Cult of Islam.

Some members of this secret all-Negro cult preach militant hate of whites. The cult has a military arm known as the FOL. Some authorities say this stands for "fruit of Islam."

Cult followers chant Arabic litanies and dress in Arab garb. But they are not adherents of the Moslem faith. They use the Bible for their religious rites.

Its members often refuse to register or report for the draft contending that they are citizens of Asia even though born in the United States. Some evaded military service during the Korean war on grounds that they would not fight other Asians.

HATE, INC.

THE FIFTH COLUMNISTS OF HATE AND PREJUDICE

(By Jack Steele)

New right-wing and isolationist groups now springing to life are providing a happy hunting ground for peddlers of prejudice.

Bigots of varying kind and degree are trying to infiltrate and take over these organizations set up to give voice to ultraconservative or neonationalist sentiments.

Such groups are legitimate enough and have an unchallengeable role to play in the formation of American public opinion, just as do those of the non-Communist left.

But haters hope to use these groups for their own ends—either as covers for trouble-making or as paths to the pocketbooks of wealthy and unsuspecting "angels."

In efforts to infiltrate right-wing groups, the forces of bigotry have adopted the fifth-column tactics of the Communists.

They readily take over and preach the doctrines of the particular group they want to penetrate. Often they cover their operations with an aura of intrigue and conspiracy.

Some operators try to conceal or explain away their own unsavory pasts. Others hide their prejudices behind euphemisms designed to fool the unwary and confuse their critics.

These tactics make such infiltration hard to tag, as these recent case histories will indicate:

Joseph P. Kamp

He has been one of the Nation's most prolific pamphleteers. He turns out brochures loaded with distortions and appeals to fear and prejudice. Then he sells batches of them to businessmen and others to distribute "where they will do the most good."

Who supplies the money to keep Joe Kamp going? He won't say.

He went to jail for 4 months for contempt rather than disclose the sources of his revenue to a House Campaign Expenditures Committee in 1944. He was convicted on similar charges in 1950, but won a retrial and acquittal.

Kamp, who refers to anti-Semitism as a "dirty little Communist swear word," vehemently denies that he is anti-Semitic.

But dislike of Jews crept into much of his literature. That was the case with anti-Eisenhower propaganda he turned out before the 1952 convention.

He devoted two 16-page issues of his publication Headlines to candidate Eisenhower. The first was headed "Who's Promoting and What's Behind 'We Want Ike'?" and the second "More About What's Behind Ike."

Kamp's answer was obvious—Communists and Jews.

These editions were widely distributed to supporters of the late Senator Robert A. Taft, Republican, of Ohio. Senator Taft repudiated them and the volunteers for Taft denounced them as "scurrilous, un-American, and defamatory."

But hate sheets copied freely from them.

More recently Kamp has cashed in on Senator JOSEPH R. MCCARTHY'S fame. He formed a front called the Committee for McCarthyism and put out a "miniature library" of pamphlets on Senator MCCARTHY.

He also took it upon himself last year to answer the "MCCARTHY Balance Sheet"—a series of articles by Scripps-Howard reporter Frederick Woltman, who won a Pulitzer Prize for exposing Communists. Kamp's pamphlet was entitled: "The Red-Addled Brain Behind the Scripps-Howard Smear of Senator MCCARTHY."

Hatemongers Conde McGinley, Gerald L. K. Smith, and Gerald Winrod praised and quoted from it. Mr. Smith wrote: "We are indebted to the brilliant commentator Joseph P. Kamp for a very special article on Frederick Woltman who was called out of Roy Howard's journalistic brothel to do a job on the great MCCARTHY."

Kamp's most recent pamphlets have attacked tax-exempt foundations—and suggested boycotts of the products of companies which finance them.

Allan A. Zoll

He is another pamphleteer and promoter whose most successful venture was the National Council for American Education. This outfit, with a name easily confused with the respected American Council on Education, fomented a wave of troubles in the public schools.

Here's how it worked.

Mr. Zoll's council put out pamphlets which served as blueprints for exposing school administrators, teachers, and textbooks as being Red-tinged and for attacking so-called educational frills.

These were sold to taxpayer groups interested in cutting school costs and to patriotic groups aroused by Mr. Zoll's extravagant Red charges. Use of the pamphlets touched off a rash of battles in public-school systems across the Nation.

The New York World-Telegram and Sun first disclosed that Mr. Zoll was behind all this and told who he was.

Mr. Zoll in 1937 founded and became national commander of the American Patriots, Inc. Attorney General Francis Biddle in 1940 listed it as "fascist." Mr. Zoll called this a New Deal smear, but the now-defunct group is still carried on the Attorney General's list for the Eisenhower administration's security program.

In 1939 Mr. Zoll appeared before the Senate Judiciary Committee and opposed confirmation of Supreme Court Justice Felix Frankfurter on the grounds that he was a Jew. Yet Mr. Zoll claims he "hates anti-Semitism."

He also organized the picketing of radio station WMCA in New York when it took Father Charles E. Coughlin off the air. He was indicted on charges of taking a bribe to call off the pickets, but the case was dismissed without being brought to trial.

Mr. Zoll has been inactive since he married the elderly widow of an oil millionaire late in 1953. She sued for divorce last December.

Mr. Zoll is now back in his New York haunts—presumably ready for a new venture.

The United Nations

The U. N. is one of the major targets of blantant bigots. Gerald L. K. Smith and his fellow hatemongers rarely miss a chance to charge that the U. N. is part of a Jewish-Communist plot to destroy the sovereignty of the United States.

Neoisolationists who are forming new groups patterned after the old America First Committee likewise center their attacks on the U. N.—without, of course, combining them with appeals to prejudice and bigotry.

But these parallel attacks on the U. N. and one-worldism can and do create a good deal of confusion.

Take the case of W. Henry MacFarland, Jr.

Mr. MacFarland now runs the American Flag Committee from his home in Philadelphia.

Attacks on the U. N. issued under its imprint have been widely circulated in the last few years—and widely reprinted by hate sheets.

But many people who have read and perhaps been influenced by the publications of the American Flag Committee know little about Mr. MacFarland's background.

A one-time admirer and supporter of Gerald Smith, Mr. MacFarland once ran from the same address in Philadelphia an outfit called the Nationalist Action League.

The Attorney General cited the Nationalist Action League as Fascist on April 27, 1949, and its name still appears on the Justice Department's list.

A few weeks after it was so listed, Mr. MacFarland sought to unite the Nationalist Action League with a group of supporters of hate-monger Conde McGinley. For a short time, Mr. McGinley's Common Sense was the official organ of the league.

The House Un-American Activities Committee charged in its report in December on hate groups that Mr. MacFarland had also been active in the National Renaissance

Party, a group branded by the committee as neo-Fascist.

Mr. MacFarland's union with Mr. McGinley did not last long. Soon after it broke up he formed the American Flag Committee as a vehicle for his attacks on the U. N.

Mr. MacFarland now assures his supporters that the American Flag Committee is an avowed enemy of fascism.

In one of his publications he offered this explanation of attacks on his own background:

"Neither the (American Flag) Committee nor its chairman has ever been cited as a Fascist by the United States Attorney General, nor by any other Federal or congressional body."

Technically Mr. MacFarland is correct.

The Attorney General cites only organizations—and not the individuals who run them—on his list, which is used as the basis for the Government's loyalty-security program.

And the American Flag Committee has never been cited by anyone.

Banning of Commercial Dealing in Minor Children

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, May 9, 1955

Mr. THYE. Mr. President, I have introduced a bill (S. 1123) to make unlawful certain commercial dealing in minor children. The bill was prepared after Federal grand jury investigations in Minnesota uncovered a situation involving this traffic between Minnesota and Illinois. Federal legislation on this subject should be enacted, I believe. In connection with this matter, I ask unanimous consent to have printed in the RECORD two recent articles from the Duluth Herald.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Duluth (Minn.) Herald of May 3, 1955]

BABY ADOPTIONS UNDER INVESTIGATION IN DULUTH—AUTHORITIES QUESTION TWO IN CITY—PROBE BRINGS TIGHTENING UP IN STATE LAWS

(By Paul Lawson)

Attention of local and Federal authorities has been focused on Duluth which they term the northern terminus of an interstate baby selling operation. As a result of their investigations, a Duluth physician has been severely disciplined by the St. Louis County Medical Society.

State adoption laws were strengthened at the recent session of the legislature, and a measure is now before the Congress of the United States to tighten laws dealing with transportation of children between States to avoid State adoption laws.

Among those questioned in Duluth by county and Federal authorities was the physician who was disciplined after a thorough, separate investigation by the medical society. Another is a Duluth attorney said to be involved in the adoptive placement of illegitimate children.

St. Louis County and Federal authorities up to the present time have been unable to bring charges because of the inadequacies of State and Federal laws. Cases investigated took place before new State laws were adopted.

The activity of arranging for adoption of illegitimate children by persons, not Minnesota residents, who are thought to pay handsomely and quietly, has been called a great moral wrong.

No definite sums have been mentioned as returns from the human traffic. Official speculation places the cost to the adoptive couples between $4,000 and $6,000 for each baby. Evidence does exist that the outlay in hospital bills, transportation and other expenses, met by the operators, runs up to $1,000 for each completed transaction.

The practice, which authorities says violates the spirit of the Nation's laws against slavery, operates because of the weakness of two groups involved. Mothers of illegitimate children make up one segment. Couples who either cannot or will not seek adoption of children through authorized agencies make up the other. The persons who get them together by skirting the law for fees they may receive are in the middle but untouched by law or possible future tragedy. However, since the close of the recent State legislative session they face prosecution on any new case.

Four separate cases have come to the attention of the Duluth Herald and News-Tribune. Circumstances in each vary regarding final disposition of the children involved. Duluthians are known to have had a part in three of the incidents and, possibly, in the fourth. Illegitimate birth was a factor in all.

According to official information, the general method of operation in the area cases was to persuade the mother of an illegitimate child to give up her baby by consenting to the infant's adoption. In making arrangements, the operators avoided organized public channels as much as possible.

They played on the emotional distress of the woman prior her child's birth. They convinced her that the child would be placed in a good adoptive home where he or she would have advantages the mother never could provide. Finally, they arranged to pay all the mother's bills, including hospital charges and transportation costs. In one instance, a woman also was given money for new clothes.

It appears that the operators favored making the separation of mother and child in Chicago. They also apparently preferred that the woman have her baby in Chicago, but the place of birth was not a vital concern.

One mother was driven by auto from Duluth to Chicago following her delivery in a hospital here. Another visited the Illinois city prior to her baby's birth in Duluth. She was examined and instructed by a Chicago doctor and lawyer but returned to the head of the lakes before her child was born.

Whether the activity is confined to Duluth and Chicago is not certain. Staff members of the United States district attorney's office in St. Paul refused to talk extensively about it. But the results of their investigations were sent to Washington, D. C., on request of Senator EDWARD J. THYE, of Minnesota, member of the Senate Judiciary Committee.

The Senator announced his sponsorship of a bill to outlaw the practice. He marked Chicago as a baby-selling reception center and said other cities besides Duluth are supply points. Investigators of his committee received reports from the St. Paul Federal attorney and the St. Louis County attorney's staff.

Meanwhile, the Minnesota Legislature moved more rapidly than Congress. It unanimously passed a bill, which was signed into law by Gov. Orville Freeman shortly before the close of the session, to strengthen State adoption laws.

Two Duluth men testified at hearings on baby selling during the preliminary stages of the new law's formulation. Donald C. Odden, assistant county attorney, and Ove M. Wangensteen, executive director, county welfare board, related their knowledge of local activities. These men, with Sheriff Sam Owens, led investigations in St. Louis County.

A Federal grand jury which met in St. Paul in January and February also studied the situation. United States Judge Dennis F. Donovan, Duluth, presided. His insistence and help caused Federal authorities to present information and witnesses before the jury. But it failed to produce the required true bill which would empower the Government to prosecute the suspects.

The strongest evidence held by the county attorney concerns a young mother whose twins were born last fall in a Duluth hospital. The mother and babies were taken to Chicago shortly after the births. There, the infants were taken from the mother who signed several documents presumed to be adoption consent waivers. She has neither seen nor heard of her children since.

The woman's voluntary statement brought a third Duluth resident into the inquiry. This was a woman at whose home the expectant mother stayed prior to the birth of the twins. Accommodations at the home were arranged by the Duluth lawyer with the knowledge of the local doctor, the mother said. She also declared that her hostess accompanied her and the twins to Chicago.

In excerpt, the mother claims her experience was as follows:

About 3 months after discovering her pregnancy, she came to Duluth and entered the home of the local woman. Friends in the expectant mother's home community gave her the Duluth woman's name.

Why did she seek out the Duluth woman? The mother said she learned that the Duluthian would arrange for a home for her child. At the time, the pregnant woman did not know she would bear twins.

Soon after her guest's arrival, the Duluth householder telephoned the Duluth and Chicago lawyers. A visit from the Duluth man followed at once. He tried to persuade the pregnant woman to go to Chicago to have her baby. He told her he would pay all bills and make arrangements necessary for adoption.

The Chicago lawyer came to Duluth and also visited the young woman in company with the Duluth lawyer. Both men urged her to go to Chicago, where, they said, she might stay in what apparently is a maternity home. They repeatedly assured her they would pay all expenses.

The expectant mother returned home shortly after the visit of the lawyers but came back to the Duluth residence about one week before her children were born. She went from the house to the hospital the day before her delivery. The Duluth lawyer brought her cigarets and magazines the following day.

The twins were born prematurely and were placed in incubators according to standard hospital practice. Meanwhile, their mother returned to the Duluth woman's home, leaving the babies at the hospital. The Duluth lawyer, visited her several times during her convalescence, she said.

A county welfare department case worker of the children's division traced the mother to her temporary residence. This woman learned of the case through the hospital's social service director. A tip was given the latter, by one of the obstetrical floor nurses who suspected the mother was not married.

In an interview with the welfare worker, the mother said she intended taking her children home to make private arrangements for their adoption. The case worker failed to win the subject's confidence so that county authorities could help her.

At this point, the Duluth lawyer told the mother it was time to remove the children. He obtained authorization from the doctor who delivered them. The night before

the case worker was to return for another interview, the mother and her hostess went to the hospital to get the babies. They were driven by a man allegedly in the employ of the Duluth woman.

The party was met at the hospital by the lawyer. Upon release of the babies, he paid what the mother said was a bill of $200. Then the two women, infants and driver left by car for Chicago, leaving the lawyer in Duluth.

Meanwhile, the county attorney had arranged for warning of the departure. A hospital nurse learned the babies were being taken and telephoned the alarm which alerted the county attorney. He went immediately to the hospital with two sheriff's deputies. They missed the Chicago-bound group by minutes.

In Chicago, the mother said she and her children were given a room in a good hotel. They waited about a week before the babies were taken away. During that time, the mother was visited daily by the Chicago lawyer. He told her the adoptive parents were wealthy residents of a nearby State who would have a special nurse for the children. But the mother did not see the couple at any time. Her only assurance that they exist was given by the Chicago lawyer and her Duluth woman companion.

The mother told the county attorney that a judge came to the Chicago lawyer's office where the adoption papers were signed. She remembers signing about a half dozen documents, but had only a vague knowledge of what they contained. After this incident, she discovered her children had been taken away. She returned to Minnesota by train a short time later.

All her hotel bills and other expenses were paid for the mother. She said she was given $200 for clothes, transportation, and food. Upon her return to Duluth, she stayed at the home of her hostess for about 2 weeks. She said she saw the Duluth lawyer there on at least one occasion.

The mother then moved into the Superior home of a woman friend. She cared for this woman's children and assisted with housework. Her funds came from personal savings and money sent by her mother. She said she received nothing from the Duluth attorney.

There is a right way and a wrong way to go about adopting children.

If you are foolish enough to choose the wrong way—the hazards are many and the end result may be disastrous to all concerned.

If you take the right road the chances are that you will have a long wait, answer a lot of questions, but your interests and the interests of the child will be fully protected.

All this will be fully explained in a story in Sunday's Duluth News-Tribune when this series of stories is completed.

[From the Duluth (Minn.) News-Tribune of May 3, 1955]

DULUTH MOTHER LOSES PLEA FOR RETURN OF ADOPTED BABY

A Duluth mother's request for the return of her illegitimate child through a court order, after she had consented to its adoption, was denied in a ruling by a district court judge, it was revealed yesterday.

The judge's action was termed rare by county legal and welfare authorities. They said the decision was unique in Minnesota.

In his memorandum, the judge said the decision was no reflection on the mother's character of fitness to care for the child. Children have been taken from mothers in cases where neglect or unfitness were determined.

The judge said his ruling was based on what he considered best for the child's welfare. He explained that this was a fundamental rule in Minnesota and other jurisdictions.

The child was born last fall. The mother had agreed to placing it for adoption and a couple received custody after filing an adoption petition. Later, the mother sought legal help to revoke the consent agreement. She brought suit charging that the child was held illegally by the married couple.

The judge noted that the father of the child was unknown to the court. The mother is divorced.

In her suit, the mother charged that she was coerced to give up her baby. She said the arrangement was made on condition that her prenatal, hospitalization, and medical services costs were paid. The infant was surrendered shortly after birth.

The judge said there was no illegal imprisonment of the baby. He ordered a 30-day stay of execution of the ruling.

The judge declared he was satisfied that the mother had been frightened into believing that she would lose the child if she did not consent to its surrender. He criticized the action of a physician who delivered the baby.

The doctor's action, the judge said, created in the mother's mind the impression that organized welfare agencies were unsympathetic and to be avoided.

Also criticized were the prospective adoptive parents. The judge said their failure to proceed through normal channels resulted in chaos for all parties concerned.

The Northeast Mississippi Hospital, Booneville, Miss.

EXTENSION OF REMARKS

OF

HON. JOHN STENNIS

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Monday, May 9, 1955

Mr. STENNIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a recent column by Mr. Paul Flowers in the Memphis Commercial Appeal, regarding the Northeast Mississippi Hospital at Booneville, Miss. Mr. Paul Flowers is a gifted writer, as well as a great humanitarian, and gives here a grassroots report on the work of a busy small-town hospital under the Hill-Burton Act.

Booneville and the surrounding area, with its fine public-spirited citizens and many activities, give an excellent illustration of an expanding community and the part that the Hill-Burton hospital program plays therein.

I commend to the Membership of the Congress the reading of this fine report.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

PAUL FLOWERS' GREENHOUSE

NORTHEAST MISSISSIPPI HOSPITAL, BOONEVILLE, April 3.—They've broken out in a rash of pardonable pride in this homey little hospital where a new idea of rural medicine came to the Mid-South 5 years ago.

First of all, only last week came formal notification from the Joint Committee on Accreditation of Hospitals that this one has been given top rating by the organization that inspects and ranks hospitals all over the United States.

Next, word got out that the contract for a new unit, increasing the hospital's capacity by 30 beds, will be let in May, a $200,000 improvement here where the Hill-Burton rural hospital program was pioneered.

Finally, with these heartening tidings came the reminder that Northeast Mississippi Hospital is operating "in the black" that is, paying its own way, and has paid its own way since December, 1949.

Only recently, Dr. W. R. Albus, field representative of the commission, completed an inspection; it was Saturday that his report came announcing that this is the ninth out of 182 Mississippi hospitals to receive such rating.

But there probably won't be any formal celebrating. They're too busy here running a hospital to take time off even for acknowledgment of plaudits for work well done. After all, this modern institution which maintains an old-fashioned warm family style hand in hand with modern efficiency, processes about 55 patients a week (bed patients, that is) and the routines have to be steady to run about 16 percent over rated capacity. When overload periods come, the staff rustles up more bed space * * * in the nurses' lounge maybe, or additional space in the solarium. Thus with an average of 55 patients a week, this hospital has served more than 15,000 ailing people, a generous share of them persons unable to pay for hospitalization; it has accomplished this without any income save fees paid by patients, and it has burst out at the seams.

When they build the new addition, completion of which is planned for early winter, they will put it on a foundation heavy and deep enough to permit extra stories later. This new wing will occupy most of the available land, so the only way to grow will be upward. The present buildings stand on foundations laid for 1-story structures, and so any vertical expansion will have to be over the new part. Patients come here from Prentiss and adjoining counties, a few from other States.

A Saturday afternoon and night here has many elements of the old-fashioned get-together, a fifth Sunday meeting, or a sacred harp singing, without the noise.

Little things seem big here. The small boy hastened in a pick-up truck for treatment, his face torn by a dog. That took some sewing, and of course precautionary measures against rabies. Happily, thanks to years of preaching by Dr. W. H. 'Wick' Anderson and others, the dog was put under observation instead of being killed instantly by indignant parents and neighbors; Dr. 'Wick' says that is a better course than to send the dog's head to a laboratory for study. In any case, the threat of rabies always is a horrendous one; even while doctors are sewing up wounds they urge vaccination of pets, and commend parents for hastening bitten persons to the hospital for immediate treatment.

There has been little rabies reported in this area lately, but there's always the chance that a migrant rabid fox, or skunk, will bite a dog, and that the dog will bite a child or grown person.

That's just one of the things the staff at this hospital has done.

These doctors report also that the wearing diseases of winter are brought under control so much more quickly than once upon a time—often a persistent case of walking flu goes into retreat after 2 or 3 days in a hospital, after the patient had tried for weeks to walk it off. However, most folks keep going until they collapse, which is the hard way. At that, pneumonia isn't the grim spectre it used to be.

No wonder these people are proud of their accrediation by the national rating body, for most of these staff members have made this a way of life in these 5 years.

I have never seen such morale, such a spirit of teamwork and unity. Pride they display, like the spirit behind an athletic team or even a family accomplishment. When notification of the hospital's accreditation came in, you'd have though one of the

girls in the front office had a new engagement ring.

But it didn't throw anybody off stride, they hung up the laurel and went on to make things even better. After all, this will be an 80-bed hospital instead of a 50-bed hospital; but that will mean more work for Administrator E. L. King, for Mrs. Nina Faye Holder, housekeeper, for Roy Coons, di-director of linen rehabilitation. All right then, laundry superintendent.

Daily J. A. Cunningham, Sr., of the board of trustees stolls through the place to see what goes on. He's 81 now, but he convinces you of that only by sworn testimony. Seth Pounds, T. A. Cook, Sr., and Fred Houston watch this place as if it were something precious.

But Mr. Cunningham isn't the only octogenarian on these grounds. There's Dr. W. H. Sutherland, who could have been the model for pictures so dear to the American way, kindly, benign, his 81-year-old eyes sparkling with the zest for living and the satisfaction of service. His wife is a patient in this hospital now; this tireless man of medicine spends what time he can with her, and devotes the rest to those who have put themselves in his care.

Here also you will find Doctors S. C. Galloway, R. B. Cunningham, Paul Elizey, Joe R. Hurst, W. W. Strange, and P. A. Watson.

But most of all here you find a community spirit, a determination to go the Hill-Burton sponsors one better by making this thing promote better health in general, by making it grow for greater service, and for keeping it fiscally solvent. You could even get Mayor Marion Smith to make a speech about it.

The Communist Attitude Toward Peace

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, May 9, 1955

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial, entitled "The Illusion of Futility," appearing in the Wall Street Journal on April 29, 1955, which in my judgment reflects the opinions of many clear-thinking Americans at this crucial crossroad in history.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE ILLUSION OF FUTILITY

Expressing his disapproval of the administration's willingness to negotiate with Peipin, Senator KNOWLAND said: "I, for one, do not believe the Communist leopard has changed its spots."

Neither, as far as we are aware, does anyone else concerned in the matter. We are sure President Eisenhower and Secretary of State Dulles and Senator GEORGE would agree with Mr. KNOWLAND that the Communists' objective has been, is, and will continue to be, the destruction of human freedom.

But we thought it was equally well understood that in pursuit of that ultimate objective the Communists are capable of violent shifts of tactics. It is, at any rate, a fact. At times it suits the Communists to be belligerent. At other times, depending on internal and external pressures and other reasons best known to themselves, it suits them to be more pacific specific issues.

When they are in the latter mood, negotiations become possible and can prove very useful indeed. We negotiated, for example, the end of the Korean War with the Chinese Communists. The fact that they agreed to conclude it did not mean they had repented of their aggressive sins against South Korea. What's more, neither the American negotiators nor the American people entertained any such illusion. Nor do they with regard to the possibility of a cease-fire in Formosa Strait.

It is important to remember, in any negotiations, the unchanging nature of the Communists' ultimate objective and to realize that because of it the negotiations may prove futile. But to reject all negotiations on that account would be to doom to futility any foreign policy aimed at peace.

The Case of Mrs. Lucille Affolter

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Monday, May 9, 1955

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have incorporated in the Appendix of the RECORD an editorial entitled "Let's Have the Facts," appearing in the St. Louis Post Dispatch of Wednesday, May 4, 1955.

This editorial deals with the case of Mrs. Lucille Affolter, an employee of the Internal Revenue Service.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LET'S HAVE THE FACTS

A mean and ugly issue has developed in the Internal Revenue Service—the Federal income-tax collecting agency—over the case of Mrs. Lucille Affolter, a civil-service employee until June 1953. Republican Senator WILLIAMS, of Delaware, told the story Tuesday substantially as follows to his colleagues on the Senate floor:

Mrs. Affolter was an employee of the Internal Revenue Service who cooperated with Senator WILLIAMS in his collection of information for his one-man inquiry into income-tax scandals, begun in the Truman administration.

At no time did Mrs. Affolter give Senator WILLIAMS any information protected by law. The data she gave him included such things as appointment books, office diaries, and notes. When intelligence agents of the Service asked to see her appointment books and diaries she said they were in Senator WILLIAMS' office and they could see them there.

Eight days after Mrs. Affolter conferred with the crusading Republican Senator she was fired. She appealed to the Senator who arranged a conference with Internal Revenue Commissioner T. Coleman Andrews, an Eisenhower appointee.

The grievance against Mrs. Affolter, in the Revenue Service, was that she gave data to Senator WILLIAMS instead of the Service's inspectors. As a consequence the dismissal was rescinded, but her civil-service file has been flagged so as to practically prohibit her from ever being reemployed in any agency of the Government.

These are the basic facts as set forth in his Senate speech by the Delaware Republican, who added that the only interpretation he knew to put on the treatment of Mrs. Affolter was that it was to be "an indirect warning to all employees as to what they can expect if in the future they are caught furnishing me with any information."

The real question here is: Why did this civil servant feel she needed to go to Senator WILLIAMS? It is no more desirable that Senator WILLIAMS get information from employees in the service than that Senator MCCARTHY have informants in the Defense Department. In any properly administered Government department, it should be necessary only to report a bad situation to a superior official.

Is the Internal Revenue Service under Commissioner Andrews such a Service? Or is it taking on some of the bad color that disfigured it in the Truman administration?

Senator WILLIAMS performed a notable public service when he went after the disgraceful conditions in the Federal revenue-collecting agency under the Treasury secretaryship of John W. Snyder. In the last year of the Truman administration he received notable cooperation with the result that James P. Finnegan and many others were indicted, convicted, and sent to prison.

Surely the Delaware crusader deserves as much cooperation and more from the Eisenhower administration in Washington. Yet he found it necessary to take the Senate floor and make his extraordinary speech about reprisals in the Service.

Why? Commissioner Andrews is the man to answer.

Calumet-Sag I: An Authoritative Statement by Congressman Thomas J. O'Brien in Behalf of All Members From Illinois

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1955

Mr. O'HARA of Illinois. Mr. Speaker, by unanimous consent I am extending my remarks to include the statement on May 6, 1955, of the Honorable THOMAS J. O'BRIEN, speaking by bipartisan designation and for the entire delegation from Illinois, as follows:

STATEMENT OF CONGRESSMAN THOMAS J. O'BRIEN, REPRESENTATIVE FROM ILLINOIS, SIXTH DISTRICT, CHICAGO, BEFORE THE PUBLIC WORKS SUBCOMMITTEE OF THE HOUSE COMMITTEE ON APPROPRIATIONS, PANEL NO. 1

At this time I find it most encouraging, gratifying, and hopeful to realize that the Calumet-Sag Channel project has finally reached this stage of discussion. Actually, this approach to constructive action has been long overdue. For in this project we have one that is of paramount importance, not only to the citizens of Illinois, but to the whole vast and vital midcontinent area of the United States.

It is perhaps unfortunate that the subject of Cal-Sag did not reach this stage of discussion years earlier. For Cal-Sag has been the No. 1 bottleneck on our system of inland waterways for more than 30 years. The responsibility for the neglect of Cal-Sag must rest with those agencies and organizations which failed to impress upon Congress and the public the vital nature of the Cal-Sag project.

For my own part, I must admit that I knew little about this project even though it lies in the Chicago area in which I reside. Probably I would have continued in my lack of knowledge had it not been for the magnifi-

cent educational and publicity program staged by the Cal-Sag Waterways Development Committee and through the personal contacts and discussions which grew out of the information broadcast in this campaign.

For too many years the Cal-Sag project was admittedly ignored and rejected. Then, about 2 years ago, the long-overdue campaign on behalf of the project was staged. The campaign was a magnificent one, bringing home to all of us the importance of Cal-Sag and the manner in which it was holding back an estimated $3 billion industrial expansion and an estimated 500,000 new job opportunities in the area while at the same time it strangled the whole of our development of our inland-waterways system.

CREDIT DUE KILLIAN AND ALLISON

Too much credit cannot be given to those individuals responsible for this campaign. By this I mean specifically Mr. John L. Killian, legislative vice president of the committee, as well as Anthony G. Allison, its executive vice president.

The campaign organized and carried through dynamically under the leadership of these men put Cal-Sag squarely into the limelight for Congress and the public. Through the educational program of this committee, I and my fellow Congressmen from Illinois were made aware of the true facts concerning Cal-Sag and the necessity for vigorous action on its behalf.

It is for this reason that I have decided to limit my remarks to a general outline of the project and potentialities and to leave the more detailed presentation of the project to the Cal-Sag Waterways Development Committee whose spokesman will follow me as a witness before this committee.

It was an awareness of the critical importance of the Cal-Sag Channel project, as brought to me by the Cal-Sag committee, that last year motivated me and my colleagues of the Illinois delegation in the House of Representatives to sign a resolution petitioning the President and the Director of the Budget to place this worthy and necessary project on the budget. Now that this has been done and the project is being given proper consideration I feel that it is highly important that all concerned should be made aware of the economic importance of this long neglected though vital key in our otherwise magnificent system of inland waterways.

HOLDS A VITAL KEY POSITION

To anyone not conversant with the critical importance of the Cal-Sag Channel I suggest a study of the location of this waterway on a map of the Mid-Continent area. A glance is sufficient to force appreciation of its vital key position. It lies, as a mere glance shows, squarely at the crossroads on one of the world's greatest inland waterways system. To the north lies the Great Lakes where a huge fleet of ore carriers move the mountains of iron ore which feed our basic industry—steel. Because of this, we have had the tremendous development and expansion of the steel industry, particularly in the Chicago area, which has during the past few years, risen to the position of the leading steel producer of the Nation.

To the south lies the inland waterway system formed by the Mississippi and its tributaries. This system veins the whole vast and productively rich Mid-Continent area that now contains over half the wealth and population of the United States.

Squarely between these two independent systems lies the Cal-Sag Channel. Let me stress this interdependence of these two waterway systems. For, as the fleet of Great Lakes carriers feeds industry with iron ore and other raw materials, so the Mississippi system of inland waterways carry an equally critical burden of other raw materials to industries such as petroleum, chemicals, grain and others.

Of this great national system of primary production located in the heartland of America, Chicago is the economic capital city and nerve center. By the same token, the Cal-Sag Channel is the connecting link that allows Chicago to function in its role of economic capital and ties the two waterway systems into one unified and efficient whole.

INDUSTRIAL CENTER OF NATION

This has been the position of the Cal-Sag Channel throughout the years that the Mid-Continent area developed into the No. 1 industrial area of the Nation. However, during all that time the Cal-Sag Channel was practically ignored, its critical position disregarded, its tremendous potentials never developed or realized in terms of material economy and industrial efficiency.

That the Cal-Sag Channel exists, even in its present inadequate form, is a tribute to the energy and foresight of the people of Illinois. A Cal-Sag Channel was an absolute necessity since Chicago began to develop as a great commercial and industrial center. Because of this local agencies constructed the present channel and have paid for its operation and maintenance for over 50 years of its existence.

The replacement cost of work done by the State of Illinois and the city of Chicago on this link of our inland waterway system would be over $350 million.

Realizing the key importance of Cal-Sag, Congress acted in 1930 to make Cal-Sag a Federal waterway. Because of its key position and its obvious indaquacy, Congress acted again in 1946 to declare Cal-Sag a Federal Public Works project. But at that time no further action was taken. No funds were allocated. So Cal-Sag remained a neglected, though still a critically important, job to be tackled.

DEVELOPING A MODERN WATERWAY

During this time the economic importance of our inland waterway system drew attention and attendant action. A great system of modern transportation developed along the Mississippi and its tributaries. New locks and dams were constructed. The Illinois River, to cite an instance, was developed as a modern waterway.

However, while this constructive action on our inland waterway added greatly to our industrial efficiency and aided in the growth of prosperity in the midcontinent area, it actually threw a greater and greater burden upon the obsolete and inadequate Cal-Sag Channel. For, as these waterways leading north were improved, a constantly growing volume of waterborn traffice pressed upon the Cal-Sag Channel which, year by year, became a more serious bottleneck and an impediment to the movement of freight and the expansion of industry.

Thus, the position of Cal-Sag became more and more impossible. Now, this position has been made even more intolerable. For, just as the development of the waterways to the south have credited stalemate at Cal-Sag, so, now, plans for further development to the north make action on Cal-Sag absolutely imperative. I refer to the construction of the St. Lawrence seaway. As everyone knows, this project will open the Great Lakes, not only to Atlantic shipping, but to the newly discovered and developed rich ore bodies of Labrador. As this invaluable flow of ore reaches the ports of the Great Lakes, no city will feel greater effects than Chicago. And, if the beneficial effects of this new ore body is to be felt in increased prosperity throughout the midcontinent area, the avenue through which the benefits must flow will be the Cal-Sag Channel.

IMMEDIATE ACTION IMPERATIVE

It becomes obvious, therefore, that immediate action must be taken to break the bottleneck of Cal-Sag and allow general prosperity and industrial expansion to flow through the one channel that nature has designated as the only available avenue.

In all discussion of Cal-Sag we should note that Chicago is now in process of an ambitious program of port development. With the opening of the St. Lawrence seaway, it is believed Chicago will become the greatest inland port in the world. But, again, Cal-Sag is a key piece in all plans. For, Chicago cannot realize its port potentials, nor can it serve the huge and rich area of which it is the economic capital unless Cal-Sag is modernized. Such modernization would make Cal-Sag what it should be, the efficient key channel linking Atlantic sealanes and the ores of Labrador to the Mississippi Valley, the Gulf of Mexico, and the seas beyond.

In the Chicago area alone, it is conservatively estimated, completion of Cal-Sag would spark an industrial development involving billions of dollars in new and expanded industries, thus creating many thousands of new jobs while at the same time it would stabilize and make more secure those industries already operating in the area and maintain the established high level of prosperity enjoyed by all workers in this area.

WOULD BENEFIT ENTIRE NATION

In appealing to this committee for the most sober and thoughtful consideration of this project, I would point out that no single project in years has such wide possibilities of benefit to so many people. For there can be no calculating the wide, even all-embracing character of this project. It is physically located in Illinois, but the benefits deriving from its completion would be felt from the Appalachian Range to the Rockies, and from the northern ports of Duluth and Superior to New Orleans and the whole gulf coast.

Therefore I urge this committee to approve the appropriations on the budget for the Cal-Sag project so that construction can get underway immediately.

In conclusion, I should like to express my deep appreciation to this committee for the opportunity afforded me to present my views on this vital project.

Calumet-Sag II: Background History of Vitally Necessary Waterway

EXTENSION OF REMARKS

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 9, 1955

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include the following statement on the history of the Calumet-Sag project submitted by Congressman THOMAS J. O'BRIEN at the conclusion of and supplementing his argument on May 6, 1955, before panel No. 1 of the Committee on Appropriations:

BACKGROUND HISTORY OF CALUMET-SAG

Construction on the Calumet-Sag Channel was begun in 1911 and the channel was completed in 1922. This period of construction was much longer than it should have been, due to the delay occasioned by World War I.

The use of the Calumet-Sag Channel for navigational purposes came about through necessity, because this channel bisects the ridge of land that lies as the major barrier between navigation on the Great Lakes and the great inland waterway system that leads to the Gulf of Mexico. A channel through this ridge of land has been a prime necessity

ever since Chicago began its rise as a great national industrial and transportation center. While the Calumet-Sag Channel never proved adequate for navigational purposes, the demands of the waterways forced its use as a barge canal.

Recognition of this fact by the Federal Government was evidenced in 1930, when the Calumet-Sag Channel was made a Federal waterway by act of Congress. At this time, the inadequacy of the Calumet-Sag Channel was also recognized locally, and modernization of the channel was requested by various groups at sundry times.

APPROVED BY ARMY ENGINEERS

Such demands resulted in further action by the Federal Government in 1946, when the projected work on Calumet-Sag was approved by the United States Army Engineers and was authorized as a Federal works project by act of Congress.

However, nothing was ever successfully done about Federal appropriations for the construction of the Calumet-Sag, even though barge traffic on this waterway rose from a few thousand tons carried in 1930 to an estimated 4 million tons which will be carried on the canal this year. Naturally, public demands for modernization of the Calumet-Sag Channel have grown in exact proportion to the rising burden of freight borne by the waterway.

The United States Army Engineers, as a result of studies carried on for years on the Calumet-Sag and the area it serves, have conservatively estimated that the potential tonnage to be carried on a modernized Calumet-Sag should amount to some 18 million tons annually.

UNITED SUPPORT OF RESOLUTION

It is against this background that the following resolution is presented:

"Whereas because of its critical position as a link between the water-borne traffic of the Great Lakes and the vast inland waterway system leading to the Gulf of Mexico, the Calumet-Sag Channel, with its present inadequate width and its obsolete locks and installations, seriously hampers the normal flow of trade and commerce on a national scale; and

"Whereas the Calumet-Sag Channel is vital to all industry and commerce in the entire midcontinent area from the headwaters of the Mississippi waterway system at Duluth-Superior and St. Paul-Minneapolis, and in the area served by the Ohio and Monogahela Rivers to the Gulf ports of New Orleans, Pensacola, and Mobile, as well as to Houston and other ports on the intercoastal canal; and

"Whereas this channel is absolutely essential to the needs of national defense, as was so clearly proven during World War II; and with the growing threat of atomic warfare, the Calumet-Sag Channel becomes of even greater importance to the future of our national defense; and

"Whereas there has developed a critical and intolerable traffic congestion at the foot of Lake Michigan, in which this channel is the key factor in a situation affecting railroads, highways, and other forms of transportation, and which cannot be corrected without the modernization of Calumet-Sag Channel; and

"Whereas all planning for Chicago port development, road and bridge building, and other such attempts to break this traffic congestion hampering the movement of trade and commerce in the area, is dependent upon the decision to start construction on the Calumet-Sag Channel; and

"Whereas practically all costs connected with the channel up to the present time—an estimated total of over $400 million at current values—has been borne by local authorities and agencies; and

"Whereas all of these agencies have indicated agreement to make all necessary concessions, turn over needed property, and to cooperate in every practicable manner with the Federal Government, thus reducing the probable cost of construction to a fraction of what it would be without this very substantial local participation; and

"Whereas the United States Army engineers have reported that the Calumet-Sag Channel project offers a ratio of benefits to be derived against costs incurred of about 3 to 1 (2.55 to 1), and this is reported to be the most economical with the highest ratio, of any major large-scale Federal works project in the country; and

"Whereas this project can be carried through to completion without any stoppage of navigation or the flow of traffic on any other form of transportation, and, at the same time, will not hamper the operations of any industry already producing in the area: Therefore be it

"*Resolved*, That we, the undersigned, do hereby unanimously petition the Bureau of the Budget to include an adequate amount of funds to start construction on the Calumet-Sag Channel in its budget for the fiscal year of 1956; and be it further

"*Resolved*, That the Calumet-Sag Channel, as authorized by act of Congress in 1946 as a Federal works project, be specifically eliminated from any ceiling criteria.

Calumet-Sag III: Congress Rarely Has Heard Such Impressive Testimony, Says Chicago Tribune

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1955

Mr. O'HARA of Illinois. Mr. Speaker, on May 7, 1955, the morning following the presentment of the case of Calumet-Sag to the panel of the Appropriations Committee by Congressman THOMAS J. O'BRIEN, as spokesman for the entire Illinois delegation, Democrats and Republicans alike, and by other distinguished witnesses, the Chicago Tribune carried the following editorial:

CAL-SAG, AN INVESTMENT

Congress has rarely heard such impressive testimony for a domestic improvement project as that presented yesterday before the House Public Works Subcommittee in behalf of the Calumet-Sag development. The committee is considering a $4 million appropriation designated for this purpose in the Federal budget.

Representative THOMAS J. O'BRIEN, of Chicago, spoke for all the Members of the Illinois congressional delegation—both Republicans and Democrats. Henry E. Seyfarth testified for the Cal-Sag waterways development committee, representing business interests, labor unions, and civic leaders. Mr. Seyfarth presented a comprehensive report on the project, prepared under the direction of Dr. Harold M. Mayer, a University of Chicago economic geographer who is a specialist in transportation and in the development of cities and regions.

A simple explanation of the importance of Cal-Sag was given by Mr. Seyfarth. He likened the situation to two superhighways, each serving a large part of the North American Continent. These superhighways approach within about 20 miles of each other, but to get from one to the other a choice must be made between two roads, each narrow, winding, and obviously unable to handle the superhighway traffic.

One of the super-highways is the Great Lakes waterway system, soon to be improved by the St. Lawrence seaway. The other is the Mississippi River and its tributaries. These waterway systems were connected at Chicago by the building of the old Illinois-Michigan canal, no longer in service, and later by the Chicago Sanitary and Ship Canal. A second link is the Calumet-Sag Channel, which traverses the southern part of Cook County and joins the sanitary canal near the Cook-Du Page County line.

The first of the two connecting routes is unsatisfactory because it leads to downtown Chicago, an area which no longer accommodes much heavy industry and which has no more vacant areas for industrial development. The second route, the Cal-Sag, serves the great Calumet industrial district of Illinoise and Indiana, where 15,000 acres are available for new industries. Dr. Mayer's report estimates that, with proper development of the Cal-Sag Channel and the port facilities at Lake Calumet, the area will support an additional population of 2 million persons.

The report carefully examines the probable effects of the Cal-Sag improvement on competing forms of transportation, chiefly the railroads. It points out that the railroads have not suffered from the Mississippi waterway, because it raised the general level of industrial activity, and the prediction is made that elimination of the Sal-Sag bottleneck will benefit the railroads for the same reason. New freight traffic growing out of new industries and additional population is expected to add $95 million a year to railroad revenue.

The report notes that the Federal Government is not being asked to begin a project for the benefit of a community which is carrying no share of the cost. Improvements already made at the expense of local taxpayers would cost $403 million to reproduce on the basis of 1954 price levels.

If there were no connecting channel between Lake Erie and Lake Huron, or if the channel were inadequate, Congress would have no hesitation in voting funds for such an improvement. It is no exaggeration to say that Cal-Sag is equally important. It will be a good investment, not a drain, on the taxpayers of the Nation.

A Conservation Acreage Reserve

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1955

Mrs. KNUTSON. Mr. Speaker, I have introduced a bill to transfer farmland not needed for commercial production each year into a "conservation acreage reserve" to store soil fertility until time of need. Designed to apply to all farmers, rent would be paid for such acreage to maintain "take-home pay" for the farm family while reducing the cost of the support program.

This legislation would protect the purchasing power of our rural families and prevent shifting from one crop to overproduction in another. The plan, horizontal in direction, would cover all farmers with special incentive to use wisely our soil resources. It would be made consistent with approved watershed development to improve fertility and to keep our farms ready to meet any demands imposed upon them in time of need. National interest demands that we, as a Nation, take care of our soil. One generation from now, the demands of our people must meet a sore test. We will need a reserve production of food to meet "head-on" the needs of a growing population. Seven thousand babies are born every day. When the growth cycle of present day children completes itself, will that generation have an adequate supply of food? Tragic as answers to this question can be, we have the power to prepare now to prevent food hardships. Farmers need adequate income if they are to build soil and not only mine their fertility. Under this bill, the farmer would be paid the landlord's share.

The bill makes provision for farmers to place acreage under this program if another farmer does not wish to use his quota. Where soil tests show fertility on a farm severely depleted, provision is made if the farmer wishes for this whole farm to come under this program. National policy dictates the necessity of such a conservation program. The act states, "It is the policy of Congress that farmers shall be encouraged to make the fullest and best economic use and conservation of the Nation's soil and water resources through coordinated watershed development." I feel it extremely necessary that we continually expand our outlook to bring the maximum number of farm families under programs such as this for our economic welfare and for the benefit of our country.

Problems of a Republican President and Democratic Congress in Working Together—Talk by Congressman William T. Granahan Before Sentry Club, Wednesday, May 4, 1955

EXTENSION OF REMARKS

OF

HON. WILLIAM T. GRANAHAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 9, 1955

Mr. GRANAHAN. Mr. Speaker, under unanimous consent, I include a copy of a talk which I delivered Wednesday night, May 4, to the members of the Sentry Club, an organization of outstanding Philadelphia women. In it I discussed on an objective level the problems which arise with divided responsibilities in Government—that is, divided between a Republican President and a Democratic Congress, or vice versa. As I tried to point out in that talk, it is natural in a two-party system, such as we have, for partisan politics to become injected in many policy decisions, but at the same time the strength of our American system lies in the fact that we can and do work together whenever the safety of this country and the basic freedoms of Americans are concerned.

PROBLEMS OF A REPUBLICAN PRESIDENT AND DEMOCRATIC CONGRESS IN WORKING TOGETHER

Beginning back in the election campaign last fall, the question of how a Republican President and a Democratic Congress can work together in harmony and in good faith has been worrying a great many people.

To some students of political science, this sort of situation of divided responsibility in Government between two political parties is considered extremely unfortunate. It seldom happens in other democracies for the reason that the executive head of the government is usually the leader of the majority party in the parliament. To some people, then, the fact that it can happen and does happen periodically in the United States is supposed to be one of the big faults with our constitutional system of elections.

As a matter of fact, we can remember back to 1946 when an able, outstanding Democrat, Senator FULBRIGHT, seriously suggested that President Truman appoint a prominent Republican as his Secretary of State and then resign, so that the Republican could then succeed him as President. That was, of course, before the passage of the new succession act which provides that in the absence of a Vice President, the Speaker of the House and then the President pro tempore of the Senate should be in line for the Presidency before any Cabinet member.

When Senator FULBRIGHT made that suggestion, he was fearful that the divided Government created by the election of a Republican Congress during a Democratic President's term of office would bring us chaos. As a one-time Rhodes scholar, Senator FULBRIGHT was very familiar with the English system in which the Prime Minister always represents the majority party.

As it turned out, Senator FULBRIGHT's fears in 1946 were overly pessimistic. And so were President Eisenhower's last fall when he predicted in Republican campaign speeches that if the Democrats won Congress the country would have two drivers and go in the ditch. It is significant this time, I think, that no one has suggested that both Eisenhower and NIXON resign so that Speaker RAYBURN could be President. And Mr. Eisenhower himself has acknowledged that his talk about the country going into the ditch was mostly campaign exaggeration.

So it looks as if we can get through the next 2 years with a Republican President and a Democratic Congress without any breakdown of the American political system. We learned in 1947–48 during the 80th Congress that most Members of Congress are patriotic enough to suppress bitter partisan obstructionism in time of national danger.

On the other hand, there are problems—a great many problems—in this kind of situation. It would be silly to shut our eyes to them or to pretend that they don't exist. The best policy is to face up to these problems and do what we can to iron them out.

In talking to you this evening, I want to try to bring into focus the two sides of this troublesome problem of divided political responsibility in government—the President's problems in dealing with a Democratic Congress, and the problems of the majority party in Congress itself. For there are problems on both sides.

But in no case are they insurmountable, if there is good will and good faith on both sides. And I hope we can achieve that.

But let me point out one very important fact before we go into this any deeper. It is this:

Under no circumstances should we expect to see President Eisenhower stop being a Republican or those of us in the majority party in Congress stop being democrats just because we've got to work together. We choose up our political sides on the basis of certain principles of government in which we believe. It would be a sad thing indeed for American democracy—based on a two-party system—if those political beliefs were just superficial—if we had to throw them overboard as the only means of achieving harmony and progress in a period such as this.

I want to emphasize that point, for I think it is very important. The Democrats in Congress do not have to run out on everything they believe in just in order to cooperate with Eisenhower. And the President does not have to turn into a Democrat in order to cooperate with us. So please, in the coming 2 years, don't be either surprised or disappointed that these changes in basic principles and views have not occurred.

If the President holds stubbornly to some position and the Congress holds stubbornly to another—and this may happen from time to time—then the question is not whether the Democrats should give in because the President is Republican, or whether the President should give in because the Congress is Democratic. The only question will be. Which side is right? Or, if that can't honestly be determined in the circumstances, then the question is: How do we find a middle ground?

For when you come down to it, nearly all legislation passed by Congress and signed into law by the President is a compromise This is fundamental in American government.

You may be surprised to hear, in fact, that most of the bills which pass Congress and become law are passed by unanimous consent. That doesn't mean everybody agrees wholeheartedly about everything in each of those bills. What it does mean is that in order to get those bills through, so many compromises have to be made between strong views on both sides that finally a middle ground is reached and the less-than-perfect compromise is accepted.

This happens whether the Congress is Republican or Democratic; it happens, too, whether the Congress and the President belong to the same party or to different parties. That's because within the two parties there are strong differences of opinion on many issues; and also because party lines often cut across geographical or sectional or economic issues. Therefore, eastern Republicans and Democrats are often joined on one side against western or southwestern Democrats and Republicans, on the other.

So there is much precedent for a Republican President and a Democratic Congress finding a common ground for a middle course on many of the big issues to come up in these next 2 years.

But behind this cooperation and harmony, there will always be partisan political considerations, too—so don't be surprised when you see them crop up.

Now let's look at some of the problems involved in this cooperative effort to provide effective government leadership with divided political responsibility in Washington. First of all, let's look at it from the President's viewpoint; President Eisenhower—and this would be true of any President in the same situation—wants to make his administration succeed. He certainly would not want to climax a distinguished military career with a failure in the greatest and most responsible job in the world, as President of the United States.

Every President develops a sense of history—and of his place in it. But, while

looking at the long-range evaluation of his place in the history books, he must also be acutely conscious of his place in current history—in the newspapers and magazines and in the minds and hearts of the people. He knows he can accomplish more, both within his own administration and in dealing with Congress, if he is popular with the public generally. But sometimes he has to run the risk that some policies which he feels are very important to the Nation might be unpopular with the people.

If the program is very unpopular, he has a tough time, indeed, getting Congress to accept it, for, after all, every Member of the House of Representatives has to run for reelection every 2 years or else quit and get out. If he gets out voluntarily or is defeated, he loses his seniority automatically; therefore, if he comes back to Congress later, he comes back as a freshman all over again and has to start again from the bottom of the ladder. So in the House, and to a certain extent in the Senate, too, even though they have 6-year terms over there, an unpopular program has tough sledding; many Members feel they vote their own political suicide if they approve an unpopular measure.

But they will do it—and they have done it often—if the President convinces them of his sincerity, of his good faith, and of the underlying vital nature for the whole country of the policy he has recommended.

Now, when the President and the congressional majority are of the same party, the President can get further on this kind of approach. The Congress knows the President would not deliberately cut the ground out from his own party members in the House and Senate.

But when a Republican President tries to sell a Democratic Congress on an unpopular course of action—or the other way around in the case of Truman and the 80th Congress—many Members might feel the President isn't really a bit interested in whether they are reelected or defeated; some might even suspect the proposal of being deliberately calculated to hurt the opposition in the forthcoming election.

Does this sound overly suspicious? Perhaps so. I am only reporting on how Members sometimes feel in a situation like this, and many will continue to remember that the President's party leaders in effect called Democrats pro-Communist in 1954 in order to try to defeat them. That rankles deeply as one of the worst things that could be charged to any patriotic American.

So the President is under a handicap in selling Congress on unpopular legislation, even though, as President, he may have to try his best to do so.

Now, suppose he were to go to the extreme length of praising individual Democrats to the skies as great Americans, honoring them and flattering them in various ways to prove his friendship and good faith in seeking their help on a very unpopular course of action. The President's own party would then scream to high heaven, particularly in the States and districts represented by the Democrats he praised so highly. This might cause him a loss of support from his own party in the Congress, since many Republicans of the rgiht wing have never really accepted Eisenhower as a true Republican anyway.

Therefore, he must call his shots as he sees them; he must sometimes break with his own party leaders when they insist on going after the Democrats as a party of treason; his Vice President, whose campaigning was considered below the belt by many Democrats, cannot help him very much in dealing with those same Democrats in leadership positions in the Congress.

So the President has got to work hard and constantly at maintaining the confidence of the opposition party in the Congress, particularly where he and we agree on objectives. This is particularly true in the foreign-policy field; most of the President's difficulties on this have come, in fact, from within his own party, so he must depend largely on Democrats to get these measures through. Therefore, you see him by and large soft-pedaling the political attacks where this issue is concerned.

Yet, right after the reciprocal trade-agreements bill went through the House successfully only because of the magnificent work of Speaker RAYBURN, you had the situation of the President unleashing a terrific attack on the Democrats and even including the Speaker for alleged irresponsibility on the tax-reduction proposal. This was apparently his way of backing up and bucking up the Republicans to get them to unite solidly behind him on that proposal and keep them happy with his leadership.

So that is often how it goes. One day the opposition party is hailed by the President as patriotic, and the next day as irresponsible. He plays down the political battles where the issue is vital to the country's foreign policy but gets his partisanship into it in some other way on domestic issues. It is a difficult role for the President to play, and we often think he overdoes quite a bit in letting some of his friends inject partisanship and animosity against the opposition party in every possible way. Of course, these same administration officials probably think we overdo the attacks—so you see it's a question of which side of the fence you're on coloring your view of this problem.

Now let's look at some of the practical problems on the other side of it—for the Democrats in the Congress. Year in and year out, both parties are always anxious to capture the presidency and the administrative machinery. Patronage is one aspect of that, but certainly not a major one. The real stakes are the decisions on national policy. Again, I repeat, we have pretty deep-seated views about government and we want to see our views prevail for what we sincerely believe are the best interests of the whole country. This is true of both parties. Democrats believe a Democratic administration is better for the country; Republicans believe their party can do more good for the country. I say that is fine; that's the way things should be. We should have strong views on issues and policies.

Thus, when a Democratic Congress supports a Republican President, because we think he is right on a particular issue, we know we may be making him and his party look better politically than they would otherwise. Nevertheless, we have got to do the same thing the President must do in this situation: We've got to bury party considerations time after time in order to serve national interests. Even while doing this, we know that the President in 1956 will be out to beat us, no matter how well we might have cooperated with him on the really vital issues If he weren't out to beat us, then he wouldn't be much of a Republican Party leader, would he?

Another thing; we may be buttered up by the administration from time to time to get us to vote for something the President wants, but then, as the opposition party, we see these policies administered, frequently, by officials who are completely out of sympathy with us. The Republican administration is composed largely of active Republican partisans—many of them much more partisan than the President. And they use the machinery of Government to try to beat Democrats and elect Republicans.. This is not a complaint; it is a fact. The Republicans said the same thing about the Truman administration during the 80th Congress.

On the other hand, the Democrats had been in power so long during the Roosevelt and Truman years that the newness of power had worn off and frequently the goal was to get a particular job done regardless of whether Democrats or Republicans did it and got the credit. Many Republicans had very high positions in the Democratic administrations—some even as Cabinet officers. So far as I know, however, there is only one really high Democrat in this whole administration, Ambassador Bruce who is almost irreplaceable.

So we feel left out of the day-to-day decisions on policy. We get no credit for supporting the administration when we do; we get all kinds of criticism for opposing it.

All this means is that under our 2-party system, there are problems on both sides; there are frustrations and headaches for both the President and the Congress when they belong to opposing parties.

But these are not the really serious, insurmountable problems of Government. We can work things out in an atmosphere of good faith—for the simple reason that we have to, for the good of this country. Both sides will play politics when it is safe to do so—safe for the country, that is. They will both have their eyes constantly on 1956. But not to the extent of blinding themselves to the needs of 1955 or of the future, either, in those instances in which American safety, American prosperity, and American decency and justice are at stake.

Mrs. Lulu Hall Pratt, Pennsylvania Mother for 1955

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1955

Mr. DAGUE. Mr. Speaker, it was my great privilege to join with a great group of my constituents on April 28, last, in honoring Mrs. Lulu Hall Pratt, of Coatesville, Pa., who has been selected as Pennsylvania Mother of the Year.

The outpouring of her friends and neighbors was a heart-warming testimonial in itself, and when they proceeded with appropriate words and beautiful gifts to show their appreciation of this dedicated woman it was brought home to all present that the bedrock upon which this Nation rests is that spirit of motherhood so beautifully symbolized by the self-sacrificing love of Mrs. Pratt.

The testimonial banquet was honored by the presence of the beautiful and talented wife of Gov. George M. Leader, an honored Pennsylvania mother in her own right, who in her gracious manner paid fitting tribute to the guest of honor and presented her with the scroll bearing the Governor's proclamation designating the Pennsylvania Mother for 1955.

The Governor's proclamation is made a part of these remarks, and reads as follows:

IN THE NAME AND BY AUTHORITY OF THE COMMONWEALTH OF PENNSYLVANIA, GOVERNOR'S OFFICE, HARRISBURG—PROCLAMATION

PENNSYLVANIA MOTHER FOR 1955—PENNSYLVANIA STATE MOTHER'S WEEK BEGINNING APRIL 24, 1955

Whereas the citizens of the Commonwealth of Pennsylvania annually, during Pennsylvania State Mother's Week, express an official

tribute of respectful admiration to the women of our State's families through selecting one among their number as a most fitting embodiment of the spirit of unselfish devotion and service to community betterment that is a living tradition in our Commonwealth; and

Whereas this tribute is symbolized by the designation of "Pennsylvania Mother for the Year" upon a mother of our State whose qualities of sensitive concern and personal consideration for her fellow citizens in all aspects of human relations reflect the distinctions of her continuous accomplishments in charitable and civic enterprises; and

Whereas Mrs. Lulu Hall Pratt, Coatesville, Chester County, Pa., has been designated recipient of this statewide distinction as the choice of the Pennsylvania State Mother Committee for her superlative record of devotion to the common welfare of her Commonwealth and community.

Now, therefore, I, George M. Leader, Governor of the Commonwealth of Pennsylvania, do hereby designate Mrs. Lulu Hall Pratt as Pennsylvania Mother for 1955 in honor of her unequaled record of devotion to the best interests of her fellow Pennsylvanians in all aspects of civic endeavor that engaged her throughout a constructive career of community activity. I am privileged to extend to Mrs. Pratt the sincere esteem and congratulations of the government and the citizens of the Commonwealth who consider her life a sterling exemplification of the best that can be undertaken by the good citizen working for the attainment of the good society. We are confident Mrs. Pratt is worthy of representing the glowing traditions of our Commonwealth in the national conference of all State mothers as Pennsylvania's candidate for the illustrious accolade of American Mother for 1955.

Given under my hand and the great seal of the State, at the city of Harrisburg, this 28th day of April, in the year of our Lord 1955, and of the Commonwealth the 179th.

GEORGE M. LEADER,
Governor.

By the Governor:
[SEAL] HENRY E. HARNER,
Deputy Secretary of the Commonwealth.

Protecting Our Friends in Austria

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1955

Mr. DAVIS of Wisconsin. Mr. Speaker, it was with gratification that I learned over the weekend that our negotiators had succeeded in striking from the proposed Soviet-Austrian Treaty the provisions of article 16 for forcible repatriation—at least it would have amounted to that—of 30,000 Soviet escapees in Austria.

The significance of this proposed language is explained in a recent editorial in the Wisconsin State Journal, of Madison, Wis. We can be grateful that our negotiators had been alerted to this blueprint for tragedy.

The editorial follows:

DEATH WARRANT FOR 30,000 FRIENDS

If the United States approves the Soviet-Austrian Treaty in its present form, this country will be signing death warrants for 30,000 of its best friends and allies * * * and dealing itself serious damage in the cold war.

For this bloodcurdling discovery we are indebted to two University of Wisconsin faculty experts, Edmund Zawacki and Dimitri Pronin, who unearthed it in their careful scrutiny of the text of the treaty just concluded between the Russians and Austrians.

Some 30,000 escapees from the Soviet Union are still in Austria, where they fled toward the end of World War II. None of them in the past 10 years has indicated any desire to return to the Soviet Union.

Now article 16 of the Soviet-Austrian Treaty deals with the repatriation of these people and paragraph 5 of this article obligates Austria to deny any relief or help to persons who refuse to return to their native land.

"This," Zawacki and Pronin point out, "is the slippery Soviet terminology, for what is intended to be and certainly will become forcible repatriation. If the United States does not cause these provisions to be stricken from any treaty we approve (the treaty still requires approval of the United States, Britain, and France), we will have signed death warrants for 30,000 of our best friends and allies in the cold war.

"No amount of talk over the Voice of America ever will explain it away."

There is history and precedent, both terrible and triumphant.

Zawacki and Pronin recall that "however great were the political errors committed by the Western Allies at Yalta, the published documents that describe these negotiations made no mention at all of forcible repatriation of former Soviet citizens.

"It must be assumed, therefore, that hundreds of thousands of unwilling but helpless people were turned over to the Soviet authorities in 1945. For they were turned over.

"The officials responsible for this inhuman political blunder have so far managed to conceal their identity."

On the other hand, despite Communist pressures at Panmunjom, American negotiators there stood firm against forcible repatriation of unwilling North Koreans and Chinese, and no Korean or Chinese was delivered into Communist hands against his will.

The American position on this issue thus was dramatically, and it is to be hoped, everlastingly clear.

"In the cold war," Zawacki and Pronin plead, "firmness, clarity, and devotion to principle is as important politically as it is morally—both in Asia now with regard to Formosa, and in Europe with regard to Austria."

The Crop Insurance Program

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1955

Mrs. KNUTSON. Mr. Speaker, crop insurance has been stopped in 9 severely hit drought counties in the high plains area.

Colorado counties are Baca, Prowers, and Kiowa.

New Mexico counties are Quay and Curry.

Texas counties are Ochiltree, Deaf Smith, Hansford, and Childress.

Seven more counties will probably lose crop insurance in the near future.

Crop-insurance officials will not extend withdrawal date unless they have additional funds to cover expected losses.

For those farmers using crop insurance, it affords the best, most practical way to handle the land during this extreme drought emergency because it permits the farmers to obtain adequate financing from local sources to carry on proper and good farming practices.

The crop-insurance program is a good boost for the entire economy in the area and an excellent program for leveling off years of high production with low or no production. The soundness of the program should not be judged by losses taken during extreme drought years.

The program has been withdrawn from some of the historically best wheat-producing counties in the Nation.

Immediate reinstatement is necessary because many families cannot operate or obtain financing to get their land farmed this year.

Before the program can be reinstated, crop-insurance officials want assurance that losses, if taken, will not be charged to capital stock of the Federal Crop Insurance Corporation and have suggested either special funds come from legislation—this is time-consuming—or that the President authorize use of emergency funds and allot funds from the President's emergency fund for such purposes.

The withdrawal of the crop-insurance program had the effect of withdrawing on a 24-hour notice since many farmers had pledged this year's crop insurance to plant winter wheat last fall.

Address of Hon. A. Boyd Campbell, President, United States Chamber of Commerce

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1955

Mr. WILLIAMS of Mississippi. Mr. Speaker, the election of a Mississippi small-business man to the presidency of the United States Chamber of Commerce is something to which we, as Mississippians, point with pride.

Mr. Boyd Campbell, the new president of the United States Chamber of Commerce, is a man of unusual qualities and accomplishments. Recently, by virtue of his election to this high position, he has been the recipient of numerous honors and encomiums, all of which he deserves. In the face of this, however, he has proven his right to greatness by retaining his modesty and humility. This is evidenced by the brief and sincere message which he delivered to the annual meeting of the United States Chamber of Commerce at the Statler Hotel last week. Under leave to extend my remarks in the Appendix of the RECORD, I include the text of Mr. Campbell's speech:

A distinguished fellow Mississippian, in commenting upon his appointment to a position of great responsibility, said, "A man of much less ability than I have could fill this job, but they couldn't find a man of less ability than I have."

If that remark is appropriate to this occasion, my only reason for not using it is that I did not think of it first.

Five times under circumstances similar to this I have heard my illustrious predecessors emphasize the power and the influence of the national chamber.

One can never be fully impressed with the truth of such statements without having had an experience that drives those facts home in one's own mind. I have recently had such an experience and I desire to share it with you.

An amazing cascade of letters has flowed across my desk during the past 6 weeks. They could well be an opinion poll about the Chamber of Commerce of the United States.

From all over America these missives came. They came from Canada and Mexico, from Hawaii, from a ship at sea, and from six countries of Western Europe.

They came from friends and from strangers. They came from people high in government, in finance and in industry, and from men and women in humble walks of life. They came from those who represent organizations that are new and strange to me. Many sent brochures, tracts, and books, and there was a flood of clippings.

In my first, and rather terrifying press conference, I said that security was not to be had by statute or by contract: that it was of the spirit and that it was within you.

That statement was picked up across the continent by editors who had never heard of me, but who approved of what the president-elect of the national chamber had said. They wrote editorials about it and copies were sent by readers who added their own commendation.

Many of my correspondents said they would be remembering me in their prayers. A surprising number said that. Many expressed pleasure that a small-business man had been chosen—and many, frankly, expressed surprise.

But out of the mass of messages, this pattern of thought evolved:

Ours is a great country. We must keep it so by preserving the principles that made it great and by perfecting the practices with which we implement these principles. In striving for that objective, the Chamber of Commerce of the United States will not only be enhancing the great American tradition, it will be contributing vastly to our national well-being.

Yes, in their own language, that is what my correspondents said, but they said more—much more.

The president-elect of the national chamber had been quoted—and correctly so—as saying that the American system of enterprise was a stewardship; that management had a moral accountability; that the most important factor in industry was the human factor, and that only in an atmosphere of mutual confidence and good will could men and management work together and thrive and prosper.

He had been quoted as saying that he believed with all his heart that education was an economic good, a moral obligation and a spiritual trust, and that business and education comprised an imperative partnership.

My correspondents approved of these statements. In doing so, the words they most frequently used were "cooperation" and "faith." They said they wanted to help. They said it with hope and understanding. They said it with simplicity.

It is my desire and my purpose to be numbered among those who have so clearly pointed the way. And so, I dedicate myself anew to the principles upon which this great organization was founded and to the policies for which it stands.

With cooperation, with faith that "we shall not walk in darkness," and with the help of God we will go forward to a better tomorrow.

The strength and the power of this faith has been movingly expressed in the simple but beautiful words and melody of a song: "Walk on, walk on, with hope in your heart, and you'll never walk alone."

Play to the Gallery

EXTENSION OF REMARKS

OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 9, 1955

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article on farm price supports appearing in the Washington Post entitled "Play to the Gallery":

The 206–201 House vote to peg basic farm price supports at 90 percent of parity was a tawdry political gesture. Some House Members, no doubt, voted to upset the flexible support program out of sincere conviction that a 90-percent formula offers the best way to stabilize and augment farm income. But plenty of others voted for the rigid supports, one may suspect, in the hope and expectation that the Senate would leave the flexible law unchanged. That, of course, was a cheap way for legislators to get on the record as champions of the farmer's "interest" while leaving the hard responsibility to someone else. The partisan nature of the vote was underscored by the horse trading with certain labor leaders over the minimum wage.

In a narrow sense this sort of sham may seem to be smart politics. There is a great deal of justifiable concern through the country about the decline in farm income; and a gesture, even an empty gesture, in the direction of permanent 90-percent price supports, could produce political dividends. We wonder, however, whether in the long run this is even smart politics. The flexible support law—which provides supports on basic crops at from 82½ to 90 percent of parity this year and next year broadens the range to 75-90 percent—has never had a chance to operate. If the flexible-support principle is an iniquitous as some of the House critics seem to think, one would suppose that the best way to demonstrate this would be to give it a fair trial.

The probability is that at this stage no price-support formula will have a very immediate effect either in increasing farm income or in reducing the accumulation of surpluses. A $7 billion stock of surpluses hangs over the heads of farmers and acts as a price depressant. New trouble is in the offing in the tremendous production of feed grains anticipated this year. Substantial acreage diverted from other surplus crops is being devoted to grains at the very time that grain sorghums are beginning to vie with corn as feed.

If there is no easy solution to the problem of overproduction, the one thing that stands out is that the answer does not lie in a reversion to the type of rigid support formula that aggravated the problem in the first place. Even though the House vote was predominantly Democratic, the issue is not really one of a Republican formula versus a Democratic formula. The antecedent of the present flexible law which the House voted to upset was the Anderson law—a very similar measure which, although Congress never actually permitted it to take effect, was sponsored by a Democratic Senator and passed by a Democratic Congress. The flexible support system is at least an attempt to bring production more nearly into balance with demand, to encourage farmers to produce for the market rather than for the Government. Surely the Senate will understand that the only way to test its worth is to try it.

Housing Needs of the Aged Are Neglected

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1955

Mr. SIKES. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I include a most significant article entitled "Housing Needs of the Aged Are Neglected," by Edith Johnson, appearing in a recent issue of the Florida Times-Union, Jacksonville, Fla.:

If ever you should try to find a home other than the county farm for an elderly man or woman and you met frustration at every turn, you would realize that one of the major needs of a society in which an aging population is steadily increasing is a far larger number of comfortable, well-operated establishments where otherwise homeless men and women could live out their days with dignity.

Dreary places there are where the inmates wait nervously and anxiously for death, many of them suspecting that life's greatest tragedy is to be unable to die when life no longer is worth living. Places so cheerless and so lacking in privacy and decent comforts that the angel of death would be welcomed as a kind friend.

More than once this column has endeavored to find a home for an octogenarian who is keenly aware of the difference between ugliness and beauty, comfort and discomfort, good food and miserable provender. And usually without avail. Every home fit for a person having some cultural background to live in was full and had a waiting list.

Countless churches in this country have built, are building or planning to erect a fine youth center, a place where the young can foregather, enjoy a wholesome type of social life and the recreation all boys and girls naturally crave. And this is all to the good.

Millions were invested a few years ago in "teen towns" most of them having had but a brief existence. Other millions have been spent in the establishment and maintenance of parks and playgrounds for the Nation's children and youth.

But how little time, thought, money, and effort have been invested in creating tolerable living conditions for the elderly.

What a need there is for homes to shelter aging men and women where they would have light and beauty and comfort and be domiciled for modest sums; men and women quite alone in the world or the parents of children neither able nor willing to care for them. And there are so many belonging to one group or another.

Why are so many elderly men and women ignored and neglected? Is it because they are coming ever nearer to the end of their days and the world no longer expects much of a contribution from them?

Is it due to the fact that they are consumers rather than producers? Does society forget all too readily what they have given to it in their day and time?

In that agricultural civilization which prevailed in this country before the exodus

from the farm and the trek to the towns began there were jobs for elderly people capable of some effort and there were places among relatives where they were supplied with bed and board.

An elderly father could help his son with the farm chores and a grandmother's aid was priceless. She made the best of baby-sitters and she took full charge of the domestic affairs when a new baby was born into the family circle. As most of the food consumed by the family was produced on the farm the cost of elderly people's living was nearly nil.

But how different is the situation of millions of elderly men and women today. In our highly industrialized society many are unwanted. Jobs for them are few and far between. Families living in small cottages or apartments have no room for them—they would be in the way.

For entirely too many it is "over the hill to the poorhouse" to an existence as somber and bleak as Will Carleton described in his long poem.

Some live on in overcrowded rest homes, visited now and then, it may be, by relatives or forgotten by their own sons and daughters. What a reward, if one dared call it that, for having lived bravely, decently, industriously, and fruitfully.

This need, and a pressing one it is for many homes where aged men and women could live comfortably, safely, and happily, should make a profound and stirring appeal to the Christian conscience.

Help for Retarded Children

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 16, 1955

Mr. SMITH of Mississippi. Mr. Speaker, I should like to speak out in behalf of the families of the more than 5,800,000 mentally retarded and handicapped children in the United States, and to point out the urgent need for assistance to these burdened folk that would in part be provided by enactment of my bill, H. R. 2205, now pending before the House Ways and Means Committee.

The present Social Security Act provides for the payment of benefits to surviving children until they reach the age of 18 years, and for the vast proportion of our people this is a sound provision. We want our mothers to be able, insofar as it is possible to make it so, to remain at home with their children even though they have lost their husbands and fathers, so that our children may have the immeasurable benefit of a normal home and proper care. And for most of our families, it is safe to assume that the children will become self-supporting when they reach 18.

For the families of many, however, this is not true. Can the child who is permanently and severely mentally retarded or crippled be expected to earn a living and to free his widowed mother to do likewise? The answer is, of course, an emphatic no. If anything, the need for special care of the abnormal child above age 18 creates a demand upon the widowed mother far greater than that experienced in caring for normal children under 18 years.

This principle has been recognized in almost every major insurance and retirement plan of the Federal Government. H. R. 2205 would give long overdue recognition to it by amending the Social Security Act to provide benefits to surviving children above the age of 18 who are so mentally or physically disabled that they are unable to earn an independent livelihood, and to continue to widow's benefits for their mothers who must remain at home and care for their handicapped children. By specifying that the child's disability must be a longstanding one, originating before age 18, H. R. 2205 provides a safeguard against any possible abuse of the benefits and at the same time facilitates determination of eligibility for the benefits.

In moving to expand the social-security system, we must always consider whether the additional benefits, however justified on moral ground, are actuarially sound. I have studied this aspect of my bill carefully, and I am convinced that no argument against these benefits can be made on actuarial grounds. Even though enactment of H. R. 2205 will provide benefits to approximately 10,000 handicapped children and their widowed mothers, the estimated additional cost to the fund would not require an increase in the payroll tax, according to computations of social-security experts I have consulted with. Since there are now about 1 million children on the rolls, if current ratios continue, the number of children on the rolls would only be increased by about 1/110 if H. R. 2205 were enacted into law. This expansion of the program, from a cost standpoint, is indeed minute.

Small in cost, yes; but the aid this legislation would give to widows with handicapped children would be of tremendous value in easing their burden of misfortune by providing them with a minimum income for independent existence, and by easing the poverty which so many of them suffer in addition to the permanent sorrow of having an abnormal child. The husbands and fathers earned these benefits, and it is only just that their widows and children should at last receive them.

Hon. John Taber

SPEECH
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1955

Mr. AUCHINCLOSS. Mr. Speaker, the spontaneous birthday greetings given by Members of the House to our beloved colleague, JOHN TABER, the gentleman from New York, where well deserved and I am glad to have this opportunity to record my personal greetings to him on his 75th birthday.

Mr. TABER has devoted the greater part of his life to the service of his country and has never wavered from the high standards and the principles which have always guided him in his actions. He believes in honesty, he believes in efficiency, he believes in loyalty to one's country and, in the responsible position which he has held on the Committee on Appropriations, these qualities are always present in the decisions which he has made. Perhaps Members of the House are sometimes provoked because of his opposition to plans which they may have in mind for their districts but no one ever doubted the sincerity of the man and the honesty of his thinking.

It is a priceless pleasure and joy to know him and to serve with him in the House of Representatives. He has enhanced the standards of our Government and added luster to the fair name of the Congress. I trust that he will continue in active service and I know the years to come will bring him joy in the realization of the affection in which his many friends hold him and the knowledge of work well done.

Soil Conservation Report, 1954

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1955

Mr. DAVIS of Wisconsin. Mr. Speaker, as I have done in recent years, I want to include in the CONGRESSIONAL RECORD the annual report of M. F. Schweers, Wisconsin State conservationist, to district supervisors of the soil conservation service in Wisconsin.

Only four counties in our entire State have not been established as soil-conservation districts. Wisconsin has 39 locally organized watershed associations, and legislation has been introduced in our State legislature to permit wide utilization of the provisions of Public Law 566, the Watershed protection and Flood Prevention Act. One contract already has been let for construction of two floodwater detention structures in the Kickapoo Valley, with a third dam under consideration.

Mr. Schweers' report for 1954 follows:

DEPARTMENT OF AGRICULTURE,
SOIL CONSERVATION SERVICE,
Madison, Wis., May 2, 1955.

To: Soil-conservation district supervisors.
From: M. F. Schweers, State conservationist.
Subject: Acknowledgment of your 1954 soil-conservation district annual reports.

"Accuse not nature,
She has done her part.
Do thou but thine."
—*Milton.*

The above bit of poetic philosophy appears in the 1954 report for the Door County Soil Conservation District. In very simple language it portrays a situation and tenders a challenge. When all farm families "use each acre of land within its capabilities and treat it according to its needs for protection and improvement," then we will have done our part.

THE 1954 REPORTS RATE EXCELLENT

We are adhering to our custom of past years by issuing a single letter to acknowl-

edge the fine annual statements received from your and the other 66 soil-conservation districts of Wisconsin. Each year they get better.

We derived a great deal of satisfaction in reading your interesting and informative reports. It was gratifying to note the large number that were mimeographed. We sincerely hope that everyone who received a copy of your annual message enjoyed and got as much out of it as we did.

ACCOMPLISHMENTS

During 1954 much was said and a lot was written about the drought-stricken areas of the Nation. Wisconsin, fortunately, had above average rainfall which created soil conditions that were not conducive to effective layout of some soil-conservation practices.

Construction of waterways, terraces, diversions, and open ditches, normally built with heavy and farm-owned equipment, was virtually at a standstill for weeks at a time. In many soil-conservation districts 20 to 30 miles of lines were surveyed and staked in hopeful anticipation of good construction weather. Unfortunately, it never materialized. However, amounts of other established practices not requiring equipment were generally up to or above par. This latter appraisal also applies to other activities such as providing assistance to farm families in planning, servicing, etc.

In the final analysis, we, too, are well pleased with overall production in Wisconsin's 67 soil-conservation districts in 1954. The following table shows some of last year's accomplishments, total attainments to December 31, and the percent the past year's work is of the total.

Activity	Unit	1954 accomplishment	Total accomplished to Dec. 31, 1954	1954 accomplishment as percent of total
SCD cooperators	Number	4,193	33,592	12.4
Soil surveys	Acre	527,079	10,951,698	4.8
Tree planting	do	2,681	26,657	10.0
Improvement cutting	do	4,069	74,932	5.4
Reforestation, natural	do	12,942	199,453	6.4
Wildlife area improvement	do	844	11,749	7.1
Pasture renovation	do	11,950	122,038	9.7
Contour farming	do	5,987	132,444	4.5
Contour stripcropping	do	63,263	738,097	8.5
Wind stripcropping	do	3,215	5,535	58.0
Waterways	do	565	5,666	10.0
Terracing	Mile	228	2,773	8.2
Diversions	do	163	1,072	15.2
Drainage	Acre	10,236	98,365	10.4
Closed drains	Mile	158	1,168	13.5
Open drains	do	384	2,805	13.6
Spoilbank leveling	Cubic yard	244,327	1,621,430	15.1
Ponds	Number	37	164	22.5
Concrete structures	do	18	257	7.0

The Service does not maintain detailed records on such items as desirable land-use conversions; increased farmer purchases of needed liming and fertilizing materials; improved rotations, etc. However, these basic factors are considered while assisting farm families in developing and carrying out their conservation plans. To do this job in 1954 Service personnel made nearly 22,900 personal calls on soil-conservation district cooperators.

The Service also assisted district governing bodies and collaborated with the Agricultural Extension Service and the State soil-conservation committee in planning for and carrying out educational and informational programs. We do not have data on the extent of these activities for the year.

AGRICULTURAL CONSERVATION PROGRAM

Generally speaking, comments contained in your reports indicate that the ACP was a contributing factor to increasing interest in the adoption of soil and water conservation practices.

County agricultural stabilization and conservation committees transferred more than $107,000 to the Soil Conservation Service under the SCS–ACP 5-percent program. Of this amount the Service earned just under $97,000. These funds were utilized by us in employing additional part-time aids during the spring and fall layout seasons and in determining need and practicability for and certification of ACP practices.

More than 25,000 referrals were turned over to the SCS by county ASC committees. Nearly 24,000 were given service. Over 5,700 of the approved practices were satisfactorily completed. The accomplishments made under this joint program are included in the table appearing in the previous section of this letter. About 12,000 of the referrals involved farms of soil conservation district cooperators. According to what you say many of the other farmers have since indicated an interest in farm conservation plans and will ultimately become district cooperators.

WATERSHED ACTIVITIES

Many of your reports made reference to active watershed associations. Records show that there are now 39 such groups in the State, varying in age from 0 to 9 years.

Brevity will not permit quoting many of the favorable comments made about these organizations. "Local planning," "local leadership," "whole family participation," "social and economic advantages," etc., are among the remarks included in your reports or conveyed to us in contacts with enthusiastic association members. A statement appearing in the LaCrosse County Soil Conservation District report presents an interesting and somewhat different type of story, and it is repeated, as follows:

"This Bohemian Valley Watershed Association was organized in the fall of 1952. Its present membership is over 90. In 1954 the members voted to construct a new clubhouse to be used jointly by the association and the local 4–H Club as a meeting place and picnic grounds. Members furnished all the lumber and labor for construction. The Wisconsin Conservation Department is preparing to launch a full-scale stream improvement demonstration in the valley this spring."

The Sauk County Soil Conservation District still leads the State in the number of associations with seven. The officers of all the organizations have formed a districtwide council. This body meets periodically to exchange ideas and experiences. Its members will also develop proposals for presentation and consideration by local associations for improving programs and expanding activities in each of the organizations.

Many groups visited the Kickapoo River pilot watershed protection project during 1954. Weather was bad for construction during the past fall and only about 13 percent of the work on the two water detention structures has been completed. It is hoped that these dams will be finished by midsummer.

All soil conservation district governing bodies received copies of Public Law 566. This is the Watershed Protection and Flood Prevention Act passed by the 1954 Congress. We understand that 2 or 3 watershed organizations are in the process of preparing applications for planning assistance under this program.

In carrying out the cooperative program provided for in Public Law 566 there are a number of responsibilities that must be assumed by local people. In order to fulfill these obligations some questions have been raised as to whether adequate powers are authorized under current State laws. Your State soil conservation committee has taken steps to secure interpretations of pertinent existing statutes. The committee is continuing to study needs for new legislation and will make judicious recommendations thereon.

COOPERATION

Every one of your annual reports contain complimentary references to friendly and effective relationships among all people interested in agriculture in your respective soil conservation districts.

You commended the Extension Service and the State soil conservation committee for their leadership in carrying out the educational program of your districts. Special references were made to the successful air tours conducted in 10 of the districts in 1954. These were carried out under the able leadership of Extension Soil Conservationist O. R. Zeasman and the Wisconsin Aeronautical Commission. According to Mr. Zeasman, 571 people participated in last year's flights. The Extension soil conservationist highly recommends this method of selling the need for soil conservation.

According to your reports a number of Extension Service home agents are acquainting the womenfolk with the seriousness of erosion and what can be gained by following a sound soil- and water-conservation program. One of the most interesting remarks along this line appeared in the Rusk County report, as follows:

"Former Home Agent Marion Wagner was an ardent advocate of soil conservation. Realizing that the attitudes of the farm wife often influences farm plans and farm action, she did her utmost in the course of her demonstrations to bring in the wise use of soil. Since the efficiency and comfort of the farm home depend on farm income, the home agent was interested in a program that would increase and maintain farm production."

You expressed appreciation to the State committee for planning and holding the 1954 State meeting for supervisors. You say these annual conferences are very much worth while.

According to your reports the Farmers' Home Administration is encouraging its clients to become SCD cooperators. The Grant County supervisors' report mentions that the first FHA soil- and water-conservation loan in Wisconsin was made in their district.

You compliment the Wisconsin Conservation Department for their contribution to the forestry aspects of your district's programs. Most reports indicate a great need for additional planting stock.

Many vocational agriculture teachers and veteran on-the-farm trainers consider soil conservation as basic in their education and training activities. And they are evidently doing something about it.

A previous reference has been made to County ASC committees. They have participated in your planning deliberations and provided funds to complement your SCS staff.

We greatly appreciate your very fine remarks concerning contributions made by SCS field personnel. You credit the Service with

assisting farm families in the development and application of farm conservation plans and in carrying out other assigned functions in a satisfactory manner.

County highway committees and commissioners are cited for their fine cooperation in making motor patrols and other heavy equipment available to district cooperators at reasonable rates. Many township motor patrols are being rented out on the same basis. Cooperation has been so fine that in one northeastern Wisconsin district eight motor patrols were in operation on a single day.

Newspapers, radio, and TV are evidently giving excellent support to your soil conservation district activities.

Quite a number of county bankers' associations are doing outstanding jobs in supporting the soil- and water-conservation movement. Many banks have purchased tree planters. One has bought a land leveler. All of these units are made available to farmers in the districts at very nominal rental rates.

One of the outstanding events of the year was staged by the Waupaca County Bankers' Association. A dinner was served and certificates presented to the outstanding soil conservation farm couple from each of the 22 townships. Selection of these farm couples was made by local farmers who inspected the farms of nominees in townships other than their own. The judges received no remuneration, but as one of them said, "I put in quite a bit of time for which I was well repaid by learning about new things I could put to use on my own farm."

YOUTH EDUCATION

Youth education in soil- and water-conservation has a high rating in most district work plans. We still believe Wisconsin ranks second to none in the field of youth training. In most soil-conservation districts, county superintendents of schools have done an outstanding job in having courses on conservation included in the rural-school curriculum. We too commend these important members of soil-conservation district-governing bodies on the fine program they are carrying out.

Civic groups of Wausau, Wisconsin Rapids-Marshfield, and Monroe collaborated with district supervisors, agency representatives, and county superintendent of schools in sponsoring Rural Youth Conservation Days. Fifth to eighth grade rural-school students take over the towns for a day. They compete in essay, speaking, and judging contests. They have a parade, hear talks, and are provided with ice cream and milk by the civic groups. These days are really fun for everyone and they're educational too.

Under the capable leadership of I. O. Hembre, executive secretary for the State soil conservation committee, advances are continually being made in emphasizing and improving conservation courses for teachers, both in secondary schools and on the job. Properly informed teachers are essential to putting over the conservation story as well as any other subject.

Each year more and more of your reports point to increased 4-H Club enrollment in conservation projects. Vocational agriculture teachers have done an outstanding job in their land-judging program. FFA clubs have participated in various activities.

According to a number of your reports the 1954 Boy Scout soil conservation program was quite successful. Extension Service and SCS personnel worked with scout leaders in improving camp sites, conducting field trips and presenting talks to Boy Scout troops.

GOVERNING BODY ACTIVITIES

Your remarks concerning activities being carried out by you supervisors are very interesting. Most governing bodies meet monthly and plan their programs in advance. Evidently your field trips have been quite profitable in guiding your activities. Your sponsorship of plowing matches, demonstrations and meetings have been very fruitful. Quite a number of governing bodies held highly successful recognition banquets for SCD cooperators.

A number of county boards have appropriated funds to district governing bodies. Amounts varied from one up to several hundred dollars. This permits you to do some of the things requiring financing that you would be unable to do otherwise.

According to your reports the semiannual area meetings of supervisors are very much worthwhile. We attended some. We too believe that the exchange of ideas and experiences has been conducive to improving district administration.

The Buffalo County Soil Conservation District Governing Body won first place in the 1953–54 Goodyear soil conservation awards program. The Marathon County SCD was runner-up. We understand that about 35 governing bodies have entered the 1954–55 contest.

The Vernon County district governing body is featured in the Allis Chalmers' movie, Return to Eden. This film pays tribute to the "unheralded achievements of SCD supervisors." The Midwest premiere showing of this film took place at Viroqua on March 25 of this year.

THE FUTURE

The future of conservation in Wisconsin looks good. Your work plans for 1955 are ambitious and commendable. It is inspiring to read them. You are apparently using your SCS men to maximum advantage.

Like Ol' Man River, interest in soil conservation keeps rollin' along. As more and more district cooperators put essential practices to work on their farms, more and more farmers observe their favorable effects on both conservation and incomes. The success of the program is directly dependent upon farmer understanding, enthusiasm, and action. And, as we all appreciate, major credit for soil and water conservation gains goes to the people who till the soil.

In mentioning increased interest we support the above statement with some evidence. According to your estimated workload analyses, it would take over 240 man-years of time to adequately handle the anticipated requests for SCS–SCD farm planning and application assistance during 1955.

On the basis of our current budget we shall be able to make available about 147 man-years. This will mean that the Service will satisfy about 61 percent of your indicated requirements. According to your remarks, a very high percentage of the requests for layout will be satisfied. Planning will suffer, so you say.

We can only deduce from your reports, then, that the program in Wisconsin can be nothing but a success if we all continue to work together harmoniously and effectively as we have done in past years.

THANK YOU

Extending personal regards and thanking you for the many courtesies and fine cooperation you have extended to all of us in the Soil Conservation Service, I am

Sincerely yours,

M. F. SCHWEERS,
State Conservationist.

Price Supports for Basic Commodities

SPEECH

OF

HON. HAROLD D. COOLEY

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 9, 1955

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 12) to amend the Agricultural Act of 1949, as amended, with respect to price supports for basic commodities.

The CHAIRMAN. The Chair recognizes the gentleman from North Carolina [Mr. COOLEY].

Mr. COOLEY. Mr. Chairman, this great debate is now about to be ended. Soon the last word will be spoken, and the vote will be taken. We are coming to the "showdown." All of us must soon stand up and be counted. As chairman of the committee, I think it only appropriate that I should say to you now that when we go back into the House I shall demand a separate vote on the amendment offered by my colleague and friend from Pennsylvania, Congressman GREEN. In this debate the amendment has been referred to as the peanut amendment. I have cherished the friendship of my colleague, BILL GREEN, for many years. I do not doubt for one moment his great sincerity, but I believe that even he now realizes that the friends he had on yesterday will leave him and desert him today, and will vote to recommit the bill when the roll is called on the motion to recommit. The Republican leadership voted for the Green amendment, and many Members voted for the amendment, knowing at the very time they cast their votes that they intended, even if the amendment were adopted, to vote to recommit the bill. This was the ultimate objective sought to be accomplished by the Republican leadership. It was a smart political maneuver to prevent an outright vote on the real proposition which is now presented to the House. The Republican leadership outsmarted us a year ago when they pulled a "rabbit out of the hat," and offered the 82½ percent price-support amendment. That was clearly a compromise, but even that amendment was an outright repudiation of their own Secretary of Agriculture, Mr. Benson. This time the Republican leadership is trying desperately to prevent a true vote on the real issue.

Today we have witnessed demonstrations of real statesmanship. Yesterday the Republican leadership sought to divide us. Yesterday we were divided, but today we know the truth, and we understand the ulterior purposes which influenced the vote which was taken in this House yesterday afternoon. I want to compliment Congressman ABE MULTER, of New York, who in great sincerity supported and spoke for and urged the adoption of the Green amendment when it was presented to us yesterday. When Congressman MULTER realized just what had happened, and when he understood the ultimate objective sought to be accomplished, he took the floor today for the purpose of testing the sincerity of Members who had voted for the Green amendment in which he was interested. Congressman MULTER looked the Republican leadership straight in the eye, and put Members to the test of real sincerity. Congressman MULTER said:

How many of you who voted for the Green amendment will now stand up and say that you will vote for the passage of the bill as amended?

Not a single Republican stood, nor did a single Republican indicate that he would vote for the passage of the bill, even after the Green amendment had been adopted. Perhaps Congressman MULTER was slightly out of order in subjecting the Republican Members to this test of sincerity. He had no right to demand Members of the House to respond to his suggestion, but certainly no one would deny him the right to invite Members of the minority to indicate their views on the important proposition he was discussing. After Congressman MULTER realized that an effort would be made to recommit the bill, even after the Green amendment had been adopted, he had the courage and the statesmanship to stand on the floor of this House, and to urge the defeat of the amendment, because he was unwilling to be used as an instrumentality to bring about the destruction and the repeal of the farm program which has meant so much to the welfare and the happiness of all the people of this great country.

Mr. Chairman, I also want to compliment and pay brief tribute to our able and distinguished colleague, CARL ANDERSEN of Minnesota. CARL ANDERSEN stood like the rock of Gibraltar. He could not be moved, nor could he be shaken, nor did he bow down under the lash of the whip of partisan politics. He stood here like a man, and he spoke his own mind, and he reflected the views of his honest heart, and he labored in behalf of the people whom he has had the honor to represent. CARL ANDERSEN is a man of conviction and courage, and a great champion of the farmers of America. His constitutents have a just right to take great pride in the man that they have sent here to represent them in this the greatest lawmaking body of the world.

As I said when this great debate started, this is the time for facts and figure and not for fraud, fallacy, or fancy. This is the time when the people of America should know the truth. This is the time for forthright and fearless action.

To lead the end users of peanuts—the manufacturers of candy—to believe that great relief was about to be afforded them was nothing more nor less than fiction and fancy—and now the cruel truth they must know.

If the peanut amendment remains in the bill, obviously the bill will be recommitted. If the bill is recommitted, the end users of peanuts will find themselves just exactly where they were before this great fight and effort in their behalf was undertaken. Yes; they will be right back where they were night before last. You have won only a temporary victory. As my colleague from Mississippi, TOM ABERNETHY, has said to me, the Republican leadership gave you a lollipop yesterday, but they will take it away from you today.

Let us be realistic. Let us all be fearless and fair, and face this issue. By the adoption of the peanut amendment, you Republicans have repudiated the President and his Secretary of Agriculture, neither of whom have advocated the abandonment of the program which provides acreage allotments and marketing quotas and price supports for the producers of peanuts. The vote on the peanut amendment is just as vital as its adoption was vicious. The peanut amendment must be defeated. This bill must not be recommitted. Let us come to the final test and to the showdown, and let us here and now say to the country we are either for the mandatory 90 percent of parity price support program, or we are in favor of the slideaway, hideaway, giveaway program, which is the only program of the present administration.

Mr. Chairman, I cannot permit this great debate to come to an end until I have paid at least a brief tribute to CARL ALBERT, of Oklahoma, the Democratic whip. I have served in Congress for 21 years, and for about 15 years of that time I was an assistant Democratic whip. I have served under many whips, and I want to say to this House, and especially to the Democratic Members, that CARL ALBERT is one of the very best whips the Democratic Party has ever had. No man could have worked more diligently, more faithfully, more constantly than CARL ALBERT has in trying to present to the Members of this House the views of the party of which he is a very vital part. CARL ALBERT is a great American—a great citizen and a great champion of the farmers of his district, his State, and his Nation. He is courageous, he is fearless, he is honest, and he is worthy of every confidence that the people of his district could ever entrust into his care. His heart and his soul are devoted to the welfare of farmers and ultimately to the happiness of the people of this great Nation.

The showdown is at hand—the chips are down—and I am ready for the rollcall.

Eisenhower Administration Promotes Free Enterprise

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1955

Mr. McDONOUGH. Mr. Speaker, I have consistently advocated that the Federal Government get out of competition with private industry in order to preserve and promote free enterprise. It is unfair to private industry and too costly to the American taxpayer for the Government to produce anything that private industry can produce. The cumbersome and complex redtape and tax-free privilege of the Federal Government make the competition unfair to private industry.

The Eisenhower administration has taken the lead and made great progress in getting the Federal Government out of competitive business with private industry.

The following article from the U. S. News & World Report reveals some of the progress that has been made up to date:

UNITED STATES VERSUS PRIVATE INDUSTRY: THE GOVERNMENT IS GETTING OUT OF BUSINESS

As part of his campaign platform, Dwight Eisenhower promised to take the Government out of competition with private enterprise wherever possible. Since the Federal Government was running some 100 types of business, in which it had sunk $40 billion (Time, July 13, 1953), keeping this promise has turned out to be a big order. Nevertheless, the administration has chalked up notable progress. Last week, in its biggest single step to eliminate competition with private business, the Government sold 24 of its synthetic-rubber facilities. Thus, with a pen stroke, it turned over to 15 companies virtually all of a $310 million industry, and netted a $39 million profit.

The administration has also revived last year's plan to get the Government out of the business of running two atom cities—Oak Ridge, Tenn., and Richland, Wash. At the request of the Atomic Energy Commission, the Democratic heads of the Joint Congressional Committee on Atomic Energy last week introduced bills to end Government ownership and operation of Oak Ridge and Richland. The responsibility for schools, streets, etc., would be handed over to local residents, eventually saving the Federal Government upwards of $1,500,000 yearly.

In scores of other nooks and crannies of Government, less dramatic ways have been found to eliminate competition with private business. The Defense Department has shut down 24 scrap-metal operations, 7 bakeries, 9 laundries, a chain factory, a caustic-soda plant, 4 cement-mixing plants, a tire-retreading plant, 2 garden nurseries, and 4 ice plants. The Navy, which has been manufacturing uniforms for years, has closed its clothing factory. It is bringing in more private yards to overhaul its ships, has boosted such contracts from $34 million in 1953 to $82 million in fiscal 1955.

Some time this year the Navy will close the coffee-roasting plants it started in 1858 because it was not satisfied with the quality or cost of commercial coffee. It will put on a standby basis the Boston Ropewalk, a cordage factory it opened in 1834 because good rope was not available commercially. The Air Force is now contracting with private businessmen for 50 percent of all maintenance of engines, radios, etc., versus 21 percent in 1952. Government motor pools are being dried up; in San Antonio the Fourth Army has started using public taxis and buses for most official business trips.

The General Services Administration has found new ways to handle its chores with the aid of private-business men. Suppliers now deliver fuel oil and coal directly to users instead of to Government dumps, thereby eliminating extra freight and handling charges. GSA also hired commercial truckers to distribute supplies from central depots to scattered Federal agencies; found it worked so well that it is now using them in more than half the Nation. To help the Government sell a $90-million chunk of its surplus real estate, GSA called in private brokers to find clients and to close sales. Elsewhere the Government has gotten rid of a whole grab bag of business activities it got into because nobody else could or would. It liquidated the Island Trading Company, a copra and trading firm (1954 sales, $3 million), set up by United States occupation officials in the Southwest Pacific, at a net profit to the United States of $1,100,000. In the Virgin Islands the Government sold its rum distillery (Government House brand) and its famed resort hotel, Bluebeard's Castle.

Despite this progress, the get-out-of-business program still has far to go, against plenty of opposition. Government agencies, the Hoover Commission recently found, are almost impossible to kill. "REA is an example. * * * Although more than 90 percent

of the Nation's farms are electrified, the sponsors of the REA program foresee no end to the need for ever-increasing amounts of Government loans for rural electrification." Many another agency is dragging its feet. Probably the worst offenders are in the Defense Department, where empire builders try to justify their activities by crying "national security."

Actually, many "defense" operations bear little or no relation to national security; for example, the Federal Government still owns and operates about 168 ice-cream plants in 36 States; 23 in California alone. Such nonessential activities drain off men and money that could better be used for the defense of the Nation. But cutting back almost any Government activity brings protests from Capitol Hill. For example, Massachusetts' Senator JOHN F. KENNEDY has already protested to the Navy against shutting down the Ropewalk on the grounds that it is necessary to the "national interest."

In the huge, amorphous layers of Government not even the experts can calculate how much money has been saved to date by the get-out-of-business campaign. But the most encouraging thing to businessmen is less the money savings than the fact that the long-time trend to get the Government into business has finally been reversed.

Statement of George J. Burger on the Subject of Tires, Batteries, and Accessories Distribution

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1955

Mr. METCALF. Mr. Speaker, hundreds of independent filling-station operators everywhere in the United States will be interested in the statement of Mr. George J. Burger, vice president of the National Federation of Independent Business, before the Small Business Committee. Mr. Burger discussed the distribution of tires, batteries, and accessories. His complete statement follows:

I am George J. Burger, vice president in charge of legislative activities, National Federation of Independent Business, 740 Washington Building, Washington, D. C. Our national headquarters are located in Burlingame, Calif. We also maintain division offices at New York, Cincinnati, and Chicago.

For the information of the committee, we have in the field approximately 200 or more sales representatives who are in personal daily contact with small business nationwide. Through this we are able to get the factual information from the grassroots.

In their daily visits it goes without question that they must be in contact with all independent factors in the automotive servicing field.

Further, I have been an independent member of the automotive industry for close to 50 years, and through this it gives me the full knowledge of the basic serious problems facing independent factors in that industry.

It will be noted in a report issued by the Senate Small Business Committee in 1941, Senate Committee Print No. 3 Small Business Problems of the Tire and Rubber Manufacturers and Retailers, from which report I am quoting a section which applies to the subject matter before this committee, namely, the control exercised by the major oil and rubber companies over the independent trade. Such report, at the suggestion of the committee, originated with the writer as a result of a national survey. I quote:

"MAJOR RUBBER MANUFACTURER-MAJOR OIL COMPANY TIE-UPS

"Despite the fact that the major petroleum marketers proclaim their stations are largely operated by independent businessmen it is not difficult to discover that so far as having the right to select a brand of tires is concerned this independence is in reality nonexistent. Dealers admit that the oil companies do not go so far as to send out any letter or written order demanding that the leased stations refrain from handling any specific line of tires. But, as one dealer wrote: 'Here is what happens to those leased stations. If they want a man badly enough, if he is a good boy, stands on his hind legs, jumps through the hoop, and rolls over, they charge him, for example, from $50 to $100 a month for his lease. But Lord help him if he attempts to display his independence.' In that event they say, 'All right, you handle any lines of tires, batteries, or tubes you want, but from now on your rent will be $350 per month. So take your choice'." Other dealers report that in certain instances they had definite proof of threats to cancel leases unless unwanted brands of tires are removed immediately. The means of keeping the leased-station operators in line seems chiefly to be threats to jump rents or cancel leases.

Additional evidence of the widespread control exercised by the four major tire manufacturers through their major oil company connections over the tire-through-oil-station distributor setup, is derived from the following: There was an average of 274 filling stations selling tires and tubes in each dealer's locality as reported in a recent survey conducted by the writer. Of this number, on the average, only 60, or about 22 percent, were said to be free to buy their tire and tube requirements where they wanted, while 214, or approximately 78 percent, were not free.

Further proof of the extensive control which the 4 major tire companies wield over the filling-station field through their exclusive supplying contracts is found in a compilation of the relationships reported. Of the 15 tire-oil company hook-ups the major tire manufacturers control 13, and 2 smaller companies, 1 each.

The following are the reported distributor relationships existing between the major tire and major oil companies: Goodrich—Texas, Gulf, Magnolia; Firestone—Union, Texas, Magnolia; Goodyear—Richfield, Shell, Gulf, Sinclair and Magnolia; and United States—General Petroleum, American, Magnolia, Sun Oil, and Socony Vacuum. Of course it must not be forgotten that the last named of these tire companies is one of the greatest, if not the greatest, private brand-for-oil company manufacturer in the industry, producing Atlas tires for Standard Oil of New Jersey and the Humble Oil Co., as well as Acme tires for the Cities Service Stations.

Special arrangements exist: When asked whether or not they believe there were any special arrangements that the major petroleum companies had with the major tire manufacturers in the matter of deferred payments on tires and tubes sold to the consumer through leased or owned filling stations, dealers cited the credit cards which are accepted only on approved brands of tires. Whether or not the oil company carried the burden of the credit assumed on these sales or whether the tire manufacturers did was not made clear. However, these cards have a double edged effect; in the first place they tend to discourage consumers from buying any other than the approved brand of tires from stations they may patronize and, in the second place, they make it most attractive for leased station operators to handle the line of tires specified, thereby discouraging buying of other makes of tires. In some sections it was reported that certain rubber manufacturers had set up full budget departments on some of their leased station premises.

"The Federal Trade Commission, in a report prepared for the temporary National Economic Committee, stated that 'investigations and complaints brought by the Federal Trade Commission have gone a long way toward eliminating the practice of tire companies of granting over-riding commissions to the oil companies for permission to sell their stations tires and tubes, dealers feel that the major oil producers must still be receiving a quid pro quo for their efforts to induce their stations to handle only acceptable lines.'

"One dealer says he has actual knowledge that one major tire manufacturer had, until 6 months ago, a petroleum company connection and allowed that oil concern a 10-percent cutback for the privilege of selling its retail outlets. Other dealers report that mutual agreements exist whereby the tire companies are able to purchase their oil and gasoline requirements at prices lower than those accorded oil station operators. Still others report, as proof of the existence of overriding arrangements, that where the rubber company sells direct to leased gas stations the billing is done on industry program, but where the oil company bills its station lessors it receives dealer prices, and the rubber company pays its dealers the delivery commissions."

Our observation is that the situation has not improved, but on the other hand, the condition is even more serious today than it was at the time of that report in 1941.

It is interesting to note that during the period from 1941 to the present time the findings in the overall report have never been challenged as being incorrect.

It is my belief that at the very moment the Federal Trade Commission must be cognizant of this control exercised by major rubber-oil companies in what appears to be a definite violation of the antitrust laws.

Finally, there is only one correction which should be made, and such recommendation should emanate from this committee, namely, the complete divorcement of producers and manufacturers operating their own establishments in the retail field. In no other way can there be a future, or an incentive for independents to carry on their rightful business in the automotive servicing field. (This would definitely apply to the oil producers and the rubber-tire manufacturers.)

Contracts Between Rural Electric Cooperatives and the Government

EXTENSION OF REMARKS
OF
HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1955

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include resolutions adopted on May 2, 1955, by the Rural Electrification Committee of the Missouri House of Representatives, and the Agriculture Committee of the Missouri State Senate.

I voice my strongest support of these resolutions and respectfully urge that the existing contracts between the rural electric cooperatives and the United States Government, acting through the

Southwestern Power Admiinstration, be made operative on a permanent basis.

The resolutions follow:

MISSOURI HOUSE OF REPRESENTATIVES,
Jefferson City, May 2, 1955.

To the Congress of the United States:

We, the undersigned members of the rural electrification committee of the Missouri House of Representatives, do hereby approve the following resolution:

Whereas low-cost electric power rates are most vital to all farm families in Missouri and the Nation, and

Whereas there exists contracts between the rural electric cooperatives in Missouri and the United States Government, acting through the Southwestern Power Administration, that will provide the means for making available to the rural people of Missouri the lowest electric power rates possible, and

Whereas, the United States Congress can make these contracts operative on a permanent basis without appropriating any funds whatsoever, as these contracts are completely self-sustaining: Now, therefore, be it

Resolved, That the undersigned members of the Rural Electrification Committee of the Missouri State Legislature support activation of the existing contracts between the rural electric cooperatives and the Government; be it further

Resolved, That copies of this resolution be sent to Members of the United States Congress so that the wishes of this Committee will be made known.

Charles W. Foley, Chairman; C. D. Hamilton, I. W. Henson, Wesley McMurry, Claude E. Duckett, M. D., Gordon S. Summers, J. H. Kramer, Ralph Wigfield, Shandy Stewart, Roger E. Kirchner, Wm. R. Sherman, G. H. Simmons, Frank X. Siebert, Ralph J. Ayers, D. M. Overstreet, Lee Aaron Bachler, Members.

MISSOURI SENATE,
Jefferson City, May 2, 1955.

To the Congress of the United States:

We, the undersigned members of the agriculture committee of the Missouri State Senate, do hereby approve the following resolution:

Whereas low cost electric power rates are absolutely necessary and essential to the farmers of Missouri; and

Whereas the rural electric cooperatives, with the help and assistance of the Federal Government, have developed plans for the coordinated use of hydroelectric power generated at Government-built dams that will provide the means for making available to the rural people of Missouri the lowest electric power rates possible, without the appropriation of any funds whatsoever; and

Whereas in June 1953 the District Court, Washington, D. C., ruled that the hydroelectric contracts executed in 1950 between the rural electric cooperatives and the United States Government, acting through the Southwestern Power Administration, were legal and binding in every way; and

Whereas on April 28, 1955, the United States Court of Appeals, when considering the foregoing case, issued the following statement when ordering that "the case be remanded to the District Court with directions to dismiss the complaint":

"It is indisputable that the essence of plaintiffs' complaint is the competition which they will suffer if the Government's contracts are carried out. They can claim no other interest or injury. The defendants have not undertaken to regulate them in any way. They have not been ordered to abandon any of their activities or to forego the expansion programs planned by them. They have not been subjected to any obligation or duty. Their sole interest and objective is to eliminate the competition which they fear. Controlling decisions of the Supreme Court, dealing with other electric power contracts of the Federal Government, establish that an interest of this kind is not sufficient to enable them to sue to enjoin execution of the power contracts and program of the Government." Now, therefore, be it

Resolved, That the undersigned members of the agriculture committee of the Missouri State Senate wholeheartedly support restoration of the existing contracts between the rural electric cooperatives and the Government; be it further

Resolved, That copies of this resolution be sent to Members of the United States Congress.

George A. Spencer, Chairman; William M. Quinn, Leo J. Rozier, Charles A. Witte, J. F. Patterson, John W. Noble, Jack C. Jones, Noel Cox, James P. Kelly, Clayton W. Allen, Members.

Rockefeller Tells Industrialists of Arkansas' Potential Qualities

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1955

Mr. GATHINGS. Mr. Speaker, the great State of Arkansas is actively engaged in adding new industries to its economy, and with the building of additional sources of power in the great Mid-south this program of industrialization will accelerate.

In this connection, Mr. Winthrop Rockefeller, chairman of Arkansas' new Industrial Development Commission, visited New York City where he gave the story of industrial Arkansas to leading financial circles and manufacturing organizations. The news story of this action which appeared in the columns of the Forrest City, Ark., Times Herald is especially interesting to all who desire a sound economy in our Nation, and under leave to extend my remarks, I wish to include the article as it appeared in the April 29 issue of this fine eastern Arkansas newspaper:

ROCKEFELLER TELLS INDUSTRIALISTS OF ARKANSAS POTENTIAL QUALITIES

NEW YORK, April 28.—Winthrop Rockefeller told a group of eastern industrialists and investment bankers here today that Arkansas soon was going to move ahead economically and industrially in a remarkable and interesting manner.

Rockefeller, chairman of the new Arkansas Industrial Development Commission, declared that his adopted State's labor resources had highly attractive qualities that "are too darned hard to find in other places."

"Our people in Arkansas," he said, "have a pride of craftsmanship and they know the meaning of a day's work, too."

He said he had met Arkansas workmen who were willing to travel 40 miles on the off chance that they could get a day's labor, rather than walk across the street to the courthouse for a handout.

Rockefeller flew here from Little Rock to pinch-hit for Governor Faubus as the principal speaker at a luncheon tendered by Rockefeller's younger brother David and former Arkansan Rolland Irvine, vice presidents of the Chase-Manhattan Bank.

Mr. Faubus, who was to have been guest of honor, failed to make it. He sent his regrets from Las Vegas, Nev., where he went to view an atomic-bomb test.

Rockefeller, whose family name and connections make even the most cold-blooded man in the New York money market run a temperature, told his brother and his brother's Wall Street associates that "we need some capital in Arkansas."

He disclosed that David Rockefeller and another brother, Lawrence, had visited Arkansas and were impressed with what they had seen.

Winthrop Rockefeller migrated to Arkansas 2 years ago and has taken up residence atop Petit Jean Mountain where he maintains a model cattle breeding farm.

The speaker, introduced by his younger brother as a farmer, cited Booneville as an example of Arkansas' native enterprise and determination to lift the State out of industrial doldrums. He related that when the Ace Comb Co. examined the community as a site for its new plant it was found that there wasn't enough water.

"The people of that community of about 600 families raised $92,000 to build a pipeline to supply that water," he said. "You'll find that all over Arkansas."

"It is a great tragedy," he said, "that more people who haven't come to Arkansas and seen it, don't come down and see it. The hospitality there is real. It also is infectious. I'm going to have 2,500 people visit me at my place tomorrow."

The audience for his remarks included the financial writers of New York newspapers and press services, 9 executives of the Chase-Manhattan Bank, and 20 other manufacturing or investment executives.

Other Arkansans at the luncheon were Mr. Faubus' executive secretary, James L. Bland; Jack Pickens, chairman of the Arkansas Geological and Conservation Commission; Dabbs Sullivan, Little Rock investment dealer; W. E. Darby and Tom F. Taylor, Jr., of Little Rock, president and chairman of the board respectively of the National Old Line Life Insurance Co.; State Banking Commissioner Dick Simpson; and State Senator Jack Clark of Texarkana and Roy Riales of Mena. Another guest was John D. McCall, of Dallas, an investment banker who made the trip especially for the luncheon.

Mr. Faubus, whose staff has arranged a series of conferences for him with business and political figures in this area, is due in here tomorrow. He is to go to Washington Saturday night.

Kansas Common Sense Conquers Mental Illness

EXTENSION OF REMARKS
OF
HON. ERRETT P. SCRIVNER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1955

Mr. SCRIVNER. Mr. Speaker, as tragic as polio may be—as deadly as is cancer and heart ailments—mental illness is one of the costly human ailments that requires attention.

This fact has been recognized and talked about for years—but little or nothing done about it.

Kansas quit talking about these human tragedies and has done something about it—using their own money and common sense.

The following editorial in the Kansas City Star of May 6, 1955, tells part of the story:

RESTORING SICK MINDS

Statisticians tend to overwhelm us with figures on the growing national need for treating the mentally ill. Half the hospital beds are occupied by mental cases and more buildings, more beds, and huge appropriations will be necessary to meet this problem, the reports insist. These reports are, indeed, true, and constitute one of the Nation's more acute challenges.

A somewhat different picture emerges from Kansas, where dramatic results are capturing attention. Many, many times more patients are being admitted, but mental hospital populations are beginning to decline. The ratio of successful treatments is rising until officials now contend that nearly 4 out of 5 patients admitted in any 1 year can reasonably expect to go home within 12 months. Many return sooner. The State may have all the beds it needs. There is a mounting conviction that Kansas is doing one of the best jobs, if not the most successful job in the country, in this field.

What is this secret weapon for restoring sick minds? Experts agree that it is a combination of many things. Kansas placed its emphasis on staff rather than on buildings and beds. The program has wide popular support and adequate appropriations, but money alone will not do the job.

There is a national shortage of psychiatrists. With the counsel of Dr. Karl Menninger, Kansas set up a training hospital in Topeka to teach its own in 1952. That is now paying dividends. Eight psychiatrists now are serving under this program, gaining experience in Kansas hospitals, and the number soon will grow to fifteen. In addition, the University of Kansas School of Medicine is supplying senior students and residents to the State institutions. There is the closest cooperation between the State board of social welfare, the university, and the county welfare departments.

One thing more, and perhaps the most important, is apparent. Mental patients respond quickly to kindness and consideration. There is an abounding enthusiasm in all the institutions, from nurses and aids to top officials. It is pride in a job well done that radiates to the patients. Perhaps that is the real secret of the State's success.

In the near future further factual information will be given Congress about this program—a program that can well be followed by the Veterans Administration in lessening their load of neuropsychiatric cases—and the hundreds of millions of cost thereof.

Mining Claims on the Public Lands

EXTENSION OF REMARKS
OF
HON. CLIFTON (CLIFF) YOUNG
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 9, 1955

Mr. YOUNG. Mr. Speaker, there have recently been introduced in the House a number of bills that correct abuses of the mining laws on public lands. A proposal which has the strong support of the Interior and Agriculture Departments, the mining industry, and a number of conservationist groups has been introduced by four Members of the House, including myself.

This measure would—

First. Ban the location of mining claims for common varieties of sand, stone, gravel, pumice, pumicite, and cinders and make them subject to disposal by the United States under terms of the Materials Disposal Act. This provision is similar to the Regan bill in the 82d and 83rd Congresses, which had the endorsement of the Forest Service.

Second. As to mining claims hereafter located, it would, prior to patent—

(a) Prohibit use of the mining claims for any purpose other than prospecting, mining, processing, and related activities.

(b) Authorize the Federal Government to manage and dispose of the timber and forage, to manage the other surface resources—except mineral deposits subject to location under the mining laws—and to use the surface of the claim for these purposes or for access to adjacent land, without endangering or materially interfering with mining operations or related activities.

(c) Bar the mining claimant from removing or using the timber or other surface resources except to the extent required for mining or related activities. Any timber cutting by the mining claimant, other than that to provide clearance, must be done in accordance with sound principles of forest management.

Third. Provide an in rem procedure, similar to a quiet-title action, under which the Federal Government could expeditiously resolve title uncertainties resulting from the existence of abandoned, invalid, dormant, or unidentifiable mining claims, located prior to enactment of this measure, in any given area. This procedure calls for adequate notice to mining claimants in the area involved, and a local hearing to determine any rights to surface resources that may be asserted by claim holders. If a mining claimant fails to assert rights to surface resources, or if the rights he asserts are not upheld, or if he voluntarily waives such rights, the claim would thereafter have the same status as claims hereafter located, with the Government having the right to manage and dispose of the timber and forage and to manage other surface resources in accordance with sound principles of good management.

In the May issue of the Mining Congress Journal, there appears the following editorial pertaining to this measure which I would like to call to the attention of the House:

NOW WE'RE GETTING SOMEWHERE

(By John C. Fox, editor)

Recent introduction in the House and Senate of measures designed to curb abuses of the mining laws without disturbing their basic principles has the support of the Departments of Interior and Agriculture, the Bureau of the Budget, and many users of the public domain.

For many years a continuous barrage of adverse publicity has been leveled at abuses of existing mining laws. The general mining laws have been called archaic and outmoded. Actually, where the mining laws have been abused, the fault has largely lain in lax administration and not in the laws themselves.

Myopic critics have completely overlooked the part our mining laws played and are continuing to play in the development of the West, and in assuring a supply of vital raw materials for our growing civilian economy and the defense needs of our Nation, needs that are likely to continue high for the foreseeable future.

It is a basic principle of our mining laws that every American may enter on the public lands to search out mineral deposits. It is also a basic principle that every American having found evidence of mineralization has the right to locate a mining claim and furthermore, when he has invested time and money in the development of such claim to the point where it justifies the granting of a patent, he is entitled to a full "fee simple" title, with the security of tenure and the sound basis for future financing of mining operations which such a title provides.

Our Nation depends on mining for its supply of metals, minerals, and fuels. Mining, in turn, needs encouragement to explore for and develop mineral deposits. The principles upon which our mining laws were built supply the kind of incentive needed. The industry has never condoned the abuses that have provoked such floods of criticism. Instead it has sought means of curbing those abuses without abandoning the fundamental principles of existing law.

The proposed legislation is the product of intensive work by the Department of the Interior and the Department of Agriculture and conferences between representatives of those departments and of the mining industry. Its enactment would remove the primary causes of abuse of the mining laws and provide for multiple use of the surface of mining claims hereafter located, prior to patent. It would provide the Federal Government a means of clearing up title uncertainties resulting from the existence of abandoned, invalid, dormant, or unidentifiable mining claims, while protecting the claim-holder's basic rights. It would guarantee to the miner full rights for prospecting, development, and related activities and preserve his right, upon patent, to the same full title to his claim as under the existing mining law.

Enactment of the proposed legislation would solve a problem that has been before the Congress and the public for two decades. It should have the support of every mining man and every user of the public lands.

S. 106

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Monday, May 9, 1955

Mr. ADDONIZIO. Mr. Speaker, I should like to direct the attention of my colleagues to the following resolutions adopted by the Hellenic Post, No. 440, of the American Legion, Newark, N. J., with respect to S. 106. I trust that prompt attention will be given this measure which has been heartily endorsed by this and many other groups of patriotic citizens:

To the Congress and Senate of the United States of America:

At a regular meeting of the Hellenic Post, No. 440, of the American Legion, held Monday, May 2, 1955, at its headquarters situated at the Greek Community Center, 204-210 Clinton Avenue, Newark, N. J., it was

"*Resolved*, That—

"Whereas there are thousands of persons in the Armed Forces of the United States whose religion is of the Eastern Orthodox faith; and

"Whereas at the present time said Eastern Orthodox faith is not recognized by the Armed Forces and said persons are unable to avail themselves of the teachings of said faith while in active service; and

"Whereas there is legislation presently pending, in the United States Congress for the recognition of the Eastern Orthodox Church by the Armed Forces, said legislation being known as bill S. 106; and

"Whereas we, the members of this American Legion post, having heretofore served in the Armed Forces, knowing the need for such legislation, most urgently request the Congress, to favorably act on the aforesaid bill."

In witness whereof, said resolution is hereby signed by its duly authorized officers.

HELLENIC POST, NO. 440, AMERICAN LEGION,
DR. CHARLES CONIARIS,
Commander.
SPIRO P. POULOS, *Adjutant.*
Adjutant.

Veterans' Pensions

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. DAVIS of Georgia. Mr. Speaker, I am in receipt of a letter from Mr. W. B. Jones, adjutant of East Atlanta Post, No. 159, the American Legion, enclosing a copy of a resolution which was adopted on April 12 by East Atlanta Post of the American Legion and unanimously adopted by the fifth district executive committee of the American Legion, Department of Georgia, on April 18.

Mr. Jones has for many years devoted his efforts actively and consistently to the welfare of the veterans of all wars and to the interests of widows and orphans of our veterans.

I have previously discussed the subject matter of this resolution with Adjutant Jones and with Comdr. J. H. Drumm, of East Atlanta Post. This resolution deserves the attention and action of the House Veterans' Affairs Committee and of the Congress. I have referred this resolution to the chairman of the Veterans' Affairs Committee, Hon. OLIN E. TEAGUE. He has advised me that the resolution and its subject matter come within the jurisdiction of the Subcommittee on Compensation and Pension, and that at an appropriate time hearings will probably be held on House bill 644, to which the resolution refers, and related bills.

The resolution above referred to is as follows:

Whereas under Public Law 141, as amended, in gratitude for service rendered, the United States Congress adopted legislation authorizing payment of pension of $75 at the age of 65 years for any veteran serving the Armed Forces during war and after discharge becoming disabled; and

Whereas under Public Law 6956, 75th Congress, the United States Congress adopted legislation known as Retirement Act where an employee by having deducted from their salary each month sufficient tax to pay retirement when retirement age is reached, which amount of pension would be based on salary earned, during the time of employment which in some instances might pay $1,600 annually; and

Whereas under Public Law 357, the 82d Congress, legislation was adopted restricting to $1,400 per year for any single veteran and $2,700 for veteran with family; and

Whereas because of the high cost of living the $1,400 and $2,700, respectively, will scarcely pay for the absolute necessities of life and is imposing a burden on veterans now disabled: Therefore

Resolved, That members of East Atlanta Post, 159, through the 5th District Department of Georgia executive committee memorialize the George and national executive committees to petition the Veterans' Affairs Committee to release H. R. 644, which provides no payment if income exceeds $2,700 for single veterans and $4,000 for married veterans allowing the veteran to enjoy the benefit of his pension for service during war, and retirement which he has paid for through insurance as an investment; further

Resolved, That a copy of this resolution be furnished our Representative in Washington, to the department and national committees, and to the Honorable OLIN TEAGUE, Congressman from Texas, chairman of the House Veterans' Affairs Committee.

Unanimously adopted this 12th day of April 1955.

J. H. DRUMM,
Commander.
W. B. JONES,
Adjutant.

Unanimously adopted by the fifth district executive committee, American Legion, Department of Georgia, in regular session this 18th day of April 1955, representing 13,000 upward members.

JAMES H. PORTER,
District Commander.
CLAUDE W. PEEK,
District Adjutant.
Mrs. EMOLYN C. WALDREP,
District Secretary.

Refugees in Austria

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1955

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include a very interesting and informative letter written by Hon. Juraj Slavik, formerly Czechoslovak Ambassador to the United States, and now chairman of the Information Committee of the Council of Free Czechoslovakia, and appearing in the New York Times of May 8, 1955.

The views of Mr. Juraj are worthy of deep consideration, not only because of his knowledge of but because of his experience with the Communist mind.

The letter follows:

REFUGEES IN AUSTRIA—ELIMINATION OF CLAUSE IN TREATY STIPULATING REPARATION URGED

To the EDITOR OF THE NEW YORK TIMES:

Czechoslovak democratic political refugees, and all refugees from behind the Iron Curtain, are undoubtedly very grateful to the great American newspapers for unanimously challenging the Soviet attempt to liquidate in Austria the displaced persons and refugees who escaped Bolshevik persecution from their countries of origin.

We are confident that the western democratic powers cannot agree to such an inhuman procedure as is envisaged in article 16 of the Austrian state treaty. It is true, as you wrote, that there are no more than 4,500 to 6,000 political refugees from behind the Iron Curtain in Austria, the others being ethnic Germans to whom the Austrians say article 16 does not apply.

Even if there were only a few hundred political refugees enjoying asylum in Austria, and free Europe were to acquiesce in their delivery to Soviet and Communist vengeance, it would be a black spot on the conscience of the free and democratic countries.

PROPAGANDA VALUE

Why are the Soviets so interested in the return of a few hundred anti-Communist refugees? Would they help alleviate the manpower shortage? Certainly not. It would, however, be a great victory for Soviet propaganda. In recent weeks you have been writing very revealing articles about the so-called amnesty propaganda, showing how the Iron Curtain countries are trying to induce the refugees to return home. They have even sent stool pigeons to the West who are to return at a given moment to increase the number of those who, in their misery, succumbed to Communist temptations.

Article 16 would be a much surer way of gaining a decisive victory over the West in the cold war. Should this article be accepted by western diplomacy, the Voice of America, Radio Free Europe, BBC, and all the other means of spreading truth behind the Iron Curtain should close down, because the democrats would feel betrayed and too disillusioned to keep on fighting?

On May 5 it was reported that there was progress made on Austria and that the Russian delegation is prepared to rewrite article 16 to provide that there shall be no forcible repatriation of Iron Curtain refugees, Soviet repatriation commissions visiting camps of the fugitives in Austria shall be limited in size, and activities of such commissions shall be strictly limited to prevent any undue pressure being exerted on the inhabitants of the camps.

SOVIET INTERPRETATION

I wonder whether western correspondents, reporting such progress, are aware that the Russian meaning of forcible repatriation and undue pressure is quite different from the western meaning. And as to giving ground on the refugees issue by restricting the number, does it make any difference whether the Soviet commission numbers 100 or 10 persons?

The main task of such a commission is to ascertain the names and whereabouts of the refugees. After that, pressure is exercised on the unfortunate relatives of the refugees, who are terrorized into writing letters to the escapees asking them to return. The refugees know only too well what happens to relatives back home if they refuse to obey the orders of the Communist executioners.

This is precisely what is happening every day. Outwardly, the Communists are staging a large-scale amnesty and have established an organization which is enticing escapees to return with promises of employment and no recriminations.

From the western point of view there is only one way: to eliminate article 16 entirely. The fact that the Communists are proposing a mere change of words and phrases is very suspicious. I cannot believe that western diplomacy is not aware of the far-reaching significance of the impending decision, and I am sure that the Soviets' infamous aim will be thwarted. The diplomats of the United States, Great Britain, and France cannot deliver a single soul to the Bolshevik henchmen.

JURAJ SLAVIK.

WASHINGTON, *May 5, 1955.*

The Oil Import Problem

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. BROOKS of Louisiana. Mr. Speaker, during the last few months, a larger part of the Nation's oil supply came from foreign oil than ever before in our history. It follows, of course, that domestic oil supplied its smallest part of the national oil supply in history.

Yet, domestic capacity to produce oil is at an extremely high level, nearly 2 million barrels per day more than is now being absorbed by the market.

The conclusion is obvious. Domestic oil is being displaced by foreign oil in United States markets. A little more of it is being displaced each day, with the result that the domestic oil industry is being slowly squeezed out of existence.

These are facts fraught with danger. They reflect a situation which is unwise and unhealthy not only for Louisiana, but for the entire Nation.

Unless something is done soon to prevent this displacement of domestic oil in United States markets, the domestic oil producers' incentive to search for new sources of oil will be severely impaired, and the Nation's oil productive capacity will fall far short of our expanding economic and security needs.

The ultimate result of such a policy could well be disaster.

The American consumer has not, and will not, enjoy economic advantages, as a result of the increasing entry, into their country, of foreign oil. As a matter of fact, due to the concentration of foreign oil holdings in the hands of a few companies, the consumer runs a very great risk of being put at a severe long-range economic disadvantage by increased oil imports. Far more important, however, is the detrimental effect that increasing imports are having on our national security. Without accessible oil, our machines of defense would be helpless. It has been amply demonstrated that there is no easy access to foreign oil in wartime. American blood was spilled at sea in World War II to prove this point. I hope that we take whatever steps necessary to prevent this from happening again.

Excessive dependence on foreign oil goes hand in hand with inadequate confidence in the ability of the domestic oil industry. Yet the domestic oil industry has proved itself capable of fueling the Nation's armies to victories in two global wars. It will continue to justify confidence in any future emergency.

Another tremendously important phase of this problem relates to potentially disastrous effect of excessive oil imports on the Nation's economy. All but 18 of our States produce oil. In 1954, more than $6,300,000,000 worth of natural but unused wealth was transformed into actual wealth in the form of crude oil production. Nearly 300,000 people were employed in this country in the production of oil. About 29,000 people were employed in Louisiana. More than $700,000,000 worth of this oil was produced in my State, which ranks third among all States in the production of oil. The loss of this revenue, of this employment, of this wealth, would not be balanced by any practical or foreseeable advantages to the American consumer. It would be both pointless and tragic.

At the earliest opportunity, positive and immeditae legislative steps should be taken to limit oil imports to a reasonable level. It is my opinion that this level should allow the domestic oil industry the opportunity for normal expansion in accordance with demand for oil.

I regret that the importing companies have failed to exhibit the business statesmanship which would have prevented the necessity for taking the legislative route. Their failure to act, however, cannot excuse a similar failure on the part of the Congress.

Now that Congress is studying this problem, I am working for the passage of legislation aimed at solution of the oil imports problem. I believe that such a solution is essential to the welfare of my State and my Nation.

Democrats Lack a Real Issue

EXTENSION OF REMARKS
OF
HON. RICHARD B. WIGGLESWORTH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1955

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Frank R. Kent, appearing in the Washington Star of May 8, 1955, entitled "Democrats Lack a Real Issue":

DEMOCRATS LACK A REAL ISSUE

(By Frank R. Kent)

An interesting development in presidential politics which is being played all over the place here is the situation in which the Democrats opposed to Mr. Eisenhower (which is by no means all of them) find themselves. Here within less than 15 months before their national convention they are not only without a real issue calculated to appeal to the people, but face the possibility that they may supply the other side with one of the most appealing possible—to wit, "He kept us out of war."

In every speech he makes, the President emphasizes that to do that, with honor and without appeasement, is the thing closest to his mind and heart. While he has opposition to his foreign policy, both in his own party and in the other, and while he undoubtedly has made some mistakes and contradictions, no one in either group has yet suggested that his policy is inspired by political ambition or lacks complete sincerity. Nevertheless, his bitterest political opponents concede that if he succeeds he will be literally invulnerable as a candidate. Add to his already great popular strength the asset of keeping us out of war, and the last chance of defeating him would vanish. At least that is the way most of the better-grade Democratic leaders look at it now. This seems to account for the fact that most of them are uncritical of the President on both foreign and domestic affairs—leaving the criticism to a few of the more voluble left-wing Senators, such as HUMPHREY, of Minnesota; NEELY, of West Virginia; MORSE, of Oregon; the Democratic National Committee paid publicists, and the violent CIO attacks, which are a mere repetition of what they were in 1952.

TIRADES ON TRIVIALITIES

As a result of all this, the Democratic attack upon the President is reduced to violent assaults by a few third-rate Senators and to the tirade from the national committee upon trivial matters such as his golf-playing exercise and the normal internal difficulties in the State and other departments. Some and these come direct from the committee publicity agents but others are in the form of rumors and reports. One of these has been the rumor that Mrs. Eisenhower's health was such that the President could not run again. That was abandoned after specific evidence that Mrs. Eisenhower, after a short bout with flu and a rest at the Gettysburg farm, had returned in good health and spirits. The latest rumor is that the influence of Mrs. Doud, the President's mother-in-law, would prevent him from running again. While his wife's health conceivably might force the President to eliminate himself, it is inconceivable that the influence of his mother-in-law would outweigh the claims of his party and the country. Yet that is typical of the sort of anti-Eisenhower propaganda that is more or less rampant in Washington today. It is not effective and it is not well done, but it serves to demonstrate the level to which the present Democratic campaign activities have sunk. Small-bore sharpshooting is the order of the hour. Anything calculated to disparage or embarrass the President is made use of.

Concededly, this is not a pleasant position for a great party to occupy, but it none the less seems inescapable if politics as usual is going to be pursued by the opposition party in the face of the critical condition in which the Nation finds itself as a result of world developments and the inevitable world leadership which has been forced upon us. Few, indeed, will deny the critical condition and fewer still the heaviness of the burden upon the President to preserve the peace and at the same time prepare to meet the most dreadful war in history. Yet, clearly that is what Mr. Eisenhower is trying to do.

NO EASY VICTORY

The reason it is so hard for the politicians of the opposition to accept this is that most of them suspect that there is no way in which they can win. If the Eisenhower-Dulles foreign policy in Formosa and the Far East is successful in avoiding war, which is its declared and obvious object, then hardly anyone thinks General Ike's renomination and reelection can reasonably be doubted. On the other hand, should it fail and war come, it does seem reasonable to believe (at least the polls and reports appear to show) that the American people would rather have Mr. Eisenhower at the helm than any Democrat available, including the witty Mr. Stevenson. Considering these things, plus the very obvious fact that they have not been able to make a convincing case against either his domestic program or management of domestic affairs, and in the absence of any such scandals as characterized the preceding administrations, it is not surprising that the Democratic professionals find themselves reduced to magnifying unimportant things and personal heckling and disparagement of the President. This ought not to bother him very much and there is reason to believe it does not. Looked at calmly, it is part of his job and to be expected. Also, in a way, it seems complimentary.

Seventh Anniversary of the State of Israel

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1955

Mrs. GRIFFITHS. Mr. Speaker, April 27 marked the seventh anniversary of the birth of the State of Israel, a beacon light of freedom in the troubled Middle East.

I should like to draw the attention of my colleagues to an excellent editorial commemorating this historic occasion. The editorial was published April 29, 1955, by the Jewish News of Detroit, Mich.:

THE SEVENTH ANNIVERSARY OF THE STATE OF ISRAEL

When the Detroit Jewish community celebrates Israel's seventh anniversary, on Saturday evening, at the annual Yom Atzmaut to Medinat Israel, it will be a signal for all of us to reaffirm our admiration for the builders of Zion who have defied all obstacles in establishing a state that is now an accomplished fact in the council of the nations of the world. It also will be a time for reasserting that our kinship with the people of Israel calls for continued efforts in defense of the young state's economic position.

While it has been left to Israel alone to fight for her political rights, within the United Nations, and to defend her borders against numerous onslaughts, Yom Atzmaut challenges all liberty-loving people also to come to Israel's defense whenever powerful countries indicate a desire to pour ammunition into the countries that threaten Israel's existence. That is why we must be on the alert against unfriendly acts against Israel and on guard that our fellow citizens of all faiths should not be mislead into supporting a war on Israel.

Israel's population of 1,717,834—as of December 31, 1954—included 89 percent Jews—1,526,016; and 11 percent non-Jews, of whom 131,500 were Moslems, 42,800 Christians and 17,500 Druzes. These people are ruled by democratic processes. There is religious freedom, although many issues involving internal Jewish religious controversies are yet to be resolved; but the Moslems and the Christians are worshipping under rules of complete religious freedom, comparable to the liberties that are enjoyed by us in this great land.

Israel's trade, agriculture, industry, and projects for the development of natural resources have made many gains. They are indicative of the alertness of a people that has established a state with a determined desire and will to bring the most advanced western ideas into the country.

International relations have been conducted with dignity. Recognized by 62 countries, in 48 of which she is represented and 37 of which maintain diplomatic missions there, Israel, having drawn into her diplomatic corps her ablest sons and daughters, is conducting her affairs with courage and with a high sense of responsibility.

The young state's compulsory, universal educational system, with free school facilities for all children 5 to 14, places Israel on a high literate plane.

These are just a few of the happy events that mark Israel's rebirth and the new state's seventh anniversary. They can be multiplied manyfold by pointing to the progress made in the rehabilitation of the Negev, the growth of the Hebrew University and the Technion, and the numerous new industries created there.

In addition to these achievements, young Israel has taken off the hands of Jewish communities throughout the world a great responsibility: that of providing asylum and caring for hundreds of thousands of persecuted, dispossessed, and disfranchised Jews. She continues to beckon to those who are threatened by tyranny and bigotry, and her only request is that we provide some of the means for the integration of the newcomers and that we make proper investments in her economy. It is very little to ask of us, whose kinsmen in lands of oppression have only Israel to look to for haven and succor.

Therefore, on the seventh anniversary of Israel's rebirth, while saluting the courageous young state, we must rededicate ourselves to friendship for Israel, to her economic defense, to striving to prevent attacks upon her, to an aim to avert dangers to her security.

In congratulating Medinat Israel, we also extend to her hands of friendship and an assurance that we not only rejoice in her triumphs but that we shall help her retain and protect them.

Nero Award

EXTENSION OF REMARKS
OF
HON. CLIFTON (CLIFF) YOUNG
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1955

Mr. YOUNG. Mr. Speaker, I would like to take this means of nominating the Veterans' Administration for the Nero Award.

If the Nero Award is not yet as famous as the Oscar Award, it is only because the Nero Award is a new invention.

Let me explain how it came to be.

This famous Roman Emperor, as we all know, is remembered for his fiddling while Rome burned. The Veterans' Administration, which I am hereby nominating to be its first recipient, has nonmusically equalled his efforts while a housing project in my State sinks into the ground.

Late in 1952 construction was started on Sun Gold Manor, consisting of 100 houses located in Panaca, Nev. Twenty-five of these houses were sold to veterans under the loan-guaranty program, and seven were sold under loans insured by the Federal Housing Administration. The subdivision was promoted and built for the employees of the Combined Metal Reduction Co., of Caselton, Nev., which operated a lead and zinc mine nearby.

Construction of the homes was completed in 1953. Before the end of the year the occupants of the homes were somewhat intrigued to find that their floors were sinking away from their walls, ceilings were cracking, driveways disappearing, and the very attractive project turning into rapid chaos.

The builder was called back to make repairs. The occupants were even more intrigued to find that the repairs sank, too.

When they became sufficiently intrigued, they naturally contacted their Congressman.

In September of 1954 I contacted the Veteran's Administration in behalf of the residents of Sun Gold Manor. My questions were simple, I thought. I only wanted to know why the homes were sinking and what the Veterans' Administration was going to do about it.

Sixteen days after writing I was advised that the Veterans' Administration "fully realizes the seriousness of such a situation and you may be assured that every effort, within the authority of the Veterans' Administration, will be exerted to alleviate the condition."

In the 8 months that have elapsed since that date, the condition of the Panaca sinking homes has been anything but alleviated.

Since the first of the year, I have been in almost weekly contact with the Veterans' Administration officials handling the case in an attempt to expedite some action.

Last week I finally received some definite word. This definite word is that no further report of no progress can be expected until the week of May 16.

When I am out in the field and ask for answers, they refer me to Washington. Back here they say they will have to check out in the field.

The problem has been back and forth between the Washington office and the regional office of the VA with the same regularity of a shuttlecock in a badminton game.

In badminton, however, somebody wins. The tenants of Panaca's sinking homes continue to lose.

There have been enough official investigations conducted to do credit to the FBI.

The Veterans' Administration and the Federal Housing Administration have just about decided what makes the houses sink. It is believed this is because the ground on which they are built also sinks.

Apparently, the ground is light alluvial and blow sand that compresses when water is applied from landscaping or sewage disposal.

The Federal Housing Administration seemed to have the interests of the tenants well in mind.

The builder had offered to refund $1,000 to each of the 7 purchasers of FHA-insured homes. This would have left these families in a fairly good position. Their monthly payments would have been regarded as rent and there would have been no deficiency judgment against them.

However, because of delays and an apparent effort to collect $1,000 from the builder for the 25 VA-insured homes—money that would have gone to the agency and not to the individual veteran—the Veterans' Administration caused the builder to withdraw the offer.

Now the FHA purchasers are back where they started from—without the $1,000 and minus the 6 weeks' time it took the Veterans' Administration to cause them this new problem.

Six weeks to produce a new obstacle is about par for the bureaucratic course.

I might also point out that the 32 families who have purchased these homes have not been able to sell them. As we know, the lead and zinc mining industry has been tragically depressed since the end of the Korean war.

These 32 families now find themselves with no jobs in their communities, homes that are sinking away, and a Government agency that has set a new record in bureaucratic delay and buck-passing.

To date the VA has caused the FHA-insured tenants to lose their chance for recovery from this disaster, and has demonstrated no apparent concern for the veterans involved.

I am more than happy to nominate the Veterans' Administration for the Nero award. I can think of no one more deserving.

Fanatic Arab Hate Still Blocks Peace

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1955

Mr. MULTER. Mr. Speaker, I am pleased to call to the attention of my colleagues the following article which appeared in the New York Journal-American, Thursday, May 5, 1955, entitled "Fanatic Arab Hate Still Blocks Peace," written by our former colleague, the Honorable Samuel W. Yorty. The article was originally written for the Herald-Express:

ISRAEL: KEY TO THE MIDDLE EAST—FANATIC ARAB HATE STILL BLOCKS PEACE

(By Samuel W. Yorty)

The Arab States of the Middle East must face reality before peace in that corner of the world will be possible. Lasting settlement of the Arab-Israel dispute is possible only after the Arabs recognize Israel's existence and the permanent place she holds in the community of Middle East nations.

Most reasonable people will subscribe to this statement and I am convinced of its truth as a result of my recent tour of Israel and the Arab countries of the Middle East.

My talks in Israel also convinced me that the Israelis have seriously attempted to settle the long-standing dispute with their Arab neighbors.

While the Arabs have clung to fanatical hate, Israel has shown a readiness to meet legitimate claims. The Government unfroze blocked bank accounts and safe deposit boxes of displaced Arabs, but the property and money of Jewish refugees who left Arab countries are still frozen.

Israel reunited split families through their return to Israel territory and gave full citizenship status to 19,000 Arab refugees in Israel. In addition, Israel has offered to help large scale plans for permanent settlement of the Arab refugees now beyond her borders under plans approved by the United Nations. As part of an overall settlement, Israel is also willing to pay these refugees for the property they left behind.

The Arabs, who refused even to recognize Israel's existence, stubbornly insist that Arab refugees be returned to the area of Palestine which is now part of Israel.

When I talked to Moshe Sharett, Israel's prime minister, he said:

"They can't come back. We have no place for them. There is room in the Arab countries."

Sharett said:

"We have tried to be fair and we are willing to make reasonable payments to them for their property as a part of an overall settlement. We recently agreed to unblock Arab accounts in our banks and let them draw out their money."

On this point of Arab bank accounts, I was told in Lebanon that the Arabs who negotiated that agreement did not then dare return home. To some fanatical Arabs any discussion with the Israelis is treasonable.

That is why it is virtually impossible to conduct reasonable roundtable discussions leading to an agreement for the conservation of Jordan River waters. With proper conservation of this water resource, from 150,000 to 200,000 Arab refugees could be resettled in the Jordan Valley.

The Israelis also desire to utilize the Jordan River water for irrigation. But Jordanians claim this would violate their water rights. The result has been an American special envoy to try to get these two countries to agree on a plan for conservation despite the fact that they are technically at war.

In the area of the Dead Sea there are minerals which Jordan would like to develop, but a stumbling block is the cost of building an expensive new road entirely within Jordan in order to haul the minerals to the Gulf of Aqaba. But for the Arab blockade Jordan could easily haul them on a good road across a narrow strip of Israel to the excellent Mediterranean port of Haifa in Israel.

Also, there is a long oil pipeline running from Dhahran on the Persian Gulf in Saudi Arabia to Haifa. In spite of the loss of needed revenue to Jordan as well as to Israel, the pipeline is kept empty because the Arabs will not let the oil flow through their lands to Haifa.

In view of such an atmosphere of fanaticism on the part of the Arabs, Isreal strenuously objects to American plans to supply arms to Arab nations as part of a security program. The Israelis are afraid that arms would be misused, that the guns would be turned on Israel and not any Communist aggressor.

Sharett said that giving arms to Arab States which refuse to make peace becomes a premium upon their policy of permanent warfare against Israel and that these arms "enhance their capacity for mischief."

The Israeli Prime Minister said it is not a step in the direction of peace but a step away from peace.

Sharett has been strong in his opposition to such a policy of arms, but he does not oppose technical aid which would help develop Arab countries and raise their living standards.

No Arab state has ever taken up arms against an aggressor in modern times, Sharett brought out. The Arabs did little to fight Turkey in World War I, although they achieved independence as a result of the war. During World War II they did nothing to help the Allies.

It is his feeling that arms given the Arabs are arms directed against Israel. He said Israel cannot reconcile such an arms policy with America's declared policy and concern to see Israel prosperous and secure.

Prime Minister Sharett firmly believes that the root of the problem is the persistent refusal of Arab States to make peace with Israel and thus reestablish stability within the Middle East.

Here is what some say:

First of all, the Arabs must be made to realize that Israel exists. Like it or not, they must face this fact. Next the killing on the borders must be stopped.

Some observers believe that the border incidents will continue to delay peacemaking unless the United Nations is enabled to effectively stand guard. Once border incidents end, things will quiet down, they believe.

Others feel that Israel should consider permitting a token repatriation in northern Palestine of some Arab refugees and also consent to certain minor border rectifications.

Israel would have to pay for Arab properties the Israelis now hold and the Arabs would have to lift their blockade and boycott of Israel. Arabs would have to pay for properties held by the Arabs of dispossessed persons of Jewish faith.

One thing is hopeful—and helpful. The Israelis are willing to sit down and talk, willing to admit responsibilities and even errors. But at the same time they rightly insist on recognition of the fact that Jewish people now at long last have a national home—and must keep it and protect it.

It is all too plain that the birth of Israel was made a needlessly painful process to the United Nations and to Jews and Arabs alike by the Arabs' rash resort to war against this tiny new state.

Under the circumstances, it appears neither wise nor fair to Israel for the United States to arm the Arab nations before peace is firmly established and Israel invited to take her rightful place in a defense program for this area.

It must be remembered that Israel is the key to Middle East security—and a firm friend of the United States.

May 3, 1791—May 3, 1955

SPEECH
OF
HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1955

Mr. FRIEDEL. Mr. Speaker, May 3, 1955, marks 164 years since the adoption of the Polish Constitution in 1791. On May 3 of that year the people of Poland set forth this principle:

All power in civil society should be derived from the will of the people, its end and object being the preservation and integrity of the state, the civil liberty, and the good order of society, on an equal scale, and on a lasting foundation.

But today, in 1955, the Polish people, under Communist dictatorship, have no control over their government. In accordance with Communist philosophy, the power in the state does not originate with or belong to the people, but to the leaders of the Communist Party.

Today, under the Communist-Soviet regime Poland is not a genuinely independent country. Freedom was lost practically from the moment the Red army entered Poland. Nazi oppression was replaced by Communist slavery. The Polish governmental agencies are merely fronts behind which Soviet leaders are the real masters. Whenever possible the Poles oppose the Red regime, but today it is virtually impossible to offer effective resistance in an organized way or on a national scale. In short, Poland is a Communist-captive country.

Although a captive, Poland is certainly neither friendless nor forgotten. Poles in exile, those in the free world, strive constantly to bring encouragement and assistance to their fellow men in Poland. There is a warm friendship between the Poles and the American people. We do not approve the unwilling subordination of Poland to the Communist regime, but

rather look forward to the day when the freedom of Poland will be restored. We should let the world know our hope and conviction that with God's help, Poland and the rest of the world under Soviet domination will soon again enjoy the liberties and independence which they anxiously await.

Are Southern Governors Frightened?

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1955

Mr. HOFFMAN of Michigan. Mr. Speaker, southerners have a reputation not only for patriotism, but for courage.

Has something gone wrong?

Are the governors fearful of labor bosses who now have millions at their command to use in defiance of law and its enforcement—for political purposes?

Labor bosses, having driven some industries out of the North into the South, are now giving the southerners a return dose of carpetbagging at its worst. Apparently, the AFL, in the railroad strike against the Louisville & Nashville Railroad and its subsidiaries, and the CIO against the Southern Bell Telephone Co., have the southern governors running for cover.

Instead of calling upon local officials for the enforcement of the law and backing up those local officials with the power of the State, those governors appear to be either disinclined or unable to protect the peaceful, law-abiding citizens of their States from the violence of labor goon squads.

Note the following news story from Atlanta, Ga., under date of April 23, 1955:

THREE GOVERNORS STRIVE TO END PHONE STRIKE—RAIL PEACE HOPES SUFFER SETBACK

ATLANTA, April 23.—Southern governors, who are trying to settle the strike of 50,000 CIO Communication Workers of America against the Southern Bell Telephone Co., today expressed some optimism concerning their efforts.

But while Govs. Marvin Griffin, of Georgia; James Folsom, of Alabama; and Hugh White, of Mississippi, conferred with both sides here, sporadic violence continued across the southland in both the telephone strike and the strike of three independent operating unions and 10 A. F. of L. nonoperating unions against the Louisville & Nashville Railroad and its subsidiaries.

The telephone strike, affecting a 9-State area, and the rail strike, affecting 14 States, began March 14.

RAIL PEACE HOPES DIM

Prospects for an end of the rail strike appeared less favorable. The deadline passed today for the strikers' acceptance of a southern governors' proposal for arbitration of the issues. It was not accepted. Thereupon Gov. Lawrence Wetherby, of Kentucky, called a meeting of 13 governors next Tuesday in Nashville, Tenn., to consider their next move.

Governors White and Griffin both were optimistic as the phone strike parley recessed for lunch here.

Folsom, however, was noncommittal. W. A. Smallwood, southern director for the CWA, expressed hope that the meeting would result in a settlement but withheld more specific comment.

ILLINOIS CENTRAL YARDS PICKETED

Wages, arbitration, and a no-strike contract clause are among the major issues to be decided. In the rail strike, which the AFL unions began alone, the principal issues are a welfare plan, vacations, and Sunday pay. The operating unions joined the rail walkout last week, charging that the L. & N. had fired their members who refused to cross picket lines.

Rail picketing at Birmingham was extended today to the yards of the Illinois Central, Frisco, and Central of Georgia Railroads. These lines indicated some passenger trains might be canceled, but there was no immediate effect.

EIGHT RIOTERS ARRESTED

Eight rail strikers were arrested in rioting at the L. & N. station in Birmingham last night, when a mob of 150 threw bricks, rocks, bottles, and eggs at the station and main office.

Jim Atkins, a Birmingham Post-Herald reporter-photographer, was hit by a brick and knocked to the ground by 4 or 5 thugs who beat him in the face and robbed him of his camera at the L. & N. Boyles yards in Birmingham.

At Gadsden, Ala., 2 telephone strikers were arrested for throwing eggs at a nonstriker. Police chased the strikers 2 miles and shot all 4 tires off their car before they surrendered.

Relations With Japan

EXTENSION OF REMARKS
OF
HON. KENNETH J. GRAY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1955

Mr. GRAY. Mr. Speaker, my attention has been called to a situation involving the relations of this country with Japan, which, in light of the aid we are giving that country, seems to me to be a proper subject for consideration by the Congress.

We entered into a treaty of friendship, commerce, and navigation with Japan in 1953. Under article XIV of that treaty, it was specifically provided that no discrimination shall be practiced with reference to any restrictions on exports and imports of goods between the two countries, over and above the restrictions imposed with respect to any other nations.

However, in the face of this treaty and the GATT agreement, which contains similar provisions, and to which Japan has adhered, Japan has embargoed shipments to the United States only of certain merchandise without such an embargo being placed on such shipments to any other country. The Department of State has called this treaty violation to the attention of the Japanese very forcefully, and finally on April 22 presented to the Japanese Foreign Office a formal note setting out the treaty violation and asking that if a further delay in replying is required, the effective date of the embargo be postponed. To date, no reply whatever has been received to this note, and the embargo has gone into effect. As a result, the American interests, who entered into contracts in Japan in good faith and based on the integrity of our treaty obligations, have suffered very substantial losses.

Granted our desire to work with our friends abroad, as indicated by the tremendous military and economic aid program of this country, this cooperative spirit should in no manner interfere with our protection of the legitimate interests of our businessmen abroad. If our current attempts to encourage foreign investment and enterprise by Americans is to succeed, it behooves our Government to stand by our businessmen. The situation I have outlined is a vivid example, and I sincerely hope that our Department of State takes whatever measures it feels necessary to secure fair and legal treatment through compliance by the Japanese with their treaty obligations. Only in this way can we demonstrate the courage and conviction consonant with our position of leadership in world affairs. Without this courage and conviction, the development of American enterprise abroad must suffer heavily.

John William Flannagan, Jr.

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1955

Mr. HARRISON of Virginia. Mr. Speaker, it was with deep personal sadness that I read the obituaries of John William Flannagan, Jr. The press accounts of his passing took note of his distinguished record in the Congress and of the esteem in which he was held in Virginia. My recollections of our former colleague were occupied more with the human qualities not readily translated into print.

It was my high privilege to know Mr. Flannagan during my first years in this House. I learned early in my experience here that he was a man whose counsel was much sought by his colleagues and whose judgment commanded great respect and influence. On nine occasions this merited confidence also was manifested by his fellow citizens in Virginia, who elected him to Congress. He served faithfully and with distinction from 1931 until 1949. When he decided to return to private life this House lost one of its most earnest and astute Members.

On countless occasions Mr. Flannagan gave me the benefit of his experience and sound reasoning. When he left these Halls I was deprived of a friendly hand along the way. These few words are poor acknowledgment of the manifold kindnesses he extended. My sincere sympathy, Mr. Speaker, goes out to his family in this bereavement.

Mrs. Elizabeth Phelps Rucker: Virginia's Mother of the Year

EXTENSION OF REMARKS
OF
HON. WILLIAM M. TUCK
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1955

Mr. TUCK. Mr. Speaker, on Sunday, May 1, 1955, the Honorable RICHARD H. POFF, Representative in Congress from the Sixth Congressional District of Virginia, delivered a very interesting address at the Bethlehem Methodist Church at Moneta, Va., incident to the presentation of an award to Mrs. Elizabeth Phelps Rucker as Virginia's Mother of the Year. Mrs. Rucker is highly deserving of the honor bestowed upon her and Mr. POFF's tribute is altogether appropriate.

At this time all of us are mindful of our obligation and revotion to motherhood and I extend hearty congratulations to Mrs. Rucker, who typifies all that is fine and noble among the mothers of the Commonwealth of Virginia.

Under leave to extend my remarks, I insert Mr. POFF's address, which is as follows:

I am humbly grateful for the honor you have bestowed upon me by inviting me to pay tribute to one of your fellow citizens who has so nobly distinguished herself.

One rainy day a mother sat in here rocking chair mending clothes. Her noisy little boy, unable to go outside to play, was about to drive her to distraction. In desperation and in an effort to keep him quiet, she tore from a magazine a leaf on which was printed a map of the world. With her scissors, she cut it into a jigsaw puzzle. She scrambled the pieces together, handed them to her son and told him to fit them back together again. Thinking that would keep him occupied the rest of the afternoon, she went back to her mending. However, in less than 10 minutes the boy was back at his mother's elbow with the map of the world intact. His mother could scarcely believe her eyes, and she asked him how he had completed the task so quickly. Sheepishly, he looked up at his mother and explained, "On the back of the map was the picture of a man, and when I put the man together right, the world just took care of itself."

This is the story of the life of Mrs. Elizabeth Phelps Rucker. For half a century she has been helping to take care of the world by fitting together the pieces of the lives and characters of men and women. It has been well said that a "mother in her office holds the key of the soul and stamps out the coin of character."

To her providential care and guidance God saw fit to entrust the keys of 13 souls, and the coins of character which she has stamped have circulated throughout the realm of human experience. Few parents have been so abundantly blessed as have Dr. and Mrs. S. L. Rucker. Still fewer can point with so much justifiable pride to the achievements of their children. How many parents can count among their offspring 2 physicians, 2 dentists, 1 pharmacist, 1 chemist, and 5 homemakers? And how many children owe so much to their mother—a mother who, after the death of a beloved husband and father 24 years ago, took upon herself the burden of feeding, clothing, sheltering, and educating such a large family?

As they—mother, children, and grandchildren—are gathered together here in their hometown, here within the hallowed walls of their home church on this wonderful Lord's Day, what glorious thoughts must crowd their minds and warm their hearts. Ringing and echoing down the long corridor of the years that have passed come the memories of hours of pain and pleasure; hours of woe and joy, gladness and sadness, tears and laughters, play and toil, failure and success. How humble and yet how very proud they must be.

And how very grateful must be the hearts of these fine children for a mother who has labored so long, so faithfully, so untiringly, and so unselfishly in God's great vineyard. How often has she, who 13 times entered the valley of the shadow of death to win a life at the peril of her own, laid down bit by bit and day by day a small segment of her life for her children? How often has she abandoned sleep to sing lullabies? How many times has she bandaged a wound or kissed a bruise; how many clothes has she mended; how many floors has she swept; how many meals has she prepared; how many dishes has she washed; how many stories has she read; how many lessons has she taught; how many times has she smoothed a rough path and brushed away a tear to make room for a smile?

Yes, Miss Bessie's hands have held the key to men's souls and I know through their minds today must be coursing the words of the poet who said:

"My mother's beautiful hands!
They're neither white nor small;
And you, I know, would scarcely think
That they were fair at all.
I've looked on hand whose form and hue
A sculptor's dream might be;
Yet are those wrinkled, aged hands
Most beautiful of all to me.

"Such beautiful, beautiful hands!
Tho heart were weary and sad,
These patient hands kept toiling on,
That the children might be glad;
I always weep when looking back
To childhoods distant day,
I think how those hands rested not,
When mine were busy at play."

But her labors have not been in vain. God has used her richly to bless not only her children but the members of this congregation and the citizens of the community in which she lives. By her Christian example, she has, in the windows of the lives of generations still unborn, lit a candle of faith and hope and inspiration, and in so doing has laid up for herself treasures in heaven where neither moth nor rust doth corrupt and where thieves do not break through or steal. And long after the Supreme Architect of the Universe, the Father of all mankind has seen fit to call this mother to her eternal reward, the fragrance of her life will linger on in the garden of humanity.

"Her heart is like her garden,
Old-fashioned, quaint and sweet,
With here a wealth of blossoms,
And there a still retreat.
Sweet violets are hiding
We know as we pass by,
And lilies, pure as angel thoughts,
Are opening somewhere nigh.

"Forget-me-nots there linger,
To full perfection brought,
And there bloom purple pansies,
In many a tender thought.
There love's own roses bloom,
As from enchanted ground,
And lavish perfume exquisite,
The whole glad year around.

"And in the quiet garden—
The garden of her heart,
Songbirds are always singing
Their songs of cheer apart.
And from it floats forever,
O'ercoming sin and strife,
Sweet as the breath of roses,
The fragrance of her life."

I think God in His Heaven must be smiling down on us today, and if His Son Jesus were here in the flesh, as He most certainly is in the spirit, I know He would say, "Well done, thy good and faithful servant."

The Russian Menace at Next Year's Olympics

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, the New York Times of May 5, 1955, reported that the Soviet Union, in an apparent bid for the 1960 or 1964 Olympics, has announced that it was spending approximately $62 million this year to expand athletic facilities in Moscow. Work has started on the construction of a gigantic stadium, indoor tennis courts, and a summer artificial ice rink. Moscow already has the big Dynamo Stadium and a second smaller stadium.

In a speech delivered at the National Press Club in Washington, D. C., on February 28, 1955, William Randolph Hearst Jr., following his Russian trip, said that sports are a front on which the commissars are moving ahead fast. From Moscow, he said:

Radiate troupes of athletes and artists, circulating through the Soviet world and the satellites, venturing into countries like Red China and India with their gospel of communism.

Avery Brundage, in the Saturday Evening Post of April 30, 1955, reported that things look bad for us at the 1956 Olympic games in Melbourne, Australia. He said that Russia is building the greatest mass army of athletes the world has ever known. Unless there is a sudden awakening in this country, Soviet sportsmen are almost certain to dominate the 1956 Olympic games at Melbourne, Australia.

They threaten to seize the initiative even in track and field, the feature phase of the games, in which United States athletes have always been supreme—although to a lessening degree—since the games were revived 60 years ago—

Mr. Brundage warned.

Mr. Hearst advocates the establishment of a permanent planning board commissioned to formulate a strategy on all fronts for meeting the challenge of competitive coexistence with the Communists.

I have developed a plan, and presented it to this Congress, for meeting the propaganda offensive of the Russians. This plan is developed in several bills—H. R. 5040, H. R. 4307, H. R. 4215, and H. R. 4109—which are specificaly designed to put into legislative form the excellent proposals and timely warnings of Mr. Hearst. There is very little money involved, but, if adopted, they would go far toward meeting the major attacks the U. S. S. R. is making upon us in the fields of culture and sports.

Because the very survival of our way of life may depend on taking action now

I urge their early consideration and enactment by the Congress.

H. R. 4109 would establish an advisory board to assist the commission created by the joint resolution of December 20, 1944, in considering a site and design for a National Memorial Stadium in the District of Columbia. The text of my bill is included here. Also included is the text of the New York Times report on the Moscow plans, as well as a recent article by David Sentner, chief of the Washington bureau of the Hearst newspapers, which appeared in the Los Angeles Examiner. This article also appeared in the Chicago American, the San Francisco American, the Boston American, the Pittsburgh Sun-Telegraph, the New York Journal-American, the Milwaukee Sentinel, and the Seattle Post-Intelligencer:

H. R. 4109

A bill to establish an advisory board to assist the commission created by the joint resolution of December 20, 1944, in considering a site and design for a National Memorial Stadium in the District of Columbia, and for other purposes

Be it enacted, etc., That the joint resolution entitled "Joint resolution to consider a site and design for a National Memorial Stadium to be erected in the District of Columbia," approved December 20, 1944, is amended by redesignating section 3 as section 4 and by inserting immediately after section 2 the following new section:

"SEC. 3. (a) There is hereby created an advisory board, which shall advise and consult with the commission in carrying out its functions under this joint resolution. The advisory board shall consist of—

"(1) one person selected by each of the following national organizations in the field of recreation and sports: The United States Olympic Association, the American Recreation Society, the National Recreation Association, the National Federation of State High School Athletic Associations, the National Association of Intercollegiate Athletics, the National Collegiate Athletic Asociation, the Amateur Athletic Union, the American Association for Health, Physical Education, and Recreation, the Society of State Directors of Health, Physical Education, and Recreation, the Athletic Institute, and the Sports Fishing Institute.

"(2) one person selected by each of the following national organizations: The American Legion, the Veterans of Foreign Wars, the American Veterans of World War II, the Disabled American Veterans, the Marine Corps Reserve Officers Association, the Marine Corps League, the Marine Corps War Memorial Foundation, the American Veterans Commitee, the Catholic War Veterans of the United States, the Jewish War Veterans of the United States of America, and the Reserve Officers' Association of the United States; and

"(3) one person selected by each of the following national service organizations: The United Service Organizations (USO), the Young Women's Christian Association, the National Jewish Welfare Board, the National Council of Young Men's Christian Associations, and the National Catholic Welfare Conference.

"(b) The advisory board may exercise its functions through a working committee composed of 6 members, 2 selected jointly by the organizaitons named in each of the categories enumerated in subsection (a)."

SEC. 2. The first section of such joint resolution is amended (1) by striking out "an athletic field and stadium" and inserting in lieu thereof "an athletic field, stadium, and parade ground," and (2) by striking out "World War I and World War II" and inserting in lieu thereof "World War I, World War II, and the Korean hostilities."

[From the New York Times, of May 5, 1955]

RUSSIANS ARE SPENDING $62 MILLION ON ATHLETIC FACILITIES—ACTION A PRELUDE TO OLYMPICS' BID—RUSSIA REGARDED AS SEEKING 1960 OR 1964 GAMES—MOSCOW SUBURBS GET NEW STADIA

LONDON, May 4.—The Soviet Union, in an apparent bid for the 1960 or 1964 Olympics, announced today it was spending 250 million rubles ($62 million) this year to expand athletic facilities in Moscow.

S. V. Pushnov, chairman of the Moscow City Committee on Physical Culture and Sport, said in a Moscow radio broadcast heard here:

"During this year alone 250 million rubles will be spent on sports facilities.

"Work has started on the construction of a gigantic stadium in Luzhniki (a Moscow suburban district).

"In Sokolniki (another Moscow district) a summer artificial ice rink will be opened on which hockey players, ice skaters and figure skaters can compete. Construction is being completed on new indoor tennis courts."

Pushnov said nothing specifically about trying to obtain the games for the Soviet Union. However, the Russians have been privately talking about it since the Olympic committee meeting in Athens last May.

In talks with foreigners they admitted the only thing preventing their lodging a bid for the games was lack of facilities in Moscow.

STADIUM GROUNDS SMALL

Hungary has been prominently mentioned as a possible 1940 site but the Russians may be aiming at 1964. Next year's games will be held in Australia.

Moscow already has the big Dynamo Stadium, but the grounds around it are small. There's another stadium in the Stalino district, but isn't big enough for the Olympics.

By using the available stadiums—and centering activities in the new one in Luzhniki—the Russians could easily handle the Olympics.

Housing would offer no particular problems to the Russians. If they did not put up an Olympic village, they could do as they've done for other international events—just empty several hotels and use them.

Pushnov also announced this summer would see the inauguration of the first Moscow games. About 300,000 athletes will take part.

SPECIAL POLICE FOR OLYMPICS

MELBOURNE, AUSTRALIA, May 4.—Melbourne officials announced today that a special police corps had been organized for the 1956 Olympic games "for the protection and general assistance of overseas competitors and visitors."

A committee of senior officers of all branches of the police force will work in close liaison with the organizers of the games. The police station building in the Olympic village of Heidelburg will be staffed by policemen speaking at least two foreign languages.

Special squads of plainclothes policemen will be assigned to safeguard the visitors against pickpockets and confidence men. All incoming ships and airliners will be scrutinized for foreign criminals, descriptions of whom are being obtained from the international police organization.

Meanwhile the Olympic games construction committee, after a stormy 2-hour meeting today, decided to proceed with a 333-meter concrete cycling track at Olympic Park. The track will cost 200,000 Australian pounds ($448,000).

[From the Los Angeles Examiner of April 29, 1955]

HOUSE URGED TO CONSIDER HEARST ART, SPORT PLAN TO COMBAT REDS

(By David Sentner)

WASHINGTON, April 28.—Representative FRANK THOMPSON, JR., Democrat, of New Jersey, today urged consideration of congressional measures to promote American culture and sports events in line with the program for "competitive coexistence" with Red Russia advocated by W. R. Hearst, Jr.

Concurrently, the House District Committee favorably reported out THOMPSON's first bill on the subject, providing for the creation of a Federal Commission to formulate plans for the construction in the District of Columbia of a civic auditorium. The latter would include an inaugural hall of Presidents and a music, drama, fine arts and mass communications center.

THOMPSON asked the House to heed warnings by the editor-in-chief of the Hearst newspapers and Olympics Committee President Avery Brundage that this country is in danger of losing its supremacy at the international games.

PROPOSALS

THOMPSON said his legislation is specifically designed to put in to effect the proposals made by Hearst upon his return from behind the Iron Curtain, where he interviewed the four top leaders of Communist Russia.

The measures would create a national advisory committee under the welfare secretary to develop a program with the States that would make the public more sports and culture conscious.

Six million dollars in Federal funds would be used to match money raised by the States to promote the work.

Secretary of Health, Education, and Welfare Hobby has approved a bill introduced by Representative WAINWRIGHT, Democrat, of New York, for establishment of a Federal Commission on the Arts "and for other purposes."

WARNING

However, Representative THOMPSON and his Democratic colleagues do not think this administration bill goes far enough in activating a dynamic competitive coexistence blueprint.

THOMPSON called attention of Congress to both the warning of Hearst and Olympic Committee President Brundage on the sports challenge from the Soviet Union.

He referred to a current magazine article by Brundage warning that Russia is building "the greatest mass army of athletes the world has ever known."

Brundage said the Russians are almost certain to dominate the 1956 Olympic Games unless "there is a sudden reawakening in this country."

TWENTY YEARS OLD

"The huge Russian sports program is based on a broad and comprehensive system of physical training for everyone in the U. S. S. R. regardless of age or sex," THOMPSON said.

"Undoubtedly one of the results of this system, which was started more than 20 years ago, was a very substantial contribution to the success of the Soviet armies during World War II. No country is stronger than its people.

"In his recent speech at Washington's National Press Club, William Randolph Hearst, Jr., after his Russian trip, said that sports are a front on which the commissars are moving ahead full speed.

PRESTIGE

"America, he said, has dominated the Olympic Games since their inception. It

has been a source of prestige throughout the world, especially with sport-cosncious young people.

"Mr. Hearst asked: 'How will the youth of the world feel, especially in doubtful areas, if the Russian team ends America's long sway at Melbourne in 1956?'

"Mr. Hearst advocates the establishment of a permanent planning board commissioned to formulate a strategy on all fronts for meeting the challenge of competitive coexistence with the Communists."

THOMPSON added the legislation introduced by himself, Representatives ROOSEVELT (Democrat, California), and REUSS (Democrat), Wisconsin, was designed to carry out "the excellent proposals and timely warnings of Mr. Hearst."

Price Supports for Basic Commodities

SPEECH
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1955

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 12) to amend the Agricultural Act of 1949, as amended, with respect to price supports for basic commodities.

Mr. HOFFMAN of Michigan. Mr. Chairman, from the argument advanced by the gentleman from Texas [Mr. POAGE] there might be drawn the conclusion there were no Members of the House other than the gentleman from Texas who had any sympathy or kindly feeling for people who were in the lower income groups or who were unfortunate. If I desired to cry all over the place about individuals or groups in my district, I might refer to those pepole who work on the lowlands, on their knees, weeding celery, onions, carrots or cabbage, or I might talk about the folks who spray their fruit trees, harvest the berries or pick the cherries, and tell you how little they get as the result of their labor. But that in a way, is quite beside the point, although if peanuts are to be on the list of basic commodities why not the other farm products which I have just mentioned?

Mr. Chairman, listen to this argument made by our good friend from Texas. He held up that peanut bar and he said he paid a nickel for it. I just went out and bought one. He said that peanuts cost so much, but he did not give the cost of the other ingredients. Then he said, and listen to this, that the manufacturer made a profit of 800 percent. When I went out and bought my peanut bar just 75 feet from where he purchased his I asked the young lady out there who sells them, the efficient, kindly, always pleasant daughter of our longtime faithful friend Ben "What is your profit on a 5-cent bar?" She said, "Two cents." So there goes two-fifths at least of the manufacturer's 800 percent. Had I used the computing methods of our colleague I would have come up with a loss.

If the gentleman from Texas cannot give us any better argument than that, and any better figures, any nearer approach to the facts than the ones he gave us, why should we accept his statements?

Mr. GROSS. Was the candy bar you bought made in Britain or the United States?

Mr. HOFFMAN of Michigan. From the quality of it I think it was made here. It was the better.

Maj. Gen. E. A. Pollock

EXTENSION OF REMARKS
OF
HON. JOHN L. McMILLAN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1955

Mr. McMILLAN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a concurrent resolution adopted by the legislature of the State of South Carolina recommending Maj. Gen. E. A. Pollock to the President of the United States for appointment to the office of Commandant of the United States Marine Corps. We people of the State of South Carolina are extremely proud of General Pollock and the record he has made with the United States Marine Corps. I join with the State legislature of my home State in recommending this fine general for the position of Commandant of the United States Marine Corps.

The resolution follows:

Concurrent resolution commending Maj. Gen. E. A. Pollock to the President of the United States for appointment to the office of Commandant of the United States Marine Corps should a vacancy occur

Whereas Maj. Gen. E. A. Pollock has spent his life in distinguished service of his country; and

Whereas the members of the General Assembly of the State of South Carolina have visited the Parris Island Recruit Depot, of which he is the commanding general, and have seen the efficient operation of the depot base and the splendid results of the training being given to the young men of the Marine Corps under his inspiring leadership; and

Whereas the high morale of the officers and men of the Parris Island Recruit Depot is the best indication of the universal admiration and respect inspired by him in all; and

Whereas the outstanding accomplishments of Maj. Gen. E. A. Pollock in time of war and in time of peace prove him to be eminently qualified for appointment as Commandant of the United States Marine Corps: Now, therefore, be it

Resolved by the House of Representatives of the State of South Carolina (the Senate concurring), That the members of the General Assembly of the State of South Carolina hereby commend Maj. Gen. E. A. Pollock, commanding general of the Recruit Depot at Parris Island, S. C., to the President of the United States for appointment as Commandant of the United States Marine Corps should a vacancy occur in that office; and be it further

Resolved, That a copy of this resolution be sent to the President of the United States, to each United States Senator from South Carolina, and to each Member of the United States House of Representatives from South Carolina.

Memorial Postage Stamp Honoring American Coal Industry

EXTENSION OF REMARKS
OF
HON. KENNETH J. GRAY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1955

Mr. GRAY. Mr. Speaker, I have the honor of representing the good people of the 25th Congressional District of southern Illinois, many of whom earn their livelihood by mining coal in the bowels of the earth.

A great many people in southern Illinois and other coal-mining areas of this country have felt that it is only proper and fitting that a United States memorial postage stamp be issued honoring the great American coal industry, its coal miners, and the over 115,000 brave dead, killed in the coal mines of this country.

I have joined with many Congressmen and United States Senators in requesting the Postmaster General to issue such a memorial stamp, but we have been unsuccessful to date. I think it is high time that our deceased coal miners be recognized for the great effort they have given in helping make America the greatest country in the world. I sincerely believe that this memorial postage stamp should be issued for these 115,000 heroes of our industrial "front" who sleep in unhonored graves over the Nation.

I want to pay tribute to a great American, Mr. Vachel Davis, Eldorado, Ill., a coal miner artist and include in the RECORD an article written by Mr. Davis entitled "This I Believe," which was delivered on a coast-to-coast broadcast, CBS network, April 14, 1955, at 3:10 p. m., central standard time.

THIS I BELIEVE—A COAL MINER WALKING CLOSE TO DEATH DAILY FORMS A PHILOSOPHY OF HIS OWN

After having lived in the coalfields for 50 years, with the smoke from the coal mines as a horizon, I know tragedy. The tragedy of mine explosions and the death whistle whose wailing sound strikes terror in the hearts of everyone who lives on company row and in every coal miner's humble shack. Often as a lad I stood with the crowd gathered around the mine shaft where a tragedy had occurred. With pale drawn faces, tears coursing down their cheeks, some sobbing, some praying, were the wives, mothers, and children of the men who worked in the pits. Sometimes a wife or a mother had to be held back from jumping into the open mine shaft. As a child, these scenes haunted me.

A coal miner walks so close to death daily, in the nether darkness of his world, he forms a philosophy of his own of necessity. When a man knows that he is utterly, helplessly surrounded by danger, with millions of tons of rock and earth above him, with only small mine props to support the roof over him, he must find something to have faith in. Sometimes there is a tendency to believe in ghosts and omens. Some carry good-luck charms, to help ward off danger. One may feel that he has a charmed life, or another may reckon that "what is to be will be," and there is no way to avert this predestination. There are many who believe in prayer and faith in the protecting hand of God.

The coal miner's creed might not always be orthodox and his cathedral has no costly

stained-glass windows. The mine safety props are the pillars of his temple where he whispers his prayers, without the solemn tones of the organ and the cushioned pews. But his horny, calloused hand brushes away a tear from his coal-blackened cheek, and he feels that God has heard him through the several hundred feet of earth that hangs over him. And he knows that there is a God, for he feels that inward Witness and Presence that satisfies him.

I believe when a man realizes how helpless and insufficient mortals are, when he faces inevitable danger and tragedy, he must put his faith in something greater than himself. When a man has looked upon the broken, crushed, and burned forms of his miner buddies, and when he dares to think on these things, he forgets the devil-may-care front that he wears. The words that come from his untrained lips are heard of God and He recognizes it as prayer.

So, this I believe, that men who face constant dangers, as do coal miners, do pray, for it is the only help they can expect. When all nature seems to cry out and revolt in the bowels of the earth, the helplessness of a man leaves no possible avenue of escape—other than help that is supernatural and divine.

But, while a miner to some degree becomes a fatalist, I believe that there are things a man is meant to try to change. With what knowledge and art I possess, I find my greatest satisfaction is in trying to save the lives of the men who mine our Nation's coal. I cannot doubt that there is a Supreme Being—there is a power above that of man—and I believe that in devoting myself as best I can to improve the welfare of others—by doing this—I am fulfilling His purpose.

City Council, Peabody, Mass.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following resolution which was adopted by the city council, Peabody, Mass., endorsing legislation for the purpose of increasing the Federal minimum wage:

RESOLUTION ON RAISING THE FEDERAL MINIMUM WAGE

To the Congress of the United States:

Whereas the President of the United States has proposed, and Congress is now considering, legislation to increase the Federal minimum wage above the present inadequate figure of 75 cents an hour; and

Whereas a fair and reasonable minimum wage would raise the living standards of underpaid workers, increase the national income, stimulate business activity, minimize unfair industrial competition based upon sweatshop wages and help to solve the problem of runaway shops; and

Whereas the city of Peabody, Mass., has suffered serious competition because of the inadequacy of the present minimum wage, and is threatened with further difficulties unless action is taken quickly; and

Whereas the President's proposal of a 90-cent minimum falls far short of meeting the needs of underpaid workers or of the population as a whole: Therefore be it

Resolved by the City Council of the City of Peabody, That we call upon the Congress of the United States to enact a Federal minimum wage of $1.25 an hour, and urge our Senators and Representatives to support such legislation, in the interest both of our own community and of the Nation.

Aodpted at a regular meeting of the Peabody City Council held Thursday, April 28, 1955.

Why Is the United States Unpopular in Europe?—The Real Crime of the Americans—American Giveaways Do Not Improve Other People

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1955

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an article by one Indro Montanelli, Italian political analyst and author, who recently wrote in Milan's leading newspaper, Corriere della Sera, on the subject of American aid to European countries. He points out, in this article, that the Americans have a "craze for improving us, for making us try to be in every way kinder to each other, juster, richer, happier."

Mr. Speaker, here is more evidence that the foreign aid programs which have been pouring billions of dollars into many countries in Europe and Asia is not having the effect it was desired to have.

Under leave to extend my remarks, I am including the article by Mr. Montanelli:

THE REAL CRIME OF THE AMERICANS

Why is America so unpopular even in those countries which she has liberated and subsequently helped to rebuild and rescue from starvation? It is a legitimate question which I myself would ask if I were an American, and as such, had lost, let us say, one son in Normandy to save France. The only country which might have some reason for ingratitude is Germany. Yet Germany is the only country which looks amicably at the ex-enemy.

Of all the objective causes with which we justify our feeling of rancor against an enemy, guilty of having beaten us in a war which we declared, there's not one that holds good. They have taken from us neither ships, nor cannons, nor a foot of land; they treated our prisoners with great humanity; they have given us 40 billion lire ($65 million). Unfortunately all these claims on our gratitude are obscured by one defect of which there isn't the slightest hope that Americans can be cured, because it's in their blood, it's constitutional. It is the craze for improving us, for making us try to be in every way kinder to each other, juster, richer, happier.

The real trouble—the great inexplicable crime of the Americans—is that they really are better than us Europeans. I don't say more intelligent. Neither would I say that the Americans are more cultured, capable, refined, or courageous. I only say they are better intentioned, ready to sacrifice the individual for the common good, more candid, more trustful of others, and more ready than we are to see the good rather than the bad side of things.

It upsets all our criteria which for centuries have trained us to look for evil behind the mask of innocence, and to oppose it with malice even more subtle and perverse. The whole of Europe is envious of America, envious of her power, her well-being.

Does the Hatch Act Go Too Far?

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1955

Mr. McDONOUGH. Mr. Speaker, in a recent issue of the Saturday Evening Post an editorial cites a case now pending on appeal in a Federal district court in Vermont which involves the Hatch Act and the rights of an American citizen to freedom of speech.

This case, now known as the Simpson case, involves one, W. Arthur Simpson, who is Vermont's commissioner of social welfare. His job involves administering State funds plus certain grants-in-aid from the Federal Government.

In October of 1951 Mr. Simpson wrote a letter to the editor of the Boston Herald in which he stated his own personal choice of Senator Robert Taft as Republican candidate for President.

Because Mr. Simpson dared to express his personal opinion as to which candidate he believed to be best suited for nomination by his party for President, the United States Civil Service Commission, in 1953, issued a "letter of charges" against him charging him with violation of the Hatch Political Activities Act. The basis of this charge was that Mr. Simpson had violated the law in writing his letter.

The State of Vermont was ordered by the Federal commission to fire Arthur Simpson, but refused, and in an effort to force compliance with its order, the Civil Service Commission then told the State of Vermont that the Federal Government would hold out from Vermont's share of welfare aid an amount equal to Simpson's salary for 2 years. At this point Vermont appealed to the Federal district court in Montpelier where the case is still pending.

This, in my opinion, is a case bordering on the ridiculous when the Federal Government will invoke the Hatch Act against a citizen who expresses his personal opinion, and signs his name as a private citizen.

The man or woman who enters Government service, either at the Federal or State level, does not renounce all citizenship rights as an individual upon taking such office.

But it would appear this is the view taken by those who administer the Hatch Act, if a man's discharge is ordered for expressing a personal opinion, and an attempt made to force the State to comply with the order by the withholding of welfare aid.

If this is an example of the extent to which those charged with administration of the Hatch Act intend to go in denying the rights of free speech and expression of personal opinion to employees

of Federal and State Governments, then I think it is high time we took a long look at the Hatch Act, and consider proper amendments to it, or, perhaps, its repeal, and replacement with better legislation in which the civil rights of Government employees will be protected adequately.

I am fully aware of the importance of keeping Federal employees out of politics. However, the Hatch Act was not enacted to deny to Federal employees the rights guaranteed to them by the Constitution.

Freedom of speech is a privilege which every American cherishes. And so long as a man expresses his own opinion as a private individual, he should be protected in this right. Nor should he live in fear that his job will be taken from him if he exercises this basic right of citizenship.

In the totalitarian state men must live in silence, fearful that any expression of personal opinion not in accord with the will of the government in power will result in immediate retaliation.

Robert Simpson exercised his right guaranteed under the Constitution to express his personal opinion on a matter of importance to him as an American citizen. As a result, the Federal Government ordered his removal from his State position, thus expanding Federal power within a State. When the State refused to comply with this order, the Federal Government attempted to bring pressure to bear on the State government by withholding Federal-aid funds.

This is a situation that cannot be tolerated in the United States. And we should not delay in taking appropriate action to safeguard the right of free speech to every American, regardless of whether he is employed in government service or in private business.

The following article from the Post states the case of W. Arthur Simpson, a citizen in public service who dared express his personal opinion as to a candidate for public office, and was faced with dismissal from office after more than a third of a century of distinguished service for the State of Vermont:

IT'S HARD TO SEE A "LETTER TO THE EDITOR" AS REALLY IMMORAL POLITICAL ACTIVITY

When W. Arthur Simpson, a Vermont State employee, sat down to write a letter to the editor of the Boston Herald back in October 1951 he had no idea that this exercise of an ancient and honorable American privilege would eventually land him smack in the middle of a State rights fight to determine how much authority over its own affairs a State must surrender in exchange for Federal aid.

Mr. Simpson, a Republican, is Vermont's commissioner of social welfare, a job that involves administering State funds, plus certain grants-in-aid from the Federal Government. In the preconvention discussion of the best possible Republican presidential candidate, Mr. Simpson favored Senator Robert Taft. He wrote a letter to the editor of the Boston Herald saying that while he didn't think Robert Taft was the only alternative, "he at least has the virtue of being honest, forceful, a fighter, and a successful campaigner." Surely Mr. Simpson's views should have no more to do with his fitness to hold his job than if he had come out for Senator KEFAUVER.

However, the United States Civil Service Commission, in 1953, issued a "letter of charges" against the Vermont social-welfare head, charging that he had violated the Hatch Political Activities Act by writing the letter, and by presiding at a session of the Republican State convention in 1950. The Commission did this even though published Federal Security Agency rules and the laws of the State of Vermont seemed to Mr. Simpson to exempt him from the Hatch Act on the ground that he was putting in most of his time for his State, and not for the Federal Government.

The Federal Commission ordered Vermont to fire Arthur Simpson. Vermont refused. The Civil Service Commission then told Vermont that Uncle Sam would hold out from Vermont's share of welfare aid an amount equal to Simpson's salary for 2 years. At this, the Vermonters appealed to the Federal district court in Montpelier, where the case is now pending.

Incidentally, Mr. Simpson has worked for his State quite a while, apaprently without trouble. In April 1953 the Vermont Legislature adopted a resolution praising him for distinguished service over more than a third of a century, citing him as a "gracious neighbor and public administrator," and concluding, "Well done, thou good and faithful servant."

Other States are up in arms about what was done to this Vermont Republican, and the expansion of Federal power which it implies. New Hampshire has joined Vermont in the court battle. Indiana, where four State employees have been charged with political activity, seems about to follow suit, with Hoosier Gov. George Craig leading an effort to persuade other States to support a bill by Congressman JOHN V. BEAMER, Indiana Republican, which would make the Hatch Act apply only to Federal employees.

Lawyers for the State of Vermont urge persuasively that the Federal Government's idea that the Hatch Act applies to anybody who works even part time for a State agency receiving Federal funds could logically involve a State employee serving 1 day or members of any State board or commission financed by $1 of Federal funds. Such a person couldn't write a letter to the editor on a political matter, even if he didn't write in his official capacity. (Mr. Simpson signed only his name, didn't use his official title.)

Conceding that the Hatch Act was wisely intended to keep Federal employees out of politics, it is certainly doubtful that Congress intended to extend its prohibitions to every State office that gets a nickel of Federal money or to mere expression of preference for candidates for office. If that is what Congress did intend, a vote on the Beamer resolution provides an opportunity to make the intention plain. In the meantime a vote of thanks is due the Vermont, New Hampshire, and Indiana rebels for bringing the whole thing to light.

The Simpson case may go against them, now that the Federal camel has thrust its head legally into so many local tents. If it does, it will be time for a lot of Americans to get into politics in earnest and reverse the trend by which Federal control of State affairs is assumed as the price of Federal aid. If the Simpson case causes the citizenry to look these Federal gift horses in the mouth, there's nothing wrong with that.

Hon. John Taber

SPEECH
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1955

Mr. McGREGOR. Mr. Speaker, it has been called to our attention that one of the great men of not only our time but of all times, today is celebrating his 75th birthday. I am referring to the Hon. JOHN TABER, the gentleman from New York.

Words fail me when I attempt to express my appreciation of the many kind things, the courteous treatment, and the consideration that has been shown me by JOHN TABER. He had attained high position but he never forgets the little man whether this individual is his colleague, his friend or—yes, even his political enemy. My experience has proven to me that JOHN TABER has only one rule and that is the Golden Rule—"Do unto others as you would have others do unto you."

He has never forgotten that he is a public servant and he is one who remembers not only the people that sent him to Congress but all the people.

And may I add, Mr. Speaker, just a note of praise and appreciation of JOHN TABER's helpmate, his wife, Gertrude. She, too, follows the rules that I have expressed above and they together make a team that will be remembered by those who write for the Archives.

Public Honor for Public Servants

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1955

Mr. GUBSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert a letter which I have written to Mr. Mark Wright, president of the San Jose Newspaper Guild of San Jose, Calif. This organization of working newspapermen and newspaperwomen recently honored the public servants of local government in our community by presenting its annual "Outstanding Citizen of the Year Award" to Mr. Francis Tanner, a patrolman on the San Jose police force:

Mr. MARK WRIGHT,
President, San Jose Newspaper Guild,
San Jose Mercury-News,
San Jose, Calif.

DEAR MR. WRIGHT: The increasingly complex problems facing our local communities today could never be mastered were it not for the ability, loyalty, and devotion to duty of the men and women who are the civil servants of the public in the administration of our government. It is to the everlasting credit of our free American press that the public is kept informed about the activities of these public servants, and that a close link is maintained between the public and those laboring on its behalf.

Today I should like to express to you and the working members of the San Jose Newspaper Guild my sincere appreciation for presenting your "Outstanding Citizen of the Year Award" for 1955 to a plain patrolman of the San Jose police force. Most of us who keep up on local affairs are familiar with the names and activities of top officials, such as the mayor, the city manager, the chief of police, or the sheriff. Your award to Patrolman Francis Tanner points out admirably that the public is served with equal distinction by policemen, clerks, firemen, meter

readers, draftsmen, laborers, technicians, repairmen, and many other categories of men and women. We, as members of the community, have every reason to be proud of them.

In choosing the recipient of this year's award, your organization acted from firsthand knowledge of the merit which alone determined the choice. In doing so, you performed a considerable public service which cannot but benefit the community. May I commend the San Jose Newspaper Guild for doing such an excellent job in fulfilling its mission in our community.

Sincerely,

CHARLES S. GUBSER,
Member of Congress.

Twentieth Anniversary of the REA Program

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1955

Mr. GATHINGS. Mr. Speaker, on the occasion of the 20th anniversary of the REA program, I deem it appropriate to give the Congress a report on the actions of the program in the First District of Arkansas.

There are 10 counties in the first district, and electric lines extend into each of these counties under member-owned electric cooperatives operation. There are 4 electric cooperative corporations located in the first district, and 2 of them are the largest in the entire State of Arkansas.

The Craighead Electric Cooperative Corp., with headquarters located at Jonesboro, Ark., is the largest in Arkansas, serving 16,500 members on 3,900 miles of line in Craighead, Greene, Poinsett, Lawrence, Crittenden, and parts of Independence and Randolph Counties. This cooperative was first put into operation in November of 1938, and in the years since has served an area principally devoted to agricultural crops of cotton, corn, rice, and soybeans, although the area is growing in the production of beef cattle, dairy animals, hogs, and poultry.

The Woodruff Electric Cooperative Corp., with headquarters in Forrest City, Ark., is the second-largest electric cooperative in Arkansas. This corporation has 3,400 miles of line serving 12,500 members. This organization went into operation in 1938, and serves members in St. Francis, Lee, Phillips, Cross, Crittenden, Woodruff, and Monroe Counties.

The Clay County Electric Cooperative Corp., located in Clay, Greene, and Randolph Counties, has its headquarters at Corning, Ark. This cooperative, since going into operation in November of 1939, has expanded to 1,798 miles of lines serving 6,207 members. Agricultural loads served by this cooperative are broiler operations, livestock, dairying, row crop and rice irrigation and cotton gins.

The Mississippi County Electric Cooperative, Inc., with headquarters in Blytheville, Ark., serves one of the richest agricultural areas in the Midsouth. This pioneer cooperative now has 800 miles of lines serving 4,200 members.

It would not be fitting to report on these fine cooperatives without mentioning some of the men who have made these organizations so successful. For these are the men who have worked through the years to bring electricity to the farms.

I would like to recognize the tireless work of such pioneers as Mr. Leon Presson, president of the Clay County Electric Cooperative Corp., and Mr. Adolph Lillard, their able manager. Others in this organization are Mr. J. Frank Ellis, Mr. Thomas Hall, Mr. Paul Moore, Mr. Clois Butler, Mr. C. T. Johnson, Mr. Mack Dalton, Mr. Roy Creek, Mr. W. Z. Porter, and the Honorable E. G. Ward.

In the Craighead organization are such fine men as Mr. S. C. Chapin, the president, and their fine administrative manager, Mr. Earl Walden. Working with these men are Mr. G. C. Jernigan, Mr. Oscar Robinson, Mr. E. L. Stillions, Mr. L. C. Sloan, Mr. C. H. Montieth, Mr. G. M. Shipman, Mr. W. A. Cunningham, Mr. Raybon Sullivan, Mr. Ode Chipman, Mr. Garland Arrington, and the Honorable Charles Frierson.

Associated with Mr. Charley Lutes, president of the Mississippi County Electric Cooperative, and their fine manager, Mr. H. C. Knappenberger, are Mr. Tom Callis, Mr. Charles R. Coleman, Mr. B. B. Threlkeld, Mr. Claude Duncan, Mr. G. W. Garrigan, Mr. J. B. Johnson, Mr. W. E. Hagan, Mr. R. L. Houck, Mr. Lloyd Shelton, and Mr. Earl Wildy.

In the large Woodruff Electric Cooperative Corp. and working with their president, Mr. John Doyel, and their fine manager, Mr. T. E. Bostick, are Mr. J. E. Breeding, Mr. V. O. Turner, Mr. James Smith, Mr. E. E. James, Mr. Joseph Whittenton, Mr. J. Crossett, Mr. Carson Brown, Mr. John Brooks, Mr. Homer G. Townes, and their excellent attorney, the Honorable John Eldridge, Jr.

These men, pioneers all in this great work, are continuing to give their service to their neighbors in the work of the REA.

The Meaning of Mother's Day in the Free World and Behind the Iron Curtain

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1955

Mrs. FRANCES P. BOLTON. Mr. Speaker, in recent years we have been setting aside special days to emphasize certain human relationships, among them Mother's Day. We have agreed that on the second Sunday in May of each year we will pay tribute to the virtues of motherhood, the love, the courage, and the strength of mothers down the ages, which we recognize as the molding and steadying force in every normal childhood and in every happy home.

There are many things I could say about the custom we are establishing—for to me these days are useful only if they give to every one of the 365 days of our calendar year a deeper sense of what these relationships mean. But today I want to speak for a few minutes about the use being made of Mother's Day and of Children's Day by the Communists who have become so consummately skillful in using the emotions of men and women to hide their purposes.

Women who believe in God—no matter what their form of belief—cannot do less than resent the the use the Communists are making of women in all lands—using words to deceive, to cover up reality. And they exploit these words and send them out to all the corners of the earth.

DANGER SIGNALS

Let me give you some danger signals:

On March 8 of each year, the Communist world celebrates International Women's Day. On this day the International Federation of Democratic Women mobilizes its 66 million women all over the world. On this day Communist women display their power and their contribution to building up the Communist world. All Communist governments, all Communist parties of all countries give special attention to this day, and praise the women for what they have done and scold them for what they failed to do. This is the day when Communist women feel the public tribute paid to them and when they are made to feel how important and how needed they are as a factor in building up communism. The wife is expected to influence her husband, the mother to educate the children, the working woman to speed up production to build the Communist state. Women in politics are expected to do a tremendous job as propaganda agents, as information agents, and as legislators to press for laws that aid the Communist plan.

On June 1 of each year the Communist-dominated world celebrates Children's Day on the national and international level. On this day they show the world "the wonderful Communist children—loyal to the State, and so mature when they reach the age of 14 that they do not need the guidance of their parents any more. They are free to do what they please. At this time it becomes their right and duty to spy on their parents and to do all assignments given them by the party leaders.

I would urge you to read the readily available Communist pamphlets on the Education of Communist Youth, to understand what is actually being done to youth.

COMMUNIST MOTHER'S DAY

On the 18th of June, a matter of only a few weeks from now, Communist Mother's Day will be tuned to the note of hate of the West, and above all else, hate of America. And in July another

World Congress of Mothers will be called. At this Congress an appeal will be addressed to all mothers everywhere—an emotional appeal—to ban atomic war, to stop "American imperialism" and its interference in the affairs of other countries. It will urge all mothers to work for peace and brotherly love among all nations. It will be beamed to the hearts of the mothers of the West—to the trusting women of the free world who listen eagerly to all voices in support of peace. But we women of America—yes, and our men as well—with women everywhere should listen intelligently. We should not permit ourselves to accept these high-sounding words until we have examined the kind of "peace" that is being offered us by the Communist leaders. We should be keenly aware that the Communist Mother's World Congress combines its channels of propaganda with those of the Vienna Peace Conference. We should be alert to see what a truly terrific outlet this gives with which to flood our press, etc. Somehow we must be prepared to refute this propaganda immediately and effectively, or we give the impression that what they say is true: that America is the aggressor and the warmonger, while Communists are doves of peace.

We who live in this free America—especially we who are women, whether we be mothers in fact or not—feel an especial urgency to bring to all people everywhere the realization of what the inevitable results will be should communism be able to becloud the true issues so thoroughly that women and men as well permit themselves to be taken in by their words.

What channels do we free people here in America have to counteract the floods upon floods of propaganda that are constantly poured over us and the increased flood that will be loosed on these special dates?

We have the United States Information Agency and we should use it more intelligently. We should see to it that it has the personnel and the tools to do a real job for us. I am thoroughly aware of the criticisms that have been hurled at it—some justified but much not justified—but it is our one general channel. Then there is Radio Free Europe that is doing much. We could concentrate our subject matter and refute the dove of peace of the hammer and sickle.

WOMEN FOR FREEDOM OF EUROPE

We have in our midst also a woman's group whose knowledge is far beyond our own, because it is drawn from personal experience and from the constant flow of information from the curtained countries that are theirs.

I speak of Women for Freedom of Europe, Inc. This organization at 8 West 40th Street, New York, is a member of the General Federation of Women's Clubs. Its president is Geraldine Fitch; the chairman of its advisory board is Mrs. Robert P. Patterson, one of the finest representatives of American womanhood. These women have undertaken to study and analyze from firsthand information, the social changes introduced in these Communist and Communist-dominated lands, and to learn the effects of these changes upon the lives of women and their families. A seminar now in progress at the Baltic House of Freedom in New York City is giving out important information about the laws recently introduced in order to Sovietize the pattern of family life, the education of children—and again I urge you to read Lenin's brochure on the Education of Communist Youth—and the working conditions imposed upon women. We Americans should know more of the actual conditions. It is so difficult for us to picture such a situation. We do not realize how vital it is that we who are still free should work together to retain our freedom.

As you well know, Communist propaganda is constantly telling their own people and the world that only the U. S. S. R. works for peace—that America is responsible for all the war talk—all their need for ever more war strength. And they are good at it. Do not mistake that.

CONTRASTS IN PEACE EFFORTS

Let me review a few things which would seem not only to disprove their contentions, but to paint the picture in its true colors.

The historic record of the American people for peace stands despite the Communist labels of "warmonger" and "aggressor." The quick demobilization of the American forces after the war, tells clearly our dislike of war and love of peace. By contrast the whole Russian Army is still under arms and ready for action, with armies of the captive countries gradually integrated into a joint Soviet military plan. Drawn up this February by Soviet officiers and military delegates this plan designated Hungary, together with Bulgaria and Romania, as the second defense line. The delegates of the satellite states proposed that each country have its own military command with Soviet officers as "liaison." The Russians counterproposed that Russian military headquarters be set up in each country and their "proposal" was "accepted" by all the delegates, as the Minsk resolution. In view of the impending ratification of the Austrian Peace Treaty which implies withdrawal of Russian troops from Austria, Hungary and Romania, the Minsk resolution supplies another pretext for keeping the Russian armies in these countries.

After the Second World War the Acheson-Lilienthal-Baruch plan for international agency control of atomic production was blocked by Soviet veto in the United Nations. Also another generous effort for the sharing of "atoms-for-peace" was presented by President Eisenhower to the United Nations and accepted by the General Assembly in November 23, 1954.

Assistance was originated and largely underwritten by the United States through the Marshall Plan, NATO, and the Point Four Program for the Underdeveloped countries. This is elequent testimony of the American people's striving for world peace based on higher standards of living, with freedom and justice strengthened by economic security and without political influence.

In the treatment of former enemies America actually donated billions of dollars for the reconstruction of Japan and Italy, while Soviet Russia looted billions' worth from the captive countries. Today Japan is a free country, with its own foreign policy as is Western Germany.

I could name many more matters which show our good faith, and the Communist infidelities. But my purpose today is not tied to these things. My purpose is to draw the attention of all women to the need for intelligent thought and action lest we let the soft words of those who talk peace, deafen us to the steady and persistent beat of the drums of war from which they emanate.

Peace never comes easily for it is a quality of the heart, of the personality. The work for peace is not a matter of mass gatherings, and propaganda banners. The work for peace involves instead a constant vigilance against the slavery which the Soviets are forcing upon millions and millions of people in the name of peace.

We who are free women in a free land must keep faith with our own dedication to peace and also with the trust that women of the rest of the world have placed in American womanhood. We must recognize the false and stand firmly behind each true and since step toward a just and lasting peace.

Such a rededication of ourselves to the true meaning of freedom, which after all is our responsibility to the Infinite, can bring new meaning to our so-called Mother's Day. May we work unceasingly and humbly that freedom may be reborn across the world.

COMMUNIST STRATEGY

Even before I had the responsibility of chairmanship of a subcommittee of the House Committee on Foreign Affairs having to do with national and international movements, the committee that drafted the Strategy and Tactics of World Communism, I had concerned myself with communism and its teachings, it methods, its goals. Insofar as I have been able, I have followed the tragic history of those peoples and countries who are behind the curtain, hoping that other countries and other peoples might learn from these tragedies and not be engulfed.

Let me give you something of the history as it has been laid bare:

CZECHOSLOVAKIA

Ever since World War I, as an active and loyal member of the League of Nations, Czechoslovakia kept a constant record for peace and international cooperation. Confronted by the increased Nazi menace, it supplemented its system of alliances with France and the Little Entente by a treaty with the Soviet Union in 1935, which was renewed in December 1943, and was clearly based on nonintervention by the U. S. S. R. in the internal affairs of the postwar Czechoslovak Republic. Yet, its genuine effort to promote European reconstruction and the work of the United Nations was abruptly ended by combined machinations of the Soviet Union and its Communist agents within. By a violent coup Czechoslovakia was deprived of its traditional role of working for peace, its

democratic system was overthrown, and its people drawn into the orbit of Soviet slavery.

BALTIC STATES

Lithuania and her Baltic neighbors, Estonia and Latvia, existed in peace with Russia ever since the establishment of their independence in 1918. In the course of good neighborliness, peace treaties were made, nonaggression pacts signed, and mutual-assistance treaties concluded. The mutual-assistance treaties were for a term of 15 years. Yet within 8 months these Baltic States fell under such ruthless occupation as history has seldom recorded.

In Estonia, according to verified data, about 60,000 persons were deported to the Soviet Union in 1940–41. About 2,000 men and women were executed on the spot; 9,229 of the deported or murdered were minors or children under 20 years of age. In 1949 a considerably larger number of people were deported than during the mass deportation in 1941.

In Latvia, during the first occupation in 1940–41, a total of 37,500 persons was deported. Including the subsequent deportations after the reoccupation of the country in 1944, the allover amount is far over 100,000 persons.

Since the first mass deportation of the horrible night of June 13–14 in 1941, in Lithuania, six other deportations have taken place, taking young people, fathers, mothers, and children. Eighty-three thousand Lithuanians were driven off in the early part of May 1945. In May 22, 1948, Lithuania lost more than 100,000 of her inhabitants in a single night.

DEPORTATIONS

Today deportations proceed under the guise of voluntary work in remote regions of Russia, where the deportees are forced to perform specified duties and labor voluntarily. They are forced to sign a statement that they are leaving voluntarily for work in such-and-such brotherly republic or autonomous district. At designated points, these deportees are classified, some to go to penal camps, some to forced labor, some to free exile, which covers women and children. The places of deportees are filled by newcomers from Russia. Recent escapees from Vorkuta and other camps bring news of thousands of those Balts, Bulgarians, Hungarians, Rumanians, and Poles laboring unto death in the mines, railroad building, fisheries, and forests of the western Ural region.

This is the Communist peace that was accorded the Baltic States when they trusted the false independence, autonomy, and coexistence promised by the Soviets. Similar Soviet pattern was followed in other countries, like Bulgaria, which was also taken over, the Russian troops exercising pressure which gradually led to the transformation of the coalition cabinet in September 1944 into purely Communist government. From 1945 to 1947 thousands of members of the Peasant Party of the opposition in Parliament were imprisoned and their leader, Nicolas Petkoff, executed.

RUMANIA

Next was Rumania. On April 3, 1944, Molotov, the Soviet Minister of Soviet Affairs, in the course of the Rumanian armistice negotiations, made the following statement:

The Soviet Government declares that it does not pursue the aim of conquering any part of Rumanian territory or of changing in whatever manner the existing social order in Rumania. It equally declares that the entry in Rumania of Soviet troops is solely the consequence of military necessities and of the continuation of resistance of the enemy troops.

This solemn statement was repeated by Molotov on August 23, 1944, when Rumania joined the allied forces:

In the face of events in Rumania, the Soviet Government considers that it would not be without value to confirm the declaration it made in April this year, to the effect that the Soviet Union does not intend to appropriate any part of Rumania or to change the established social regime in that country, or, furthermore, to limit in any way whatever the independence of Rumania.

Almost at the same time, Vishinsky arrived in Rumania to overthrow the coalition government under the pressure of Russian tanks and force upon the country the Communist regime. Right now the Sovietskaya Moldavia of March 31, 1955, announced the planned displacement of the whole population of Bessarabia and Moldavia to Astrakhan, Rostof, and Pavlodar in Central Asia. One million six hundred thousand people, women and children and old people, are among those to be moved to a virgin cold region, where there is nothing but the bare frozen ground. These people are Rumanians, and the territory was incorporated in the U. S. S. R. at the peace treaty.

The same pattern was used in Hungary. In Hungary reports tell that in March 1955, while the Communists vigorously stepped up their peace campaign, the Government issued a decree stipulating that within a period of 14 days the enemies of the people be evicted from Budapest and other major cities.

The people of the captive countries have peace treaties, but they have no peace. Their countries have been looted under various pretexts. The misery and suffering of their people is hard to imagine by American standards. They have lost their freedom and are cut off from the rest of the world. Their people are subject to slavery, imprisonment, and mass deportation.

This, Mr. Speaker, is the peace the Communists offer the world.

Warrior-Tombigbee River Development

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 9, 1955

Mr. BOYKIN. Mr. Speaker, on Thursday last a number of citizens of Alabama, who are interested in the development of the Warrior and Tombigbee Rivers and of the improvement of Alabama's only seaport at Mobile, Ala., appeared before the Subcommittee on Public Works of the House Appropriations Committee in behalf of the appropriations approved by the Budget Bureau on the Warrior lock and dam—$4,100,000—and of the 40-foot channel from Mobile Harbor to the mouth of Mobile Bay 500 feet wide in the bay, with 42 feet over the bar—$1 million to start the work of deepening and widening this channel which is estimated to cost a total of $5,971,000.

Mr. John M. Griser, of Mobile, who is president of the Warrior-Tombigbee Development Association, which organization is a nonprofit association, was among those who appeared before the subcommittee and his statement is so comprehensive and so fully explanatory that I wish to insert his remarks in the RECORD. Mr. Griser is one of the outstanding civil leaders of Mobile, and has, down through the years, taken an active part in the development of the waterways in the State of Alabama. He is president of the Alabama Dry Dock and Shipbuilding Co., one of the largest shipbuilding and ship repair plants in the South:

STATEMENT OF WARRIOR-TOMBIGBEE DEVELOPMENT ASSOCIATION BEFORE THE SUBCOMMITTEE ON PUBLIC WORKS OF THE HOUSE APPROPRIATIONS COMMITTEE, MAY 5, 1955

I am John M. Griser, president of Warrior-Tombigbee Development Association, which has its offices located in Birmingham. The organization is a nonprofit association made up of members throughout Alabama's Warrior-Tombigbee River Valley. The association has one purpose: to seek development of the water resources of this valley for better use for navigation, for industry, for agriculture, for domestic consumption, and for recreation. We fully recognize as do the members of this committee, that these uses are all interlocked and that the developments we seek must be governed by a standard which will result finally in deriving the greatest public benefits possible from our water resources.

At the same time we must recognize that the Warrior-Tombigbee is already a vital, principal commercial artery serving an established industrial area whose heavy, basic industries are important factors in not only the economy of the Southeast but the Nation as well. The area's industrial growth continues to keep pace with the needs of the region and in line with the national average. One of the basic factors in promoting the industrial progress of the area is the availability of water transportation on the river system, as well as the availability of access to world trade through the fine Gulf port in Mobile Bay into which the river empties.

While we are interested in all the complex phases of water resource development which must be practiced in our river valleys, and while we are aware of the need for maintaining carefully balanced development to protect fully the public interest in every phase of water use, we come before this committee asking consideration and assistance primarily for navigation purposes.

This is the fourth consecutive year that representatives of the Warrior-Tombigbee Development Association have appeared before members of this committee. I am sure you are as well informed on most aspects of the project as we are. However, I do want to call certain facts briefly to your attention.

The public interest in the development of this river system is greater today than it has ever been. The interest in the program of our association, in the progress of work on the river, and the interest in use of the

river is more widespread and more intensive than it has ever been in the past.

Shippers, barge and towboat operators, and to some extent the public gained a new concept of the value of navigation improvements on the Warrior-Tombigbee River last August when the new Demopolis Lock and Dam was opened to traffic midway on the river system. This new facility made it possible to cut transportation costs on the river by a full 10 percent. Plans are underway for industrial expansion in the dam area. Heightened interest in water recreation above the dam is already adding a steady flow of dollars into the service economy of the area.

We are here, particularly, today to ask this committee's approval for a second appropriation for construction of the second such navigation facility on the waterway. This is the $19 million Warrior Lock and Dam on which construction was started last fall under an initial appropriation of $1,800,000. Warrior Lock and Dam is a replacement for existing Locks and Dams 8 and 9 which were built in 1903 and 1902, respectively. These locks were built for packet boats. They provide lifts of 10 and 11 feet, respectively. They are 284 feet long by 2 feet wide. Both the lock chambers and the dams are in such condition from age and wear and tear that a reputable civil engineer who made a study of lock and dam 9 for our association 2 years ago concluded that "To keep these structures in even a reasonable state of repair, that will permit operation of the lock, must involve a tremendous maintenance effort. To put them in acceptable state of repair is obviously impractical and probably impossible. While this report does not intend to suggest imminent complete failure of either the lock or dam, it does not rule out the possibility of such failure. There is, however, basis for the premise that even now there is not time for adequate replacement before failure." Maintenance by the Corps of Engineers has kept the structures operating but their basic condition is getting worse all the time.

As an indication of the public interest in the improvement of this river and particularly in the building of Warrior lock and dam, I would like to point out that 650 people gathered at a remote, isolated, and poorly accessible site on the river in October of last year to participate with the Corps of Engineers and 8 Members of Alabama's 11-Member delegation in the Congress in ground-breaking ceremonies.

There is in the budget under consideration an item of $4,100,000 of construction money for Warrior lock and dam. In our estimation it is money that is needed for worthwhile improvement of an already navigable waterway that is paying good dividends on investments already made and which in our estimation will return even greater benefits in the future. We earnestly ask your approval of the full amount in the budget for this project.

Four completely new locks and dams will be required to modernize the navigation facilities on Warrior-Tombigbee. Demopolis, which is practically finished, and Warrior, which is under construction, represent half of these facilities. Looking ahead in hopes that Congress will see fit to provide the funds to complete the modernization of this inland navigation channel in orderly, systematic fashion, we urge your consideration and approval to provide adequate planning and investigation funds for the Corps of Engineers. As a representative of a region that has a relatively small stake in the $3,600,000 included in the current budget for general investigations by the Corps of Engineers, we nevertheless recognize the need for such funds to be provided for the Corps. Good business practice requires that planning work proceed systematically far in advance of actual construction.

The next navigation project on Warrior-Tombigbee will be in the lower reaches of the river. There is at present a conflict of interest involved in the project. The conflict concerns the amount of land to be flooded. We are confident that the Corps of Engineers will find a way to design improvements to provide maximum efficiency of the river for navigation and at the same time minimize the amount of productive land affected. But this very conflict of interest and the need to find a mutually satisfactory solution emphasizes the need for the Corps to have adequate general investigation funds.

Ours was one of the first complete river systems in the United States that was authorized for Federal improvement. Today it is one of the most run-down river systems being used as a principal artery of commerce. In its present condition, with 2 of our locks and dams only 1½ miles apart and some of the others only 3, 4, and 5 miles apart, the river is actually crowded. There are 22 towboat and barge operators on the river with 44 towboats and 204 registered barges in operation. In barges that average only a little more than 500-tons capacity, they are carrying commerce at a rate this year well in excess of 3 million tons annually. They navigate over 467 miles of channel that has a 255-foot fall in 277 miles now canalized by 13 locks and dams. The upper half of the river flows through a narrow rock gorge. The lower half flows through a relatively flat plain where the river winds constantly and at times abruptly through soft soil where the banks are constantly eroding. Consequently, the Warrior-Tombigbee from Tuscaloosa south for 250 miles, except for the new Demopolis pool, requires constant maintenance dredging. We have the highest regard for the office of the Mobile District Engineer of the Corps of Engineers for the fine job of maintenance that has been done with limited funds. At the same time we ask this committee to recommend adequate inland waterway channel maintenance funds from which we on the Warrior-Tombigbee may receive our fair and proportionate share to keep our commerce moving.

Mobile Bay, into which this river system flows, affords access to oceangoing shipping over a federally maintained ship channel that was first authorized by the Congress in 1826. Last year the Congress authorized a project to deepen and widen the ship channel in Mobile Bay. The present project depth is 32 feet with 36 feet over the outer bar. The present project width is 300 feet in the channel with a 450-foot width over the bar. These project controls were established in 1934 when commerce through the port totaled 3,700,000 tons. Six years ago, in 1949, the people of Mobile and the shipping interests using the port asked for and were given a public hearing by the Corps of Engineers on the project. At that time they asked the corps to recommend a 40-foot channel. The corps did so and last year Congress approved the project for a 40-foot channel, 500 feet wide in the bay, with 42 feet over the bar. I mention this chronology of events to point out that the need for this project has been recognized for a number of years, and the need continues to grow. Tonnage handled through the port now exceeds 12 million tons annually. A major portion of this tonnage is bulk materials which can be most economically carried in deeper-draft vessels—vessels drawing in excess of 27 feet of water. Industries operating bulk material-handling plants at Mobile have added several million tons of capacity to their facilities in the last year. The vessels supplying these plants are giving up cargo ranging from 2,000 tons to 8,000 tons on every trip because the channel cannot accommodate them fully loaded. In the first 11 months of 1954, 608 vessels entered the port of Mobile which drew in excess of 27 feet of water when fully loaded. Not only do these deep-draft vessels lose cargo but they operate under constant hazardous conditions because of depth and width limitations of the channel.

There is an item of $1 million in the budget now under consideration to start the work of deepening and widening the Mobile ship channel which is estimated to cost a total of $5,971,000. We understand this project is estimated to return $2.77 in benefits for every $1 of expenditure—a very favorable ratio. We know the deeper, wider channel is greatly needed and we urge approval of funds for the work.

California Senate Resolves Memorializing Congress Stating That Civil Defense Is Primarily Federal Government Responsibility

---

EXTENSION OF REMARKS
OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 9, 1955

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent granted me so to do, I wish to call your attention, and that of my other distinguished colleagues, a letter to me from the secretary of the Senate of California, together with the text of California State Senate Joint Resolution 24:

SENATE, CALIFORNIA LEGISLATURE,
Sacramento, Calif., May 5, 1955.

Hon. CLYDE DOYLE,
House of Representatives,
Washington, D. C.

DEAR MR. DOYLE: Pursuant to instructions by the senate, I am handing you herewith a copy of Senate Joint Resolution 24, to which I respectfully invite your attention.

Very truly yours,

J. A. BEEK,
Secretary of the Senate.

Senate Joint Resolution 24

Joint resolution relative to memorializing Congress to study the problems involved in civil defense

Whereas recent scientific developments have so altered previous civil-defense planning that it has now become apparent that an effective national civil-defense program can only be achieved by the Federal Government's acceptance of responsibility for both defining and financing such a program; and

Whereas the previous position of the Federal Government that civil defense is primarily a responsibility of the several States controverts the Federal Constitution which clearly assigns the responsibility for the common defense to the National Government; and

Whereas it has been clearly demonstrated during the past 4½ years that with the several States dependent upon each other for civil-defense support, many States are neither financially able nor inclined to go along with the current Federal program, which demands matching-fund participation to the degree necessary to provide adequate fall-back support for their sister States; and

Whereas California's neighboring State of Nevada has recognized its inability to provide adequate support for the people of California in the event of an enemy attack and its legislature has adopted a resolution calling upon Congress to make adequate provisions for such an event by establishing Federal supply reserves east of the Sierra Nevada Mountains: Now, therefore, be it

Resolved by the Senate and Assembly of the State of California (jointly), That the Legislature of the State of California respectfully memorializes the President and the Congress of the United States to study the problems involved in the new concept of civil defense resulting from the greater destructive powers of presently developed weapons and make adequate plans to realistically provide an effective national civil-defense program to the extent necessary; and be it further

Resolved, That the secretary of the senate be directed to transmit copies of this resolution to the President and Vice President of the United States, the Speaker of the House of Representatives, each Senator and Representative from California in the Congress of the United States, the Secretary of Defense, the Secretary of the Army, and the Secretary of the Navy.

Farley Addresses Career Conference

EXTENSION OF REMARKS
OF
HON. J. PERCY PRIEST
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1955

Mr. PRIEST. Mr. Speaker, under leave granted to extend my remarks, I desire to insert the following address delivered by the Honorable James A. Farley at the fifth annual conference at Tennessee A. and I. University in Nashville:

It has been quite some time since I have had the pleasure of visiting in Tennessee. Therefore, it gives me great satisfaction that you, Dr. Davis, and your fine staff here at Tennessee A. and I. State University have granted me this opportunity to come to Nashville.

This university has taken this period to show to the people of Tennessee, likewise the people of the entire United States, that it is fully cognizant of the role of education in the preparation of tomorrow's citizens, the heirs to America's greatness, and the most definite assurances that this Nation shall continue to flourish as a great and forward-moving democracy. For, to say the least, today's investment in our children is a tangible investment in our tomorrow.

I, therefore, wish to commend the progressive leadership, that this institution is affording in these events to the State of Tennessee and to the rest of the Nation and several foreign countries through the boys and girls who have found their way here.

The fact that Tennessee A. and I. State University in these projects has extended itself both beyond and below the level of its instructional obligations is another reason that indicates its depth of interest in a broader scope of educational service.

In the days just passed this institution has sponsored a marketing clinic, principally designed to aid the needs of men and women of the postcollege level who are engaged in the fields of marketing, advertising, and sales promotion.

Today, here in this vast arena, we view the eager and inspired faces of high school and college youngsters, and one cannot but offer commendation to Tennessee A. and I. State University for its generous foresight—indeed, its sincerity of purpose as it fosters these opportunities of enlightenment for the high-school students, its college enrollees, and men and women already launched upon their career.

My long experience in public life vividly testifies to me that the sort of results, here witnessed, could not have come of reality through mere circumstantial incident. Governor Clement, the fact that this institution on this beautiful hill, with its magnificent plant and its useful educational program, fortified by a will to serve, is, to say the least, a tribute to Tennessee.

So I feel the need to compliment, likewise the State of Tennessee, you, its first citizen, your predecessors in the Governnor's chambers, and the unit of this State's administrative arm which is entrusted with the important and challenging responsibility of providing your youth with the best educational experience that may be afforded.

Consider me not naive to the point, Mr. Davis, that it may be concluded that I feel that this institution, or any other such institution in the State of Tennessee or elsewhere in the Nation, has arrived at a point of static existence or a level of diminishing returns, for such cannot be true in a society in which needs change every day and challenges become greater.

But you and I, our precious boys and girls, can gather hope in the fact that Tennessee and the rest of the Nation will find ways and means, regardless of the race, color, or creed of the child, to assure it of the finest possible educational opportunity. And, thus, it was in this frame of mind that I accepted the invitation to come to Nashville.

Before I address myself to the subject of careers, since I am mindful of the fact that my role here today is that of keynoting the career conference, which this meeting officially opens, I would like to make a further observance.

I feel that the importance of the activities being held here during this period takes an added significance in acknowledgment of the consideration education is giving to business. I sense here a locking of arms between education and business, which is indeed wholesome in its implications. Beyond doubt, if we, as a Nation and a world leader in the system of free, competitive enterprise are to survive education and business must continue and accelerate this type of mutual cooperation.

Education has the obligation to prepare our young people for useful and productive roles in business and the many and important occupational areas which contribute, directly and indirectly, to the Nation's economy, and business has the responsibility of working with educators in vocational efforts such as this present career conference, as well as of offering challenging opportunities for the school trainee in areas for which he or she might be best suited.

In this sort of setting, my young people, you are called upon to exert a self-determination over which you as individuals have primary control. You must, within yourselves, decide what you wish to attain in life and establish within your hearts and souls a determination to achieve these objectives. I am suggesting, therefore, that the first steps toward a fruitful career rest within you as persons and finally only you can foster your inner urge for successful achievement.

You may choose one of the professions, the arts or the sciences, or a career in marketing, or selling, or any line of business or service endeavor. However, your first responsible to this chosen career is that of gaining for yourself a firm and sound foundation in its background—you must strive toward excellency in your everyday school work.

In searching for a subject upon which to address you this morning, I naturally concluded upon one with which I have had a close association for most of my life. I have been engaged in selling for a long time, therefore, I have chosen to speak with you on the subject of selling or salesmanship as a career. However, I do not proposed to represent myself as an expert in salesmanship. I am not a professor of salesmanship.

Nevertheless, let us take a look at the item, selling—this profession which we call salesmanship. I do not know of a truer statement than the famous remark of one of my very good friends and fellow salesmen, who says: "Nothing ever happens until somebody sells something." That is true in every field of endeavor, and it has been true since the beginning of time. To translate any worthwhile project, an abstract idea into concrete action, somebody has got to sell something.

Somebody has been selling something to get action right here on this campus and we see the tangible results all about us. It was somebody selling something, too, that has brought our country back and up and out of every crisis in its remarkable history. Through it all, creative salesmanship, somebody selling something, has made or remade or made greater our grand Nation.

Just what is salesmanship? There are a lot of fancy definitions, some of which you may have read. Of those that I have seen, I like the following best. It was put together by Dr. Alfred Gross, professor of marketing at New York University. In his book on salesmanship, Dr. Gross says: "Salesmanship is the art of increasing the satisfaction of customers by persuading them to buy specific goods or services as the best solution to their needs and desires."

That is very comprehensive, is it not? Notice that he says: It is an art; that it increases satisfaction; by persuading customers to buy; specific goods or services; as the best solution; to their needs and desires.

Now let us take Dr. Gross' 6 points and consider them 1 at a time:

First, it is an art, he says. I do not necessarily limit it to art for I rather consider it a profession and I think it is taking on those characteristics more every day. Of course, it is not taught as formally as other professions but the successful salesman will study it in all its phases, just as a doctor or lawyer would study his profession.

The label of art is appropriate, of course, when you consider that salesmanship, the most successful salesmanship, requires talent. Some people say a salesman is born, not made. I do not agree. Of course, all salesmen must have ability. Some have more inherently than others but all need study and training, whether talented or not. Naturally, the greater native intelligence you have the more likely you are to succeed as a salesman.

In point 2, he says salesmanship increases satisfaction. I think that is obvious. It must increase satisfaction or the customer will not buy.

Point 3, persuading them to buy, is very important. There is where the real talent comes in. Some people limit their definition of salesmanship to the art of persuasion and if we had no other that would not be a bad one.

But do not overlook the last word in the point 3 phrase, persuding them to buy. That word buy, which means that the sale is completed, is the real essential. All the persuasion in the world is of no account unless the customer buys or, as they used to say, unless he signs on the dotted line.

Point 4 is easy, specific goods or services. He means, of course your goods or services.

Point 5, as the best solution. In other words, any other action than buying will not solve the customer's problem. It must be the best solution.

And, point 6, to their needs and desires. I think he means that the salesman sees the need, points it out to the customer, then converts the need into a desire. Remember, this all takes place in the mind of the customer. And it happens when the need becomes a desire, or in my words, when the need becomes a want.

Now I know there are many good salesmen who never heard of that definition of sales-

manship. And if they never learn it they will probably continue to be good salesmen. It just happens they have what it takes.

But I would not venture to say that all of them might be better salesmen if they knew it and remembered the important elements. Surely I am safe in commending it to those of you who may enter the field.

Let us consider another important phase of salesmanship—the customer. Obviously, without a customer you cannot make a sale. The business analysts tell us there are three kinds of customers. I understand this is particularly true in retail salesmanship but I believe it is true also to a degree of all the other kinds, too. They say there are the casual, the attracted, and the permanent customer.

The casual customer, of course, is the fellow you catch on the wing. He is on the move and he just happens to come your way. Naturally, you cannot borrow much money on the prospective commissions you are going to get from the casual customer.

The attracted customer is a little better security because he is your man. And he is your man because of something you or your firm has done; some of your effort may be in the form of advertising or sales promotion has brought him to you. And you can count on him, or others like him, coming to you if you continue the volume and quality of your promotion effort.

But the customer of the highest degree, of course, is the permanent customer. He is your man and you can count on him. He will continue to be your man so long as you treat him right; so long as you give the quality merchandise and the quality of service and satisfaction it took to make him your customer in the first place.

A good thing about him is that every time you sell him, under those circumstances, he becomes more permanent than ever. Now your job as a true salesman is to convert these three types, ultimately into the one type. You turn a casual customer into an attracted customer and you make the attracted customer a permanent customer.

How can you do this?

Well, that is where most of the art of selling comes into play. But surely the real basis of it all lies in creating a relationship of mutual trust and confidence between you and the customer. It goes without saying, you must have a good product, a product you know is good, and you must know it thoroughly.

A complete knowledge of the product you are selling is indispensable to successful salesmanship. There is no place today for high-pressure methods or any kind of misrepresentation. The key to making any customer a permanent customer is the Golden Rule.

So, probably first, the salesman should have a depth of sincere integrity. Then he should have imagination, the ability to deal with unexpected situations. His curiosity about people should be of the genuine type, and in which he receives enjoyment from studying and understanding people. His education should be broad and diversified and of the sort that gives widespread interest in many facets of life. And, above all, he must be enterprising, possessed of determination to get ahead.

In my opinion, salesmanship would offer a fruitful career for any of you young people who may desire to enter the field. The income of our population is greater today than ever before in our Nation's history, and the people of the United States have greater leisure than ever before. As a consequence, we have more money to spend for the many fine things that are now available to us and greater time to enjoy these items. Therefore, I do not hesitate in the least to recommend salesmanship to you as a career.

So once again, I wish to express my sincere gratitude for the opportunity which has been afforded me to come to Nashville to address this opening session of the fifth annual career conference of Tennessee A. and I. State University.

Dr. Davis, you and your competent staff and faculty are indeed to be complimented for the tangible interest that you are showing in the youth of your State as well as to such people as the membership of the National Association of Market Developers and the men and women who travel to this location each year to be a part of your marketing clinic.

There is hope and there will always be hope for the perpetuation of the American way of life as long as there are institutions of learning such as this one. To you young people let me say in closing, there are many opportunities, many careers awaiting you if you will dream and work to make your dreams come true. I feel the need to try to impress upon you, however, that your self-determination to succeed in whatever career you may choose will depend to no small degree upon your desire to excel.

Therefore, you must be resourceful, flexible, and possessed of personal initiative. The world may not come looking for you, but it will certainly receive you if you carry to it the best in training, ideas, and a determination to succeed.

Last but not least, let us not overlook this other essential, work. It is not very glamorous but it surely produces results. There is no royal road to knowledge; no plush carpets leading to success; and any one will tell you that salesmanship is no exception to the rule.

Some salesmen do it easier than others; some organize it better than others; some are more proficient; some more talented. But this is always true, the more calls you make the more sales you make. It is just that simple. So, in the words of Roger Babson: "Tackle more than you can do, then do it. Bite off more than you can chew, then chew it. Hitch your wagon to a star; just keep your seat and there you are."

We Agree

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1955

Mr. MULTER. Mr. Speaker, I am pleased to call to the attention of my colleagues the following editorial which appeared in the New York Journal-American April 29, 1955:

WE AGREE

When the Brooklyn Veterans' Administration Hospital at Fort Hamilton was constructed original plans called for a large, nonsectarian chapel.

It was never built.

For reasons known best to Washington bureaucrats, a change in orders resulted in the present small place of worship.

All major veterans organizations are agreed that the substitute is completely inadequate to serve the religious needs of the almost 1,000 men and women who are patients at the hospital.

Recently, following protests led by Brooklyn Post, No. 500, of the American Legion, the Government attempted to make amends by starting installation of new benches and stained glass windows in the small chapel.

We agree with Post 500 that this is a waste of funds under the circumstances. We agree that the only solution is construction of the chapel originally planned.

It should have been done in the first place.

The American Press

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1955

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include the following editorial entitled "The American Press," appearing in the May 7, 1955, issue of the Pilot:

THE AMERICAN PRESS

More than a week ago Dr. Robert Hutchins read the riot act to the American Society of Newspaper Editors. It was a stirring and thoughtful speech and said a great many things worth pondering—whether anyone will pay serious attention to it is, of course, another question.

Even those of us who have the largest sympathy for the daily press sometimes get tired of hearing the old platitudes about the importance of the newspaper and how infinitely well it does its job in the American community. All this kind of talk breeds complacency. It is true that the American press is properly lauded for a whole string of virtues—but it is also true that it can do an even better job than what it is doing at the present time. No one knows this better than the editors, but they are not, in every case, able to do much about it.

The policies of many papers, normally set by the publishers, actually determine in advance how the news is handled by the editors and those who work with them. It does not require an alert reader a long time to discover what are the special preferences of a particular paper. It is not too much to say even that each paper has its own bias—its personal set of rules according to which it judges the passing events of the times. This is inevitable, and if it does not distort the news, it presents no great cause for complaint. It does suggest, however, as Dr. Hutchins points out, that a one-paper community is less well off than one which by having several papers presents more than one point of view.

The real crux of the whole question lies in the fact that newspapers are a medium for education. They are not merely informational, or inspirational or comical—they are organs of enlightenment and they have a job to do in the community. They are also, of course, big business and they are expected to make money. When these two interests conflict, however, it is usually the first that gives way to the second. Any one familiar with the press of our country can name several nice fat papers, full of advertising, which if measured on educational value and honest news presentation must be counted total flops.

The obvious question that presents itself at this point is how to reconcile the business and the educational features of the paper so that it is at once a prosperous and effective voice in the community. Neither Dr. Hutchins, nor anyone else, seems able to answer this one in a concrete and acceptable fashion. He suggests setting up a committee of press and lay people who will make annual reports on the effectiveness of our papers as educational media. This will pro-

vide a norm for publishers in testing just how good a job they are doing in some other scale than in that of dollars and cents. Such a plan certainly could work. It would depend so much on the qualifications of the committee.

Farther back in the picture however always stands the personality of the publisher and in the last analysis he is the one who determines what kind of a paper the public gets. Since we have a good, elert, oftentimes brilliant, and steadily courageous American press, we may suppose that we have also good, alert, oftentimes brilliant, and steadily courageous publishers behind it. However it is clear that we can have an even better and more effective American press if we care to. This calls for a larger vision and a greater dedication, once again, on the part of American publishers. It will be decided, we feel, by the answer to one question: Which is more to be valued, the American dollar or the well informed American citizen?

Jeanne D'Arc Day

EXTENSION OF REMARKS
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1955

Mr. MACHROWICZ. Mr. Speaker, yesterday marked the 526th anniversary of a French victory, in the Battle of Orleans, over an army which intended to impose their hostile rule upon the French people. This will to resist oppression was led by a gallant spirit of young womanhood in the person of Joan of Arc.

On the occasion of this anniversary, Philip A. Hart, the Acting Governor of Michigan, has issued a proclamation setting forth May 8 as Jeanne D'Arc Day.

I would like to take this opportunity, under leave to extend my remarks, to insert this proclamation into the RECORD and to show that resistance to hostile rule and oppression is not a recent idea among the free people but an inherent desire dating back many centuries.

I hope that the spirit against oppression as shown by Joan of Arc will continue to live in the hearts of all freedom-loving peoples of this world.

The proclamation follows:

STATE OF MICHIGAN, EXECUTIVE OFFICE, LANSING—PROCLAMATION

JEANNE D'ARC DAY

May 8 marks the anniversary of the victory of the French forces led by Jeanne d'Arc at Orleans in 1429. This saintly maiden, canonized in 1920, long has symbolized French resistance to foreign oppression and hostile rule.

This triumph is among the most heralded in military history. But greater far are the vivid examples of virtue and Christian love the world may learn from her life.

It is more than fitting that the State of Michigan pay tribute to the memory of this magnificent girl saint.

Therefore, I, Philip A. Hart, Acting Governor of the State of Michigan, do hereby proclaim May 8, 1955, as Jeanne D'Arc in Michigan, and urge all citizens to join with their brethren of French descent in paying homage to Jeanne D'Arc and to reflect on the quality of courage and sound value which she so dramatically demonstrated.

Given under my hand and the great seal of the State of Michigan, this 2d day of May, in the year of our Lord 1955 and of the Commonwealth the 119th.

PHILIP A. HART,
Acting Governor.

By the acting governor:
[SEAL] JAMES M. HARE,
Secretary of State.

Reduction of Personnel at the Watertown Arsenal

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following statements of Mr. Kenneth T. Lyons, national commander, Federal Employees Veterans Association, Inc., and members of the FEVA Watertown Arsenal Post 5, Mr. John J. McGee, chairman, and Frank P. Brown, James Ready, and Ellis Crossland.

The organization, representing the employees of the Watertown Arsenal, delivered their remarks at a breakfast held at the Congressional Hotel, Washington, D. C., today, in which they made a direct appeal to the Massachusetts congressional delegation, for assistance in their efforts to prevent the pending layoff at this installation:

The statements follow:

STATEMENT OF KENNETH T. LYONS

Members of the Massachusetts congressional delegation, once again our organization, representing the employees of the Watertown Arsenal, is making a direct appeal to you to intercede with the Department of Defense and the President of the United States, if need be, to prevent the pending layoff at this installation. Recent developments over the past 6 months lead me to believe that the Watertown Arsenal is going to be reduced to a research and development center, which will necessitate a force of approximately 800 men to operate. The present on-board ceiling at the arsenal is 3,200. This followed a recent reduction in force of 600 men. The arsenal, going into the calendar year of 1955, had a ceiling of 3,800.

I imagine the important issue here is whether or not the reductions in force at the Watertown Arsenal are necessitated by a reduced budget, economy in the Department of the Army, inefficient operation, or lack of productive work. The answer, I believe, is quite simple, in that the Watertown Arsenal through an Executive order, a Defense Department policy, and the recent directive which moved the Army's Weapon Command Center to Rock Island, Ill., are the controlling factors in the deterioration of the Watertown Arsenal.

We only have to look at the work that the arsenal has lost to areas outside the New England area, and I believe you will be able to understand the reasoning behind our request to ask that you demand an investigation of the Defense Department's policy and the action of the Army's Weapons Command Center at Rock Island, Ill., as it concerns the arsenal.

Whoever has been handling the distribution of contracts for the Army certainly sold the Watertown Arsenal down the river. For instance, the original atomic cannon, 280-mm., as it is commonly known, was designed, developed, and built at the Watertown Arsenal. This gun was tested at the Aberdeen Proving Grounds, and much publicity was given to this cannon a few years ago, stressing the quality of workmanship at the Watertown Arsenal, together with the fact that this was the first atomic cannon ever built in the world. No further contracts for this cannon were given to the arsenal. A firm in Pennsylvania received this contract. However, the drawings, research data, and equipment was made available to this firm by the Department of the Army in order that they could go into full production.

Another large gun that was built, developed, and designed at the Watertown Arsenal, commonly known as the 75-millimeter skysweeper, received about as much publicity as the atomic cannon. This was another first for the Watertown Arsenal, but a firm in the Midwest has been given the contract for producing this gun. The tools, jigs, blueprints, drawings, and fixtures had to be moved from the Watertown Arsenal to this firm so that they could go into full production.

The 105-millimeter cannon was designed, developed, and equipped at the Watertown Arsenal but is now being manufactured and produced in plants in Warren, Ohio, and Elwood City, Pa.

The Watertown Arsenal designed, developed, and manufactured the first 280-millimeter shells for the atomic cannon. All these shells were inspected and tested at the arsenal without any failures. A concern outside of Massachusetts is now manufacturing these shells and many of them did not pass the specifications of the Departments of the Army and have had to be condemned. The Watertown Arsenal does not have the contract to manufacture these shells.

Another item which is important to our Defense Department is the field service equipment; that is, spare parts for heavy cannons such as the 280-millimeter and 75-millimeter cannons. Although the Watertown Arsenal formerly had these contracts, they have now been turned over to concerns in the Midwest. The bogies and gun carriages that were formerly manufactured at the Watertown Arsenal have also been turned over to firms in the Midwest and at the present time these firms cannot meet the production quotas set up by the Department of the Army.

Although the Watertown Arsenal was promised the guided missile project, and was assured by officials of the Department of the Army that they would receive the production contracts and research contracts, to our knowledge, none of this work has been assigned to the arsenal.

The cost to the taxpayer of manufacturing and producing these weapons, while higher than that of firms that are now manufacturing these same weapons is quite understandable, as the Watertown Arsenal has to design, develop, and test all of the pilot models that are introduced to our Nation's armory. The first cannon could thus conceivably cost 5 to 6 times that of continuing models that are manufactured. The firms that have received these contracts receive the finished product following the development and years of research that had to be initiated at Watertown.

There's no doubt that the Watertown Arsenal can design, develop, and manufacture heavy guns more economically than any other arsenal in the world. Now I think we should look into the matter of efficiency of operation and quality of workmanship as a guide for further contracts. I distinctly recall a letter I sent to the chairman of the Senate Armed Services Committee during the fall of 1954 wherein our organization was

alarmed over some of the materials that were being manufactured by private contractors and these same materials could not withstand tests that were being conducted at the Watertown Arsenal. One of these in particular was the cylinders that were being manufactured by a private concern for the 280 mm. guns. These cylinders were originally designed and manufactured at the arsenal. However, the contract was given to a private manufacturer and then assembled at the Watertown Arsenal. During one of the tests of these cylinders an employee of the arsenal had his leg torn off and has been in the hospital for almost a year now and will be a cripple for life. It was only a miracle that many other employees were not killed or maimed at the arsenal as a result of this explosion. It would be interesting to ask the Department of the Army how many of these cylinders that were manufactured by this private contractor exploded at the Aberdeen Proving Grounds. We can proudly point to the fact that the arsenal's record of manufacturing was perfect on all tests on these cylinders.

It is my belief and contention that to turn over to private contractors the manufacture of such highly technical and intricate weapons, when they do not possess the type of skilled gunsmiths, craftsmen, and technicians as that of the Army's arsenal, would be tantamount to disaster and a major scandal could develop in our armaments production.

I am in hopes that the Massachusetts congressional delegation will issue a unanimous protest to the Secretary of Defense and request that he take immediate steps to channel some of the lost contracts back to the Watertown Arsenal, both for the efficiency of the service and for the economy of the area here in Massachusetts. We certainly are not being treated very fairly by the administration when you consider the fact that the major portion of the contracts for heavy defense equipment has been given to firms in the Midwest and yet Massachusetts has been for the past two centuries the arms center of the Nation and the world.

If no action is taken on your request to the Defense Department the Watertown Arsenal will definitely be reduced to a research laboratory, and this will mean a reduction of over 2,000 employees within the very near future. We cannot allow this to happen.

WATERTOWN ARSENAL POST, NO. 5, FEDERAL EMPLOYEES VETERANS' ASSOCIATION, INC.

The vast membership of the Federal Employees Veterans Association, Post No. 5, at the Watertown arsenal, and the more than 3,000 employees at this installation feel that there are certain very important basic reasons why the layoffs should be stopped and more work sent to this arsenal.

1. Greater Boston has a tremendous amount of skilled labor that is not being utilized. Industry in this area is very depressed and if it is to be kept alive at all, the skills of these mechanics must be preserved.

2. The Watertown arsenal which has been the Country's foremost research and development center has been reduced to a mere depot. Back in the 1870's, the Watertown arsenal pioneered the entire steel industry as we know it today, with its tests to prove the durability and elasticity of steel in making guns.

3. The Federal Government should remember that New England contributes a very large amount of Federal taxes and therefore it is not unusual for us to expect the Government to spend money and provide work for its installations in New England and the Greater Boston area.

4. We feel, one and all, that the withholding and removing of vital work from the Watertown arsenal is a complete discredit to the highly skilled personnel now employed there. Since this is not a recession or a depression, we can find absolutely no justification for this unjust act of taking work away from Government installations and turning it over to big business.

FEDERAL EMPLOYEES VETERANS' ASSOCIATION, INC., ADDRESS OF JOHN J. MCGEE, CHAIRMAN, FEVA COMMITTEE, TO THE MASSACHUSETTS CONGRESSIONAL DELEGATION

Members of the Massachusetts congressional delegation, may I take this opportunity to express our deepest appreciation for those of you who have been kind enough, and courteous enough to come to this meeting.

We have come to Washington for just two reasons. (1) To get more work for Watertown Arsenal, and (2), to bring about an end to the layoffs at our installation.

To say that we, at the arsenal, are shocked and bewildered at the treatment which we have been receiving would be indeed an understatement of fact. The treatment of Government workers in the past months has so greatly alarmed the more than 3,000 workers at this installation, as well as the vast membership of the Federal Employees Veterans' Association, that they have sent us here to bring this enormous act of injustice to your attention. The tremendous scale of layoffs at our installation, which have included men with long records of faithful and loyal service to our Government is without a doubt one of the worst moves ever conceived by the present administration. Men with 15, 20, and 25 years of service have been hit.

We strongly protest this treatment and we strongly urge each and every one of you to vote against Senate bill 1003 which provides for the termination of Government operations which are in competition with private enterprise. We ask that you vote in favor of House bill 5115 which will prohibit the disposal, by contract or Executive order, of work traditionally performed by civilian components of the Department of Defense.

And now, I should like to introduce the secretary of our committee, Mr. Frank P. Brown.

FEDERAL EMPLOYEES VETERANS' ASSOCIATION, INC., ADDRESS OF FRANK P. BROWN, SECRETARY, FEVA COMMITTEE, TO THE MASSACHUSETTS CONGRESSIONAL DELEGATION

Members of the Massachusetts congressional delegation, during the 83d Congress big-business interests sought enactment of legislation designed to give congressional approval to the termination of all commercial and industrial-type activities in which the United States Government is engaged. This legislation passed the House of Representatives but did not pass the Senate. Now similar legislation has been introduced in this session of Congress.

In the meantime, however, while this legislation has been awaiting committee action, the President has directed the Federal agencies and departments to review their commercial and industrial activities to determine which functions can be taken over by private industry. All such functions shall be terminated accordingly by administrative directive, and those functions which require specific legislation to terminate will be terminated via legislative process, with the support of the present administration.

This entire policy is being predicated without regard to the tremendous burden of cost which it will place upon the American taxpayer, without regard for our national security, and without the slightest regard for the Government's moral obligation to Federal employees who have devoted years of their lives in the service of the Federal Government.

I should like to take just a moment to name for you some of the manufacturing, repair, business, transportation, and communication services and activities which have already been terminated or are in the process of elimination or liquidation:

1. The manufacture of chain and rope.
2. The manufacture of special furniture for naval vessels.
3. The manufacture of special marine paint for the Navy.
4. The manufacture of clothing for the Navy.
5. The manufacture and development of prototype protective clothing for the Armed Forces.
6. The repair and overhaul of typewriters and office equipment.
7. The Reconstruction Finance Corporation has been placed in liquidation.
8. Assets of the Inland Waterways Corporation have been sold.
9. Synthetic rubber plants have been sold.
10. Puerto Rican Reconstruction Administration is being liquidated.
11. The Army and Navy are divesting themselves of automotive maintenance and repair to private garages.
12. The Army has sold a $15 million chlorine plant in Alabama, thus stopping the manufacture of chlorine and caustic soda.
13. The Air Force is now contracting over one-half of its maintenance and modification work to private industry.
14. The Navy is increasing the farming out to private interests its manufacturing, research, and development and modification functions.
15. Contracts have been let for private delivery of Government supplies from the General Services Administration's stores depots in the Washington and New York areas; and similar arrangements are being made elsewhere throughout the Nation and in other Government agencies.
16. The cleaning of Government buildings has been placed under private contract.
17. The Government manufacture of dry ice for the Navy has been terminated.
18. The manufacture of crates and wooden boxes for Government shipments has been contracted.
19. An increasing amount of engineering and drafting services have been contracted to private industry.
20. The Army is divesting itself of increasing amounts of the research and development of prototypes and manufacturing and modification functions.
21. The intent and spirit of the Vinson-Trammell Act has been violated by administrative decree granting a larger proportion of naval work to private interest than is assigned to Government shipyards, arsenals, etc.
22. Increasing amounts of the Nation's public natural resources are being turned over to private interest for development for profit.
23. Bids are being sought for private operation of automotive service stations to serve Government motor pools.
24. Contracts have been awarded to private industry for testing, analysis, and inspection of minerals, ores, and pulps, and for freight movements.

These are just some of the activities and services which are being turned over to private industry. These instances are only partially representative of the vast movement of the present administration to direct and establish the operation of our Government into the hands of special interests.

These present policies would protract the existence of subversive elements having access to security information relative to our national defense. Senate Report No. 3 of the 1st session of the 83d Congress titled "Subversion and Espionage in Defense Establishments and Industry" clearly points out that our national security has been, and

is still, in jeopardy when Defense Department work is performed in private industry plants. In contrast, the investigations of the Subcommittee on Investigations clearly establishes our contention that Federal employees provide a nucleus of loyal and trustworthy civilian servants. Federal employees cannot strike, nor do they seek the right to strike, against the Federal Government; therefore, there is no danger of production delays caused by differences between employees and management.

Since the President's directive will not only terminate all Government functions, but will also prevent the commencing or establishing of any new functions or operations that can be performed by private industry; the Government will not have the means to gage the propriety of private industry cost bids. This means that the cost upon the taxpayer will be tremendous.

The Government will be forced to accept private industry's standards for the quality of the products and services received. The Government will further be forced to accept private industry standards of improved techniques, engineering, and technological progress, and inasmuch as these will be geared largely to the civilian consumer's acceptances, our national defense and the lives of service personnel could be seriously jeopardized by inadequate or arrested quality, production, development, and research standards.

The sum and substance of the policy would be to cause the terrific upheaval of the economic status of millions of Federal employees and their families, and the dissipation and dislocation of industrial "know-how" and industries. The policy should also have an adverse social and economic impact upon communities and States in which these Government functions are presently located. There is also a lack of proper evaluation of the vast sums of the taxpayer's moneys which have been invested in equipment, facilities, and the training of highly skilled operating personnel.

The policy would further spell the economic death of scores of supporting businesses and services of local communities throughout the Nation.

We must not let this happen.

THE FEDERAL EMPLOYEES VETERANS' ASSOCIATION, INC., ADDRESS OF JAMES REEDY, VICE CHAIRMAN, FEVA COMMITTEE, TO THE MASSACHUSETTS CONGRESSIONAL DELEGATION

I feel certain that all of you here today must be aware of the reduction in force which has been going on at the Watertown Arsenal over the past several months. Over 800 employees have been laid off in the past few months with many more reductions slated to follow in the near future. At this time it is of vital importance that more work be assigned to the Watertown Arsenal.

We cannot understand the shenanigans of the present administration. World tension is increasing faster and faster. We are virtually sitting on a powder keg, with war practically staring us in the face. Our national security is in dire peril, and at this most critical period of civilization, our present administration is cutting down on its most important arsenal and naval installations instead of building them up. We can only say that we do not feel that we are being dealt with fairly and honestly.

The background of the Watertown Arsenal cannot be overlooked in the contributions which the installation has made to the scientific research and development of our country and of the world. Here are just a few of those developments:

1. With the existence of the Emery hydraulic testing machine, the Watertown Arsenal Laboratory was the pioneer testing laboratory for metals in this country and one of the most important in the world.

2. The Watertown Arsenal Laboratory pioneered in the study of impact in this country.

3. The whole American steel industry could be said to have stemmed from tests made at the Watertown Arsenal.

The Watertown Arsenal has also contributed many, many other great scientific developments too numerous to mention. In time of need, this installation has been a bulwark that has supported our great country through many of its greatest crises.

Let me say in conclusion that we cannot accept the arguments of the Department of the Army, or those of the Department of Defense that reducing our New England installations is in the best interest of the economy or the defense effort. I feel that this is merely a matter of politics. Big business, or special interests, as they are known, have taken over the Government and are channeling all the work and money into their own pockets.

Our State and our installation can stand on their own records of achievement. We deserve to be treated honestly, and fairly in the handing out of work through Government contract.

I therefore ask that the Massachusetts congressional delegation request that the President of the United States and the Defense Department send more work to Watertown Arsenal and to the other Government installations throughout Massachusetts and the New England areas.

FEDERAL EMPLOYEES VETERANS' ASSOCIATION, INC., ADDRESS OF ELLIS CROSSLAND TO THE MASSACHUSETTS CONGRESSIONAL DELEGATION

Members of the Massachusetts congressional delegation, we have been asked to meet with you today by the people we represent; the men and women of the Watertown Arsenal, and the membership of the Federal Employees Veterans' Association, Inc. They feel as I feel, that the present administration is breaking up the greatest team our country has ever known. It was this team that was the backbone of the Government all through World War I and World War II. It was this team again that came to the aid of a troubled Government during the Korean conflict. It is this team that has been instrumental in making the United States one of the world's greatest powers, and now the present administration is seeking to destroy this great team and sell the employees of our installation and the employees of other installations throughout the country down the river, just to satisfy the whims and demands of the big business interests who are seeking to devour the economic security and welfare of our country.

And now I should like to give you an outline of the complete history of our Watertown Arsenal. Laboratory activities began at the Watertown Arsenal as early as 1830 although in the beginning they were not associated with metallurgy. The first metallurgical work was done in connection with improvement of cast iron. Cannon developed at Watertown Arsenal were the envy of the world.

In the 1870's steel began to emerge as a competitor of cast iron for gun construction.

In 1876, Congress authorized the construction of a testing machine to settle questions raised as to the suitability of steel for cannon, particularly with regard to the contention that had been made that steel is not elastic and therefore would be dangerous to use in guns.

The machine, to become famous as the Emery hydraulic testing machine, was designed at Watertown Arsenal and installed in 1879. It has a capacity of 800,000 pounds, in tension and 1 million pounds, in compression and is sensitive enough to test the tensile strength of a horsehair. From around 1880 to 1918 tests made on the machine were reported direct to Congress and published in a series of annual volumes under the title "Tests of Metals." This series for a long time provided the largest single accumulation of experimental testing data for metals in existence and was consulted freely by metallurgists both in this country and from abroad.

The existence of this machine made Watertown Arsenal Laboratory the pioneer testing laboratory for metals in this country and one of the most important in the world.

Since the beginning of World War I the Watertown Arsenal Laboratory has become more than a testing laboratory; it has become a center for research and development in many phases of metallurgy ranging from the refining of steel to its final fabrication in finished products.

The influence of the laboratory on the industrial life of the Nation has been profound; for example, the steel industry may be said to have stemmed from the results of tests carried out on the Emery machine. However, its contributions have not been confined to the field of mechanical testing. In the January 1948 issue of Metal Progress, the editor takes a look at metalurgical progress since 1917 and lists 210 milestones of progress, 8 of which are credited to Watertown Arsenal Laboratory, this organization being the largest single contributor. These outstanding achievements are listed as follows: 1921, autofrettage of large gun tubes; 1922, radiography used as a method for steel foundry control; 1925, gun tubes made by centrifugal casting; 1929, all welded gun carriage; 1930, molybdenum high speed tool steel; 1934, spectroscope used for foundry control; 1935, cast armor plate; 1940, cemented carbide cores for armor piercing projectiles. All of these were peacetime achievements that were of vital significance in winning the battle for production that made possible the success of World War II. They benefited commercial industry also; for example, radiography and spectroscopic analysis have been generally adopted by industry.

During the recent war the major efforts of the laboratory were concentrated on the technical activities that were needed to solve emergency problems as they arose. However, even under war conditions, a great deal of scientific research was carried out and during this period the Watertown Arsenal Laboratory was one of the most prolific centers for advanced metallurgical research in the Nation. Around 40 papers were published in the field of physical metallurgy with such things as plastic deformation, mechanical testing in the planning range, fracture strength, plastic flow and rupture, impact, phase equilibria, hardenability, mechanical equation of state, temper brittleness, and others, practically covering the field. Also a book was published of great practical interest to metallurgical engineers setting forth the principles of metallurgical engineering design.

Gentlemen, I could go on and on naming the great scientific and metallurgical discoveries and developments that have been perfected at our arsenal. I could go on and on naming the many great machines that have been built and perfected at our arsenal, but the whole thing boils down to just one plain simple truth. We cannot get along without our great arsenals and Navy yards. They have pioneered the way for all industry, and they have set up and upheld the high standards of quality that makes our weapons and military service equipment second to none in the world.

I say, gentlemen, that we cannot, with a clear conscience, permit the administration to deprive us of these great backbones of our economic security. We cannot permit this total disregard for our national defense. It is you to whom we look to put a stop to this vicious trading in human grief. Most of you remember Pearl Harbor. Most of you

will remember how completely unprepared we were. If it were not for our arsenals at that time, it is hard to tell what might have happened. It was our arsenals that provided industry with the necessary knowledge and time to gear itself and tool up for this great conflict.

Yes, gentlemen, let me say in conclusion that the reducing of our arsenal must not happen or as sure as we are standing here, we will someday find ourselves facing another Pearl Harbor, and this time we may not surmount our fight for survival.

Mississippi Comes to the Front in National Leadership

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1955

Mr. WILLIAMS of Mississippi. Mr. Speaker, the announcement on May 3 that novelist William Faulkner and dramatist Tennessee Williams had been awarded 1955 Pulitzer Prizes is significant in that both are natives of the State of Mississippi. Also, their accomplishments exemplify a trend which has been going on for some time in our State. Mississippi, once considered a backward State, has long since emerged to the forefront of national leadership in practically every field of activity.

Recently, a writer for the Jackson (Miss.) Daily News wrote an interesting article on Mississippi's national leadership. In case some may still be doubtful as to Mississippi's position on the horizon of progress, I am including this article as part of my remarks. It is with pride that we Mississippians point to the acomplishments of our citizens as they are pointed out in this article:

(By Maurine Twiss)

Folks who swell the statistics in bigger, colder, noisier and what they consider more progressive cities than Jackson, Miss., are way behind the times in one respect.

They've heard tell of the Mississippi mocking bird lazily swinging on a honeysuckle vine in the solid noon sunshine and they've concluded that it's sleepy time down South all the time.

But citizens of Mississippi's wide-awake capital city not only know better, they can prove it with a statistic or so of their own to act as eye-opener for the rest of the country.

Millions of people from all over the United States and in foreign countries are turning their eyes on this one deep Dixie town, looking toward it for leadership.

Because right here in Jackson, among all the storied moonlight and magnolias are a half dozen or so men who currently serve as national presidents of some of the country's most influential organizations.

Let's tick those leaders off on our fingers: there's A. Boyd Campbell, newly elected president of the United States Chamber of Commerce.

And Mayor Allen Thompson, who heads the American Municipal Association.

Plus Garner Lester, president of the National Tax Equality Association for the eighth year.

Then, there's William A. Vaughey, in his second term as president of the Independent Petroleum Association of America.

While J. F. Montgomery, heads the National Association of Mutual Insurance Agents.

In a class by himself is Supreme Court Clerk Tom Q. Ellis, General Grand High Priest, Royal Arch Masons, International, largest Masonic organization under one head in the whole round world.

That's not all: In the fall, Secretary of State Heber Ladner will move up to the presidency of the National Association of Secretaries of State of which he is now vice president.

There are a lot of firsts tied up in these first men of national organizations.

The South hasn't always been so splendidly represented or recognized.

When Boyd Campbell, chairman of the board of Mississippi School Supply, became president of the 1,600,000-member United States Chamber, he brought to Mississippi the highest civic recognition it had ever achieved.

Although Campbell says that he's the smallest in commercial stature to hold his office, he's a director of Mississippi Power and Light Co., the Gulf Mobile and Ohio Railroad and the First National Bank. Vice chairman of Region 5, Boy Scouts of America, Campbell is president of the board of stewards at Galloway Memorial Methodist church, and longtime treasurer of Millsaps College.

Jackson's dynamic mayor is the first president of the American Municipal Association to be chosen from a city of less than a half-million population.

He heads up the mayor associations from 46 States and was 1 of 5 mayors from the United States to go to the International Conference of Mayors in England in 1951. Thompson is also president of the Mississippi Municipal Association.

Counted as individuals, nearly a hundred thousand persons belong to the Tax Equality Association which Garner Lester, Jackson financier, serves as president.
